Finley was the crusading naturalist whose movies, pictures, books, and lectures helped motivate the conservation movement that surged forward after President "Teddy" Roosevelt came into office.

As a direct result of Finley's publicity on the plight and slaughter of wildlife on the Malheur Marshes, Roosevelt first set aside the refuge there in 1908.

Oregon division of the Izaak Walton League has planned a daylong program starting with a tour of the refuge at 10 a.m.

Dr. Ira Gabrielson, close associate of both Jewett and Finley and president of the Wildlife Management Institute, will be the principal speaker.

So, on the 50th anniversary of the Malheur National Wildlife Refuge, largest of all Federal refuges managed primarily for waterfowl, two men whose lives and works were closely tied to the Malheur Marshes are being honored on a site and at a time that would most please them.

## Labor Legislation

EXTENSION OF REMARKS
OF
### HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
*Thursday, March 5, 1959*

Mr. CASE of South Dakota. Mr. President, one of this country's great leaders in the field of responsible labor-management relations, is a man of whom South Dakota is justly proud, Judge Boyd Leedom, Chairman of the National Labor Relations Board, and a native of Rapid City, S. Dak.

In a recent speech before the Industrial Relations Center Labor Conference at the University of Minnesota, Judge Leedom discussed the responsibilities of labor unions in the enactment of legislation to curb the evils and abuses disclosed in the operation of some unions.

Judge Leedom posed this burning question:

Will union leaders use their effective political strength, which was greatly enhanced in the latest elections, to prevent enactment of regulations that are tough enough really to cure existing evils?

The Washington Star saw fit to comment editorially on Judge Leedom's question.

I ask unanimous consent that both the speech and the editorial be printed in the Appendix of the RECORD.

There being no objection, the speech and editorial were ordered to be printed in the RECORD, as follows:

ASPECTS OF GOVERNMENT REGULATION AND UNION RESPONSIBILITY

(Luncheon remarks of Boyd Leedon, Chairman, National Labor Relations Board, before Industrial Relations Center Labor Conference, University of Minnesota)

A few months ago on a university platform in your neighboring State of Wisconsin, Mr. Arthur J. Goldberg, one of organized labor's most capable lawyers, made a speech which has given me a great deal of thought. He reported what he termed the recent occurrence of "a hardening of attitudes" between management and labor. He said in part:

"But in the recent past I see a hardening of attitudes, and retrogression rather than progress in understanding. Management is tougher, unions are tougher, and the end product is not necessarily good for either side."

Not long afterward, Prof. E. Wight Bakke, head of the Yale Labor and Management Center, brought in almost the same report. He was quoted as declaring that relations between the two seem to be forming "a pattern of fairly antagnostic foreign relations between two separate institutions."

STATE OF VASSALAGE

A. H. Raskin, writing in the New York Times, has said:

"Businessmen reproach themselves for having sunk into what they depict as a state of vassalage to monopolistic unions. * * * The collapse of the drive to outlaw the union shop in industrial States has shattered employers' hopes that they could put the brakes on labor through political action. Moreover, the victory of liberal Democrats and Republicans has convinced many ranking industrialists that both parties are union dominated. This sense of being political orphans in a laboristic society has strengthened the movement among major employers to find their own salvation by forming united fronts to slug it out with labor at the bargaining table."

Wherever I go I find evidence of increased antagonisms. Among union representatives I hear echoed Mr. Goldberg's comment. Among management representatives I see signs of preparation for strong resistance to unions in politics and at the bargaining table.

An excellent record of harmonious industrial relations during the past 6 years may be coming to an end. Under the moderate guidance of Secretary of Labor James P. Mitchell, chief architect of the labor policy of the Eisenhower administration, only one-fourth of 1 percent of available work time, approximately, was lost in strikes—a remarkable record. But the recent rash of shutdowns and strikes in the auto industry, in farm equipment, the air lines, and in newspapers, indicates this unusual period of industrial peace may be headed for hard going. These strikes also affirm the new harder attitudes which are bad for everybody—for industry, for organized labor, for the American consumer—but more especially this new antagonism is bad for the American worker. It is he who gets caught most directly through loss of pay when the great squeeze between management on one side and union leadership on the other increasingly slows down and sporadically stops the marvelous wheels of American industry.

LABOR'S RESPONSIBILITIES

That organized labor cannot escape a share of the blame for this new and deplorable condition is manifest. Of course, management is also to blame. But I talk about management's responsibilities when I talk to management groups as I did earlier this month. Today I speak to a meeting cosponsored by this university, the Minnesota AFL-CIO Federation of Labor, the Minneapolis Central Labor Union Council, and the St. Paul Trades and Labor Assembly, and so I deal primarily with the responsibilities of

organized labor in the current industrial situation.

Some of the things that have happened and continue to occur in the labor movement and that have contributed to management's determination to get tough, are perfectly obvious. Others may be more questionable. I want to mention one, in passing, before I get to the most obvious cause—that is the revelation by the McClellan committee of widespread corruption in certain segments of organized labor and in industry.

Conduct that possibly bears on management's hardened attitude, is organized labor's indiscriminate use at times, of its tremendous power over the economy of our country. It is only the very insensitive union leader who does not see some possibility of further public regulation on the right to strike or picket. A contributing factor may be the widespread adverse public reaction to secondary boycotts, to the recent strategic airline strike at the peak of the Christmas season, and to the recent disputes that stopped all the presses of the New York City newspapers.

PEOPLE WILL SPEAK

The American people will not put up with labor lords any more than they did with the business barons of another era. And at that certain point when the public mind decides that the special rights of labor interfere too much with the general welfare, a powerful reaction will set in. It should not be inevitable that the pendulum swing too far. But when it does, those in whose favor it swings ultimately suffer most.

But the factor emanating from organized labor which has certainly created new management and public resistance to and suspicion of unions is the corruption brought to light within the labor movement by the Senate investigation. This wary attitude is not merely a matter of employers taking advantage of these sordid incidents to embarrass the whole union movement and thereby escape collective bargaining, although there is some of that going on. The impact of these revelations upon the public as well as upon management unquestionably tends to create a climate of distrust and suspicion which makes both sides stiffen. After all, the revelations of bribes and "sweetheart" agreements and phony unions touch both labor and management.

It is virtually certain that these conditions will result in Government regulation, and likely with this session of Congress. The Kennedy bill, the administration bill, introduced by Senator GOLDWATER and other Republicans, and the McClellan bill, that thus far has had little attention, would all require strict reporting and accounting of union funds, would increase the processes of democracy within unions and sharply restrict bossism. That legislation will pass is indicated by reason of this area of agreement between three well recognized political groupings within the Congress. These groups are the liberal Democrats of the North represented by Senator KENNEDY, the Republicans on the administration bill, and the conservative Democrats of the South represented by Senator MCCLELLAN. I think all respected labor leaders favor generally the kind of regulation I have just mentioned. But there are at least a couple of flies in the ointment that may prevent quick enactment of new legislation.

LABOR "SWEETENERS"

The Kennedy bill and the administration bill have provisions euphemistically called "sweeteners" for labor. A principal one would ease the difficulties the building trades encounter in the union security provisions of Taft-Hartley. Rumblings from responsible labor leaders indicate that unless these provisions are carried along with even the relatively mild restrictive measures enumerated, labor may oppose the legislation. The other difficulty lies in the fact that the administration bill goes beyond the Kennedy bill, providing further restrictions in the area of secondary boycotts and other forms of picketing. These provisions seem to be opposed by most if not all of organized labor's leadership.

In the face of revelations of widespread abuses, labor was confronted with a decision as to responsible action. Should they and could they clean their own house? This decision was made forthrightly and I think with great courage, but lesser effectiveness. The AFL–CIO made great efforts to do the job by itself, but there are circumscribed limits to the federation's reach, as its officers have often noted. Expulsions and rival organizing campaigns are about the most effective action, and under some circumstances these have had little effect.

BIG QUESTION

A second question of real magnitude now confronts the union leaders. Will they use their effective political strength, which paradoxically was greatly enhanced in the latest elections notwithstanding the full revelation of labor's abuses, to prevent enactment of regulations that are tough enough really to cure existing evils?

The responsible leaders are in an anomalous and difficult situation. They fear, and no doubt with some just cause, that certain elements would pass legislation under the guise of controlling admitted evil practices, but for the real purpose of using it to undermine unionism and collective bargaining. Therefore labor acquiesces in further regulation very cautiously. On the other hand, if through the political strength they thwart congressional action that really reaches the current abuses, their own institution might fall. For it is quite clear that some Government restraint must be put upon union officers and that the labor movement cannot cope with its own problem without such additional help. The federation has endorsed this idea, and so have nearly all the major unions. Then comes the question: Is restraint needed on certain kinds of concerted activity now protected under the present law? That is the decent labor leader's problem. If they decide restaint on such activity is not needed, and they are wrong, then certain of their own disruptive bodies will continue to damage the whole movement through ruthless union activity. Only the renegade unions take advantage of the loopholes in inadequate regulation and they alone stand to benefit from it.

PROMPT ACTION NEEDED

Thus the cancer will be permitted to grow through weak legislation, and the healthy body of labor will seriously suffer. There is no question that prompt action is necessary in this area of abuse if we are going to avoid a longtime damage to collective bargaining.

But the damage will not be forestalled by a statute which does not cure the evil; any worthwhile legislation must strike directly at the cancerous growth, and leave unharmed the organism that I deem vital to our economy—the legitimate trade union functions. The damage to collective bargaining will fall heaviest upon the union people whose organizations exist primarily for the purpose of collective bargaining. Great damage to our whole country can result, but clearly the heaviest immediate brunt would fall upon the people in unions. All of us, but especially the unions' responsible leaders, must examine each proposed law carefully to be sure it will do the proposed job adequately, no more and no less.

I wish to revert now to Arthur Goldberg's reference to hardening attitudes. He proposed that something be done about it, that a labor-management conference be established where in off-the-record sessions, free of Government interference and away from the immediate stakes of gain or loss that completely dominate the conferences of the bargaining table—good, solid, and wise representatives of labor and of management can get together periodically to work out their respective responsibilities to themselves, to each other, and to the public. Aspects of his proposal received appreciative words from the management side—the U.S. Chamber of Commerce, and from Government, the Secretary of Labor. I am convinced that in this kind of approach toward improved understanding, rather than through Government regulation, necessary as the latter may be, the best soltuion of industrial problems will be found.

THREE SIDES TO QUESTION

I have a good friend by the name of Dick Halverson, formerly of Hollywood and now of Washington, D.C. In the extra time he has from his Presbyterian pastorate and a Christian ministry that physically reaches into all parts of the world, he issues a weekly letter throughout the Nation which is called Perspective. It contains many words of wisdom. In one issue of Perspective, Dick said this:

"There are three sides to every question! Not just two sides—three! Your side, the other fellow's side, and the right side!

"The only real cure for any problem is to discover and apply the right side!

"This is the crux of the matter. We're not really interested in the right side. We're interested in our side. Other fellow's interested in his side. Result: impasse—deadlock."

Management and labor really need to learn this lesson. The secret of course is to substitute for the prevailing mutual attitudes of suspicion and distrust, good will, and real concern for the other fellow's welfare, and the Goldberg plan might provide a proper starting place. Seems naive, doesn't it, to suggest to a hardheaded American business magnate that he be motivated by a real concern for the welfare of a tough, hard-hitting union leader—and vice versa?

MUTUAL CONCERN

That this does seem so naive to those who are the partisans in the great controversy is, of course, the cause of the present deterioration of industrial relations. In an atmosphere of genuine good will and real concern for the problems of the other side, there would be no limit to America's productive potential and the resulting benefits to businessmen, workers, and all the rest of us. Dick Halverson said this in Perspective:

"Management has its side—labor too. Each fights to maintain its 'rights,' Deadlock. Then they begin to whittle—jockey—conspire. Finally agreement—but with each side giving in as little as possible * * * cutting in on the other as much as possible.

"Both cherish the day they can regain what they lost in concessions granted out of sheer expediency.

"Problem's not solved—actually increased. In the long run the conflict is not settled—just postponed. Resentments burn quietly, deeply, explosively."

But I say to you, given a climate of real cooperation and attitudes of mutual concern, the problems are not impossible, can really be solved.

There is a fable in which, somewhat deeply hidden, you will find the point I want to make:

An eagle swooped down in a little community nestled in the mountains, snatched up a small baby and carried it away to the eagle's nest high on the crags of the mountainside. First a shepherd, then a mountain climber sought to rescue the child, and failed. Finally a peasant woman tried and brought the baby back to safety. She did the impossible through a real concern for the baby's welfare. You see, she was the baby's mother.

---

[From the Washington Evening Star, Mar. 4, 1959]

A QUESTION TO LABOR

Chairman Boyd Leedom of the National Labor Relations Board has posed a question

to union leadership that has a great bearing upon the American economic system, and possibly on the whole political and social structure of the country. It is, in short, whether labor—with its political strength greatly enhanced in last year's elections—will throw the balance of its power for or against the enactment of legislation that would help to eliminate some of the evils and abuses that have been disclosed in certain union practices.

In posing his question, Mr. Leedom was referring primarily to the evils and abuses revealed by the McClellan committee, to the racketeering and thievery within segments of organized labor and the consequent corrupting influence upon affected labor-management relations. He acknowledged, too, that some of labor, for example, the AFL–CIO, had made efforts "forthrightly and * * * with great courage" to do its own housecleaning, but with relatively little effectiveness. Remaining, then, is the core of the question, namely, whether responsible labor will support and welcome legislation to help in the housecleaning, or will retreat into a position of opposition to any corrective legislation unless it is sweetened to union tastes.

Unfortunately, labor—again, the AFL–CIO—already has given an initial answer. It has served notice it will oppose the Kennedy-Irvin bill if the one section it wants is deleted. Labor may, of course, prevail in preserving its sweeteners. One of these would permit replaced strikers to vote in representative elections. Another would allow building trades unions to obtain NLRB certification under certain conditions without any election or showing of majority status on a job.

But labor should bear in mind the point made by Mr. Leedom that there are "three well-recognized political groupings within Congress" pushing for corrective legislation. One group includes the liberal Northern Democrats backing the Kennedy bill, a second the Republicans supporting the administration bill and a third the conservative Democrats of the South supporting the McClellan bill. Combined, these three have the power to enact legislation, and they probably will. If labor, in turn, succeeds in weakening it to a point where it does not correct the abuses, then labor itself runs further risks.

It will, as Mr. Leedom says, be the "renegade unions" that will take advantage of the loopholes in inadequate regulation. They will be the beneficiaries, while the responsible labor movement is damaged. And at some date thereafter, "when the public mind decides that the special rights of labor interfere too much with the general welfare, a powerful reaction will set in." Labor's own uphill battle for political influence should be its best reminder that the pendulum of public sentiment in this country can and does swing, and that Mr. Leedom, for example, was only stating a fair warning when h said that "the American people will not put up with labor lords any more than they did with the business barons of another era."

## Tourism, a Two-Way Street

EXTENSION OF REMARKS

OF

### HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

*Thursday, March 5, 1959*

Mr. WILEY. Mr. President, in reviewing our economic picture—as we often do today—a fact that is sometimes overlooked is that of the value of tourism to the eonomcy.

In recent years, the general conception of tourism has been, for the most part, that of U.S. citizens visiting nations abroad.

In time past, this was largely true. Touring in foreign countries was a luxury affordable only by the rich. By contrast, today's travelers, fortunately, include students, teachers, laborers, farmers, businessmen, artists, musicians, and others.

I am happy to note also that currently there is strong indication that international tourism is becoming more and more a two-way street; that is, that a substantial number of foreign visitors are now coming to our country.

According to the Immigration Service, more than 847,000 foreign travelers entered the United States in the fiscal year ending June 30, 1958. There were also more than 6 million Canadian visitors.

We recognize, of course, that the travel industry can—and in the future, I believe, will—make an ever-greater contribution to the educational, economic, political, and cultural progress of our country.

Fortunately, the increased number of travelers also offers new opportunities for development of tourism, not only to the Nation, but to the individual States.

In Wisconsin, for example, tourism is now one of our major industries—estimated to bring in about $500 million annually.

Featured among Wisconsin's attractions are: About 8,676 lakes and 10,000 miles of streams for excellent fishing; 7 State forests and 17 State parks, providing a great many wonderful opportunities for sightseeing, boating, camping out of doors, and traveling through our scenic countrysides; over 161 museums and other historical sites and places of interest. Last year, over 6 million travelers visited the State park and forest areas of our State.

With the opening of the St. Lawrence Seaway—scheduled for next month—we are also looking forward to an influx of more and more visitors to Wisconsin and the Great Lakes region, from Canada and all over the other parts of the World, as well as from many other States of the Union.

With our ever-expanding network of turnpikes, increased air transportation, and the opening of the St. Lawrence Seaway, Wisconsin—as will other States—will continue to grow as a tourist attraction in this great country.

The March 3 edition of the Christian Science Monitor carries an informative article by Mr. Leavitt F. Morris, commenting on the upsurge in international tourism, as well as some of the problems to be dealt with to encourage an increase in traffic.

I request unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES WARMS WELCOME AS WORLD TRAVEL ENTERS TWO-WAY STREET

(By Leavitt F. Morris)

A two-way street in travel, long sought by United States leaders in the tourist industry, at last is becoming a profitable reality.

Pleasure visitors from abroad to the shores of the United States have risen sharply in the past year. For every business traveler there now are five tourists. This is a most encouraging trend for the American resort operator, who has seen many of his potential guests lured away to foreign lands without any immediate possibility of filling their places with visitors from overseas.

Figures supplied by the Immigration Service of the Department of Justice disclose that more than 847,000 foreign travelers (all classes of nonimmigrant arrivals) entered the United States in the fiscal year ended June 30, 1958. There also were more than 6 million Canadian visitors. Pleasure visitor visas numbered 514,599 and business visitor visas 81,405.

HOST FACES CHALLENGE

When the United States eases its currency restrictions and requirements for admitting visitors—steps already are under way in Washington to do these things—the tourist tide from abroad should swell to unprecedented heights.

President Eisenhower has designated 1960 as "Visit the United States Year." In so doing he has called upon all segments of the tourist industry to develop attractive programs for visitors from overseas. The President urges that our foreign guests go to all parts of the Nation to see for themselves a land and people that stand for freedom and peace among all mankind.

Being hosts for foreign visitors will be a new experience for many American resort operators. It also will be a stimulating challenge. By being gracious hosts to persons from abroad—especially those seeing the United States for the first time—Americans can do much toward establishing a better understanding of this country's way of life.

OVERSEAS TRAVEL WINGS ON

There will be no slackening of travel by Americans to foreign shores. With the jet age a reality, more U.S. vacationists will be winging their way to London and Paris, from which points they will travel far and wide.

Those who have the time will be crowding aboard ocean liners for the leisurely and pleasant voyage to ports in Europe, South America, and other distant lands.

Festivals, fairs, musicals, and a host of other attractions have been scheduled in almost every European country to lure Americans for a week or for several months.

The one important thing to be remembered about this 2-way street of travel is: The dollars spent in foreign lands by Americans in turn are used by their counterparts to pay for vacation expenses while touring the United States.

The two-way street in travel is indeed long overdue, but now that it is here the world in general will be better for it—not only because of profitable financial gains to all concerned but for the richer and fuller understanding gained among those men and women who move over this broad highway.

## Shifts in Defense Spending

EXTENSION OF REMARKS

OF

### HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

*Thursday, March 5, 1959*

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excerpt from an article in the January 31 issue of the Magazine of Wall Street, entitled "Firsthand Report on Shifts in Defense

Spending." The author, Allen M. Smythe, has specialized in defense procurement policies and practices and brings out some interesting facts about the President's attitude toward extravagant spending by the Defense Department.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

FIRSTHAND REPORT ON SHIFTS IN DEFENSE SPENDING

(By Allen M. Smythe)

Military procurement in 1959 will be more directly affected by shifting emphasis on weapons systems, including the coming into production and operational status of those projects just emerging from intense development, than it will be by Federal economy or the outcome of the contest between the spenders and the savers.

Whatever happens to other budgetary items, national defense is not likely to suffer. It will be surprising, indeed, if the total outlay is not well over the aggregate spending of fiscal year 1958.

Some defense contractors will feel the pinch of developments. Some already have. On the other hand, there will be beneficiaries of technical breakthroughs and new scientific discoveries.

The President in press conferences and messages to Congress emphasized the need for the new missiles and the spaceships, and also stressed that they must be procured at the expense of less modern weapons. They must supplant, not supplement, other weapons, if the Nation is to remain solvent. The Pentagon has already started to carry out the President's orders.

THE PRESIDENT'S APPROACH

At this point it might be interesting to analyze the President's attitude on future defense spending. Under the law he is Commander in Chief of our armed services. His experience and background gives the Nation and our allies confidence in his viewpoints. Recently he has been giving detailed attention to our military problems and has stressed this point.

His chief goal is a dynamic national defense, thoughtfully and sensibly planned. His secondary aim is increased efficiency and the avoidance of waste. He has stressed that the cost of the new weapons is tremendous, even when compared with the marvelous resiliency and capacity of our country.

He states: "Such expenditures demand both balance and perspective in our planning for defense. At every turn we must weigh, judge, and select. Needless duplication of weapons and forces must be avoided. We must guard against feverish building of war armaments to meet glibly predicted moments of so-called maximum peril."

To the embarrassment of the Pentagon, the President has been inclined to accept the Treasury's figures on defense costs. The Treasury gives total expenditures and total estimated costs. The Pentagon is inclined to emphasize minimum production costs.

TOTAL COST VERSUS PART COST

An example occurred in the state of the Union address to Congress. The President stated that the overall cost of the Atlas ICBM would average $35 million per missile on the firing line. Last January the Air Force testified before Congress that the production cost of Atlas or Titan after the original order was completed would be $1.8 million per missile.

Incidentally, this figure released to newsmen for the first time the classified number of ballistic missiles on order. Previously given out was $3 billion for the total cost of the project. Simple arithmetic gives an answer of 90 Atlas, or sufficient for nine squadrons.

President also has stressed the importance of missile development. He estimated that a total of $7 billion would be spent on such projects. The Pentagon had disclosed that expenditures for missile hardware, i.e., contracts to military contractors, would be at half this amount. Research, construction of launching sites, transportation, and other costs make up the other half.

Pentagon consternation rose to great heights when they read the President's statement that "certain bombers cost their weight in gold." They thought the President might be referring to the Air Force B–58 medium bomber or the Navy A–3J carrier bomber.

Defense officials for the first time hastened to show high costs for their weapons. They pointed out that if all expenditures on the B–58 were charged to the planes so far produced, the cost would be $26.7 million per plane. However, with a flyaway weight of over 160,000 pounds, this does not approximate the $35 per ounce for gold.

North American Aviation has a contract for 25 A–3J Mach 2 carrier bombers for development and testing purposes. They weigh 31,000 pounds, and total costs would average $17 million per plane. However, Navy and company officials say the production price is $5 million per plane, which would make them cost about 11 times their weight in silver.

The President also in recent speeches and conferences has cautioned that ordinary submarines now cost $50 million and that those of the Polaris type cost over three times as much. He has often used the old analogy that modern fighter aircraft fly twice as high, over 3 times as fast, and cost 50 times as much as the fighters of World War II.

There is an implied threat that if Congress appropriates greater amounts than his budget request the President will again exercise his constitutional authority and not spend the money. All of this indicates that industry must expect some heavy shifting of funds from conventional armament to the new modern and scientific weapons of today.

## How Television Can Help Us Survive

EXTENSION OF REMARKS

OF

## HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

*Thursday, March 5, 1959*

Mr. JAVITS. Mr. President, at the recent convention of the Radio-Television News Directors Association in Chicago, Ill., Edward R. Murrow, the distinguished radio-TV news columnist, delivered a provocative challenge regarding television's role in the United States today.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by Mr. Murrow, which was reprinted in the December 13–19 issue of TV Guide.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HOW TV CAN HELP US SURVIVE

Our history will be what we make it. And if there are any historians about 50 or 100 years from now, and there should be preserved the kinescopes for 1 week of all three networks, they will find there recorded in black and white, or color, evidence of decadence, escapism, and insulation from the realities of the world in which we live. I invite your attention to the television schedules of all networks between the hours of 8 and 11 p.m. eastern time. Here you will find only fleeting and spasmodic reference to the fact that this Nation is in mortal danger. There are, it is true, occasional informative programs presented in that intellectual ghetto on Sunday afternoons. But during the daily peak viewing periods, television in the main insulates us from the realities of the world in which we live. If this state of affairs continues, we may alter an advertising slogan to read: "Look now, pay later." For surely we shall pay for using this most powerful instrument of communication to insulate citizenry from the hard and demanding realities which must be faced if we are to survive. I mean the word "survive" literally * * *.

I am entirely persuaded that the American public is more reasonable, restrained and more mature than most of our industry's program planners believe. Their fear of controversy is not warranted by the evidence. I have reason to know, as do many of you, that when the evidence on a controversial subject is fairly and calmly presented, the public recognizes it (as) an effort to illuminate, (not) agitate.

The oldest excuse of the networks for their timidity is their youth. There spokesmen say: "We are young; we have not developed the traditions, nor acquired the experience of the older media." If they but knew it, they are building those traditions, creating those precedents every day. Each time they yield to a voice from Washington or any political pressure, each time they eliminate something that might offend some section of the community, they are creating their own body of precedent and tradition. They are, in fact, not content to be "half safe."

Nowhere is this better illustrated than by the fact that the chairman of the Federal Communications Commission publicly prods broadcasters to engage in their legal right to editorialize. Of course, to undertake an editorial policy, overt and clearly labeled, and obviously unsponsored, requires a station or a network to be responsible. Most stations today do not have the manpower to assume this responsibility, but the manpower could be recruited. Editorials would not be profitable; if they had a cutting edge they might even offend. It is much easier, much less troublesome to use the money-making machine of television and radio merely as a conduit through which to channel anything that is not libelous, obscene or defamatory. In that way one has the illusion of power without responsibility.

In this kind of complex and confusing world, you can't tell very much about the why of the news in broadcast where only 3 minutes is available for news. The only man who used to do that was Elmer Davis, and his kind aren't around anymore. If radio news is to be regarded as a commodity, only accepted when salable, and only when packaged to fit the advertising appropriation of a sponsor, then I don't care what you call it—I say it isn't news.

My memory also goes back to the time when the fear of a slight reduction in business did not result in an immediate cutback in bodies in the news and public affairs department at a time when network profits had just reached an all time high. We would all agree, I think, that whether on a station or a network, the stapling machine is a poor substitute for a newsroom typewriter.

One of the minor tragedies of television news and information is that the networks will not even defend their vital interests. When my employer, CBS, through a combination of enterprise and good luck, did an interview with Nikita Khrushchev, the President utered a few ill-chosen, uninformed words on the subject, and the network practically apoligized. This produced a rarity. Many newspapers defended the

CBS right to produce the program and commended it for its initiative. But the other networks remained silent.

Upon occasion, economics and editorial judgement are in conflict. And there is no law which says that dollars will be defeated by duty. Not so long ago the President of the United States delivered a television address to the Nation. He was discoursing on the possibility or probability of war between this Nation and the Soviet Union and Communist China—a reasonably compelling subject. Two networks—CBS and NBC—delayed that broadcast for an hour and 15 minutes. If this decision was dictated by anything other than financial reasons, the networks didn't deign to explain those reasons. That hour and 15 minute delay, by the way, is about twice the time required for an ICBM to travel from the Soviet Union to major targets in the United States. It is difficult to believe that this decision was made by men who love, respect, and understand news.

So far I have been dealing largely with the deficit side of the ledger, and the items could be expanded. But I have said, and believe, that potentially we have in this country a free enterprise system of radio and television which is superior to any other. But to achieve its promise, it must be both free and enterprising. There is no suggestion here that networks or individual stations should operate as philanthropies. But I can find nothing in the Bill of Rights or the Communications Act which says that they must increase their net profit each year, less the Republic collapse. I do not suggest that news or information should be subsidized by foundations or private subscriptions. I am aware that the networks have expended and are expending very considerable sums of money on public affairs programs from which they cannot hope to receive any financial reward.

But we all know that you cannot reach the potential maximum audience in marginal time with a sustaining program. This is so because so many stations on the network—any network—will decline to carry it. Every licensee who applies for a grant to operate in the public interest, convenience and necessity, makes certain promises as to what he will do in terms of program content. Many recipients of licenses have, in blunt language, welshed on those promises. The moneymaking machine blunts their memories. The only remedy for this is closer inspection and punitive action by the FCC. But in the view of many this would come perilously close to supervision of program content.

What, then, is the answer? Do we merely stay in our comfortable nests, concluding that the obligation of these instruments has been discharged when we work at the job of informing the public for a minimum of time? Or do we believe that the preservation of the Republic is a 7-day week, demanding more awareness, better skills, and more perseverance that we have yet contemplated?

I am frightened by the imbalance, the constant striving to reach the largest possible audience for everything; by the absence of a sustained study of the state of the Nation. Heywood Broun once said: "No body politic is healthy until it begins to itch." I would like television to produce some itching pills rather than this endless outpouring of tranquillizers. It can be done. Maybe it won't be, but it could. Let us not shoot the wrong piano player. Do not be deluded into believing that the titular heads of the networks control what appears on their networks. They all have better taste. All are responsible to stockholders, all are honorable men. But they must schedule what they can sell in the public market. And this brings us to the nub of the question.

In one sense it rather revolves around the phrase heard frequently along Madison Avenue: "The Corporate Image." I am not precisely sure what this phrase means, but I would imagine that it reflects a desire on the part of the corporations who pay the advertising bills to have the public imagine, or believe, that they are not merely bodies with no souls, panting in pursuit of elusive dollars. They would like us to believe that they can distinguish between the public good and the private or corporate gain. So the question is this: Are the big corporations, who pay the freight for radio and television programs wise to use that time exclusively for the sale of goods and services?

Is it in their own interest and that of the stockholders so to do?

I refuse to believe that the presidents and chairmen of the boards of these big corporations want their "corporate image" to consist of exclusively a solemn voice in an echo chamber, or a pretty girl opening the door of a refrigerator, or a horse that talks. They want something better, and on occasion some of them have demonstrated it. But most of the men whose legal and moral responsibility it is to spend the stockholders money for advertising, are removed from the realities of the mass media by five, six or a dozen layers of vice presidents, public-relations counsel and advertising agencies. Their business is to sell goods, and the competition is pretty tough.

But this Nation is now in competition with malignant forces of evil who are using every instrument at their command to empty the minds of their subjects, and fill those minds with slogans, determination, and faith in the future. If we go on as we are, we are protecting the mind of the American public from any real contact with the menacing world that squeezes in upon us. We are engaged in a great experiment to discover whether a free public opinion can devise and direct methods of managing the affairs of the Nation. We may fail. But we are handicapping ourselves needlessly.

Let us have a little competition. Not only in selling soap, cigarettes, and automobiles, but in informing a troubled, apprehensive but receptive public. Why should not each of the 20 or 30 big corporations which dominate radio and television decide that they will give up one or two of their regularly scheduled programs each year, turn the time over to the network, and say in effect: "This is a tiny tithe, just a little bit of our profits. On this particluar night we aren't going to try to sell cigarettes or automobiles; this is merely a gesture to indicate our belief in the importance of ideas." The networks should, and I think would, pay for the cost of producing the program. The advertiser, the sponsor, would get name credit, but would have nothing to do with the content of the program. Would this blemish the corporate image? Would the stockholders object? I think not. For if the premise which our pluralistic society rests—which, as I understand it, is that if the people are given sufficient undiluted information, they will then somehow, even after long, sober, second thoughts, reach the right decision—if that premise is wrong then not only the corporate image but the corporations are done for.

It may be that the present system, with no modifications and no experiments, can survive. Perhaps the moneymaking machine has some kind of built-in perpetual motion, but I do not think so. To a very considerable extent the media of mass communications in a given country reflect the political, social, and economic climate in which they flourish. That is the reason ours differ from the British and French, or the Russian and Chinese. We are currently wealthy, fat, comfortable, and complacent. We have currently a built-in allergy to unpleasant or disturbing information. Our mass media reflect this. But unless we get up off our fat surpluses and recognize that television in the main is being used to distract, delude, amuse and insulate us, then television and those who finance it, those who look at it and those who work at it, may see a totally different picture too late.

To those who say: People wouldn't look, they wouldn't be interested, they're too complacent, indifferent and insulated, I can only reply: There is, in one reporter's opinion, considerable evidence against that contention. But even if they are right, what have they got to lose? Because if they are right, and this instrument is good for nothing but to entertain, and insulate, then the tube is flickering now and we soon see that the whole struggle is lost.

This instrument can teach, it can illuminate; yes, and it can even inspire. But it can do so only to the extent that humans are determined to use it to those ends. Otherwise it is merely wires and lights in a box. There is a great and perhaps decisive battle to be fought against ignorance, intolerance and indifference. This weapon of television could be useful.

Stonewall Jackson, who knew something about the use of weapons, is reported to have said: "When war comes, you must draw the sword and throw away the scabbard." The trouble with television is that it is rusting in the scabbard—during a battle for survival.

## Foreign Aid Hurts People

EXTENSION OF REMARKS
OF
## HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
*Thursday, March 5, 1959*

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a timely editorial "Foreign Aid Hurts People," which was recently printed in the Arkansas City Daily Traveler, Arkansas City, Kans.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EDITORIALLY SPEAKING—FOREIGN AID HURTS PEOPLE

The Federal Government's policy of playing rich uncle to foreign nations is beginning to bring squeaks from the big wheel which is the people who see part of their paychecks go for taxes. They are beginning to complain.

For years the wage earner hasn't gotten his hands on all the money he earns. It is taken by the Government, and a good share of it is sent off to other nations. Some nations use it to improve their industries so they can compete with the people who gave the money.

Shortly after World War II this country began pouring money into foreign lands. Any complaints were quickly hushed up. The people were led to believe their money was making lasting friends abroad and communism was being contained in the world.

Once in a while news leaks out that a foreign nation accepts American money, walks hand-in-hand with Russia and looks down on Yankees. This desire to spend abroad isn't a mark of a particular political party. Instead both major parties have been at the helm during the spending spree.

The other day Congressman WINT SMITH of Kansas, said in th last 10 years the U.S. taxpayers have sent $1,375 million to India. Just the other day $350 million went to that nation. But when a gusher oil well came in, India sent to Russia to build refineries. Here is a case where more than a billion dollars went to a nation and when

it got one foot on the ground it leaned toward Russia.

Among the Senators who are interested in foreign affairs and the State Department something is wrong. They criticized Fidel Castro for his wholesale killings of alleged war criminals and Batista's henchmen in Cuba. It is now said that Batista's hands were bloody from similar killings attributed to his leaders and the news was guarded in this country.

In a letter to the folks back home Senator ANDREW SCHOEPPEL called attention to the mail he is getting from home folks. Many citizens want a balanced budget and curtailed foreign spending. Taxes, spending and the farm situation are getting attention from the private citizen.

Senator SCHOEPPEL said an Arkansas Cityan wrote: "I think the small farmer is very much in the dark because he does not know what steps to take to make things better. I think he wants it better and different but doesn't know what to do."

The expression, "but doesn't know what to do," is fitting for everyone. Government is vague on where this country is headed and all the citizen knows is that he is paying the bill.

The fellow with the tax-extracted paycheck as well as the industry that employs him have something to worry about. This spending isn't helping the cause. Here is an example cited by the Ralls, Tex., Banner:

"The Tennessee Valley Authority, a tax-fed power unit supported by the taxpayers of this Nation, has just bought three new 54,000-kilowatt hydroelectric generators at a cost of $2,637,135 of U.S. tax money—from a foreign manufacturer in Baden, Switzerland.

"Three American firms who bid on the generators were by-passed because they paid their workers so well they could not compete with foreign companies who pay their workers very little.

"The lowest American bidder was the Allis-Chalmers Manufacturing Co., of Milwaukee. Allis-Chalmers needed the business. It recently had to lay off 2,300 workers. These workers are among the citizens of Wisconsin who have, during the past 25 years, contributed almost $26 million of their paychecks to support TVA.

"This follows the announced and demonstrated policy of the U.S. Government. That is, simply—to give foreign nations the equipment and technical help to set up factories to compete with American factories; even while American factories pay minimum wages which make it economically sound to buy the cheaper foreign product than the American.

"This policy, and it is a policy of both political parties, can and will destroy American industry in the final analysis, and along with it the entire economic system of this country. And without American industry and without the American economic system, there can be no such thing as American freedom and independence."

## Oregon State College Professor Wins National Book Award in Fiction for 1958

EXTENSION OF REMARKS
OF
### HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Thursday, March 5, 1959*

Mr. NEUBERGER. Mr. President, I am sure that many people in the State of Oregon, particularly those in literary pursuits, are extremely proud of the fact that Prof. Bernard Malamud, of Oregon State College, has received the National Book Award in fiction writing for 1958. The award stems from a collection of short stories written by Professor Malamud under the title of "The Magic Barrel."

There is a tendency in our country to think that all literary achievement centers either on Manhattan Island or in Hollywood. I think it is significant that all three major winners of the National Book Awards for 1958 are from the Pacific Coast, with Professor Malamud of Oregon State College among these. Other distinguished winners are from Stanford University at Palo Alto, Calif., and from the University of Seattle in Seattle, Wash. Oregon State College is located in the city of Corvallis, Oreg.

Further details about Professor Malamud's award are contained in an excellent article in the Washington Post and Times Herald for March 4, 1959, entitled "Award Author Got Post Start." I ask unanimous consent, Mr. President, that this dispatch by Glendy Culligan, book editor of the Washington Post, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AWARD AUTHOR GOT POST START

(By Glendy Culligan)

NEW YORK, March 3.—A former Government worker who did his first writing as a freelance columnist for the Washington Post today won one of the Nation's top literary awards.

Bernard Malamud received the National Book Award in fiction for his collection of compassionate and profound short stories, "The Magic Barrel." He shared honors with J. Christopher Herold, whose witty biography of Mme. de Stael, "Mistress to an Age," was named nonfiction winner, and with Theodore Roethke, poetry winner for his lyrics "Words for the Wind."

Now a college teacher, Malamud came to Washington from his native New York in 1939, worked as a clerk with the Census Bureau for a year, and experimented with the writing which has since won national acclaim. He contributed a dozen sketches of Washington life to the "Post-Impressionist" column, which was then a feature of the Post. Later he wrote two novels, "The Natural" and "The Assistant," as well as his winning stories.

EACH GETS $1,000

Like his fellow winners, Malamud received $1,000 and a scroll from the American book industry which sponsors the awards. Roethke, who is ill, accepted his prize by proxy.

All three of today's winners came from the west coast. Herold is editor of the Stanford University Press, Malamud teaches English at Oregon State College, and Roethke does the same at the University of Seattle.

Ranking author among more than 100 writers at the awards reception was Adlai Stevenson, whose book about Russia, "Friends and Enemies," will be published this month. Traffic was heavy at his end of the ballroom as guests stood in line to shake his hand.

Although all of this year's prizes went to representatives of the humanities, science had its inning on the program with the appearance of atomic physicist Arthur Holly Compton, who delivered the ceremonial address.

Compton called for an end of the military chain reaction which has grown out of the nuclear chain reaction he helped develop. He urged the assembled writers, publishers, and all others who influence public opinion to commit themselves to a new American dream, not a dream of motor cars and high wages, but of a better social order.

Scientists, he said, have learned to believe in miracles, but the miracle needed today must take place not in the realm of physics, but in the hearts and minds of men.

WASHINGTONIANS MISSING

Among the missing today were two Washington area eminences who played important roles in preaward speculation. J. R. Salamanca, of Washington Grove, Md., was a candidate for the top fiction award on the basis of his widely praised first novel, "The Lost Country." Huntington Cairns, secretary-treasurer of the National Gallery, who served on the nonfiction jury, was prevented from joining the judges on the platform by gallery business elsewhere.

Malamud's prize-winning fiction also nosed out the controversial novel "Lolita." This is the first time in the award's 10-year history that a volume of short stories has won. When the stories were published last May, the Washington Post commented: "Sad, tender, and funny as all life, they endow even the lowliest tenement dweller on New York's East Side with the essential dignity of manhood."

When Herold's prize-winning biography appeared in October, the Post called it a brilliant account of a brilliant, almost incredible personality.

## Farmington High Demonstrates Policy of George Washington

EXTENSION OF REMARKS
OF
### HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
*Thursday, March 5, 1959*

Mr. BUSH. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD an article from the Farmington Valley Herald, a Connecticut paper, bearing the headline, "Farmington High Demonstrates Policy of George Washington," which was published in this Connecticut newspaper on February 26, 1959. It is a very interesting story of honesty. I am sure readers of the RECORD will enjoy seeing it in the Appendix of the RECORD.

I also ask that there be printed with it a guest editorial contributed by Louis E. Ball, Jr., editor of the Farmington Valley Herald.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Farmington Valley Herald, Feb. 26, 1959]

FARMINGTON HIGH DEMONSTRATES POLICY OF GEORGE WASHINGTON

(By Harriette Calver)

FARMINGTON.—Farmington High School demonstrated to the National Freedoms Foundation last Monday morning that George Washington did leave a rich heritage of principle, which found expression on the holiday commemorating his anniversary. By refus-

ing an award that had been made by the directors of the Freedoms Foundation, the school and particularly the school newspaper, the Fairview Beacon, gave a concrete expression of Washington's long-held belief that "Honesty is the best policy."

Superintendent of Schools Robert E. Saunders had been notified Monday that the Freedoms Foundation was awarding Farmington High School's newspaper a George Washington honor medal and a prize of $100 for an editorial carried in the paper's annual brotherhood issue. Mr. Saunders said that accepting the award would be unethical, since the award was based on an article contributed by an adult, and not by a student, as required by the rules of the foundation.

"I assume that the judges in making the selection figured that it was written by a student, overlooking the credit line. To accept the award would be unethical, and I notified the foundation that because of this, we cannot accept it." He explained further that the paper had obtained statements and comments from a number of town officials and others on brotherhood for inclusion in the issue, and that the editorial noted by the foundation was actually a guest editorial written by the editor of the Farmington Valley Herald, Louis Ball.

Foundation Vice Chairman Felix Stump, in withdrawing the award, expressed appreciation for the forthright honesty of the school and its officials, and said that he hoped the foundation would get another nomination from the school next year.

BROTHERHOOD 1958

(By Louis E. Ball, Jr.)

Not long ago, a sociologist made the statement that the major social problem of the 19th century was the achievement of equality, while the major social problem of the 20th century is the retention of individuality. Historically, there can be little argument with the first premise. The second premise contains perhaps the greatest challenge that any of us will live to see.

You have but to stop a moment and consider life in the year 1958. Mass communications, limitless travel, and a universality of teaching have combined to give us what we like to call the highest standard of living ever known in the history of the world. Concurrently, it appears that each of us is caught in the crunching mesh of conformity. We must all look alike, talk alike, dress alike—yes, even think alike. Those who do not conform to the mode become outcasts, or worse. Yet, few of us are aware that the ultimate in conformity is communism. Sold under the false label of "peace, equality and brotherhood," it poses a grave threat to freedom and liberty, not only in Europe and Asia, but in our own America as well.

Experience has shown us the only effective means to halt its insidious growth is through brotherhood. Therein lies the greatest challenge that any of us will live to see, for true brotherhood is the recognition of individuality. Individual dignity, individual freedom, indivdual ability, and individual responsibility are the four cornerstones of true brotherhood. Further, all freedom and liberty hang from these tenets.

Every totalitarian form, every instance of tyranny, and every mass injustice has required denial or deprivation of true brotherhood. Conversely, the traditional home of freedom was born with the demand for individuality in its manifold forms, and will continue to exist only through preservation of brotherhood, according to its true definition.

Many years ago, when America was founded, it was relatively easier to practice brotherhood, and manifestly easier to preach that doctrine than to exemplify its principles. Today, in 1958, the very future of the United States—yes, even that of the world itself—lies in your very hands. The future will be decided on the degree of understanding of individual freedom, dignity, ability, and responsibility, and on the extent of our adherence to them in our daily lives.

The Fairview Beacon can review the past with pride. It can look about itself in the present with confidence. It must look into the future with resolve, as all of us must.

## Medical Insurance for Older Citizens Over 65

EXTENSION OF REMARKS

OF

### HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

*Thursday, March 5, 1959*

Mr. JAVITS. Mr. President, 1 out of every 12 of our citizens is over 65 years of age. Their problems regarding adequate medical care are multiplying. Not only are the afflictions that beset the individual more prevalent with advancing years, it becomes increasingly difficult for the older citizen to obtain health insurance so he will be able to obtain the medical care he needs which is too often beyond his financial means. There have recently been announced interesting health-insurance plans for those over 65 which could well serve as an innovation and precedent. I append hereto a descriptive article from the New York Times which details these proposals:

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "New Plan Insures Persons Over 65," published in the New York Times of February 2, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW PLAN INSURES PERSONS OVER 65—CONTINENTAL CASUALTY COVERS HOSPITAL, SURGICAL COSTS WITHOUT EXAMINATION

(By James J. Nagle)

A novel insurance plan that pays hospital and surgical bills for persons over 65 years is attracting attention.

It is the Continental Casualty Co.'s 65-plus health insurance policy, which for the last 2½ weeks has been extensively promoted in New York and seven other States and the District of Columbia. The offer in these areas expires at midnight tomorrow.

In Iowa, Illinois, Wisconsin, Indiana, and California, where the plan had previously been offered, about 150,000 policies were sold. About 40 of the policyholders are 100 years old or more. Many are in their 80's and 90's.

NO CHECKUP REQUIRED

A new feature of the policy is that applicants do not take a physical examination. Coverage of new sickness and accidents begins on the final date of the offer. A condition for which the applicant has had previous medical treatment or advice is covered only after the policy is 6 months old, however.

The cost is relatively small, $6.50 a month, for benefits that range up to a maximum of $610 for each stay in a hospital. A policyholder can drop out of the plan at any time. But the company cannot cancel the policy of an individual unless it cancels all of its policies held in the policyholder's State.

Injuries or illnesses caused by war or covered by workmen's compensation or occupational disease law are not covered by the policy. Nor is confinement in veterans' hospitals and Government mental and tuberculosis hospitals.

Technically, the plan is not group insurance, but, in effect, it is. Under it, everybody signs at the same time and no one policy can be changed unless all of the policies in the State are changed.

How can the company afford to offer the plan? Continental has found that it costs less to issue the same policy in large volume with an I.B.M. 705 electronic machine. Thus, when it decides to enter an area, it sets a time limit on the length of the offer—2½ or 3 weeks. At the end of that time it processes all policies at once.

The plan is an outgrowth of an earlier hospitalization and surgical policy for retired schoolteachers in New York, according to Roy Tuchbreiter, president of Continental. In June of 1955, the company provided health insurance for 3,000 to 4,000 members of the New York State Retired Teachers Association.

This proved successful and led to a similar policy for 9,000 to 10,000 members of the National Retired Teachers Association in July 1956. But even then, the economic feasibility of health insurance for persons of retirement age had not been conclusively proved.

However, a year later, more than 30,000 members of the National Association of Retired Civil Employees came in under the same type of policy. After this Continental felt it had enough experience to promote health insurance for senior citizens in the public market.

In September 1957, the company offered a new policy based on what it had learned from its experience with the teachers and civil service employees. The first offer was made in Iowa through coupons in full page newspaper advertisements and through radio and television promotions. The enrollment period was 3 weeks. This proved so successful that it was decided to extend the offer to Illinois, Wisconsin, and Indiana. Thus, in addition to returning to Iowa for another short-term enrollment in the fall of 1958, the policy was introduced in the three other States.

On December 23, 1958, it was introduced in California and this month in this area.

Meanwhile, competition has appeared. The Fireman's Fund Insurance Co. and Mutual of Omaha are offering similar policies.

## The Origins of Shipbuilding

EXTENSION OF REMARKS

OF

### HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

*Thursday, March 5, 1959*

Mr. BUTLER. Mr. President, shipbuilding as a profession in the United States had its origins on the shores of the Chesapeake Bay, and for Maryland's role in the development of this industry, so important to our national security and economic stability, I invite the attention of my colleague, to a very enlightening article which was published in the Baltimore, Md., American on Sunday, March 1, 1959, under the heading of "Chesapeake Vessels of Today Are Far Cry From Yesteryear."

Mr. President, I ask unanimous consent that this excellent historical ac-

count of shipbuilding in the Chesapeake Bay area be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHESAPEAKE VESSELS OF TODAY ARE FAR CRY FROM YESTERYEAR

Baltimore's own inland sea, the Chesapeake Bay, has changed little in the 3½ centuries since English settlers first sailed in from the Atlantic. The same summer calms and winter chop alter its brown surface with the moving seasons, and seafood teems over its shallow, silty bottom.

But the vessels that ply the waters of the bay have changed. Pleasure craft and commercial carriers of 1959 would bewilder a turn-of-the-century fisherman. And the parade of unique watercraft developed here that brought growth and prestige to this port have vanished like bay ice in a thaw.

American shipbuilding as a profession had its origin on the shores of the Chesapeake. For over 150 years the bay carried more cargoes than the rest of the colonies combined. And since land travel around the perimeter was difficult due to the irregular shoreline, boats were a mainstay of existence.

The first craft built by the colonists was reportedly a barge brought disassembled from England. But the boating industry got off to a slow start. Oddly enough, most of the early shipwrights and carpenters seem to have died or returned home, and by the mid-1620's the Jamestown area had less than 50 boats. Tobacco was, however, the main crop, and since Europe was more than ready to supply vessels for shipment, there was little need for the construction of large ships locally.

Maryland's first shipyard was started on Kent Island in 1634 by William Paine, who turned out pinnaces and shallops for bay trading. Other yards sprang up, but by the end of the century small craft still predominated, even though a few vessels as large as 450 tons were built.

For the first 100 years of colony life, sailing vessel design remained static. But in the early 18th century the schooner became popular, both for bay and ocean, and ships began taking on a new look. Sail area increased lines became finer and longer, and topheavy, boxy shapes disappeared.

Ultimate development of this trend was the famous *Baltimore Clipper* of the middle 19th century, which raced down the tradewinds of the world, often sacrificing cargo space for speed, but building a legend of performance that can still evoke excitement and nostalgia.

By the 1850's orders were pouring in to such noted bay shipbuilders as Kennard & Williamson and Abrahams & Ashcraft, partly because Baltimore labor was cheaper than in the North, but also because the bay country was rich in the best white oak and pine for timbers. In 1828 the first drydock was built, and ships no longer had to be beached and rolled (careened) for bottom repairs. Chesapeake shipbuilding was a going concern.

The distinctive canoe-type bay boats evolved from Indian dugouts, and probably the best of the lot was the bugeye, which reached lengths up to 85 feet and was used for dredging oyster beds. Other memorable types once commonplace on the Chesapeake were the ram, brogan, pungy, clump, and scow. Last type of sailing vessel to be developed on the bay was the skipjack. Up to 60 feet long, it derived from the V-bottom skiff and is the only bay craft of any size to be built since World War I.

When metal construction entered the picture, many smaller boat companies went under from lack of capital, and most of the trademarks by which bay boats were identifiable slowly disappeared. The last large square rigger built here was the *Baltimore* (1889), but a four-masted schooner, the *Anandale*, was launched as late as 1919.

Pleasure boats, which today crisscross the byways of the bay with the prevalence of mosquitoes, had their origin in the slave-rowed barges of plantation owners in the late 1600's. By 1760 there were organized regattas and as early as 1824 the Baltimore American carried an ad about pleasure craft for hire. First yacht club was the Chesapeake Bay Yacht Club of Easton, established in 1885.

Motorboats put in an appearance about 1905 and were little more than stripped-down sailing canoes. The so-called Hooper's Island boat was a V-bottom type popular on the bay, but it was eventually replaced by the modern cabin cruiser.

Even now some of the oldtimers can still be seen about, but shipbuilding emphasis is on the small, comfortable family fun boat. And gone for good or bad are the days when you could tell a bay craft anywhere by the cut of her jib.

## Retirement of Frank E. Newton

EXTENSION OF REMARKS
OF
**HON. THOMAS J. DODD**
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
*Thursday, March 5, 1959*

Mr. DODD. Mr. President, every newspaper has its unsung heroes, men behind the scenes whose names the readers never hear.

In Connecticut, on the Hartford Times, we have a typical example of such a man, Frank Newton, who has just retired from his job after 66 years as a member of the newspaper's stereo department.

Frank Newton's job lacked the glamour and adventure that is found in the news department of a newspaper, but his devotion to his work was never lessened by this fact.

The truly creditable life which he has led symbolizes the group of men behind the scenes who day in and day out carry on tremendously important functions without receiving public acknowledgment.

At the age of 82, Frank Newton is retiring. The contribution which he has made to the American way of life is one which should not go by unnoticed.

Therefore, Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article about Frank Newton which was published in the February 27 edition of the Hartford Times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ENDING 66-YEAR RECORD SERVICE WITH TIMES—NEWTON PROVED STURDY

Frank E. Newton retired today after 66 years with the Times. His is the longest record of employment.

He came to the Times in September 1893 when he was 17 and was hired because he looked sturdy enough to stand it.

"I guess I was," Mr. Newton said today. "I am the only one left who was working at the Times then."

So, Mr. Newton's retirement, in effect, marks the end of an era—an era that began when there were no automobiles and horse-cars were the principal means of transportation in Hartford. It was an era when much of the land west of Broad Street was used for farming.

Born in Portsmouth, Va., in 1876, Mr. Newton came to Hartford with his parents when he was 4. His father owned a farm and had a florist business around what is now Newton Street.

The building of Capitol Avenue cut the Newton farm in two and reduced the farm operation, too. Young Frank Newton, just 17, applied for an apprentice job in the Times stereo department. The paper was located on Main Street then and there were three men in the department. Now, the department has 14 men. Mr. Newton was assistant foreman.

Mr. Newton has been eligible for retirement for several years but he has continued because he liked his job and felt like working. He is retiring today, he says, because he guesses it is about time and because his wife wants him to.

"We're not going to Africa or anything," Mr. Newton explains. "But I'll do some gardening and we'll take short trips here and there." He raises flowers mostly these days because it doesn't pay to raise vegetables.

His marriage 58 years ago to the former Annie M. Spears, of Hartford, Mr. Newton still counts as his lucky day. He attributes his good health and ability to work so long mostly to the good care and help of his wife.

They have two sons, Leslie and Frank, Jr., both of whom came to the Times, too. Leslie still is a compositor, but Frank, Jr., is employed by the Government Printing Office in Washington, D. C. David Newton, a grandson, is an apprentice in the composing room but presently is doing a stint in the Army. There is a daughter, Mrs. James Thompson, six grandchildren, and a great grandchild.

Mr. Newton was vice president of local 27 of the Stereotypers Union for 11 years and its secretary-treasurer for 20. He resigned the last post in October.

A long-time member of Hartford Masonic Lodge 88, he was its master and was also deputy grand master of the Sixth Masonic District. He is a founder and past master of Philosophic Lodge of Research and holds the Pierpont Edwards Medal for distinguished service to Masonry. He is a life member of the Masters and Wardens Association of Hartford County and of the Masonic Charity Foundation in Wallingford.

He has been a member of West Hartford Baptist Church ever since he and his family moved in 1928 from the old farm on Newton Street to 15 Clifton Avenue, West Hartford. For years he was moderator of the church and is now one of its two lifetime honorary deacons.

At 82, does Mr. Newton have any good advice for young men just starting out? "No," was his answer, "nobody wants it."

Perhaps he is too modest. A coworker, now retired, who heard Mr. Newton was leaving, voiced an opinion that is pretty general throughout the Times:

"He's a good man. They don't make them any better than Frank."

## Arkansas' Experiment Station Provides Research Facilities

EXTENSION OF REMARKS
OF
**HON. J. W. FULBRIGHT**
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
*Thursday, March 5, 1959*

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed

in the Appendix of the RECORD an interesting article from the current issue of the Progressive Farmer entitled "A Helping Hand: Arkansas' Experiment Station."

This article points out some of the many contributions to the farmers of my State made by the university's experiment stations. As an example, cotton yields in Arkansas are now more than 147 pounds of lint per acre over the 1938–47 average. All of the farmers in Arkansas owe a debt of gratitude to the dedicated personnel at the experiment stations, and I am pleased that the organization's work has been recognized in a national agricultural magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A HELPING HAND: ARKANSAS' EXPERIMENT STATION

(By J. Clayton Herman)

Across the State of Arkansas, farmers are setting new records. Yields per unit are rapidly increasing. Today's cotton yields are up 147 pounds of lint per acre over the 1938–47 average. Soybean yields have skyrocketed to 23.5 bushels per acre. Corn yields have almost doubled during the same period. We are experiencing similar strides in output per animal unit. Broiler growers are now marketing 3-pound birds that have eaten less than 7½ pounds of feed. And 4½- and 5-month-old pigs walk on the scales to tip it at 200 pounds.

Many of these gains can be attributed to agricultural research. Underway at the University of Arkansas' main experiment station and branch stations are 203 projects. A quick look at some of the projects points to further strides in the future.

COTTON

Rex cotton, devloped through cooperative research between the Arkansas station and the USDA, blanketed 50,000 acres in Arkansas last year. This set a record for use of a new cotton variety the first year after its release for commercial production.

Its virtues are early maturity, high yield potential, a good staple length and gin turnout, and a resistance to storm loss and certain diseases. Rex matures 10 days to 2 weeks ahead of full-season varieties. An earlier harvest season is possible on acreages planted to this new cotton. Thus harvest can be completed ahead of the inclement weather.

PREGINNING STORAGE

Annually, thousands of man-hours are lost while trailers and wagons wait their turn at gins. Can cotton be stored before it is ginned, and thus lengthen the ginning season? Arkansas researchers are now studying storing methods and their effect on lint and seed quality. Some lots of cotton are dried and cleaned before being subjected to the storage studies.

BUILT-IN RESISTANCE

In the laboratory and fields, Arkansas researchers are trying out chemicals and rotations and seeking new varieties that will reduce the annual losses caused by plant diseases. Soil- and seed- or plant-borne diseases attack field crops, fruits, and vegetables. They reduce yields and often require the shifting of production to new acreages or areas.

HOGS

Long before the term "meat-type hog" became popular, researchers at Arkansas' experiment station were developing inbred lines and doing crossbreeding. Big litters and fast-gaining pigs were the goals. These breeding projects have resulted in crosbreds which, when fed today's balanced rations, tip the scales at 200 pounds when 4 months of age.

BEEF

As part of its livestock program, the Arkansas station pioneered in performance testing of beef cattle. Bulls fed standard rations are checked for rates of gain and feed per pound of gain. These characteristics, the researchers say, are inheritable traits. During one recent test, a station-bred bull changed 537 pounds of feed into 100 pounds of beef.

BROILERS

Arkansas ranks second in broiler production. Only Georgia produces more broilers than Arkansas. Arkansas animal nutritionists are constantly checking rations and feed additives. Growers are now getting from 38 to 42 pounds of broiler from 100 pounds of feed. This is a feed saving of 13 cents per bird over a few years ago, when 9 pounds of feed were required to produce a 3-pound bird. Pelleting deserves some credit for this feed saving. Arkansas tests indicate pelleted rations increase growth rate by 7 percent and feed utilization by 5 percent over mash.

POULTRY DISEASE

While some staff members are checking sick chickens, others are mixing and feeding medicated rations to infected lots of chickens. These workers are looking for more effective ways to prevent and control costly disease losses. The use of chemicals to extend the effectiveness of certain antibiotics promises to give growers their first effective weapon against respiratory diseases.

DAIRY

Research in dairy nutrition emphasizes the full use of Arkansas-grown roughages. Digestion and feeding trials are pointing the way to greater profits from dairy herds.

Reguar calving intervals is the key to a uniform monthly production. The causes of reproductive failure are being studied. A new method of diluting semen has been developed and is now being used by the Arkansas Breeders Association. Its use gives dairymen a wider selection of sires and a stepped-up breeding efficiency in herds.

FOOD FOR PEOPLE

People afflicted with heart disease may someday benefit from research based on the theory that linoleic acid (a fatty acid in plant fats) might aid in reducing incidence of heart disease. This project, which is under contract with USDA, will disclose effects of linoleic acid on blood fat level.

Research on methods of handling and processing fruits and vegetables promises results that will benefit consumers, producers, and processors.

Scanning these projects gives you only a glimpse of the new wealth that results from agricultural research, if put to use on farms. Other examples are almost endless. The astounding return dwarfs the investment in research. The bumper harvest of dividends is too large for accurate measure.

## The Federal Airport Bill: A Doubtful Program

EXTENSION OF REMARKS

OF

### HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

*Thursday, March 5, 1959*

Mr. BUTLER. Mr. President, the eternally rising cost of government and the malignancy of inflation are matters to which the administration and the Congress are giving precise attention, and properly so. I therefore believe that my colleagues will be very much interested in an editorial entitled, "Let's Cut Here" published in the Baltimore Sun on February 24, 1959, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S CUT HERE

The spenders were on top when the Senate passed its Federal-aid airport bill. Its measure calls for a 4-year program with grants to the sum of $465 million. The House Interstate and Foreign Commerce Committee has done a little better. Under its proposal, aid to local governments would not exceed $365 million. But even this figure is far above the Eisenhower recommendation for a grand total of no more than $200 million and this with an accompanying provision for an end of this kind of spending.

From where the heavily burdened taxpayers sit, the only promising thing in the whole squabble is the idea of terminating this giveaway program. And this promise would be sweeter still if Congress should move to junk the program right here and now.

There is no reason why the Federal Government should be pouring millions into local airport projects. Take the case of our own Friendship International. It cost $14.7 million. The Federal Government chipped in $2.6 million. The other $12.1 million was raised through city bond issues. Can anyone in his right mind believe that if the Federal Government had not chipped in, the airport would not have been built?

We wanted an airport and we wanted a good one. This we have—one of the best in the country. And we would have built and could have built Friendship without Federal assistance. Other communities have funds to do likewise—that is, if they have the determination and the desire. If Congress wants to save money and ease the tax burden, there would be no better way to start than through the elimination of the airport giveaway program.

## Resolution of North Dakota Young Republicans Memorializing Congress To Adopt the Budget Policies of President Eisenhower and His Administration

EXTENSION OF REMARKS

OF

### HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

*Thursday, March 5, 1959*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the North Dakota Young Republicans, at their annual convention.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

A RESOLUTION MEMORIALIZING CONGRESS TO ADOPT THE BUDGET POLICIES OF PRESIDENT EISENHOWER AND HIS ADMINISTRATION

Whereas the Young Republicans of the State of North Dakota are concerned with the increasingly great Federal expenditure; and

Whereas President Eisenhower and his Republican administration have proposed a

budget which will economically curtail excessive Government expenditures without loss of benefit to the people of the United States; and

Whereas that budget is now being opposed by the Democrat majority of Congress: Now, therefore, be it

*Resolved by this convention here assembled,* That the Congress of the United States be memorialized to adopt the budget policies of President Eisenhower and his administration.

DAVE NETHING,
*Chairman, North Dakota Young Republicans.*

PHIL SCHAEFFER,
*Secretary, North Dakota Young Republicans.*

NORMA DALTON,
*Secretary of the 1959 State Convention, North Dakota Young Republicans.*

## Salute to United States Constitution on Its 170th Birthday

EXTENSION OF REMARKS
OF
## HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
*Thursday, March 5, 1959*

Mr. WILEY. Mr. President, 170 years ago, on March 4, 1789, the Constitution of the United States formally went into effect—after ratification by the requisite two-third of the Colonies.

During the intervening years, the Constitution—written by the practical and idealistic pens of our forefathers—has been subjected to the trials, to forces that would change or modify the structure, to the tests of time and experience.

All in all, we can be deeply grateful for the vision with which our forefathers wrote a Constitution for the country they loved—as we love it.

In its brief lifetime, the Constitution has been a sound foundation upon which we have been able to deal successfully with internal, economic, social, political, spiritual, and other problems. At the same time, the Constitution has provided the framework of freedom within which a free people could withstand threats to our sovereignty by outside powers.

The scope of forethought given by the creators of the Constitution to the future of this Nation has enabled us to deal effectively with these challenges.

Since its ratification, there have been only 22 amendments to this fundamentally sound Constitution during the 17 decades. Over this span of years there have been tremendous changes in this Nation. These include:

Expansion of 13 Colonies on the eastern seabord into a coast-to-coast Nation. Now it reaches up to the Arctic Circle with Alaska as a State, and probably before long, it will reach out into the Pacific Ocean to include Hawaii as a 50th star in our American flag.

The population has increased from 3 million to about 175 million.

The modes of transportation have changed from slow horseback and stagecoach to present-day jet, supersonic travel and to a Nation looking forward to outer space travel.

In almost every field—communication, agriculture, industry, culture, and others—these have been revolutionary changes.

Indeed, the world has changed as a place in which to live, work, and explore for new discoveries and frontiers.

The establishment of three coequal branches of government—legislative, executive, and judicial—of course, has remained one of the major safeguards of sound government.

At times, there have been circumstances which threatened this balance of power. However—and for this we can be eternally grateful—the ship of state has sailed forward to serve the Nation in the battles of this these past 170 years—as I believe it will continue to serve us in the future.

The March 4 edition of the Wall Street Journal carried an excellent article entitled, "Rugged Constitution," by William Henry Chamberlain, touching briefly upon the ways in which the Constitution—as America's political blueprint—has preserved the structural balance of a free government.

I request unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RUGGED CONSTITUTION—AMERICA'S POLITICAL BLUEPRINT, TODAY JUST 170 YEARS OLD, HAS ENDURED BY PRESERVING THE STRUCTURAL BALANCE

(By William Henry Chamberlain)

Just 170 years ago, on March 4, 1789, the Constitution of the United States formally went into effect, ratified by the requisite two-thirds of the Colonies after long and sometimes bitter debate.

Two months later, on April 30, George Washington was inaugurated as the first President of the new Republic. The ensuing 17 decades have seen the 3 million Americans of colonial days, inhabiting the eastern Atlantic fringe of the country, swell to 175 million, filling up a land that stretches from the Atlantic to the Pacific.

This period has also witnessed a tremendous revolution in the daily lives and working habits of the American people. Agriculture has given way to industry as the main source of livelihood. Transportation has advanced from the stagecoach to the jetplane with a new speed record set almost every year and travel into outer space now regarded seriously. The shrinking in time required for communication makes immediate headlines for events in foreign capitals which would have required weeks or months for transmission.

TEST OF TIME

But the Constitution has stood the test of time and sweeping economic and social change. It has remained the anchor of American political institutions and the shield of American liberties.

And it has measured up to the high test set by John Adams, one of its architects and one of its most learned and eloquent expounders: "The institutions now made in America will not wholly wear out for thousands of years. It is of the last importance, then, that they should begin right. If they set out wrong, they will never be able to return, unless it be by accident, to the right path."

The American Republic, in the inspired phrase of Abraham Lincoln, was conceived in liberty. This was the watchword of the patriot insurgents, sometimes ragged and hungry and ill-paid, often defeated but never crushed, who finally wore down the British determination to put down what was regarded as a colonial rebellion. The men who framed the Constitution knew that liberty is a tender plant which requires careful nurture and ample safeguards.

As Alexander Hamilton made clear in the first of the famous Federalist Papers, which set forth the political philosophy of the Constitution: "Of those men who have overturned the liberties of republics, the greatest number have begun their career by paying obsequious court to the people, commencing demagogs and ending tyrants."

And James Madison, another influential shaper of the Constitution, made a similar point in Number 47 of the Federalist Papers: "The accumulation of all powers, legislative, executive and judiciary, in the same hands, whether of one, a few or many, and whether hereditary, self-appointed or elective, may justly be pronounced the very definition of tyranny."

This definition of tyranny would admirably fit any contemporary dictatorship. The catch phrase "people's democracy" was not unknown in 1789; but the Founding Fathers, one may be sure, would have had none of it. For they were deeply convinced, both as scholars and as men of action, that even the best of men cannot safely be trusted with too much power over their fellows. John Adams summed up this conviction in an admirable epigram: "Power is always abused when unlimited and unbalanced."

Hence the delicate balance in the political provisions of the Constitution. So far as human wisdom could foresee dangers and provide safeguards, the individual was assured against oppression by the central government; the States were left in possession of all the functions which are not clearly the proper concern of the central Government. And the powers and limitations of the three coequal branches of the Government are so defined and delimited as to preclude the possibility that one of the three can become allpowerful and reduce the others to nullity.

The ultimate test of a written constitution is workability and the United States Constitution has worked so effectively that it stands extremely high in the esteem of the American people. Of course, the framers of the Constitution could not foresee all contingencies. The Constitution is silent on slavery, an accepted institution in the southern colonies. And it neither affirms nor denies the right of one or more States to secede. These two intertwined issues came to a devisive head a century ago and rent the country in what was fortunately its only great fratricidal schism.

There have been times when one or the other of the coequal branches tended to exceed its powers. Executive acts, especially in time of war or threatened war, have stretched the unspecified powers of the President, as Commander in Chief, to the limit. In the period after Lincoln's death it was Congress that threatened to substitute a party oligarchy for proper constitutional government. It is the judicial branch which has incurred most criticism in recent years. The American Bar Association has recently pronounced severe condemnation of Supreme Court rulings regarding Communists in this country. And predominant feeling in the South is certainly that the Court overstepped its proper bounds in denying the right of southern State legislatures to maintain the previous system of separate schools.

However, public opinion usually rights an unbalance in the distribution of powers. And there is one good reason why the Constitution has stood up well under the test of time and changing folkways.

BASIC FREEDOMS

This is that the Founding Fathers were too wise to go in for promises to make everyone healthy, wealthy and wise. The Constitution assures the citizen against State interference with his natural rights to worship as he sees fit, to express his ideas in print and by word of mouth, and to a fair, independent system of justice. Beyond these assurances, the individual is left pretty much to his own exertions, even though the general welfare clause in the Preamble to the Constitution has been stretched to extreme length in modern times. This may seem a negative conception of government to some who like to think of themselves as advanced liberals. But it has served Americans well and has helped to make the United States a magnet for immigrants from many parts of the world.

The Nation's second 170 years can be as happy as the first 170 if it continues to be guided by the principles of the Constitution.

## The U.S. Committee for the Atlantic Congress

EXTENSION OF REMARKS
OF
## HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
*Thursday, March 5, 1959*

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an announcement which has just been made of the formation of the U.S. Committee for the Atlantic Congress. A group of distinguished Americans will be under the honorary chairmanship of Lewis W. Douglas, former Ambassador to Great Britain.

The Atlantic Congress will be opened in London on June 5 by Queen Elizabeth. It is expected that all of the NATO countries will participate in the discussions.

There being no objection, the news release was ordered to be printed in the RECORD, as follows:

THE ATLANTIC CONGRESS, JUNE 5–9, 1959

The formation of the U.S. Committee for the Atlantic Congress was announced today by Lewis W. Douglas, former Ambassador to the Court of St. James and now an Arizona and New York banker. Mr. Douglas is honorary chairman of the committee.

The congress will be opened in London, June 5, by Queen Elizabeth. It will continue for 5 days, and will be participated in by all the NATO countries. President Eisenhower and the heads of the other NATO nations will be patrons of the Congress.

One of the jobs of the U.S. Committee is the selection of 130 Americans from all over the country—to attend the congress as members of the U.S. delegation.

"There has never been anything exactly like this before," said Mr. Douglas. "It is not, however, unlike the Hague Congress of 1948, in which 800 leading citizens of a group of European countries met and made plans which resulted directly in the 17-nation Council of Europe and indirectly toward the Coal and Steel, Atomic Energy, and Economic Communities subsequently established by six European nations.

"Altogether there will be 650 delegates at the Atlantic Congress, including the 130 from the United States.

"Among the speakers and delegates will be the outstanding leaders of the Western World. But, more importantly, its delegations will represent a cross-section of the people of the Western World. Citizens drawn from civil life and a few Members of the Houses of our Congress will make up our delegation. The delegations from Great Britain, France, Canada, Western Germany, Luxembourg, and all the other members of the North Atlantic Alliance will be selected from similar groups within their countries.

"This will be one of the rare occasions when people who are not committed to an official policy, because of official positions, will have an opportunity to express their ideas and say their say about the steps we should take in the future in the confident hope of preventing future wars.

"The North Atlantic Treaty was the most striking novelty of the last century in international affairs. Now on its 10th anniversary, it is important that we should reexamine the work that NATO has done and attempt to define what it should do in the future."

In addition to Mr. Douglas, officers of the U.S. committee are:

Eric Johnston, president of the Motion Picture Association of America, general chairman.

Senator ESTES KEFAUVER (Democrat of Tennessee), Senator JACOB K. JAVITS (Republican of New York), and Representative WAYNE HAYS (Democrat of Ohio), cochairmen.

Adolph Schmidt, vice president of T. Mellon & Sons, treasurer.

Charles S. Rhyne, past president of the American Bar Association, general council.

Richard Wallace, formerly administrative assistant to Senator KEFAUVER, executive director.

A list of the 34-member board of directors is attached.

The Atlantic Congress was launched with the unanimous passage of a resolution by the NATO Parliamentarians' Conference, an organization composed of legislative delegates from all the NATO countries, at its third annual conference in Paris in November 1957. It will be held under the sponsorship of the NATO parliamentarians.

The purpose of the Atlantic Congress, as set forth in the report of the Political Committee of the Fourth Annual NATO Parliamentarians' Conference, held in Paris last November, is:

"To bring together the ablest and most distinguished citizens representative of the principal aspects of national life in the NATO countries to consider ways and means of further developing cooperation, particularly in economic and political affairs, between the North American and European member countries of NATO and between those countries and the underdeveloped countries outside the area of the North Atlantic Treaty."

The three cochairman—Senator KEFAUVER, Senator JAVITS, and Representative HAYS—said:

"We three—all members of the NATO Parliamentarians' Conference—firmly believe that the United States can make a positive contribution to peace and freedom by a strong affirmative participation in the Atlantic Congress.

"As Mr. Douglas has said, the only precedent for the Atlantic Congress is the Hague Congress of 1948 which was sparked by those two great men of the Western World, Winston Churchill and Paul Henri-Spaak. Mr. Spaak, now Secretary General of NATO, indorses this Congress warmly.

"Today we are in need of new great ideas, and we are again turning to the people for them. This is the first time anyone from this side of the Atlantic Ocean—anyone from the United States and Canada—has participated in such a Congress. We are fortunate in having Eric Johnston as our general chairman and a fine group of officers and directors."

Mr. Johnston is presently in the Orient on business of the Motion Picture Association of America but will return this month.

The Atlantic Congress will divide itself into five committees: The Atlantic Spiritual and Cultural Committee, the Atlantic Political Committee, the Atlantic Economic Commitee, the Free World Committee, and Committee on Relations with the Communist Bloc. Each will thoroughly discuss and examine the common problems and policies of the entire Atlantic Community in each of those fields.

The Committee is now engaged in obtaining a broadly representative group of U.S. citizens to serve on the delegation. Invitations to those chosen will go out shortly all over the United States.

BOARD OF DIRECTORS, U.S. COMMITTEE FOR THE ATLANTIC CONGRESS

Mrs. Eugenie Anderson, Red Wing, Minn., former Ambassador to Denmark; William Benton, New York, N.Y., former Senator and former Assistant Secretary of State; Jacob Blaustein, Baltimore, Md.; Mrs. W. Randolph Burgess, Paris, France; Erwin D. Canham, editor, Christian Science Monitor, Boston, Mass.; Senator John Sherman Cooper, Washington, D.C.; Nathan Cummings, Chicago, Ill.; John Walton Dinkelspiel, San Francisco, Calif.; Lewis W. Douglas, Tucson, Ariz., former Ambassador to the United Kingdom; William H. Draper, Jr., New York, N.Y., Presidential adviser, former U.S. Ambasador to NATO, former Under Secretary of the Army; Thomas K. Finletter, New York, N.Y., former Secretary of the Air Force; Judge W. St. John Garwood, Austin, Tex., former justice, Texas Supreme Court; Ernest A. Gross, New York, N.Y., former Assistant Secretary of State; Albert J. Hayes, president, International Association of Machinists, Washington, D.C.; Congressman Wayne Hays, Washington, D.C.; Senator Jacob K. Javits, Washington, D.C.; Dr. Mordecai Johnson, president, Howard University, Washington, D.C.; Eric Johnston, president, Motion Picture Association of America, Washington, D.C.; Senator Estes Kefauver, Washington, D.C.; Dr. Clark Kerr, president, University of California, Berkeley, Calif.; Mrs. Oswald Lord, New York, N.Y., member, U.S. delegation to General Assembly of the U.N.; Robert McKinney, editor and publisher, the New Mexican, Santa Fe, N. Mex., former Assistant Secretary of the Interior; Walden Moore, director, Declaration of Atlantic Unity, New York, N.Y.; Edgar Ansel Mowrer, editor, Western World, Washington, D.C.; Dr. Franklin D. Murphy, chancellor, University of Kansas, Lawrence, Kans.; Dr. Alfred C. Neal, president, Committee for Economic Development, New York, N.Y.; Paul Nitze, Washington, D.C., former Chief, State Department Planning Staff; Edmund Orgill, mayor, Memphis, Tenn.; Lithgow Osborne, New York, N.Y., former Ambassador to Norway; Mrs. Ogden Reid, New York, N.Y.; Charles S. Rhyne, Washington, D.C., past president, American Bar Association; Elmo Roper, New York, N.Y.; Adolph W. Schmidt, vice president, T. Mellon & Sons, Pittsburgh, Pa.; Harold L. Zellerbach, San Francisco, Calif., industrialist and civic leader.

## The Tradition of New Ideas

EXTENSION OF REMARKS
OF
## HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
*Thursday, March 5, 1959*

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an outstanding address given by the Honorable J. Howard Edmondson, Governor of Oklahoma, at the recent Jefferson-Jackson Day dinner in Boston, Mass. Governor Edmondson was the guest of honor at the largest Jefferson-Jackson Day dinner ever held in the Commonwealth of Massachusetts, and his speech produced the same impressive effect as did his speech given at the victory dinner in Washington last Saturday evening.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE TRADITION OF NEW IDEAS

We meet here tonight to celebrate the great Democratic victories of 1958—and to begin laying the groundwork for an even greater nationwide victory in November of 1960.

There is good reason to begin working on that groundwork today—for the forces which already are lining up to continue Republican rule beyond 1960 are mighty and powerful forces indeed.

To the all-powerful entrenched interests who oppose change simply because it is change—who oppose new ideas, simply because they are new, there has been added a new partner—the vast and powerful Federal payroll accumulated for the past 6 years determined to preserve and perpetuate Republican rule in the White House.

Madison Avenue masters of propaganda have introduced new dimensions and horizons of public deception.

With new and skillful techniques, the GOP today beguiles and misleads the American public, working hard and even effectively to convince John Q. Citizen that unemployment of nearly 5 million is nothing to be disturbed about—that farm surpluses worth $7 billion in Government warehouses are the result of Democratic law rather than GOP mismanagement of law—that Communist gains in the Middle East and the Far East are nothing to be alarmed about. The mills of deception also work overtime to create the illusion that a man can spend every other day on the golf course, and still do a good job in the office—that another man can falsely and wrecklessly label our great party as the party of treason in a tough election year, and less than 1 year later become a mature and responsible bipartisan statesman.

The power and the influence of reactionary interests—expanded Federal payrolls insensitive to the needs of the American citizen—and the mastery of almost every technique of public confusion and deception—these are old and familiar enemies for all Democrats, but they are far more deadly and dangerous, in 1959 and 1960, than ever before in our Nation's history.

As we prepare tonight, for the battles that lie ahead, we have good reason to prepare for a tough and bitter fight—and a fight that is sure to demand the best that is in us.

Far more will be at stake in the campaigns that lie in the immediate future than mere political power and patronage.

Government today carries with it not only mighty and continuing forces that affect, in economic and social ways, the daily lives of all of us—but also an absolute power of life and death over humanity itself.

This is a power of life and death, in the use or misuse of the awful weapons of our time, that is total and complete in its awe-inspiring responsibility—permitting no casual or part-time attention, and tolerating no deception or misrepresentation in high places. Least of all, is there room for deception of our own people.

That is why the months that lie ahead—both for our party and our country—are critical months of decision.

That is why we who meet here tonight, both as Americans and as Democrats, are charged with ever-deepening responsibility.

How will we meet that responsibility in the next 18 months?

How can all of us who are gathered here tonight, as members of a great party with a grand tradition of national leadership and service, be most faithful and loyal to that grand tradition?

And what, in the final analysis, is the greatest tradition of the Democratic Party?

I am sure there are many here tonight with different ideas upon that subject.

There are also many in this room who are better qualified than I am to answer that question—by reason of long and honorable service, and much more varied experience, both in our party and in our Government.

There will be some who point to our noble tradition of fighting for the poor, and the weak, and the unfortunate—for the lame, the halt, and the blind—the forgotten men and woman in American society—and this indeed is a worthy and a great tradition of the Democratic Party.

There will be some who point with pride to the stalwart tradition of fighting against the selfish forces of special privilege and vested interest—of monopoly and merger against the public interest—and this also is a splendid and worthy tradition.

Others will identify the great and continuing effort of our party to promote and encourage sound and effective programs for international cooperation in the cause of world peace and justice—the historic programs we know as the good-neighbor policy, the Marshall plan and the North Atlantic Treaty Organization—all proud parts of another splendid Democratic Party tradition.

We are justly proud of these traditions, and we are loyal to the principles on which they are founded.

But I submit to you there is a greater tradition—and one that is vital and essential to the health of our party in this hour of national need.

Without it, we are lost in 1960—and our Nation may be lost also.

With it, we are a vital and dynamic force in every field of human interest and concern, in every place of world or domestic trouble, in every problem that today confounds and confuses our people and our leaders.

What is that tradition, and how can it best be described?

I would like to call it the tradition of new ideas.

Some people might call it the tradition of change, or the tradition of readiness to change.

For many generations, we have been blessed in this Democratic Party of ours with leaders—and with followers—who have had the boldness, and the imagination, and the initiative, to embrace new ideas and new programs to meet the problems of a growing nation and a changing society.

Is there any doubt about the Democratic record in this regard?

There was once a man named Thomas Jefferson, who was bold enough to suggest that our Federal Constitution ought to contain a prohibition against slavery. Jefferson lost that fight because the idea was called too radical for his day and his time—but is there any man today who will question that Jefferson was right, nearly two centuries ago?

There was another fight, that Jefferson won, to acquire by purchase a great tract of wilderness land—the Louisiana Purchase. This new idea was condemned and derided in Jefferson's time—but today we know that it made possible our Federal Union.

There was also a Democrat named Andrew Jackson, who was not afraid of a new idea in his time—even though his opponents predicted for his administration a period of "sackcloth and ashes" and "nothing but splendid ruin."

Jackson was denounced for delivering our Federal Government from the iron control of vested financial interest—but today we know that Jackson, with his new idea for a government with financial independence, was absolutely right.

We point with pride today to the new ideas of Woodrow Wilson and Franklin D. Roosevelt—new ideas that were the death knell for sweatshop labor, for completely unfair taxing methods, for poverty and complete loss of dignity in old age.

Yes, we have a great tradition of change in the Democratic Party, and a great combat history of joining together to fight for change and new ideas in every period of Democratic leadership.

And in that battle for change we have been able to unite all Democrats of good faith, both young and old in their party service, because we have all known, deep within us, that a party without new ideas is a party that no longer has usefulness to the people.

There are always many subjects on which parties are reluctant to take an aggressive position during campaign, because of their controversial nature—even though they involve problems that are known to be serious and long overdue in handling.

Several good examples in our State are found in obsolete apportionment of our State legislature—which has not been reapportioned since 1910, in the largely political employment of most State personnel, and in a county attorney's system of prosecution that no longer provides many smaller counties with competent prosecutors.

During the last campaign, our Democratic Party in Oklahoma reversed a policy of long standing and came out with a positive program of definite action for all three of these problems. We advocated a merit system for State employees. We advocated complete reapportionment of the legislature. We also advocated a district attorney's system, to take the place of the outmoded county attorney's system in Oklahoma. These were three in a series of reform proposals for which our entire Democratic ticket campaigned as a team during the months of September and October.

On November 1, the people voted, and our party was given the greatest vote of confidence we have ever received in Oklahoma. We won victories in some counties that have been voting with New Hampshire and Vermont for as long as the oldest Oklahomans can remember.

Of course, there was a nationwide trend in which Massachusetts was a leader, and there were other things that influenced the 1958 election.

But I am convinced, on the basis of public reaction—wherever I had the chance to hear our people talking, that one of the biggest factors of our victory was that we were not afraid to take a positive program, with many new proposals and new ideas, to the people of our State.

People everywhere, in my opinion, were hungry for a new and decisive program to meet the problems of Government today. I am sure that has been your experience in Massachusetts—and I am sure it is one of the big reasons for the popularity of leaders like Senator KENNEDY and Governor Furcolo, here in the Bay State.

There is a great and urgent need today, my friends of Massachuetts, for new ideas to meet th problems of our country.

We must be ready and even eager, as we always have been in the past during times of great trial, to open the doors of our party to new ideas—to new blood—and to new programs.

What is the answer to the crucial question of how to develop atomic energy for peaceful purposes, and yet to control it and prevent its use for mankind's destruction?

What is the answer to the critical question of how far to negotiate with the Russians, and how to establish a peaceful understanding without a real danger to our security and our safety?

What is the answer to peacetime unemployment of nearly 5 million—and real distress in many factory and mining areas of our country.

What is the answer to the perils of inflation, to the dangers of fantastic increases in some stock market values, to some of the terrible diseases that take such heavy toll of human life today?

I do not come before you tonight with the answers to these questions. I do not claim to have the answers—although I know that every American here tonight is yearning for answers to these and other questions.

But there may be some of you, in this room, who do have an answer to some of these questions—and that answer may be a completely new idea for government policy tomorrow.

In your Boston College, there may be a young man studying tonight, with a new idea that provides an answer to the difficult problem of American relations with Soviet Russia.

Not far from where he studies, within the halls of MIT, there may be another young American who has an answer, and a new idea, for the riddle of atomic energy.

In the classroom of some elementary school in Massachusetts, there may be a young girl who will give us, some day, the answer to control of cancer, or prevention of heart disease.

We do not know where the new ideas of tomorrow will come from—and we do not know who will bring them forward.

This much, however, we do know: we do know that our party and our country have urgent need of these new ideas, and we do know that a great tradition of change and new ideas is the true lifeblood of the Democratic Party.

Let us always keep open the doors of the Democratic Party to the champions of change, and the men and women of imagination who bring us new ideas for tomorrow.

In our last national convention, one of our party's elder statesmen stood before us to issue a clarion call for recognition of the fact that the Democratic Party—while the oldest party in the history of our country—must always remain young and vigorous in its thinking and its program.

"Let us be proud of all our traditions," we were told at that time, but let us not lean upon them.

Let us take into account the advice of our elders, but let us also have the courage to look ahead and to face new problems with new solutions.

In the final analysis, America is still a land with a great yearning for the spirit of the pioneer—with a readiness on the part of the people to explore new frontiers, whether this involves a new State, like Alaska, or a new approach to the problems of foreign policy.

Let all of us, in the Democratic Party, remain faithful to the pioneering spirit and continue to chart the future of our country in the tradition of all those we honor—the tradition of Jefferson, Jackson, Wilson, and Roosevelt—the tradition of new ideas for a better American tomorrow.

## German Crisis Presents America With Opportunity

EXTENSION OF REMARKS

OF

## HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

*Thursday, March 5, 1959*

Mr. MURRAY. Mr. President, the Lewistown Daily News, in my home State, is achieving widespread recognition for its aggressive and stimulating editorial policy.

The editor of the Lewistown News recently devoted a full column to the German crisis. I commend his comments to the entire membership of the Senate.

Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD the editorial referred to, entitled "German Crisis Presents America With Opportunity," which appeared in the February 26 issue of the Lewistown Daily News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GERMAN CRISIS PRESENTS AMERICA WITH OPPORTUNITY

The peace of the world and the fate of all humanity may hinge upon the outcome of the gathering crisis in Germany.

If the Communists gain control over Germany's mighty industrial and scientific resources along with her militant and gifted people, they will dominate all Europe and ultimately the whole earth. The organization of German genius with the vast material and human resources of the Communists could isolate and defeat us.

If the West can deny the Reds this tremendous, decisive prize in the struggle for the world in which we are now so desperately engaged, then there is hope that a cataclysmic world war can be avoided and that cancerous communism can be contained until, in good time, it becomes more civilized and less virulent.

Berlin is the key to Germany. Mr. Khrushchev knows this—thus the present squeeze play.

The United States has foolishly pursued a policy of maintaining, or attempting to maintain, the status quo in Germany and elsewhere in the world against mounting Communist pressures.

Containment has been the key word describing whatever policy it could be said that our country has undertaken against this Communist aggression.

This is no longer sufficient. To try merely to maintain the status quo around the world will not permanently work, as we are finding out.

In this connection, Senator MIKE MANSFIELD made a major policy address from the floor of the Senate 2 weeks ago, which has stirred international reverberations. He said that the prospect of maintaining the status quo of division in Germany is diminishing rapidly in the wake of the announced Soviet withdrawal from Berlin. He warned:

"The blunt fact is that soon either negotiations leading to German unification in peace shall begin in earnest or there shall begin in earnest the use of force to that end."

In short, Mr. Khrushchev and the Russians are not as content as we are to keep the status quo in Berlin and in Germany.

The lessons of history indicate that in this our enemy is more correct than we are. For, as Abraham Lincoln once observed, a house divided cannot stand. It will become either all one thing or all the other.

American policy in a nutshell must not only insure that Germany will not become all communistic, it must also strive to make Germany all democratic. It should strive also to release the millions of East Europeans enslaved by the Communists after World War II. Let the Berlin crisis become the touchstone for our broader aims.

So barren is our present policy, as Senator MANSFIELD has indicated, that we are even unprepared to see the Russians leave Berlin. Is this not strange? We are unprepared to deal with the East Germans, for fear that this will somehow imply recognition and sanction to the puppet East German regime.

Well, what should our policy be? How can we put the Russians on the defensive in Germany and in Europe instead of always being in that position ourselves?

In the first place we must recognize that, thanks to American diplomatic and military mistakes too numerous to mention during and following World War II, we are not now in a position to have things altogether our way in Germany. We must do some old-fashioned "hoss tradin'." Before we can undertake this we must first decide what we want and what we are prepared to pay in return.

Let us begin with the premise that we want a united, democratic, free Germany, free to stand guard with the West in central Europe against communism. Let us go further and bid for East as well as West German support by demanding that pre-World War II German borders be restored (with the possible exception of East Prussia) now occupied illegally without sanction of treaty by Poland at Soviet connivance. (Retention of East Prussia by Poland would give that country access to the sea and would represent compromise by both parties.) Moreover, history tells us we cannot look forward to any permanent peace so long as Poland retains a fifth of German territory as is now the case. In any event, our not sanctioning the Soviet-inspired Oder Neisse line and making a point of the return of German territory will put the Russians on the defensive with the Germans.

In considering what we are prepared to trade, we might contemplate with profit the various theories for "disengagement" which have been advanced, including the Kennan plan, the Rapacki plan, and the Eden plan. (Disengagement would create an insulating buffer area between Russia and the West.)

The development of intercontinental missiles, we must sooner or later acknowledge, has made obsolete and futile our elaborate and costly NATO system of defenses along with large standing armies. Accordingly, in return for Soviet agreement on our plan for a reunified Germany and for Soviet withdrawal from Eastern Europe, we could agree to withdraw our military forces, including air bases, from the continent of Europe retaining our bases in Britain. (These forces would be overrun and slaughtered in any major war with Russia anyway). We could agree to dissolve NATO and instead guarantee each member against aggression with individual treaties. We could propose German arms be limited to participation in United Nations forces which would be stationed in Germany both to guard against Russian aggression and to prevent a revival of German militarism. (The Germans certainly would be willing to agree to this in preference to their present occupation and division.) We could assure Russia by guaranteeing against future German aggression.

In all this we ought to seek more than the reunification of Germany. In return for the withdrawal of our military forces from Europe we could seek the withdrawal of Soviet forces from the occupied eastern Eu-

ropean nations such as Hungary and Czechoslovakia.

Russia with all its vast expanse of territory should not gag over these relatively minor European territorial adjustments. By now the Russians must know that they cannot permanently maintain their status quo in these restive, occupied, and unreliable satellite countries. Moreover, with over 600 million Chinese arming on their eastern borders, the Russians now should be concerned about stabilizing their western frontiers.

This or a similar plan would take us off the defensive. In any event we must go beyond permanently maintaining the status quo for in this we invite disastrous diplomatic retreat. To be sure there are dangers in this plan but are there not greater dangers in doing nothing? Unhappily the tragic illness of Secretary Dulles robs us of strength just when we need it most. In the meantime the May 27 deadline which the Soviets have arbitrarily announced for driving us out of Berlin draws ever closer.

Will Russia back down? Will we surrender Berlin and Germany? Or will we be forced to fight and thereby be plunged into unthinkable planetary destruction?

Or, can we come up with a plan offering advantages to both sides and some hope of permanent peace in Europe?

---

## Texas Schools Face Major Problems in the Future

EXTENSION OF REMARKS

OF

## HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

*Thursday, March 5, 1959*

Mr. YARBOROUGH. Mr. President, the Committee of Governing Boards of Texas State-Supported Colleges and Universities recently conducted a study of higher education in the Lone Star State.

Their findings show that by 1970, 160,000 students are due to flood into State-supported colleges, which are already cramped today with only about half that number enrolled.

Everyone in our Nation is interested in education; our happiness, progress, and our very survival are dependent upon our proper development of education. The United States is coming to realize that we must provide for more and better training for the future scientists, statesmen, scholars, surgeons and others.

As a coauthor of the National Defense Education Act of 1958, I have tried to help meet this need. However, much more must be done to keep this Nation abreast and ahead of world conditions as it works for a better world.

T. V. Thompson, a staff writer of the Houston (Tex.) Press, recently wrote an article on the findings of the committee in that State. The figures and facts it reveals are extremely enlightening and, I feel, help to point up this problem and the immediate need for its solution.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Problem of 1970: 160,000 Students," written by T. V. Thompson, and published in the Houston Press of February 20, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROBLEM OF 1970: 160,000 STUDENTS—EVERY PENNY STUDIED BEFORE SPENT, BUT THERE STILL IS NEVER ENOUGH

(By T. V. Thompson)

On the blackboard of Texas higher education is scrawled today a critical question of great significance:

What is the State going to do with the expected 160,000 students due to flood State-supported colleges by 1970?

Colleges are cramped to the limits of their ivy-covered walls today with only 86,000 students seeking diplomas.

Every precious penny freed by the legislature for education is carefully studied by the respective college boards to see where it can best be spent. There is never enough.

What to do?

NINE TEXANS STUDY PROBLEM

Sitting down to study this acute homework assignment several months ago were nine distinguished Texans, each a member of a State-supported college board, who formed the Committee of Governing Boards of Texas State-Supported Colleges and Universities.

The committee found that most Texans believe the 18 State schools to have oil-drenched endowments and swimming in money.

This, learned the committee, is a far cry from the truth. The truth: Every school in the State is financially ill.

The University of Texas, for example, cannot keep its top instructors and is crowded with 16,000 students. It will have 35,000 by 1975.

Lamar Tech in Beaumont has 5,556 students now, will have 10,000 in 15 years.

Even the State's smallest college, Sul Ross at Alpine with 874 students, is growing rapidly and will double its size in 15 years.

ISSUE AN ALARMING REPORT

The committee's exhaustive report, released this week, contains information that should alarm every Texan who believes in higher education.

Among their findings:

1. The quality of education now being offered the young men and women of Texas in State-supported colleges is falling behind other States and will continue to lose ground unless definite steps are taken to change the trend.

2. Top teaching and research talent are fleeing State colleges at a disturbing rate to find higher salaries in private industries and the colleges of other States.

3. The situation will get more critical by the year, because each State is faced with growing enrollment increases and competition for top teaching talent will be keen. Unless Texas has the money to compete, it will fall even further behind.

4. The future course of all public education, business and industrial development, and political stability in Texas are inevitably tied in with the course of State-supported higher education.

THREE HUNDRED AND SIX TEACHERS QUIT IN 2 YEARS

The committee's report reveals that 306 faculty members have resigned from Texas State-supported institutions in 2 years.

Of this number, 203 went to business and industry or private colleges for salaries ranging from $600 a year to more than $7,000 a year above what Texas schools were able to pay.

"The resultant constant turnover in staff and the steady downgrading of faculties, due to the inability of Texas institutions to compete in the open market for scarce talent for replacements, did serious damage to the quality of the educational opportunity they could offer," the report said.

The report quoted a recent survey of 96 State-supported colleges and universities which reveals that the average salary for all ranks of personnel in Texas State-supported colleges is far below the national average.

"Our top school ranked 19th on the list.

"The next ranked 36th, and 14 out of our 18 State-supported schools ranked below 40th.

"This would not be such a critical situation in a period when the supply of competent teachers and researchers was ample. In a period of scarcity, however, when all institutions must compete for top talent, it leaves Texas institutions with little opportunity for maintaining high standards of competence of their staffs."

LOW ON PER CAPITA SPENDING

Texas has the second largest number of State-supported schools in the Nation, and ranks seventh in the total number of dollars it appropriates for support of higher education.

Most important, it is in the lower half of all States in the percentage of per capita income going to higher education.

Providing more food for thought is a recent survey by the Texas Employment Commission which revealed:

1. Of 21 large industrial concerns in Texas employing 12,000 college graduates, only 50 percent of them were graduated from Texas colleges; the rest from out-of-state institutions.

2. Of these employees earning more than $10,000 a year, only 35 percent were graduates of Texas institutions.

3. One out of every three technical positions in Texas business and industry is filled by an out-of-state college graduate.

And the Texas Education Commission reports:

Forty-five percent of the technical jobs in Texas are filled by graduates from State colleges, and industry is worried about the caliber of teaching in State institutions.

REPORT MAKES TWO POINTS

What is the solution to the higher education dilemma?

The committee's report made two points:

1. The most effective use possible must be made of the funds now available.

2. Enough money must be made available for their proper development in pace with comparable institutions in other States.

The committee stressed this belief:

Competition between State colleges for money and attention must be stopped.

Every dollar must be allocated on the basis of the needs of Texas boys and girls, rather than on the basis of interschool or intersectional rivalry. We cannot afford useless duplication or waste in any segment of the State's system of colleges and universities.

The committee suggest a careful formula be worked out to split the total legislative educational appropriation between the 18 schools each year as fairly as possible.

This eliminates the wasteful process of a biennial appropriations "grab-bag" with each institution rallying its forces to secure as much of the total appropriation as possible.

The current State budget for the 18 schools is $38,720,936, which breaks down to $466.82 per each full-time student.

For 1959–60, the legislative budget board recommends $38,952,697, or $457.05 per student.

The Governor's executive budget office recommends $41,440,082, or $486.24 per student.

The Commission on Higher Education recommends $48,356,630, or $566.22 per student.

Unless the legislature substantially increases appropriations for higher education, the State will suffer, says the committee.

They point out every child in Texas is affected because two-thirds of the public schoolteachers are trained in the State schools. And unless they receive the best education from the best professors, the quality of teaching they in turn will provide for public school students will be poor.

---

## Statement by George J. Feldman Before House Committee on Science and Astronautics

EXTENSION OF REMARKS
OF
**HON. JOHN W. McCORMACK**
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I am glad to include a well-considered, pointed, and most interesting statement made by George J. Feldman of New York City before the House Committee on Science and Astronautics on March 5, 1959. Mr. Feldman has a profound knowledge of his subject.

Mr. Feldman was director and chief counsel of the House Select Committee on Astronautics and Space Exploration of last year, of which select committee I was chairman. Mr. Feldman played a most important part in the success of the select committee, and I am glad to publicly acknowledge the outstanding work done by Mr. Feldman. He is truly a dedicated American, willingly making personal sacrifices to serve, as he did, the House select committee.

The statement follows:

Mr. Chairman, Mr. McCORMACK, members of the committee, I am gratified to have this opportunity of testifying before the Committee on Science and Astronautics, especially since I was privileged to play a part in its establishment last year when I served as director and chief counsel of the Select Committee on Astronautics and Space Exploration.

Although the National Aeronautics and Space Administration was not given regulatory powers, the House and Senate committees contemplated that it would conduct research with a view to domestic legislation and that it would also participate directly in studies and proposals for international agreements governing the use of outer space. Section 205 of the act expressly authorizes the Space Administration to engage in a program of international cooperation in work done pursuant to this act. In addition, the act authorizes the administration to engage in "the establishment of long-range studies of the potential benefits to be gained from, the opportunities for, and the problems involved in the utilization of aeronautical and space activities for peaceful and scientific purposes." This language seems broad enough and was doubtless intended to include the legal problems of space.

The need for the positive pursuit of international agreement on uses of outer space is clear. It is spelled out at some length in the comprehensive and authoritative "Survey of Space Law," issued as a committee print and later as a House document by the select committee. Today this need is emphasized by the legal uncertainties which have arisen with expiration of the International Geophysical Year. It is becoming increasingly urgent with the passage of time in view of the increasing space capabilities not only of the United States and the Soviet Union but of Great Britain and soon other nations as well. Every member of this committee is fully aware of the military potentialities of missiles, satellites, and space vehicles and the risks of wrongly identifying objects moving through space. There is a danger that delay in establishing international space law may make later efforts increasingly difficult.

The positive law of outer space can be quickly summarized. Space flight is not expressly governed by existing international law. Most writers on the law of outer space have taken the position that the definition of "aircraft" contained in the Chicago convention, which is the only generally accepted international flight agreement, does not apply to space vehicles. The failure of nations to object to the passage of satellites above their territories from the launching of Sputnik I in 1957 until the end of 1958, has been explained as due to an implied international agreement based on the acquiescence of other governments in the announcement made by the United States and the Soviet Union that satellites would be launched in connection with the International Geophysical Year. I have repeatedly urged that this temporary and limited agreement be broadened into a magna carta for outer space. Such a broadening appears desirable, even necessary, both for reasons of national security and in order to establish reasonable uniformity in such matters as navigational aids and radio frequencies.

I know that many influential voices have been raised in the executive branch against any early, comprehensive, and explicit agreement. It seems to me, however, that none of the arguments which have been offered in opposition to a comprehensive code of space law would have any convincing application to limited agreements on the uses of outer space.

Before expressing my personal views as to the kinds of limited international agreement which should be sought in the near future, I should like to review briefly the present status of studies and negotiations looking toward the international legal control of outer space. Last November 13 our Ambassador to the United Nations, Henry Cabot Lodge, introduced in the General Assembly a resolution recommending space studies in four fields. One of these fields was described in the resolution as the nature of legal problems which may arise in the carrying out of programs to explore outer space. This resolution was approved by the General Assembly on December 12, 1958. Unfortunately, the establishment of a study committee to carry out the resolution has proceeded very slowly. Owing to a dispute over the membership of the study committee, the Soviet Union and other bloc countries have refused to participate. To the best of my knowledge no U.S. delegates or advisers have yet been appointed. It would seem to me to be a matter of interest to this committee, and well within its jurisdiction, to inquire what steps have been taken or planned by the United States in participating in the work of this United Nations study committee.

I should like to remind you also that section 201 of the Space Act established a National Aeronautics and Space Council, chaired by the President. One of the stated functions of the Council is to develop a comprehensive program of aeronautical and space activities to be carried out by the U.S. Government. Under this provision it would seem appropriate for the Council to consider and formulate a statement of the U.S. position on international collaboration in outer space, for presentation at the prper time in the United Nations study committee. While the proceedings of the Council are naturally kept secret, testimony given to this committee by administration witnesses indicates that ths subject has never been placed on the Council agenda.

A number of limited international agreements on the use of outer space have been proposed from time to time. At the 1958 Congress of the International Astronautical Federation I urged the continuation of the International Geophysical Year. Unfortunately, the IGY expired on December 31, 1958, and the arrangements for international scientific cooperation which took place under its auspices have continued on a very limited basis only. It should be possible to a greater extent than in the past to exchange tracking data and navigational and signal codes. In particular, international agreements must be made on radio frequencies for satellite and outer space communications. I understand that testimony on this subject has been heard by this committee in the past few days. Some international space projects, such as relay or postal satellites or missiles, could be undertaken jointly by several nations or under the aegis of the United Nations or some other international organization. Soviet legal writers themselves have suggested that international agreements would be possible and desirable on the identification of satellites and on liability for injuries or damages caused by manmade objects falling from space. The final step would be advance notice and coordination of launching schedules. The risks which may arise from the launching of new spacecraft where no notice is given of the launching are apparent to everyone. Ideally, prior notice of launchings should include information on flight plans and on the contents and proposed activities of the satellites or space vehicles. While this should be the ultimate objective, it is doubtless not immediately attainable because of the well-known views of the Soviet government on the issue of international inspection.

Going beyond particular international agreements to general principles, I would urge this committee to adhere publicly, as the select committee did, to the twin principles of freedom of outer space for nonexclusive peaceful purposes and the prohibition of hostile activities including the use of atomic and nuclear warheads. The administration has also concurred in these principles, judging from public statements made by the President and by the legal advisor of the Department of State.

Finally, how can this committee help to establish a rule of law in outer space? I suggest that it can help mainly by the vigilant performance of its watchdog functions over the National Aeronautics and Space Council and the international cooperation activities of the NASA and other executive agencies. It is also important for committee members and staff to participate in the space law organizations and activities of the Federal Bar Association, the American Rocket Society, the International Astronautical Federation, the American Bar Association, and similar groups. Such participation will not only keep the committee informed of developments and other points of view but will give these private organizations a much-needed feeling of official interest and encouragement. In particular, I am gratified to learn that a subcommittee, chaired by Congressman ANFUSO and composed of several members of this committee, will attend the March 20 meeting on space law and sociology to be held in New York by the American Rocket Society.

I should be happy to answer any questions members of the committee may have.

## Fallout Is Rising in Foods

EXTENSION OF REMARKS
OF
**HON. RALPH YARBOROUGH**
OF TEXAS
IN THE SENATE OF THE UNITED STATES
*Thursday, March 5, 1959*

Mr. YARBOROUGH. Mr. President, a study by the West German Institute for Milk Research has recently been released which shows that radioactivity in foodstuffs has reached new high levels in a variety of edibles collected from different parts of the world.

The rise of these rates, some of which have been shown to be as high as the maximums permissible concentration—and occasionally higher—has been increasingly rapid.

This is a forerunner of a major danger to this Nation and the world. Every member of the human race is endangered by this increase, particularly in such rapid amounts.

This is a matter in which we cannot wait and later look back and say, "We should have taken steps." There may be no chance for hindsight.

Experience may be the best teacher, but the experience should be that which scientists have already had in the laboratories. Their experiments have shown us the danger and the urgent, pressing need for a remedy.

Mr. President, I strongly urge that steps be taken immediately to establish an international program to work toward the control of this menace. Leadership is vitally needed among the peoples of the world to stop this increase in the pollution of the atmosphere before it goes past the point of no return.

Mr. President, in support of my statements, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Fallout Sets New Highs in Foods," written by Edward Gamarekian, and published in the Washington Post and Times Herald of March 5, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FALLOUT SETS NEW HIGHS IN FOODS—WEST GERMAN DATA SHOWS BIG RISE FOR STRONTIUM 90

(By Edward Gamarekian)

A new study of radioactivity in foodstuffs shows that levels have reached new highs in a variety of edibles collected from different parts of the world.

In some cases, the levels of strontium 90 have exceeded the maximum permissible concentration recommended by the United States and International Committees on Radiation Protection.

IN AEC REPORT

The study, made by the West German Institute for Milk Research, was published in the quarterly strontium report of the U.S. Atomic Energy Commission. This report also showed that strontium 90 has been accumulating in the soil at an increasingly rapid rate.

It came on the heels of the recent disclosure that the strontium 90 in Minnesota wheat has risen as high as the maximum permissible concentration and has gone 50 percent higher in one sample. There also have been reports that the milk in North Dakota has reached levels as high as 40 percent of the recommended maximum.

The maximum permissible concentration of strontium 90 in foodstuffs has been set at 80 micromicrocuries per kilogram. A kilogram is equal to 2.2 pounds. A micromicrocurie of radioactive material is the amount which undergoes 2.2 disintegrations per minute.

The figure of 80 was first advised for water, then applied to milk, and later, for lack of better information, to all edibles. It is based on continuous year-in and year-out consumption.

Of the 1957 and 1958 foods tested by the German group, cinnamon from China was the highest with a strontium 90 content of 380 units. This does not appear to represent any great danger since relatively little cinnamon is consumed.

The next highest on the list was a mixture of native-grown and imported rye which reached a level of 110 units in 1957. This was almost identical to the level of 113 reached by one of the sample of Minnesota wheat from the same year.

SEVENTY-TWO UNITS IN WHEAT

In German-United States wheat mixtures, the levels reached 72 units; in German oat flour, 65; in Chinese ginger, 50; in dried peas from Holland, 45; and in Ceylon rice, 41.

Levels in Norwegian and Tunis cheeses were up to 94 and 83 units of strontium 90. However, cheeses are rich in calcium and since the body does not seem to differentiate between the two chemically similar elements, the strontium-calcium ratio appears to be more important than the absolute amount of strontium.

In the cheeses measured, this ratio was 11.5 and 9.5, well below the limit of 80.

The least radioctive foods were the fruits, most of the vegetables, and the three kinds of fish obtained from the North Sea.

## The Letcher Family of Lexington, Va.

EXTENSION OF REMARKS
OF
**HON. A. WILLIS ROBERTSON**
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
*Thursday, March 5, 1959*

Mr. ROBERTSON. Mr. President, in competition with 28,000 high school boys and girls, John S. Letcher, Jr., of Lexington won the highest prize offered by the Westinghouse Co. for science talent. That outstanding accomplishment is naturally a source of pride and gratification to me and the many other Lexington friends of the Letcher family.

John S. Letcher, Jr. comes of a Rockbridge family that has been distinguished in the military and political life of Virginia for more than a century. He is named for his great grandfather, Governor John Letcher, familiarly known to his friends and political supporters as "Honest John." Governor Letcher served on the Ways and Means Committee of the U.S. House of Representatives from 1852 until 1860, assuming in January 1860 the duties of Governor of Virginia to which he had been elected the previous November. He was Virginia's wartime Governor and ranks high among the illustrious men who have held that office.

The grandfather of John S. Letcher, Jr., was Greenlee D. Letcher who graduated from VMI and the Law School of Washington and Lee and was elected a member of the Virginia Legislature from Rockbridge County when he was only 22 years of age. When he was 50 years of age he volunteered for service in World War I. He organized what was first known as the Rockbridge Battery, which later became Battery F of the 111th Field Artillery, 29th Virginia. Capt. Greenlee D. Letcher trained in Alabama with the 29th, went overseas with it in the early summer of 1918 and served with it throughout World War I.

The only child of Capt. Greenlee D. Letcher was named John S. Letcher and, like his father, he graduated from both VMI and the Law School of Washington and Lee and then decided on a military career. He enlisted in the U.S. Marine Corps, served with it in many parts of the world and throughout World War II, retiring a few years ago with the rank of brigadier general. General Letcher is entitled to wear the following campaign ribbons:

Second Nicaraguan Campaign Ribbon, 1928–29.

China Service Medal, 1937–39.

American Defense Service Citation with Base Clasp, 1939–41, for duty in China and Japan.

American Campaign Medal, 1941–43.

American Campaign Medal with four Bronze Stars, 1945–46, Asiatic Pacific area consolidated over Northern Solomons, Treasure-Bougainville operations, Marianas operations, and Iwo Jima.

Victory Medal for World War II, 1941–46.

For bravery and service beyond the call of duty he received the top decorations of the Marine Corps, including the following:

Navy Cross, 1928, Nicaragua.

Medal of Merit with Citation and Silver Star, 1928, Nicaragua.

Silver Star Medal, July 26, 1944, Guadalcanal-Marianas.

Legion of Merit, September 10, 1943, until regiment was withdrawn, Cape Torokina Beachhead, Bougainville, and Solomon Islands.

Gold Star (in lieu of second Legion of Merit), 1945, Iwo Jima Island.

Navy Unit Commendation (served with the 12th Marines, 3d Marine Division), 1943–44, Bougainville-Guam.

Navy Unit Commendation, Bronze Star, 1945, Iwo Jima Island (Iwo Jima support troops VAC).

John S. Letcher, Jr., the son of Gen. John S. Letcher, in winning the Westinghouse Science Talent Scholarship is carrying on the high traditions for public service which have characterized the Letcher family of Lexington, Va. for more than 100 years.

I ask unanimous consent, Mr. President, to have printed in the Appendix of the RECORD articles from the Roanoke Times of March 3 and 4 reporting the award to John S. Letcher, Jr., and telling of his family background.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Roanoke Times, Mar. 3, 1959]

LEXINGTON BOY WINS $7,500 SCIENCE TITLE

(By Frank Carey)

WASHINGTON, MARCH 2.—A 17-year-old Lexington, Va., boy with an eye on space travel research tonight was awarded top honors and a $7,500 scholarship in the 18th annual nationwide Westinghouse science talent search.

He's John S. Letcher, Jr., 6-foot 6-inch son of a retired brigadier general in the U.S. Marine Corps.

He was chosen from an original field of 28,000 high school contestants, including the 40 finalists—9 girls and 31 boys—who have been fighting it out intellectually for the past week for the top awards.

Heading for a career in nuclear or rocket research, young Letcher currently is attending the Baylor School, Chattanooga, Tenn., where he constructed an experimental linear electron accelerator atom smasher employing high frequency, high voltage induction. That was his search project in the competition and one of the reasons he won.

He says he feels his project could fill a gap in the equipment used in research on certain kinds of nuclear reactions.

The youth says he'd like some day to head a research team developing a nuclear propulsion system for interplanetary travel.

Next in order among the five winners were:

Frank Wayne Grimm, 17, of Catonsville, Md., whose search project involved a study of several species of land snails in an area of Maryland's Susquehanna Valley, including how they were introduced and how they survived. He was awarded a $6,000 scholarship.

Carl L. Lyngholm, 17, of San Diego, Calif., who received a $5,000 scholarship. His search project involved a treatise on Boolean Algebra—a branch of mathematics dealing with operating on sets of objects which are analogous to the ordinary operations of arithmetic on numbers.

Robert N. McDonnell, 18, of Park Ridge, Ill., who was awarded a $4,000 scholarship. His project involved a measurement of the minute amount of heat released when a solid, such as graphite, and a liquid are brought into contact. Bob converted the liberated heat into electricity and then metered the few millionths of a volt that resulted.

Peter Vajk (pronounced Voyk), 16, of Princeton Junction, N.J., who won a $3,000 scholarship. As part of the requirements that enabled him to win, he wrote a research paper from which he concludes that radioactive fallout from nuclear bomb tests will speed up the evolution of the human species.

The scholarship awards—along with 35 other cash awards to the rest of the finalists, for a total of $34,250—were presented at a banquet climaxing almost a week of activity by the contestants. Chairman John A. McCone of the Atomic Energy Commission was the main speaker on the program.

Earlier today, the finalists visited the White House where they were greeted by President Eisenhower.

Young Letcher, the top winner, already has made a good start toward a career in space research. He has been president of the Baylor Rocket Club for the past 2 years and has organized club members into groups working on improvements in rockets, rocket fuels, control devices, and launching systems.

Though a top-flight young scientist, he's also found time for sports, including varsity wrestling, soccer, and rifle team activity. He's also a captain in the junior ROTC unit at his school.

The 40 finalists got expense-paid trips to the Nation's Capital for the final competition. They had been selected on the basis of many tests, including a tough science aptitude quiz reports of their teachers, their high school grades, and their search projects. During the past week, they've been interviewed personally by a board of judges who selected the top winners.

The annual science talent search is conducted by science clubs of America, an activity of science service. The Westinghouse Educational Foundation, supported by the Westinghouse Electric Corp., provides the awards and finances the search program.

---

[From the Roanoke Times, Mar. 4, 1959]

JOHN, JR., IS FIRST SCIENTIST IN TALENTED LETCHER FAMILY

(By Ben Beagle)

LEXINGTON.—John S. Letcher, Jr., is the first scientist in a family which already includes a poet, a painter, a retired Marine Corps brigadier general, and twins.

Seventeen-year-old Johnnie is in the spotlight, even at the Letcher household, for winning a $7,500 scholarship in the 18th annual Westinghouse science talent search. Young Letcher won top honors for construction of an experimental linear electron accelerator atom smasher employing high voltage induction.

His mother, the painter, and his father, the retired general, are, in two words, simply overwhelmed by his award.

Although he was expected home today, he called to say that newspaper and magazine people were anxious to meet him and he wouldn't be home until Wednesday. The Letchers aren't worried. They figure their 6-foot, 6-inch son can find his way home all right.

When he does come home he'll be on spring vacation from the Baylor School at Chattanooga, Tenn.

Johnnie, the great-grandson of Virginia's Gov. John Letcher, was always making something when he was younger. "Milk bottles, string, and coat hangers, were some of the ingredients," his mother says.

His sister, Katie, is the poet. She's a senior at Hollins College and she has done rather well in her specialty, too.

The twins, Betsy and Peter, are busy just being 12 years old.

Young Letcher, though never what his father would like to call a "prodigy," has always been a scholar. When the family moved to Lexington in 1947 upon the general's retirement, he was several months too young to enter the first grade at the start of the school term.

So, guided by a private tutor, he took some private classes until he could get in the first grade. His arithmetic was something, his father says.

"He never saw anything new [in arithmetic] until he got to the fourth grade," the general says.

Confront Mrs. Letcher with her son's triumph and the talents of her daughter and she had a modest comment: "Isn't it amazing?"

Young Letcher's interest switched from chemistry to nuclear physics several years ago, his parents say. He is interested in rocketry and, along with several Lexington companions, put several working models together.

A chemistry lab in the basement has gone neglected for some time now.

But in the basement lab you find something that makes the youngsters big honors a little sweeter.

It's an exhibit—made for a science fair some years ago—on vanadium.

He took it to the fair and nobody noticed it.

"He was just crushed," says Mrs. Letcher.

Those science fair people should see John S. Letcher, Jr., now.

## The Republican Revival Has Started

EXTENSION OF REMARKS

OF

## HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 5, 1959*

Mr. COLLIER. Mr. Speaker, Congressman ED DERWINSKI, of the Fourth District of Illinois, won an outstanding victory in November at a time when many Republicans were falling by the political wayside. Coming into the race as a latercomer after the death of Representative William E. McVey, Mr. DERWINSKI had to compete with a candidate who was well advertised and an outspoken advocate of the "spendthrift state." To analyze just how the DERWINSKI victory came about, I am pleased to include here with my remarks this editorial from the February 26 issue of the Harvey (Ill.) Tribune.

The editorial follows:

Last November the Republican Party fell flat on its face. Yet now, only a few short months later, we are witnessing a revival of Republican spirit and energy exceeding anything seen in recent years. Our party meetings have never been so well attended, our volunteer workers have never been more enthusiastic.

What happened? How did this come about? You can find the answer right here in the Fourth Illinois Congressional District.

After the November fiasco, political analysts from all over the country dug deep into the voting statistics. Their attention was quickly focused on the Fourth Congressional District. Here in a year of Democratic victories was one election that stood out as a resounding Republican success. How had ED DERWINSKI been elected? Why did so many people volunteer to work so hard and long for him in the precincts?

The highly respected and popular Congressman, William E. McVey, of Harvey, had passed away in August. DERWINSKI wasn't appointed as the Republican candidate until early in September. He was young, not widely known in the district, and he had only a short time in which to campaign.

By that time his opponent had been campaigning for many months. His posters were splashed all over the area. He himself was a personable, articulate candidate who advocated, without reservation, the Democratic philosophy of bigger government, bigger taxes, and bigger spending—the all-purpose spendthrift State.

DERWINSKI, on the other hand, was an outspoken advocate of private enterprise and competition. He vigorously stated his belief that the creative sources of America's wealth and strength is the citizenry, not the Government.

For once, the lines of Democrat and Republican disagreement were clearly drawn. DERWINSKI won a decisive victory, by a margin greater than McVey had won over his own opponent in the 1954 congressional election. The Illinois Fourth was the only congressional district in the Nation where a Republican won by a larger margin than in 1954.

Not only that, but DERWINSKI led the Republican State ticket by 20,000 votes.

The army of investigators who descended on the area to study this political miracle came up with one conclusion.

When the issues are clean-cut, when the voters have a choice between a candidate who wants the Government to do everything for and to everybody, and another who wants the Government to encourage people to do

things for themselves, then people will volunteer to work for and vote for their ideals.

The American voters have a right to be provided with this choice between statism and volunteerism. They are tired of seeing politicians of both parties trying to outpromise, out-spend, and out-tax each other.

The Republican Party has an obligation, sadly neglected in recent years, to provide the voters with an alternative to the New Deal, welfare state, Democrat philosophy.

The Democrats regard the Government as the center of all things, its bureaucracy the doer, the decision maker, the giver and the taker-away. In its extreme form this philosophy results in socialism, with the Government owning everything, including the people.

The Republicans believe that the dynamic force for growth and prosperity is in the people. The proper role of the Government is to encourage private investment, initiative, competition, and reward. Government spending which promotes inflation has historically been the means of wiping out private ownership and enslaving the people.

The power to tax and to compete with tax money taken from the people is the power to destroy. The price of liberty is still everlasting vigilance. Republicans must oppose monopoly in every form—whether in business, or labor unions, or the Government itself.

Is such a program based on private initiative and freedom politically practical? Can any Republican candidate hope to win by publicly resisting government expansion when his opponent promises more government subsidies, more government favors, and more government everything?

The victory of ED DERWINSKI is evidence that the ideals of the Republican Party still hold powerful appeal to the voters. The chance to work for those ideals inspired volunteers who would normally stay home if the choice had been between Spender Tweedle-de-de and Spender Tweedle-de-dum.

His victory gave heart to those who believe that our future is based on the initiative of men and women who individually and in voluntary association have built our industries, our commerce, our labor unions, our schools and our culture and who will lead us to a brave future of ever-increasing prosperity and strength.

It is the busines of everyone who believes that individual liberty and free enterprise are worth fighting for, to become a part of this revival. While there is still the will to resist the narcotic of socialism let the people demand the right to vote for National and State candidates who will preserve the American way of life.

This revival of the Republican Party is a spreading thing. It is a reaffirmation of America's belief in free men and women in a free society.

## The Late Honorable Daniel A. Reed

EXTENSION OF REMARKS
OF
### HON. WILLIAM E. MILLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. MILLER of New York. Mr. Speaker, under unanimous consent I include in the Appendix of the RECORD the following resolution adopted at a meeting of the Jamestown, N.Y., Bar Association on February 26, 1959:

Hon. Daniel A. Reed, for 40 years the Representative of the 43d Congressional District in the U.S. Congress was, since 1900, a member of the bar of the county of Chautauqua.

Mr. Reed's long and distinguished career brought him activity and service in wide fields of endeavor. Following his graduation from Cornell University and his admission to the bar, his many and varied activities found him head coach of the Cornell football team and an advisory coach for many seasons; a secretary of a chamber of commerce and a distinguished record in chamber of commerce work; a member of a special mission to France on behalf of the U.S. Government; and a lawyer engaged in the active practice of the law in the neighboring city of Dunkirk where he was an honored member of the Northern Chautauqua County Bar. His election to Congress in November 1918 marked the commencement of a distinguished service in the House of Representatives which encompassed nearly 40 years and found him returned, by the people of this district, to the halls of Congress on 21 occasions. He was long a member of the House Ways and Means Committee where he performed able and conscientious service, and he was the ranking Republican member of the committee for a long period and chairman of the committee during the 83d Congress. It was during his service as chairman of that committee, and under his leadership, that the Congress enacted the thorough and extended revision of the tax laws and the enactment of a new U.S. tax code.

In addition to his other duties and services, he was a member of the Interparliamentary Union, of which he was at one time vice president, and in which he gave vigorously of his time and service.

We, as lawyers, found him ever a source of exceeding helpfulness in the many services which we as members of the bar sought of him if we had problems in the Nation's Capitol, and without his guidance would have found difficulty in steering our paths through the miriad of labyrinths in the complex structure of our Nation's Government in the Capitol at Washington. Many is the time that through his long familiarity with the departments and agencies of Government he facilitated the business which we were called upon to perform among the bureaus, the commissions, the departments, and all of the other intricate places to which a lawyer's assignments from his client might lead him.

His long experience in Washington and his kindliness and courtesy to the members of the bar and others who needed and asked his services, eased many a burden and saved many a weary footstep. He, as a, lawyer, knew our problems and our difficulties and his graciousness, his courtesy, his promptness and cooperation will long be remembered by many of us who came to him in our troubles and predicaments.

Had he had his way, many of the complexities of the Washington scene would have been eliminated and simplified, for he strongly supported the reports of the commission headed by Mr. Herbert Hoover which would result in increased efficiency, much needed economy, and a closer relationship between the public and its Government.

Daniel A. Reed was a creditable and honored lawyer, an able and conscientious servant of his district, and a distinguished and competent Member of Congress and of the Ways and Means Committee of the House of Representatives which he served long and faithfully. We, as lawyers, the members of the Jamestown Bar Association, desire to record our appreciation and gratitude to him for his many courtesies, his kindliness, his sound advice and his ever helping hand in all the multitude of services which he performed for us as individuals. We desire further to record the esteem in which we held him as both an attorney and counselor at law, and as a legislator in our National Government. His wide and varied activities and accomplishments brought him deserved honors from many places, groups, and individuals.

It is, therefore, that we, the members of the Jamestown Bar Association, record and spread upon our minutes, our sincere expressions of gratitude for his services to us, the esteem in which we held him, and our heartfelt sorrow to his gracious widow and to his son, in the great loss they have sustained. To Mrs. Reed and to Mr. William Reed, we extend our deepest sympathy, reminding them in their bereavement that they may look back with pride and satisfaction to the courageous and competent services which their husband and father had rendered to his fellows, his neighbors, his constituents and the people of this country of whim he felt so honored to be a part.

I move, Mr. President, the adoption of the foregoing as a memorial of our esteem and affection to Hon. Daniel A. Reed, and in memory of him as an honored member of our professison and a trustworthy and honored public servant.

CLARENCE G. PICKARD.

Seconded by:

MICHAEL D. LOMBARDO.

Adopted at a meeting of the Jamestown Bar Association on February 26, 1959.

ALLISON P. OLSON,
*President.*

## Marine Sgt. John A. Basilone

EXTENSION OF REMARKS
OF
### HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
*Thursday, March 5, 1959*

Mr. WILLIAMS of New Jersey. Mr. President, New Jersey paid tribute recently to a hero who belongs to the entire United States, Marine Sgt. John A. Basilone. To help others in the Nation recall once more the valor of this man, I wish to insert into the RECORD the following speech by William Kurtz, speaker of the New Jersey Assembly, as well as the newspaper account carried by the Daily Home News, of New Brunswick, N.J.

I ask unanimous consent to insert in the Appendix of the RECORD the following speech by William Kurtz, speaker of the New Jersey Assembly, as well as the newspaper account carried by the Daily Home News, of New Brunswick, N.J.

There being no objection, the speech and article were ordered to be printed in the RECORD, as follows:

ADDRESS OF ASSEMBLY SPEAKER WILLIAM KURTZ, FEBRUARY 22, AT BASILONE MONUMENT, RARITAN, N.J., HONORING WORLD WAR II HERO AND MARINE, JOHN A. BASILONE

I am profoundly honored to participate in the memorial service of Marine Sergt. John A. Basilone, one of America's greatest military heroes.

Gov. Robert B. Meyner regrets he could not attend today. He is attending the National Governors' Conference, in Mississippi. The governor, who is a commander in the Naval Reserve, shares the enormous respect, admiration, and affection all Americans have—and will always have—for the immortal marine we are honoring today.

Almost 600 men from this area served their country during World War II, but the brilliant record and heroism of John A. Basilone transcends all others. Many consider him the greatest hero of World War II.

His tremendous courage, efficiency, and leadership in the Lunga area on Guadal-

canal prevented the enemy from capturing a vital airfield in the early, but critical days of the war, when freedom was wounded by an enemy determined to subjugate the world.

Against a powerful Japanese force, he killed 38 soldiers, dismantling and repairing a defective machinegun during the battle, and also penetrating enemy lines to obtain ammunition for our gunners. This exceptional courage earned John A. Basilone the Congressional Medal of Honor, the first enlisted marine to receive the decoration.

Like all really great men, John A. Basilone was blessed with the quality of humility. Asked how he accomplished his incredible feat, he said: "I did what any other marine would have done in my position."

Returning to America, he was instrumental in selling $1,400,000 in war savings bonds and became a machinegun instructor. Because of his fame, he could have remained in the comparative comfort and safety of the United States.

But not John A. Basilone. He was anxious to return to active duty. Cowards may claim he was foolish to return to war, but cowards cause and lose wars. The courageous—men like John A. Basilone—prevent and win wars.

An article dated January 22, 1944, reveals the heart and soul of this remarkable young man, who was not only a great warrior, but a man of fine character:

The article read: "Tired of being placed on exhibit as a hero and chafing at comparative inactivity, Marine Sgt. John A. Basilone has talked himself into a fighting assignment again, requesting transfer to the front. 'There's still a big job to be done over there and I want to be in it at the finish.' "

When he returned to Raritan, a record crowd of 20,000 welcomed him on September 20, 1943, and 50,000 lined the streets to witness a huge parade in his honor. He was more than a famous marine and hero. He was loved by all Americans.

The military career that was born on July 11, 1940, ended on February 19, 1945, on the shores of Iwo Jima, where John A. Basilone led his men to victory.

He is one of America's most honored patriots. His painting hangs on one of your municipal office walls. He was selected one of America's outstanding young men of 1943. A Navy destroyer was named U.S.S. *Basilone*. The New Jersey Turnpike bridge over the Raritan River was named Basilone Memorial Bridge, in his memory. A resolution was recently introduced and passed in the New Jersey Assembly, designating February 19, as Sgt. John A. Basilone Day in the State of New Jersey.

On June 5, 1948, a crowd of 10,000 witnessed the unveiling of this magnificent and inspiring monument. This monument was praised in the National Publication of Sculptors and will endure for hundreds of years. But the achievements of John A. Basilone and what he represented, will live forever.

Lord Byron, poet-soldier, wrote that "they never fail who die in a great cause; their spirit walks abroad." Basilone's spirit was unconquerable and the cause he fought and died for was the greatest cause in life: Freedom. Today, when freedom again is threatened by tyranny wearing the mask of friendship, we appreciate his great sacrifice even more. May the life and death of John A. Basilone remind us that although life is precious, we must always be prepared to sacrifice it for freedom.

---

[From the Daily Home News, Feb. 23, 1959]

PAY TRIBUTE TO SERGEANT BASILONE, MEDAL OF HONOR WINNER

RARITAN.—About 700 area citizens and Army and Navy personnel turned out yesterday to pay tribute to the memory of John Basilone, Raritan Marine hero killed at Iwo Jima during World War II who won the Congressional Medal of Honor.

Heading the list of dignitaries at the ceremony at the Basilone Memorial Statue, Old York Road, was Brig. Gen. Herman L. Nickerson, Jr., special assistant to the physical director of the Marine Corps. In Washington, D.C., representing Marine Corps Commandant Randolph Mc. Pate.

BROUGHT MESSAGE

Nickerson brought a message from Pate, which said:

"Gunnery Sergeant Basilone will always be remembered as one whose extraordinary heroism, conspicuous gallantry in action and unselfish devotion to duty are a shining example to each of us. His memory will always be a source of inspiration to all Americans and it is most appropriate that his memory should be honored by the service which the Army and Navy Union and other veterans' organizations will conduct."

Representing Gov. Robert B. Meyner was Assembly Speaker William Kurtz of South Amboy.

PROFOUNDLY HONORED

Said Kurtz, "I am profoundly honored to participate in the memorial service of Marine Sgt. John A. Basilone, one of America's military heroes. Governor Meyner regrets that he could not attend today because he is at the national governor's conference in Mississippi.

"The Governor, who is a commander in the Naval Reserve, shares the enormous respect, admiration, and affection all Americans have and will always have for the immortal marine we are honoring today."

Kurtz also praised Basilone's courage, efficiency, and leadership in the Lunga area on Guadalcanal, which prevented the enemy from capturing a vital airfield in the critical early days of the war.

Against a powerful Japanese force, Basilone killed 38 soldiers, dismantling and repairing a defective machine gun during the battle. He also penetrated enemy lines to obtain ammunition for fellow gunners.

WON HIM MEDAL

Kurtz pointed out that this exceptional courage earned him the Congressional Medal of Honor.

Among those listening were members of Sergeant Basilone's family.

The citation for Sergeant Basilone was read by A. J. Troisi and wreaths were placed at the foot of the statue by numerous VFW groups, legion post representatives and women's auxiliaries.

Also participating in the service, which was sponsored by the local VFW, were elements of the 695th Air Force Artillery Battalion, Somerville; 50th Armored Division, N.J. National Guard; 5th Truck Company, Marine Corps League; VFW and Legion Post units, Spanish-American War Veterans and local clergymen.

Sergeant Basilone, who was 27 years old at the time of his death, was with the first assault troops to land on Iwo Jima and was killed by artillery fire from defending Japanese positions. He was posthumously awarded the Navy Cross.

Three years prior to his death, Sergeant Basilone had been awarded the Congressional Medal by Congress for gallantry in action on Guadalcanal in defense of Henderson Field.

SERVED IN ARMY

The Raritan hero was known as Manila John to his marine buddies because of a tour of duty in the Philippines while serving a 3-year hitch in the Army prior to joining the Marines.

In July 1943, following his heroic stand on Guadalcanal, Basilone was returned to this country and received the Congressional Medal from President Roosevelt. He then took part in bond selling drives but tired of this and asked to be returned to active duty.

His body lies in Arlington National Cemetery, Washington, in a plot which his father, Salvatore, selected while he was a guest of former President Harry S. Truman after the war.

Chairman of arrangements for the ceremony was John Auciello, commander of the Sante Moretti Post, VFW.

---

## Daily Radio Roundup of Farmers Union Grain Terminal Association

EXTENSION OF REMARKS
OF
## HON. WILLIAM LANGER
OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

*Thursday, March 5, 1959*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the daily radio roundup of the Farmers Union Grain Terminal Association.

There being no objection, the broadcast was ordered to be printed in the RECORD as follows:

Agribusiness Outlook is a newsletter published by Farm News Service in Washington, D.C. Here are some excerpts from it which should interest all farmers.

The Federal farm program, of all activities for which the Government spends money, is perhaps the least understood. In their anxiety to reduce farm-related spending, Government spokesmen sometimes emphasize certain facts and ignore others.

Then the newsletter explains what it means. For example, the statement that "most U.S. farm dollars are spent on the production of a relatively few large farmers. This is indisputable because 25 percent of the farmers produce 80 percent of all commercially marketed farm products.

But wholly ignored is the fact that program changes to provide lower supports as advocated by the Government would not change this situation. Even with lower supports—big producers would still get the lion's share. Also ignored is the fact that the Government is getting back 70 cents on each dollar invested in support commodities.

And another popular misconception, says Agribusiness Outlook, is that "the price support program is excessively expensive." The ignored fact is that only $1.1 billion qualifies as direct subsidy. "The biggest misunderstanding," the newsletter says, "is the common belief that farmers pocket $7 billion as a direct handout from Uncle Sam to Farmer Brown. Actually, $3.2 billion of this is not directly chargeable to farmers. It goes to foreign aid, public relief, and so forth. Another $400 million goes to consumers in the milk and school lunch programs. Another $600 million is for REA loans (repaid by farmers). Another $650 million is for research, meat inspection, disease and pest control, and other programs that benefit everyone." Summing up: Of the $7 billion spent on farm related programs, close to half—or $3.2 billion—benefits others more than it does farmers.

Another ignored fact is that lower farm prices are holding down the cost of living. Agribusiness Outlook says that the "only reason the cost of living is stable, according to the Bureau of Labor Statistics, is that farm prices are lower. Living-index Chief Ewan Clague says this, but Agriculture Department officials ignore it."

Another ignored fact on the newsletter's list is that farm products sell at bargain

rates. All major farm commodities in 1958 sold at lower prices than they did in 1952. In terms of city wages, consumers now can buy more than twice as much food for an hour's pay as they could in 1929.

Agribusiness Outlook ends up its glossary of popular farm misconceptions by quoting a prominent farm leader who says: "The farm situation is serious—and new workable programs are desperately needed. But such programs cannot be developed unless the public gets the complete picture on exactly what is and what is not the problem."

And now just a footnote—Farmers Union GTA is one of the farm organizations working to get true facts and educational information to the public. GTA farmers sponsor this program on 20 radio stations in the upper Midwest, in addition to television programs on 13 TV stations. Join your neighbors—GTA the co-op way.

## The 1960 District of Columbia Budget: Statement by Morris Kanfer

EXTENSION OF REMARKS
OF

## HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

*Thursday, March 5, 1959*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Morris Kanfer on the 1960 District of Columbia budget. The statement was made before the House Appropriations Subcommittee.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BEFORE HOUSE APPROPRIATIONS SUBCOMMITTEE ON THE 1960 DISTRICT OF COLUMBIA BUDGET, BY MORRIS KANFER, CHAIRMAN, FISCAL RELATIONS AND TAXATION COMMITTEE, FEDERATION OF CITIZENS' ASSOCIATIONS

The Federation of Citizens' Associations, representing 55-member associations throughout the District of Columbia, desires to express its support in principle of the District of Columbia Commissioners proposed budget for fiscal year 1960, amounting to approximately one-quarter of a billion dollars.

The size of the budget reflects a growth of the area and increased cost of operations comparable to those experienced by municipalities throughout the Nation. Responsible congressional leaders recognize the need for larger appropriations in supplying the basic needs of our citizens who require and demand the high standard of living which is the blessing of our form of government, and the American people are willing to pay in form of taxes for the security, health, education, and welfare to which our Government generously contributes.

We earnestly hope that this year this committee will approve of the Commissioners' request for a $32 million Federal payment toward the one-quarter billion dollar budget the District of Columbia requires to meet its essential and basic needs. It is significant, I believe, that the economy minded Budget Bureau of the Federal Government has approved of the $32 million Federal payment.

It is regrettable that the citizens of the District of Columbia are deprived of the opportunity of presenting to their representative in Congress, the facts which they believe justify the request for the higher Federal payment. Our feeble effort to persuade this committee once a year that our cause is just has in the past proven to be ineffective.

It was for that reason that the Federation of Citizens' Associations has, on several previous occasions, urged the Commissioners to establish a full-time congressional liaison with the congressional committees concerned with the District of Columbia budget but we have been advised that the Members of Congress look to the Commissioners themselves to perform the function of liaison with members of congressional committees.

I respectfully suggest that the Commissioners are overburdened by the numerous details required of them in the performance of their duties under the District of Columbia system of government and that a full-time liaison officer, comparable to those employed by Federal departments, would perform a useful function in keeping members of congressional committees informed throughout the year on the needs of the District of Columbia government.

I hope that this committee, in its deliberations, would consider the advisability of allocating a small part of the $5,168,000 requested for the Department of General Administration toward employment of an experienced congressional liaison officer to perform this, one of the most useful functions of government.

The Federation has also recommended to the Commissioners the establishment of a new office responsible directly to the Commissioners for the purpose of investigating potential savings in the operation of the District government. A quarter of a billion dollar budget fully justifies an appropriation of about one one-hundredth of 1 percent of the proposed budget to establish the office of Commissioner of Investigation, whose function it would be, among others, to determine whether the departments of the District government are being operated strictly within the law and regulations with a view of closing possible loopholes and to bring to the Commissioners attention, any violations which result either in the loss of revenue or unnecessary or improper expenditure of funds. Other cities which have attained maturity and growth have found that the office of Commissioner of Investigation resulted in stopping losses and in some instances, recovery of substantial sums which have been improperly expended in those cities through either collusive bidding on contracts or other improper conduct.

The Federation has every confidence in the integrity of the District of Columbia government and its personnel. Our suggestion for the need of a Commissioner of Investigation should not create any inference of any impropriety or wrongdoing on the part of anyone, but just as Congress itself requires broad powers of investigation in conducting its affairs, I submit that the District Commissioners require and should exercise similar powers in the interest of efficiency and a possible deterrent to collusive or improper action upon those who may be doing or asking to do business with the District government. A system of internal audit is not sufficient to ferret out collusive bidding or other improper conduct. The internal audit merely verifies figures and directs attention to obvious errors or omissions.

We respectfully urge this committee to allocate and earmark $25,000 out of the sum of $660,000 requested for operating expense of the executive office, which represents an increase of $224,000 over the 1959 budget. We are hopeful that a Commissioner of Investigation will effect savings or prevent losses substantially in excess of the cost of operating the office for the first year.

A few of the items apparently in need of investigation are:

1. The extent to which nonresidents are utilizing our school systems without payment of tuition on the pretext that they are residents of the District. Under present procedure only a signed slip of paper stating that a child is a resident of the District is required, and no evidence of legal guardianship is required of children who do not reside with their parents.

2. The budget for welfare relief is proportionately greater in the District than in other cities of comparable size. No machinery exists to thoroughly investigate the eligibility of recipients of welfare relief.

The federation also urges this committee to restore in the capital outlay budget, the sum of $2,816,350 for replacement of the Hine Junior High School at Seventh and D Streets SE. This expenditure can be financed out of the Treasury loan for building program by increasing the Commissioners' loan request to the extent of an additional $3 million. Previous legislation authorized the Commissioners to borrow from the Treasury up to $75 million.

The Education Committee of the Federation of Citizens' Associations, in requesting the Commissioners to allocate funds for the replacement of the Hine Junior High School, which serves 700 youngsters, characterized the top floor of the school to be a firetrap. Consequently, that was closed and the school has no auditorium or shop facilities and the building is generally in a very low state of repair.

While we are on the subject of the need for fire protection measures, I direct the committee's attention to an editorial which appeared in the February 7 issue of the Evening Star, entitled "Young Lives at Stake." The editorial credits Representative AUCHINCLOSS, of New Jersey, ranking minority member of the House District Committee, with the performance of a real service by disclosing a substantial number of inadequacies in fire protection measures in the public and private schools in Washington. You are undoubtedly familiar with Representative AUCHINCLOSS' speech to the House, which was based on a report by a District fire marshal, Raymond C. Roberts, after the December fire tragedy in Chicago which took the lives of 90 schoolchildren and 3 nuns. This report shows that 83 public and private schools in the District have neither telephones nor nearby alarm boxes to report a possible fire and that a number of schools are without fire extinguishers.

The federation wholeheartedly supports Representative AUCHINCLOSS' statement that these series of shortcomings should be remedied at once by administrative action where possible and by legislative action where new laws are needed. Your committee has this timely opportunity of taking affirmative action in eliminating one fire hazardous building by appropriating $2,816,350 to replace the Hine Junior High School and to do so without unbalancing the proposed budget. This cost, as previously stated, could and should be financed out of an increased Treasury loan under the building program.

The Board of Education requested $106,000 for exit lights, fire alarm system, and fireproofing of school buildings. The proposed budget allows only $21,000 and we are, therefore, assuming a terrific risk at the expense of the safety of our schoolchildren. We urge this committee to restore the full $106,000 requested by the Board of Education.

This committee is also urged to restore the sum of $250,000 to provide 50 counsellors, 1 for each of the 50 elementary schools as requested by the Board of Education. One counsellor for each of the elementary schools is not too much to request as an essential aid to an enlightened educational system. Teachers cannot possibly have the time to deal with the problems confronting children who lack normal home life. If a counsellor prevents one disturbed child in an entire elementary school from becoming a delinquent and possibly a criminal of tomorrow, he, or she, will have earned the silent gratitude of the residents of the District. Fifty counsellors for 50 elementary schools would be a long step in the right direction of preventing delinquency with which police seem to be unable to cope.

The Federation also respectfully requests this committee to restore $113,125 to provide for 25 librarians and remedial reading teachers for 2 vocational schools and 23 junior high schools. Each of the schools has a library but no one to take charge. These 25 librarians would perform dual functions.

This committee is also respectfully urged to restore $10,000 for additional teachers for summer teaching. The Board of Education requested $17,000 for additional teachers and supplies. The Commissioners included $7,000 for supplies but eliminated the $10,000 for the teachers.

The Federation again requests that the cost of operating the national zoo should be transferred to the Federal Government and it is thought that if this committee were to eliminate the entire amount of $1,150,000 from the D.C. budget, it would necessarily lead to some other agency or department of the Federal Government to assume the responsibility. The zoo belongs to the Federal Government. It serves millions of people from all parts of the world who visit the District and it should be maintained by the Federal Government.

And now for decreases of the proposed budget. The Federation recommends that the sum of $2,062,500 requested by the Highway Department for the extension of North Capitol Street from Hawaii Avenue to 16th Street, and Louisiana Avenue to Michigan Avenue, be eliminated from the capital budget, being unnecessary at this time. North Capitol Street does not appear to be an important arterial highway and a substantial amount of traffic presently using North Capitol Street may be diverted when the Maryland circumferential belt route is completed, which will connect the Jones Point Bridge in Alexandria and the National Pike, New 240, at Bethesda, Md. We also believe that before extraordinary commitments are made to complete the inner D.C. loop east of Connecticut Avenue, designed principally to divert downtown traffic, that traffic flow changes resulting from completion of the Maryland and Virginia circumferential route should be ascertained.

And finally, we urge this committee to recommend legislation to transfer excess funds from the Motor Vehicle Parking Fund to the General Fund. We note that the increased charge for street parking from 5 to 10 cents per hour will increase the Motor Vehicle Parking Fund beyond its requirements for maintenance and capital outlay. The excess should be transferred to the General Fund to provide the Commissioners with a cushion to meet extraordinary expense which may be required during the fiscal year.

In conclusion, permit me to thank this committee for the opportunity of expressing our views in a genuine effort to be helpful. I also desire to emphasize that any inferred criticism of the budget is not intended to reflect in any manner, upon the integrity of anyone. Our recommendations reflect our desire to retain Washington's reputation as one of the cleanest, most attractive and cultural cities in the country within which to live and visit.

## Problems Facing Privately Owned Shipping

EXTENSION OF REMARKS
OF
### HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
*Thursday, March 5, 1959*

Mr. MAGNUSON. Mr. President, there is so much misunderstanding and misapprehension concerning the Government's participation in commercial maritime activities that any contribution toward proper understanding of this rather complex matter deserves the widest possible dissemination.

For this reason, I ask unanimous consent that an editorial from the January 26th issue of the Forwarder marine magazine be printed in the Appendix of the RECORD. The editorial clearly details the problems facing privately owned shipping, the purpose of subsidies received from the Government, and the price paid by the vessel operators in return for this Government assistance, without which there could be no American merchant marine.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Scattered potshots are again being taken at the subsidy paid American shipping companies for building their vessels in American yards. "This is not to be confused with the subsidy for operating the ships," the article gasped.

Subsidies, this brief went on, are made paradoxes whereby people are paid to produce goods we don't want at a price we can't afford, and paying others to hold them for us or take them off our hands. To this we agree, in the case of most subsidies.

There must be something wrong in any economy when people are taxed to pay a subsidy to a producer whose product is then sold to the taxpayers at a price higher than that of a similar, and often better, foreign product forced to hurdle lofty tariffs or frozen out of the market altogether by the spiked wall of the tariff.

The merchant marine, however, is a seahorse of another color.

We can do as well without our merchant fleet as we could without our Army or Navy. When this is clearly understood everything falls into place. A time of emergency for us would be a time of emergency for all nations and we could no more depend on friendly foreign-flag carriers to transport our vital necessities than we could depend on them to send troops to defend us. They could not if they would.

Fortunately, or unfortunately, our standard of living is high. Seamen and shipyard workers, being Americans also, insist on wages commensurate with other industries of similar degrees of skill and danger. Material costs and everything else connected with ship construction and operation, keeping pace with the rest of our economy, are also inflated. However, we must have the ships.

They could be, and some are, built abroad. But on a wide scale, this would court serious danger. Skilled shipyard workers would drift away never to return—and the steel companies and other suppliers would scream to the heavens.

Therefore, needing the ships, our Government pays the difference between what the vessels would cost to build in an American yard and the cost in a Japanese yard. This is now running over 45 percent of the total price.

The result is that shipyards are kept productive, seamen are employed, our trade routes are served by crack new cargoliners which must be replaced within 20 years, and we have a constantly replenished fleet of troop or materiel transports, since special naval "features" are built into such vessels.

As for operating subsidies, steamship lines receiving them have virtually all held out to the last ditch before being forced by unequal competition into such an arrangement. The reason is that a line receiving a subsidy has the Government for a partner. The books are open, executive salaries have ceilings and profits are strictly limited, among other hedges ringing the companies. Also, of all the subsidies paid out by the Government the only one required to be paid back is the one to steamship companies.

Agreed that a subsidy is an unsatisfactory solution to the problem, but until all the economies of the world are equal, it will have to do until a better one is devised by economists and writers who demand congressional investigation of the present one.

## Economic Problems of Doctors

EXTENSION OF REMARKS
OF
### HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
*Thursday, March 5, 1959*

Mr. MORTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from my constituent, Dr. August Helmbold, of Newport, Ky.

Dr. Helmbold's letter makes some interesting observations on the economic problems facing the dedicated members of the medical profession, especially the difficulties that the doctor encounters in his later years in providing for his own security and that of his family. I think these observations will prove of interest to my colleagues.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NEWPORT, KY.,
*February 21, 1959.*

Senator THRUSTON B. MORTON,
*Washington, D.C.*

DEAR SENATOR MORTON: Thank you for your letter of February 9, concerning your introduction into the Senate, bill S. 841. In my humble opinion, this is a step in the right direction, and I thank you for taking it.

I believe that the greatest concern today is for the mass of the people in the United States. As Kentucky advertises, "The Greatest asset in Kentucky is her people."

I wish I could recall where I read the sterling article by a Swiss physician who recently visited and studied the medical problem and present solution thereof in Russia. I recall that in the article he stated that in Russia now there is 1 physician for 500 people, as compared to the United States 1 to 800. In the Armed Forces in World War II, I believe we were supposed to have 6.5 per 1,000; Russia, 1.5 per 1,000.

He also stated that in Russia men entered the medical college after completing only 2 years of high school and that Russia graduates over 12,000 physicians a year, as compared to us at 5,000 or 6,000.

Now I am not questioning whether we are overstaffed, understaffed or normal. The Kentucky State Department of Health recently reported eight counties with only one physician—probably under there.

I believe in our capitalistic system and I believe that the medical problem of this country can be well and better solved by the application of capitalistic methods that are tried and true.

To improve any service one must improve incentive—to the physician more incentive can be stimulated by providing more income and this by providing him with more patients to see. This, in turn, provides more health and better working ability of the worker. Then, in turn, more work provides more taxable income to the Government, which of course is what Congress is

striving for and this is an easier way of getting it, and a happier way.

There is, however, to the doctor a drawback to this simple plan; more patients means more time; more time means more wear and tear on his system; and more money coming in to him means more taxes and an increase in taxes percentagewise.

Should this increase continue to its limit, the doctor would be paying 90 percent of his income to the Government at a cost of 90 percent of his health and a 90 percent reduction in longevity and in the overall plan, would not be rendering good service over many years.

There is in Congress no law to provide for the doctor who overworks himself for the benefit of the people and the country.

I believe that this incentive to do more work can be supplied by Congress by passing a reducing scale of income tax payments than an increasing one.

I would have a greater incentive to work and will treat more people if I am charged 25 percent for my first $10,000, 20 percent for the next, and then perhaps 15 percent of the next, than as it now is 25, 40, 50, and on up. Doesn't taxation finally come up to be confiscation? Isn't confiscation a cause for rebellion, for unrest, for readjustment? There is a value attached to everything, including citizenship.

The savings gained by the reducing scale to the physician can be put aside to provide for his care should he have a breakdown or reach that period of life when time stops his productivity. It would in a pleasant way provide him with that up to $2,500 you so wisely advocate.

I hope I have given you something to think about and that it may help you in the passage of your bill.

Very truly yours,

AUGUST HELMBOLD.

## Inventions and Small Industries in Montana

EXTENSION OF REMARKS

OF

### HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

*Thursday, March 5, 1959*

Mr. MURRAY. Mr. President, truly, necessity is the mother of invention. The latest proof of this axiom is contained in The Northwest, published by the Northern Pacific Railway Co. It contains an article telling how one of my enterprising constituents, Gerald E. Hersman, of Livingston, Mont., after spending a night in the woods without a fire, invented an ingenious fire lighter which I am pleased to report is now being produced by his small factory in Livingston. Thus another small industry comes to Montana.

Industrial development leaders have often pointed out that, while it is always fine to attract a new branch of an established industry, one of the best ways to create new jobs is simply to develop new industries at the hometown level. That is exactly what has been done by Mr. Hersman, of Livingston.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the article referred to, entitled "Perilous Journey Gave Him an Idea for a New Industry."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PERILOUS JOURNEY GAVE HIM AN IDEA FOR A NEW INDUSTRY—NIGHT IN THE WOODS, IN FREEZING COLD, SHAPED THIS MONTANA HUNTER'S FUTURE

Ten years ago, in November, Gerald E. Hersman, of Livingston, Mont., was trailing a huge bull elk high in the Montana Rockies.

The snow was deep and the temperature, which had stood at 10 degrees below zero during the day, was dropping. An experienced big game hunter and an ardent outdoor enthusiast, Hersman had followed the particularly fine specimen for several hours when, finally, late in the afternoon, the opportunity for a shot presented itself and the excellent trophy was secured.

Naturally, he didn't suspect then how this incident would influence his life in years to come—how, as a result, he would start a factory.

Hersman had no premonition, either, of what the product he later was to manufacture—a non-failing fire lighter—would mean to thousands of other persons bent on recreation in farflung outdoor regions.

In place of day dreaming about the future, the hunter hastily dressed his kill and prepared to leave it to "cool out" before returning the next day with pack horses to move it to the highway, where it would be hauled to his home.

When the job was completed and Hersman began to take stock of his location and map out his return route, he realized with dismay that darkness was falling rapidly and that he was more than eight miles over precipitous and rugger mountain terrain away from his car.

To make this trip after dark would be dangerous and foolhardy; so, he immediately decided to build a fire and spend the night there, rather than risk injury and possible death from a fall.

Hersman's first concern was to gather wood and get a fire started to make the long hours of darkness more bearable.

Unfortunately, due to a heavy covering of snow, he was unable to gather suitable firewood and all efforts to ignite the material at hand failed. When he realized that his last match was gone and that there was no hope left for a fire's warmth, he selected a huge pine tree and trod a path around it, an act almost of despair, which was done with the realization that he was going to have to keep moving all night or he might become drowsy and doze off, with the possibility of freezing to death.

As the long, cold hours dragged slowly by while he fought off weariness, Hersman began turning over in his mind the events leading up to his predicament. He tried to think of a solution to rely on if such an emergency were to occur again. He realized that had he been carrying material that would ignite easily and quickly and that would give off heat, his night in the woods would have been much safer and less an ordeal.

Strange though it may seem at a time such as this, he recalled experiments in his high school chemistry classes. Before daylight came, Hersman had convinced himself that he could make a safe and dependable material for starting fires under the most adverse conditions.

On his return home, he tackled the problem again and, after 3 or 4 years of experimentation, a fire lighter was developed that appears to be satisfactory from every angle and, with wide approval, it is meeting a demand.

Hersman's fire lighter is made by taking a three-fourths-of-an-ounce waxed paper cup, which is filled with sawdust and his now-patented chemical ingredients. Paraffin or wax melted at 200° Fahrenheit, then poured over the material in the cup, penetrates to the bottom.

In a machine which performs the above operations automatically, the temperature is quickly lowered to zero Fahrenheit to force the contents of the cup to harden or set. This entire operation takes just 1 minute and the finished product is ready for packaging.

To ignite the fire lighter one makes a slight tear in the rim of the paper cup, which acts as a wick and the flame of a match causes the ingredients to react with a controlled fire that creates its own energy as it burns. The small amount of material produces a flame 7 inches high for 30 or 40 minutes.

The sawdust used must be of definite age, moisture content and gage.

One of Hersman's baffling problems was the fact that there was no existing machinery which could be utilized to manufacture this product. However, with the aid of Lester Hall, of Livingston, he designed and successfully built equipment which now is in use in the little factory he established at Livingston, where 12 people are employed. He calls it the Hersman Manufacturing Co. The present setup will turn out 10,000 of the fire lighters per hour. Hersman named his product the Fire-Go-Starter.

Plans are underway to obtain another location and more machines so that eventually between 50 and 60 workers will be employed.

The last 2 seasons 1 million of the fire lighters were sold and use in Yellowstone National Park to light stoves in tourist cabins.

The fire lighters are in demand by campers, fishermen, hunters and many others. They can be used in fireplaces, wood and coal ranges and in charcoal burners or for igniting the popular sawdust logs.

"The product has proved to be safe, sure, easy to operate, nonexplosive and waterproof, making it ideal for commonplace use or for inclusion in a survival kit," Hersman says.

Other advantages are that the material will not deteriorate with age and it is always ready for use.

Retailers who handle the lighters generally set the price at 5 cents each. New outlets should develop as the product becomes better known.

In addition to the above business, Mr. Hersman operates a drycleaning establishment and has another specialty product that he manufactures. This is an elk caller, which will lure a bull elk to a hunter in the fall. The instrument is made of metal and is about 12 inches long, with air chambers to give it correct tone.

Whether it sounds like a love call to a gentleman elk looking for female companionship or is accepted as a challenge from another bull to fight, we don't know, but it works. These elk callers are made only on order for interested sportsmen.

## The Trail to Brotherly Love

EXTENSION OF REMARKS

OF

### HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

*Thursday, March 5, 1959*

Mr. MUNDT. Mr. President, the greatness that is America is reflected in the annals of our history through the events and the people that have guided our destiny.

In times of crisis and peril—such as during World War II—the rich heritage of democracy comes forth in all its glory through the actions and deeds of our citizenry.

Today, as we look back on these events—World War II, World War I, and earlier times—when our Nation stood at the door of disaster, we tend to forget that although these were momentus engagements, the decisive turn of events was fully dependent upon the individual citizen.

How one such event, which is a story of personal courage and faith, will always stand as one of America's most superb moments in history, is told in a recent address given by George E. Stringfellow, imperial potentate of the Ancient Arabic Order of the Nobles of the Mystic Shrine for North America.

George Stringfellow is a dedicated American who exemplifies the finest qualities of good citizenship. He is a man of deep religious conviction and devoted patriotism, and he brings to the office of imperial potentate the outstanding traits of leadership that reflect the great principles upon which this country was founded.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the introductory remarks by Dr. Daniel A. Poling and the address by Mr. Stringfellow.

There being no objection, the introduction and the address were ordered to be printed in the RECORD, as follows:

INTRODUCTION BY DR. DANIEL A. POLING, IMPERIAL CHAPLAIN OF THE ANCIENT ARABIC ORDER OF THE NOBLES OF THE MYSTIC SHRINE FOR NORTH AMERICA

In the Chapel of Four Chaplains, the unique interfaith memorial at the heart of Temple University in Philadelphia, on Sunday afternoon, February 15, George E. Stringfellow, imperial potentate of the Ancient Arabic Order of the Nobles of the Mystic Shrine for North America, delivered a notable address. The message of the imperial potentate was a declaration of faith and freedom. He spoke in support of that unity which is not uniformity but which transcends all differences of faith and race, and which, at last, strengthens every worthy individual and group loyalty.

The chapel, which is a memorial to the four *Dorchester* chaplains—a Roman Catholic priest, a Jewish rabbi, and two Protestant ministers—is symbolic of the faith in which the *Dorchester* chaplains gave their lifebelts and their lives for their fellow men. On the occasion of the imperial potentate's address, the beautiful sanctuary with its many memorials and its three altars upon a revolving platform within the chancel arch was crowded with Shriners and their friends.

THE TRAIL TO BROTHERLY LOVE

(An address by George E. Stringfellow, imperial potentate, A.A.O.N.MS., East Orange, N.J., Chapel of the Four Chaplains, Philadelphia, Pa., Feb. 15, 1959)

My friends, we are gathered here this afternoon to pay homage to a great American heritage. It is fitting that this be done in this chapel—erected to the memory of four American heroes—who loved their country and their God so devoutly that they gave up their lives that others might live.

The night of February 3, 1943, was cold, bitterly cold. Across the wide expanses of the North Atlantic, an American convoy of troops and the supplies of war moved silently to the rescue of embattled peoples, held in subjection by a maniac. The ships in the convoy were silhouetted against the faint light that glowed from out of the north across the Greenland sea.

One of the ships in the convoy was the *Dorchester*, carrying both troops and supplies. The men aboard the ship were young, red-blooded American boys. Facing death on the battlefields of strange lands, they were carefree as soldiers usually are. Most were asleep. Others were reading, talking or gaming under shielded lights.

Suddenly, there was an explosion on the starboard side of the ship and every man aboard knew what had happened. Torpedoed. Admiral Doenitz, the chief of the Germany Navy, had warned the world that his submarines would wage uncontrolled war against all shipping. On the afternoon of February 3, the men had been told of the admiral's warning. They were instructed that until further notice they must wear warm clothing and lifejackets at all times for their protection in the event of an attack which now had come.

But fearless young men do not always do what they know is best for themselves. When the German torpedo struck the *Dorchester* just after midnight on February 3, many of the troops were asleep and without their lifejackets.

Of course, there was confusion when the explosion came. There was a rush for the decks. The skipper told his men to proceed to their lifeboats. Before half of them reached their assigned stations the ship began to list. Within a matter of minutes, the ship was almost on its side. The lifeboats could not be lowered. Rafts were cut loose and men began dropping into the sea. In 27 minutes, the *Dorchester* went down.

Suddenly in the confusion four men appeared—four stalwart young men—and raised their voices in prayer. They were Alexander Goode, a Jewish rabbi; John P. Washington, a Catholic priest; and Clark V. Poling and George L. Fox, Protestant ministers.

As they prayed, they saw some of the young men had no lifejackets or warm clothing. And so, as if in some miraculous way it had been planned, the four men calmly unfastened their own lifejackets and buckled them around the shoulders of careless boys who had forgotten where they had placed theirs.

As minute by minute passed, these four men—a Jew, a Roman Catholic, and two Protestants—calmly locked their arms together and prayed to their God—in their own manner—until the *Dorchester* sank—into the icy waters off the tip of Greenland.

These men did not die. They will live as long as there is an America. Their glorious deed is written indelibly in the pages of history—alongside the minutemen at Concord and Lexington; beside a little group of Masons from St. Andrews Lodge in Boston who dumped tea into Boston Harbor; beside Washington, Patrick Henry, and Paul Revere; beside Lincoln, Grant, and Lee; beside Pershing, MacArthur and Rickenbacker; beside Patton, Halsey, and hundreds of others.

This is the heritage we have received.

This is the heritage that Russians cannot understand.

This is the heritage that Hitler forgot, that Stalin forgot, and that today's Kremlin is forgetting. And unfortunately, too many Americans are also forgetting. We spend too much time bickering in our petty disagreements that our memory fades. On the *Dorchester* that cold, bleak night four men rose above their petty differences in form and ceremony; to the glory of America, these men met their God.

In inviting me to speak you have conferred a great honor upon me and the fraternity I represent. As imperial potentate of the Shrine of North America, I assure you that 830,000 Shriners cherish the heritage bequeathed to them by the four chaplains. We will of course strive to be worthy of their sacrifice in our behalf.

The Ancient Arabic Order of the Nobles of the Mystic Shrine for North America is playing a vital function in our tragic, modern world. It provides fun and happiness for its membership.

It provides entertainment for the millions who witness our spectacular parades.

We Shriners are vigilant to protect our people from the machinations of the monsters who would enslave us.

The Shrine teaches religious toleration. One of the great tragedies of our time is the way in which minorities engage in warfare against each other—instead of uniting and fighting the forces of evil. Our initiates are taught that every man shall have the right to worship God as he chooses without interference from anyone.

Let us rededicate ourselves to the glory of our country.

Let us not be ashamed to point, with tear-dimmed eyes, to our flag and say, This is the symbol of my country which I will defend as the four chaplains whose memory we honor today.

Let us raise our eyes to heaven and in all humility say to the great Architect of the Universe that we will forever cherish the memory of the four chaplains who blazed the trail to brotherly love.

## New Ideas for Vessel Improvement

EXTENSION OF REMARKS
OF
## HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
*Thursday, March 5, 1959*

Mr. MAGNUSON. Mr. President, there is an old adage to the effect that "The Lord helps those who help themselves." This might be paraphrased to suggest that the industries which most justifiably rate Government support are those which are making a real effort to solve their own problems. Under this heading should be included the privately owned commercial shipping industry, which presently is embarked on a program of vessel replacement, involving expenditures over the next 15 years running into several billion dollars of private funds.

Along with these expenditures, the vessel operators, in concert with the Maritime Administration, are engaged in a program of research and experimentation of great potential value to the country's future economy. An editorial that appeared in the January 19 issue of the Forwarder, gives a preview of some of the new ideas for vessel improvement in the years ahead. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

If an oldtime round-the-horn windjammer sailor were to return today no one could estimate the amount of eye rubbing and soft swearing that would go on as he stared popeyed at such wonders of the sea as the *Queen Elizabeth, Queen Mary, United States*, and our new aircraft carrier, U.S.S. *Independence* on the flight deck of which the liners *United States* and *America* could be placed side by side with room all around.

A glimpse into the immediate future, however, would have him convinced that either he or ourselves were mad.

Ships cruising the oceans for months without refueling; ships crossing the At-

lantic at 50 or 60 knots; thousands of tons of cargo transported in a rubber bag; ships traveling the trade routes of the world with only a small fraction of their bulk above the surface.

These, of course, are far from dreams. N.S. *Savannah*, now building, will be operating next year and the experience gained from its nuclear propulsion machinery will figure in all future marine engineering. Tests will soon be conducted with large, ocean-going hydrofoil ships in view. Many years ago S. B. Morse, inventor of the telegraph, developed a hydrofoil boat which goggle-eyed spectators watched streak across a northern lake at better than 70 knots. There is a hydrofoil ferry presently running between mainland Italy and Capri at speeds above 80 knots. So it is far from inconceivable that a really large ship could cross oceans at twice the present speed.

A British development shows it possible to move a large cargo of oil or other liquid in a huge specially treated bag towed like a sausage behind a smaller boat. After the cargo is delivered the bag is folded and carried as a deck load; thus eliminating possible long uneconomical return voyages of tankers.

One of the latest developments on the drawing boards is a massive, nuclear-powered submarine-type vessel. It would not be a true submarine because the bridge, living quarters, public rooms and so on would be carried in a relatively small streamlined structure high above the water, with the cargo and machinery riding in a huge, whale-like shape beneath the surface. These, and powerful submarines, towing large, blimp-shaped cargo barges far beneath the surface at high speeds, are definitely in our future.

These are exciting times we live in, restless and changing, and nowhere more than in the maritime fields. Romance of the sea dead? Nonsense, there will always be more than enough for all hands.

## Opposition to Merger Legislation Affecting International Communications

EXTENSION OF REMARKS
OF
### HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Thursday, March 5, 1959*

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted on December 16, 1958, by the executive board of the International Woodworkers of America, AFL–CIO, expressing opposition to proposed merger legislation affecting international communications.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OPPOSING MERGER LEGISLATION AFFECTING INTERNATIONAL COMMUNICATIONS

Whereas the major international radiotelegraph and cable communications companies have announced their intention of creating a monopoly in that industry and have caused to be introduced in the U.S. Senate a bill, S. 4231, which would exempt them from the prohibitions of the Sherman Antitrust Act; and

Whereas Congress has, as a matter of public policy over many years, refused to permit mergers in this vital communications field; and

Whereas the existence of competition in this industry has brought American communications development to the forefront of the world, has maintained reasonable rates and speedy and accurate service; and

Whereas a monopoly in this industry would be harmful to the business community, the national defense, to labor, and the public interest generally: Therefore be it

*Resolved*, That the executive board of the International Woodworkers of America, AFL–CIO, hereby expresses its opposition to any legislation that would permit mergers or the creation of a monopoly in the vital international communications industry.

Dated: December 16, 1958.

WILLIAM BOTKIN,
*International Secretary-Treasurer.*

## The REA and Trinity Power

EXTENSION OF REMARKS
OF
### HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
*Thursday, March 5, 1959*

Mr. KUCHEL. Mr. President, I ask unanimous consent that the text of a speech which I made before the 17th annual meeting of the National Rural Electric Cooperative Association on February 9, 1959, in Washington, D.C., be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE REA AND TRINITY POWER

(Address by U.S. Senator THOMAS H. KUCHEL, of California, before the general session, 17th NRECA annual meeting, Washington, D.C., February 9, 1959)

President George, Mr. Ellis, members of the National Rural Electric Cooperative Association, and friends, I am delighted with this opportunity to exchange views with the organization which has brought millions of Americans one of the means of better living: electricity.

Much as the pioneers did who put the plow to our broad and fertile land in order that there might be a plenitude of food for the people and an ample supply of fibers for their needs, the rural electric cooperatives have blazed a trail through the wilderness of technological maladjustment so that the American farmer and his family might receive the benefits of this convenient form of energy at prices tolerant to their income. Thanks to the cooperatives, 19 out of 20 farmhouses today can command the assistance of electricity at the flick of a switch. Clean incandescent and fluorescent lighting has literally eclipsed the kerosene lamp. The electric motor has accepted the strains of human toil in the house and the shop and barn. Even the human hunger for entertainment is filled in part by devices utilizing the magic of electrokinetics. Indeed, the farmer who is a member of his electric cooperative may have today all the conveniences of city living—plus the joys of living in the country.

The banding together by neighbors for the purpose of obtaining electrical service is clearly in consonance with the philosophy of government expressed 100 years ago by Abraham Lincoln. This greatest of Americans said, "The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do for themselves in their separate and individual capacities."

Your meeting is being held in a historic setting. Washington has been the seat of American Government for 169 years. In the old Supreme Court room of the Capitol, a mile or two from this armory, one of the most useful applications of electricity was accomplished when Samuel F. B. Morse demonstrated the first telegraph, sending his message, "What God hath wrought," over the wires instantaneously from Washington to Baltimore.

Northward, a couple of hours from here by automobile, lies Philadelphia, where Benjamin Franklin interested himself, among many other subjects, in the phenomenon of electricity. Franklin was a practicing scientist of government. He perceived, as Lincoln did later, that the people have to do jointly many things which they cannot accomplish as individuals; for it was Ben Franklin who established the Post Office Department in order that the public might have a far better mail service than they could supply for themselves. He carried out a legitimate object of government.

About 23 years ago, the Congress of the United States concluded that if rural America were to receive electric service, this would have to become a "legitimate object of Government" through Federal assistance to local cooperatives. The undertaking has been successful. A tremendous amount of new business has been developed, which benefits the total American economy; for when thousands upon thousands of farm families buy electrical appliances, industry hums in Schenectady and Chicago and all around the land. The cooperatives have had a magnificent record of financial soundness. They have served a legitimate object of government.

But now it is proposed to emasculate the foundation of the rural electric cooperatives. Other speakers during this meeting will discuss the attempts to exact higher fees for the money which cooperatives must borrow. They will remind the public that the rate of interest paid on REA loans in most of these past 23 years has exceeded the interest rates paid by the Government in the money market. They will note that under the "area covenants" which a cooperative undertakes when it accepts Federal assistance, that cooperative must give service to any farmer in the territory even if the individual account may not be profitable. This, of course, the private utilities cannot be compelled to do; and until the idea of rural electric cooperatives was born, many such farmers had to endure a standard of living which reflected the lack of electrical service.

These financial policies, as I say, are not within the scope of my remarks; but they interest me very much. In this connection, I hope you will permit me also to remind you that I am a coauthor in the U.S. Senate with Senators AIKEN, HUMPHREY, SPARKMAN, KENNEDY, MILTON YOUNG, COOPER, MANSFIELD, HILL, HENNINGS, CURTIS, MURRAY, LANGER, and CLARK on the resolution to clarify the lending authority of the Rural Electrification Administration.

The aspersions upon REA interest and loan policies constitute a threat to the magnificently successful rural electrification program. I want to discuss another, equally serious threat—the attack upon the governmental policy of giving preference to publicly owned and operated agencies when it disposes of federally generated power. By definition those agencies include military installations, irrigation districts, municipalities, and rural electric cooperatives.

The present battleground in the war upon the preference policy is my own State of California. Hydroelectric power is a feature of Federal multipurpose reclamation proj-

ects. Great dams are built to impound quantities of water for irrigation. As these waters fall over the dam, or, rather, go through a penstock, they turn electric generators. You are far more familiar with the process than I.

Revenues from the power sales have contributed substantially to project construction costs. The reclamation projects of the United States are not built for profit. Their purpose is to serve the needs of the people. They incidentally—and importantly—assist in controlling floods and in controlling salinity. They provide new recreational opportunities. And, utilizing the inevitable hydro head, they produce power.

Whenever we study these governmental projects, it must be borne in mind that the size of the dams is governed not by the output of the powerplant, but by the needs of irrigation. Irrigation is the primary purpose. These are reclamation projects. They are power projects only incidentally. The ability of the Government to receive income from the power has, of course, helped to guarantee a dependable and economical supply of water for crops.

Moreover, if the dams had been built simply for power, they would be small. Their capacity for irrigation needs would be irrelevant. There is an excellent example of this in my State. There, on the great Feather River, the private utility has built a series of dams. Each produces a hundred thousand kilowatts or so of electrical energy. But they do not hold back much water for summer irrigation. Their flood control values are negligible. In the disastrous flood of 1954–55 in the Sacramento Valley, it was not the Sacramento River which caused the loss of 70 lives and wreaked tremendous property loss, but the Feather and other streams, upon which there are no reclamation dams at the present time. On the Sacramento, the mighty Shasta Dam, a reclamation project of the United States, holds back more than 4 million acre-feet of water; if it had only to serve the needs of power production, it could be of a capacity of a relatively few thousand acre-feet.

Reclamation was found—under the administration of a great Republican President, Theodore Roosevelt—to be a legitimate object of the U. S. Government. No individual could possibly cope with a reclamation undertaking costing hundreds of millions of dollars; but it was both possible and practicable for the community of people, the Government to do so. And thus, in the best sense, it was in the Lincoln tradition.

The disposal of the water from these projects, and of the power, was dealt with on behalf of the community. A limitation was placed upon the number of acres an individual might own if he accepted the irrigation benefits; and, in order that its benefits might be shared by a maximum number of people without profit to any at the expense of the Government, the electric power was put at the disposal of Federal installations and public agencies.

This preference, with respect to power, constituted the forms of assistance which the Federal Government could make available for rural electric cooperatives. If the preference policy were to be eroded away, the Federal agencies would have to come to Congress for more money to cover the mounting costs of their power bills. The cities which have established municipal power distribution, and the electric cooperatives, would lose one of their principal means of helping to build America. With half of your systems directly dependent upon Federal projects for wholesale power, you have cause to be deeply concerned.

It is with respect to a great new Federal project in my State that such erosion is being attempted. If the private power industry succeeded in preventing the Government from making the electricity from the Trinity available to preference customers, I think it only logical to expect that a like attempt would be made with respect to all Federal reclamation projects, in being or in prospectus. The efforts of the community of people to accelerate the economy of rural America through electric cooperatives would suffer a disastrous reversal.

Congress authorized the Trinity division of the Central Valley project in July 1955. My former colleague, William F. Knowland and I coauthored the bill in the Senate. I was proud to have the opportunity of successfully presenting the necessary legislation in committee, and in the Senate as a whole. As finally approved, the Trinity bill was the version passed earlier by the House of Representatives.

By reason of the lateness of the season, Representative CLAIR ENGLE requested the Senate to take up his House-approved bill. It was similar to the Senate version, except that it provided also for a continuance of studies and a report to Congress by the Secretary of the Interior on proposals for power development through the purchase of falling water at Trinity by a non-Federal agency, the result of proposals made by the Pacific Gas & Electric Co.

The Trinity project is unique. It will take a million acre-feet of water annually from the Trinity River on the west side of the coast range of mountains in northwestern California, and dump it into the upper reaches of the Sacramento River on the other side. The transfer will be accomplished through several tunnels through the mountains. As the waters descend, they will develop electricity at three powerplants in a total of 330,000 kilowatts of firm power.

When the water has reached its destination, it will supplement the Central Valley project, and stabilize the Sacramento River. It will provide some flood protection on the Trinity and Klamath Rivers. It will have recreational values. And this multi-purpose project will generate power.

When they headed the administration of my State's government Earl Warren and Goodwin Knight both urged the Trinity project. Edmund Brown supported it as attorney general, and since becoming Governor, has stated his continuing approval for Federal construction of the power feature of the project. So in the Congress we have been carrying out the wishes of the State—which is as it should be.

In accordance with the reclamation laws, the power feature of the Trinity was included in the 1955 legislation. But as we worked for passage of the legislation, it became necessary in the House of Representatives to accept the amendment which I have described. This was the provision for a report by the Secretary of the Interior on the purchase of falling water at Trinity by a non-Federal agency. In plain English that would be the so-called partnership between the Government and the Pacific Gas & Electric Co.

I want to emphasize that Congress in authorizing Trinity was at great pains not to waive the national policy regarding public power and the preference principle. In fact, in reporting the Trinity bill, the Senate committee flatly declared it was its intention to preserve inviolate the preference clause sections of the reclamation laws. The committee went on to indicate that the study by the Interior Secretary was not to be interpreted as approving any departure from the traditional policy which goes back to Theodore Roosevelt's administration. That was certainly my intention in handling the bill. It was, I believe, the intention of the Senate in passing it.

The studies called for in the act were made by the Bureau of Reclamation. They were reported to Congress 2 years ago by the Secretary of the Interior, who recommended the so-called partnership. The Commissioner of Reclamation said in his report attached to the Secretary's recommendation, that:

"The all-Federal development assumes extending to the Trinity Division policies and reclamation law which provide for sale (1) of power to preference agencies, (2) at lowest rates to all customers consistent with the financial needs of the project.

Obviously, under the partnership, public preference would be emasculated. The Commissioner himself stated that under the partnership the power available from the Central Valley project, into which the Trinity Division has been incorporated would be curtailed. He calculated that 650,000 kilowatts would be available to nonprofit agencies under Federal development, contrasted with 400,000 kilowatts under private development. A later study by Samuel B. Morris, the distinguished Los Angeles engineer, found that the difference would be not 250,000 kilowatts, but 330,000 of firm power.

Using 250,000 kilowatts, the Secretary calculated that the excess cost to public agencies for their power needs would be $118 million, of which $71 million would be paid for by Federal installations, and $47 million by local preference customers. The report was sent to Congress on February 12, 1957. In June of the same year, after it had been discovered that the earlier figures were based on an obsolete rate schedule of the private utility, the Secretary revised his total figure upward to $150 million as increased costs to public agencies, including the proposed new San Luis Reservoir.

Mr. Morris calculated that with San Luis, the excess cost to preference customers would be $192 million—using the Secretary's figure of 250,000 kilowatts as the power output of the Trinity project. But Mr. Morris, as I have said, reckons the output at 330,000 kilowatts of firm power. He finds that the difference in cost to preference customers if they bought the larger amounts from the private utility, would be $257 million over the 50-year payout period of the Trinity project.

While it is extremely difficult to make precise calculations on a problem so complicated as this one, everyone concerned clearly understands that the excess cost to preference agencies under the partnership" proposal would run into millions of dollars. We know that the Federal installations which use Central Valley project power would find it necessary to budget for higher costs. Congress would have to provide the money for them. We would be selling the falling waters at Trinity at one level, and we would have to buy back the power at a higher level to pump water into the San Luis Reservoir, and for other Federal purposes.

Against the excess costs to Federal installations, municipalities, rural electric cooperatives, and irrigation districts, would be the offset of the amount the private utility would pay for the falling waters at Trinity. But even if the offset were 100 percent—which it is not—this would be nothing more than robbing Peter to pay Paul.

Beyond the fact that the partnership proposal violates by understanding of economics, I subscribe to the principle that the people of a community have the right to determine for themselves the kind of electric power service they want. This they do for water service, and transportation, and a number of other public objectives. Is it not abundantly true, my friends, that in this Republic of ours, it is the people whose right it is to decide what they want for themselves?

One does not need to be doctrinaire on power policies in order to recognize the right of people to determine the kind of electric service they desire for their community or district, under preferences given to them by Federal law on Federal reclamation projects. It is illogical to urge that the Fed-

eral Government build a $225 million project only to compel its own agencies and local nonprofit agencies to pay private rates for the electric energy produced by the waters stored therein. Indeed, it would be illegal under the existing Trinity authorizing law.

Congress will not consider repealing the preference clause. That was my judgment 2 years ago, which I expressed during a speech in the U.S. Senate. It is my judgment now.

The recommendation of the Secretary of the Interior for private power development at Trinity is fraught with many perils. The theory of California water law is one of beneficial consumptive use. Our semiarid State cannot afford to waste water. In a Federal reclamation project, the Bureau of Reclamation must determine what is the most efficient use of the water in the storage reservoir for both domestic and agricultural use. That is the basis upon which it must discharge its responsibility of administering reclamation projects. Beneficial consumptive use must have complete priority over using the water for the generation of electricity. Under the Secretary's proposed contract, the single responsibility of the company would be to produce hydroelectric power in a manner most efficiently to supply the needs of its own customers. In the proper functioning of the Central Valley project, I visualize a deadly serious problem if the needs of electricity by the customers of the private utility under the partnership proposal.

There is room in our Nation for both public power and private power to meet the growing needs of our expanding economy. Where facilities have been created through an investment of public moneys, as in the Central Valley project and its Trinity division, I believe the power produced by them should be distributed to public agencies, as has been done so successfully for many years. The Central Valley project was built to satisfy an urgent need among our people for reclamation assistance. Its benefits should be distributed on as wide a range as possible.

My decision as to Federal construction of the Trinity division power feature has not been lightly taken. It was recommended by both the Warren and the Knight administrations. It is endorsed by the Brown administration. It is the way Congress passed the bill and the way President Eisenhower signed it. Never in my life have I been subject to such contemptible pressures to change my position. But never in my life have I found a decision more inescapable, more logical, more right, than this one, and I give you my assurance that Trinity will be completed as a multipurpose Federal project, and that this latest assault on the preference clause of Federal reclamation law will go down to its well-earned defeat.

In this 86th Congress I will fight with all my resources for an appropriation to build the powerplant at Trinity. I call on the Secretary of the Interior 2 years ago to include an item in his budget for planning the generating equipment. I repeated that urgent suggestion last fall, but the budget does not include the necessary funds. Indeed, the Under Secretary of the Interior has made speeches in California asserting the intention of his Department to continue a "rear guard action" for approval of the partnership scheme. I shall not attempt to characterize the speeches; but some in my State have likened this approach to blackmail. If the generators are not ordered soon, they cannot be ready when the Trinity Dam is finished. The benefits of power production will be lost until the generators start turning.

Ladies and gentlemen, the rural electric cooperatives, in California and all across the land, have brought modern living to the American farmer. They are part of American life, and Federal law makes them so. And, in precisely this same category, Federal law and policy, for over a half century, provide for multipurpose reclamation projects whose byproduct of electricity shall be sold, first, to nonprofit agencies—Federal, State, or local. Federal reclamation has helped materially to build the West. It has been assaulted and condemned by selfish people who want no yardstick, and who resent what they sneeringly call socialism.

If when a community of people elect to produce or distribute electric power, that constitutes socialism, then the great city of Los Angeles practices socialism—because, like your REA's, it produces and sells electricity to its people. If that is true, then my own home city of Anaheim must plead guilty, too.

A generation or so ago, these selfish people objected to the Federal Government building any great dams. They lost. The dams, like Hoover Dam, which serves almost all of southern California, water and power, were built by the Federal Government to satisfy the people's needs. Now those same selfish people urge what they euphemistically call partnership. And I say to you, in dead earnest: They will lose again. With your help, we'll see that they do.

## Resolution Commemorating Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Lithuanian Roman Catholic Alliance of America, a national fraternal organization, with its headquarters in Wilkes-Barre, Pa.:

RESOLUTION

Unanimously adopted at a meeting of Lithuanian Americans of the Wyoming Valley, gathered on the 15th day of February 1959, under the sponsorship of the Lithuanian Roman Catholic Alliance of America, a national fraternal organization, at its headquarters, 73 South Washington Street, City of Wilkes-Barre, State of Pennsylvania, to commemorate the 41st Anniversary of the Declaration of Independence of Lithuania.

Whereas Soviet Russia, spurred by her evil ambition to conquer the world, is applying a policy of vicious destruction against peoples which she thinks might stand in her way to future expansion of world communism;

Whereas the Lithuanians are strongly opposed to any foreign domination over their country and are waging an unequal life and death struggle to preserve their national entity and to regain freedom;

Whereas because of their manifest and unmistakable attitude toward international communism, the people of Lithuania, backed by their kinsmen in the free world, represent a reliable outpost in the present defense line of the free nations against Communist aggression;

Whereas the heroic Lithuanian underground, aided by Lithuanians abroad, plays an active part in today's struggle of the free world to resist Communist aggression, and therefore deserves every possible assistance and encouragement by all free nations;

Whereas the eyes of the unfortunate are set on the United States of America, which always has been looked upon as the strongest champion of the oppressed; therefore be it

*Resolved*, That this meeting appeal to the Government of the United States and Members of the Senate and House of Representatives, to respond to the demands of our times by giving intelligent and coordinate leadership to vast human forces in Europe and Asia aspiring to peace, justice, and freedom; and be it further

*Resolved*, That the liberation of Lithuania and other Russian occupied countries be included in the program of the American foreign policy; and that the existing underground movements behind the Iron Curtain be given direct and effective assistance in their unequal life and death struggle to freedom and independence; and be it finally

*Resolved*, That this meeting express gratitude to the Government of this country which has never recognized the fruits of Soviet aggression against Lithuania and the other Baltic States, and has always demonstrated a favorable attitude toward the cause of independent Lithuania, Latvia, and Estonia.

EDWARD W. LOPATTO, *Chairman.*
FLOYD G. YOSKOSKI, *Secretary.*

## Restrictions on Imports of Residual Oil

EXTENSION OF REMARKS
OF
### HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a telegram received from John P. Birmingham, president, White Fuel Corp., of Boston, Mass., protesting against the mandatory restrictions on imports of residual fuel oil and showing what an economic blow such action will be to New England. As Mr. Birmingham states, and he is well qualified to know, this will be particularly harmful and unnecessarily so, to New England, which means not only New England industry but the homeowners of New England. I have already vigorously protested against this action which, as Mr. Birmingham stated in his telegram, could seriously damage New England economy. I also include in my extension of remarks a letter on the same subject received from Mr. Thomas G. Dignan, president of the Boston Edison Co., of Boston, Mass., together with a copy of a letter which Mr. Dignan, on February 11, 1959, sent to Mr. Leo A. Hoegh, Director, Civil Defense Mobilization. Like Mr. Birmingham, Mr. Dignan is well qualified to express his opinions on the harmful effect that such action will have to New England—to New England and to New England homeowners.

The telegram and letters follow:

WELLESLEY, MASS., *March 4, 1959.*
Hon. JOHN W. MCCORMACK,
*House of Representatives,*
*Washington, D.C.:*

Understand White House presently considering mandatory restrictions on imports of residual fuel oil. At the least this will be an economic blow to New England due to increased fuel costs. One percent shortage in winter of 1947–48 drove New England fuel costs up at rate of at least $100 million annually. In addition with domestic oil industry incapable of making up artificially created shortages and oil burning equipment

unable to use substitute fuels parts of New England may be completely without suitable fuel. Urge your intervention to prevent this action which could seriously damage New England economy.

JOHN P. BIRMINGHAM,
*President, White Fuel Corp.*

BOSTON, MASS.

---

BOSTON EDISON CO.,
*Boston, Mass., March 2, 1959.*

The Honorable JOHN W. MCCORMACK,
*Office of the Majority Leader,*
*House Office Building,*
*Washington, D.C.*

DEAR JOHN: Enclosed are copies of Boston Edison Co.'s statement concerning the importation of residual oil which have been submitted to the Office of Civil and Defense Mobilization.

This matter is being studied by the Office of Civil and Defense Mobilization and is also the subject of a number of bills pending in the Senate and House. Restrictions on the importation of residual oil is, in my opinion, detrimental to national defense and is discriminatory to New England. There will be a severe economic impact to customers of this company and to many direct users of residual oil, such as hospitals, universities, and industrial concerns. Representatives of other areas of the country, particularly the coal industry, have been very active in support of legislation against the importation of residual oil.

I am sure that your office has been aware of this problem, and I thought that it would be desirable to keep you informed of our activity in this matter.

Sincerely yours,

THOMAS G. DIGNAN.

---

BOSTON EDISON CO.,
*Boston, Mass., February 11, 1959.*

Mr. LEO A. HOEGH,
*Director, Civil and Defense Mobilization,*
*Washington, D.C.*

DEAR MR. HOEGH: Pursuant to notice which appeared in the FEDERAL REGISTER (Document 59-797) January 28, 1959, and in accordance with Office of Civil and Defense Mobilization Regulation No. 4 as amended January 27, 1959, Boston Edison Co. submits the following comments.

It is to be noted that these comments are confined to a discussion of the need to import residual fuel oil, and are submitted by an electric utility which is a large user of imported residual oil, a byproduct of crude oil remaining after other usable products have been removed.

Boston Edison Co. is an investor-owned utility which provides electric service to 475,000 customers in 40 cities and towns in the Greater Boston area and through bulk sales to other electric systems, to large numbers of consumers outside its own area. Its interest in this matter is to see that customers, including many vital national defense facilities, have a reliable supply of electricity available at all times and at the lowest possible cost.

Boston Edison Co. contends that no restrictions should be placed upon the importation of residual fuel oil. Importation of residual oil is a special problem and should be considered apart from the importation of other petroleum products. This has been recognized during the period of present voluntary controls, and it is urged that continued recognition be given to this point of view.

In the opinion of this company, no justifiable purpose will be accomplished by the restriction of residual oil imports, but rather many serious and undesirable economic consequences will result from such a restriction.

Residual oil is the scrap product of oil processing. In 1957, the amount of residual oil imported represented less than 5.1 percent of the total petroleum products used in the United States. Modern refinery design in the United States permits the distillation of many crudes, so that there is no residual oil produced in the refining process. Refiners of domestic oil have not produced sufficient quantities of residual oil. Users of residual oil have been forced to import. As the demand for other more valuable petroleum products increases and the production of residual oil decreases, the use of imported residuals is necessary to fill the gap between domestic production and domestic demand.

This company supplies power to a large metropolitan area which includes a large number of national defense facilities and producers of vital defense products. The use of natural gas on a firm basis is not economic and has been discouraged in recent cases by the Federal Power Commission. Substantial curtailment of the supply of residual oil would force this utility and others to rely on an uninterrupted supply of coal. For such a utility to be dependent upon a single fuel to produce its power is dangerous to the national defense.

Scarcity of residual oil as a fuel will increase the cost of electricity to customers, including military installations and suppliers. Other national defense considerations include the effect of import restrictions on the size of the tanker fleet which would exist for use in times of emergency. The Suez crisis indicated that the entire world oil supply and oil transportation facilities are of direct interest to the United States of America. Also, restriction of this type of fuel will have an adverse effect on the development and maintenance of very critical port facilities.

A further consideration, important to national defense, is that a large percentage of residual oil imports comes from Caribbean countries. It is a major and nearby source of oil and should be in established use for American needs rather than for other, possibly unfriendly, nations. Finally, the record of this investigation should indicate that the friendship of these Caribbean countries is of utmost importance to the national defense of the United States.

The east coast uses more than 50 percent of the residual oil consumed in the United States, and of this amount more than 55 percent is imported. Restrictions would severely disrupt the use of fuel in this area and would affect industrial heating, shipping, and public utilities, as well as other phases of industrial activity. A reduction in the supply of residual oil would increase substantially the cost of power in the east coast area.

This is critical in the entire northeastern area, which is already burdened by the high cost of fuel because of great distances over which such fuel must be transported. The charge for every kilowatt-hour this company sells includes a fuel adjustment which varies with the cost of fuel. On the basis of its present rates and actual fuel costs in December 1958, its customers would have been required to pay more than $1,500,000 additional for the energy they purchased in 1958 if this company had been unable to obtain residual oil.

The continued use of residual oil imports will aid and not impair national security. In addition, restrictions on importation of this product would threaten the ability of the electric industry to provide a reliable supply of electricity and would affect the price of electricity for a large number of users vital to the national security. Such a restriction is particularly onerous and discriminating to the very important northeastern section of this country. Boston Edison Co. urges that special consideration be given to the importation of residual oil and that no restrictions be placed thereon.

Very truly yours,

THOMAS G. DIGNAN.

## All-Out U.S. Effort To Combat Soviet Penetration of Asia, Africa, and the Mideast

---

EXTENSION OF REMARKS
OF
## HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
*Thursday, March 5, 1959*

Mr. HUMPHREY. Mr. President, it was my privilege to be the guest speaker at the World Affairs Council meeting in Troy, N.Y., on Friday, December 12, 1958. The subject of my address was "America Needs a Constructive Program in Asia, Africa, and the Mideast."

I ask unanimous consent that excerpts from that address be printed in the Appendix of the RECORD.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM ADDRESS BY HON. HUBERT H. HUMPHREY, OF MINNESOTA, BEFORE THE WORLD AFFAIRS COUNCIL, TROY, N.Y., DECEMBER 12, 1958

I want to talk to you tonight about the challenges to the United States on the world scene.

I will base my remarks to a considerable extent on my findings during my recent 3½ weeks' trip in Europe, particularly my week in the Soviet Union.

Europe's challenges are many—the crisis over Berlin, the question of atomic arms for West Germany, the problem of German reunification, the controversy over proposed disengagement in Central Europe, the disputes over free trade and the European common market, the Geneva talks on nuclear test suspension and surprise attack, and many other problems as well.

Most of these issues have been rather well publicized. But tonight I should like to turn to an even more crucial area, a less understood area, Asia, Africa, and the Middle East.

For one of the principal findings on my recent trip is confirmation of this fact—the Soviet Union is laying plans and executing plans on these developing areas to a degree that we of the United States have not begun to match.

Soviet agitation in these devoloping areas, Soviet propagandizing in them, has unfortunately long since begun to pay off in terms of rising Soviet influence and prestige there.

We need only look at the disturbing headlines in the United Arab Republic, in Iraq, in Yemen and elsewhere to see proof of that fact.

But most Americans regrettably do not yet perceive the overall dimensions of the Soviet threat in the underdeveloped part of the world.

In other words, in the years up ahead, unless we take immediate effective action, we are going to find that the grim problems which we now face, for example, in the Middle East, are multiplied manyfold in South Asia, Africa, and yes, in South America.

I, for one, believe that there is still time for us to maintain and strengthen freedom among the one-third of the world which is uncommitted.

As you know, it is my privilege to serve as chairman of the Middle East Subcommittee of the Senate Committee on Foreign Relations. In that capacity, I have noted the many facets of the Soviet offensive in this part of the globe: the economic facet, such as Soviet purchases of Egyptian cotton; the military facet, such as Soviet barter of arms for that cotton; the cultural facet, such as

artistic performers from Eastern Europe pouring in to the Middle East; the psychological facet, such as the playing on deep seated resentments, frustrations, and fears within the Middle East against Western Powers.

In all this, the Soviet Union is playing for enormous stakes. In the Middle East, it is playing for ultimate control of the billions of dollars of petroleum reserves lying beneath the hot desert sands. Indeed, everywhere, it is playing for access to raw material reserves upon which the Western World vitally depends, both for its factories and mills and for its earnings. Everywhere the target is people—discontented, disenfranchised, unhappy people—millions of them in the neutralist part of the globe.

The philosophy of the Kremlin is that the entire developing area of the world is in a state of revolution against present or past imperial ties with the West. The Kremlin believes, as Premier Khrushchev told interviewers, that the West has no right to seek to impose a status quo in the face of this anticolonial revolution. Premier Khrushchev has indicated without saying so that the Soviet Union has the right to advance this anticolonial revolution as it sees fit. But when he says "anticolonial" he means, of course, only Western colonialism; he does not include colonialism of Moscow or Peking.

By contrast, Premier Khrushchev denies the right of revolution in Central Europe. Here he insists that the status quo—meaning Soviet imperial occupation—continue. And he further insists that the West cease and desist from any effort to impair that status quo.

This, then, is the inconsistency of the Soviet position. It is not a logical position, it is self-contradictory, but as usual, that does not bother the Soviets. For one pattern which they always observe and reject is what they regard as their own raw self-interest.

And they feel that their self-interest requires the exploitation of the conditions of Asia, Africa, and the Middle East—the exploitation of south Asia, for example, where income per capita still averages only $50 per year, the exploitation of hunger, hopelessness, fear and misery, illiteracy, and disease.

While I was in Moscow, I could see certain passes of the Soviet Asian pattern developing.

Let me refer to three such evidences:

1. In the streets of Moscow, in the theaters, the auditoriums, the schools, I could see a tremenodus proportion of visitors from Asia. Many of these visitors were from the Central Asian Soviet Republics which are part of the U.S.S.R. itself.

But many were visitors from Asian countries. For example, I spoke with students from Hanoi—the Viet Minh capital. I encountered youngsters from mainland China and other Asian countries.

Always the emphasis of the Soviet is on youngsters—youngsters who are the leaders of tomorrow, youngsters on exchange programs, youngsters who will work in Russia, not just for a year, but for many years, and whom they hope will ultimately return as the leaders in the Communist world of tomorrow.

2. In addition to the Asians whom we encountered, Mrs. Humphrey and I recall very vividly a Soviet motion picture which we saw entitled "Panorama." It is basically the American Cinerama-type motion picture with three cameras projecting on a wide angular screen. Its subject was a travelog of the vastness of the Soviet Union.

But the most powerful part of the film was the sequence taken at a mammoth international student festival which was held in Moscow, attended by some 100,000 youngsters of whom around one-third came from abroad.

We cannot forget the sequence showing the students in particular from Asia and Africa, parading in the huge Moscow stadium, seating 110,000. The sequences were staged as a great propaganda spectacle, one which we know is designed for the eyes of Asia, as well as Europe.

3. And let me cite a third point now. The key theme of Soviet propaganda to the developing part of the world is:

"In 1917, we were relatively a primitive country. Now we are the second strongest industrial power on earth. What we have done you can do and just as fast. Follow our example."

This theme one could see throughout Soviet propaganda in Moscow. It has a powerful appeal to Asia-Africa. For these countries are experiencing what Prof. Arnold Toynbee has called a revolution of expectations.

These countries are impatient. They want to jump overnight from the age of kerosene oil lamps to the age of mammoth hydroelectric dams. They want steel mills and all the other symbols of western industry, and they may be attracted to the Soviet mirage that only a collectivist society can fulfill their overnight expectations.

FOUR POINT PROGRAM

What then must be our answer to Soviet action and propaganda in the developing areas? Let me suggest the following program:

1. We must greatly increase our program of exchanges and leader-grants with Asia, Africa and the Middle East. At present, for example, we have a total of 45,000 foreign students studying in the United States. This may seem like a large figure, but actually when you see the breakdown, country by country, you note how relatively thin is our coverage of some of the distant countries which are the principal Soviet targets.

We have a great many Latin American exchanges, for naturally we are interested in inter-American relations. I hope that we will increase the number of students from this hemisphere studying here and the number of Americans studying below the Rio Grande. But I also hope that we will greatly increase the number of youngsters from elsewhere in the world, in addition to sending many of our young people to heretofore larger unfamiliar countries in the East.

2. In the second place, we must greatly increase our overall familiarity with Asia, Africa and the Middle East. We Americans have tended to be Europe-oriented for many reasons. Most of us stem from European origins. Europe traditionally has been the seat of power in the world, the seat of culture, of economic strength.

But a new day is dawning. No longer can we afford to be ignorant of or indifferent to the economics, the culture, the religions and aspirations of the Asian-African-Middle East area.

Our universities must develop centers of familiarity with the heretofore exotic cultures of the East. Our newspapers and magazines, television and motion pictures must seek to give still greater emphasis to these regions—not simply to the headline crises but rather to the long-range developing trends.

3. The backbone of our policy must be to strengthen the capacity of the newly emerged nations to fulfill their aspiration for a better life for their own people. Loans at more favorable terms than presently available through the Development Loan Fund, through the Export-Import Bank, the International Bank for Reconstruction and Development, must be provided if, for example, the second Indian 5-year plan and similar efforts are not to flounder.

And as I have repeatedly stressed, we must use the bounty of America's soil, our farm crops, through Public Law 480 sales to antidote the hunger and the shortage of capital in these regions.

4. A fourth essential point in our program is that we come face to face with reality on the big problem of Asia which occupies so much of the thinking of Asian peoples—namely, America's future relations with Mainland China.

As we are all aware, the question of recognition, as such, of Red China is one of tremendous complexity. It has moral, legal, political, economic, military, social, and other overtones, none of which can be ignored. The aggression committed by the Communist Chinese in Korea as confirmed by the indictment of the United Nations, still stands for all to see and remember.

What I am urging, however, is not any premature off-the-cuff approach to the complex problem of Red China. Instead, I am urging a factual reappraisal of U.S. Chinese relationships, so that we can carefully chart our future policy, based upon the best interests of our Nation and of mankind.

The minimum fact of the matter is that we cannot any longer permit a news blackout on Red China. We cannot afford to be as relatively ignorant as we are of precisely what is going on in that vast land mass of 600 million people.

We must have more facts about the Mainland.

While I was in Geneva visiting at the World Health Organization, I saw one particular phase of the serious consequences of our lack of information about the mainland.

You will recall that the Asian flu virus which struck the United States and the rest of the world was first reported via health listening and reporting posts in places like Hong Kong, Malaya, Japan, and other countries on the periphery of the mainland. Fortunately, we had this advance warning that the virus was on its way. And so we were able to prepare vaccine for our citizens. Even with that vaccine, our economy suffered a serious loss in working days because of Asian flu illness.

The important fact to remember, however, is that the first news about Asian flu virus originated inside the Chinese mainland, but it did not reach the outside world in time. The result is that 2 crucial months elapsed before the world learned that a new strain of type A virus with epidemic possibilities was on its way. Only subsequently when a letter arrived from the mainland to a WHO official was this fact confirmed: The virus could have been attacked 2 months ahead of time—if only there had been better communications with the mainland.

So the feeling among many health officials is that the world cannot afford to continue to be ignorant about even the most elementary health facts inside the Chinese land mass.

Even, however, if this health factor did not exist (and it does), the question is: How long can even the most elemental contacts between the West and mainland China be barred?

These are problems which cannot be ignored. The Peking government is, of course, seeking to exploit our interest in facts such as those I have mentioned above. We know that it has failed to date to fulfill its obligations as a member of the society of man. It has much to account for to the conscience of the world. These facts, too, must not be forgotten.

But above all, we must ask ourselves the question: How best can freedom be maintained and strengthened with all of Asia, Africa, and the Middle East? Closing our eyes or "sweeping issues under the rug" can hardly serve to satisfy the needs of our Nation.

## A Report to the Nation

EXTENSION OF REMARKS
OF
## HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 5, 1959*

Mr. FOGARTY. Mr. Speaker, as many Members of this House are aware, on Thursday, February 19, here in Washington, D.C., the National Heart Institute and the American Heart Association joined in presenting a report to the Nation on 10 years of progress against heart disease. This report was made by six of the most eminent physicians and medical scientists in the United States. I might add that it was at the suggestion of my colleague in the Senate, the Honorable LISTER HILL, of Alabama, and myself, that the Heart Association and the Heart Institute combined forces, as it were, to give the results of this 10-year war on diseases of the heart and blood vessels. Because this report was of such great significance and because it has proved to be a truly historic event, under unanimous consent, I include the entire report in the appendix of the RECORD.

The report follows:

A REPORT TO THE NATION PRESENTED BY AMERICAN HEART ASSOCIATION AND NATIONAL HEART INSTITUTE ON "A DECADE OF PROGRESS AGAINST CARDIOVASCULAR DISEASE"

(Participants: The Honorable Lister Hill, U.S. Senator, Alabama; the Honorable John E. Fogarty, U.S. Representative, Rhode Island; Leroy E. Burney, M.D., Surgeon General, U.S. Public Health Service; Francis L. Chamberlain, M.D., president, American Heart Association; and James Watt, M.D., director, National Heart Institute. Panelists: Howard B. Sprague, M.D., meeting chairman and panel moderator; Paul Dudley White, M.D.; Irvine H. Page, M.D.; Robert W. Wilkins, M.D.; Michael E. DeBakey, M.D.; and Robert W. Berliner, M.D.)

Dr. SPRAGUE. Senator HILL, Representative FOGARTY, distinguished guests, this is a unique meeting. So far as I know, it is the first report to the Nation to be given to the people on the advances made possible through their magnificent support of medical and scientific research.

This is a unique meeting also because it could not be held anywhere else in the world. In no other country do we find so highly developed the institution known as the independent voluntary health agency, through which physicians, scientists and laymen combine their efforts to advance the national interest in so vital a field as health.

In no other country does the phenomenon exist of such a voluntary association working side by side and in closest harmony with an official governmental agency dedicated to the same objective. Simply stated, this objective is the reduction of death and disability from heart and blood vessel disease.

Too, this meeting is unusual in that it comes at the invitation and suggestion of two eminent statesmen who have personally played leading roles in the creation and growth of the National Institutes of Health, of which the National Heart Institute is a part.

I do not know, Senator HILL and Representative FOGARTY, whether you and the other Congressmen here today are aware of it, but all of you have helped to make American physicians and scientists the envy of our colleagues throughout the world.

I do not say this on my own authority but on that of the distinguished British medical publication, the Lancet. In an editorial last September, the Lancet declared:

"Those who visit American medical schools are impressed by the amount of money at their disposal for medical research. * * * In the United States, all avenues into medical research are wide open. * * * Congress is putting into research 20 times the budget of our Medical Research Council. Last year the grant from Federal funds alone was $186 million. By full deployment of talent and by the effort of great numbers, an immensely rich soil is being developed from which new research ideas can be harvested. By contrast, medical research in this country (Britain) is undergoing relative attrition despite an expanding economy."

Through this report to the Nation, we seek to make two points clear. One is that the past 10 years have been a period of extraordinary advance, producing new knowledge through which thousands of lives have already been saved, prolonged or enriched, and giving this Nation a position of world leadership in the field of cardiovascular medicine.

The other is that these advances have brought us to the threshold of even greater developments, of decisive breakthroughs that will make possible the large-scale prevention of these diseases that now cut down so many people in the best years of their lives.

The bounty of our efforts extends not only to the people of this Nation but to those of other nations as well. The new knowledge we have brought to fruition—thanks to the accelerated and intensified research programs—should prove to be an export commodity of great usefulness in winning friends and influencing people in behalf of freedom and democracy.

Research results cannot be produced by fiat or timetable. By the same token, it is usually impossible to assign research gains to any one specific year. As someone has said, "Great discoveries are not made, they grow." Like the jigsaw puzzle to which it is sometimes compared, research usually develops new knowledge through the putting together of many small pieces by many people working in many places. Once the puzzle has been filled, it must then undergo the never-ending test of application and experience. Therefore, it is all the more remarkable that we can ascribe so many specific accomplishments in the cardiovascular field to the past decade. And it should be noted, in passing, that this 10-year period coincides with the lifespan of both the American Heart Association and the National Heart Institute.

We have many advances to report. Yet, had there been no specific gains applicable to patients, the very fact that we have mounted a tremendous research effort would in itself deserve recognition as a major achievement. As we all know, the first need of any research effort is to mobilize human resources.

Today, there exists in the United States a corps of research workers in the cardiovascular field of unprecedented number and scientific capacity. Its creation has been very largely stimulated and nourished by the joint endeavor of the two agencies reporting here today: the American Heart Association and the National Heart Institute.

Here, in a sense, is the greatest accomplishment of all, for in the hands and minds of these research workers are the keys to the future—a future already bright with promise of decisive victory over the cardiovascular diseases.

It is appropriate that we open our forum today with remarks from one of its spiritual architects—a statesman whose profound concern for the health and welfare of the American people has found expression, over the years, in his stanch support of progressive health legislation. We are proud and honored to have with us today the Honorable LISTER HILL, U.S. Senator from Alabama, Senator HILL.

Senator HILL. Dr. Sprague, distinguished guests, and my friends, Congressman FOGARTY and I requested the American Heart Association and the National Heart Institute to have this meeting this morning that we might have reports on the progress that has been made in the attacks against cardiovascular diseases, diseases of the heart and of the blood vessels.

Due to the leadership of the Amrican Heart Association, the National Heart Institute, we have here this morning distinguished, outstanding doctors and scientists in the field of the heart and the cardiovascular diseases—I don't think it would be possible to bring together a more distinguished panel than we have here this morning—who will make their report on the progress that has been made during the past 10 years.

It is just ten years ago that the American Heart Association was reorganized to become a great national voluntary association of doctors and laymen. It is just 10 years ago that the Congress of the United States brought into being the National Heart Institute; and so on this tenth anniversary of the Heart Association, of the National Heart Institute, we will have these reports. I'm sure they will be not only tremendously gratifying but tremendously challenging. It is most important that the people back home, the people throughout the country, realize the part they have played in the work that has brought about this progress—that they have made many necessary and vital contributions in their support of the American Heart Association, in their support of congressional appropriations for the National Heart Institute.

The last 10 years has witnessed great progress in the battle against these diseases. With the support of the people, under the leadership of brilliant and distinguished men such as we have here today who give of themselves and of their services in this never-ending battle, the next 10 years should be the most momentous in all the history of medicine.

As we hear these reports today, I hope you'll not only be stimulated and challenged but we may go forth with resolution in our hearts that we'll give our most active support our best support, to the men in the Heart Associatoin, to the National Heart Institute, in the cause of better health and a longer life for all our people. [Applause.]

Dr. SPRAGUE. Thank you, Senator HILL.

Old presidents of the American Heart Association seem to have a remarkable talent for health and longevity. Not only do they refuse to die; they also refuse to fade away—as witness the presence of so many of us here on this platform today. This would seem to foreshadow many more years of activity for our next speaker, who is to present a brief accounting of the vital part played by the American Heart Association in the decade of progress being reported today.

It is my privilege to present Dr. Francis L. Chamberlain, of San Francisco, president of the American Heart Association. Dr. Chamberlain. [Applause.]

Dr. CHAMBERLAIN. Dr. Sprague, Senator HILL, Representative FOGARTY, distinguished guests:

My colleagues who have been presidents of the American Heart Association will soon report to you in their capacities as world authorities on various aspects of cardiovascular medicine and research. To me is reserved the privilege of speaking as president of the American Heart Association.

In this capacity one ceases to act as an individual physician, scientist, or teacher. He becomes instead the spokesman for a vast partnership of American laymen and physi-

cians who, realizing that 54 percent of Americans are suffering from some form of circulatory or heart disease, have voluntarily banded together to reduce death and disability from cardiovascular disease. It is this citizens' army that reinforces and sustains our research scientists, and that invests with greater meaning the efforts of the practicing physicians through whom the benefits of research flow to the people.

The initiative in creating this magnificent partnership came from a small group of physicians who, in 1948, transformed the American Heart Association from a professional society into a voluntary health agency, and thus set in motion a force of singular effectiveness.

One of the first endeavors of this newly formed agency was to spur the establishment of the National Heart Institute and to participate actively in the evolution of the policies and program.

Drawing its vigor from the grassroots of America, with dedicated leadership supplied by outstanding physicians and laymen, the American Heart Association immediately became the catalyst which gave strength, purpose, and direction to the struggle against cardiovascular disease.

As this new force gained momentum, programs were developed not only for the acquisition of new knowledge through research but also for its application through community service programs reaching into every State of the Union. Widespread professional educational activity has been paralleled by an intensive program of lay education through which a remarkable transformation is being wrought in the popular attitude toward cardiovascular diseases. A new climate of hope and confidence is being created—in itself one of the most important achievements of the past decade.

Let me conclude by saying it is especially appropriate that today's meeting is being held during the month of the Heart Fund campaign, which is the time of year when 50 million Americans are expected to show their support of the American Heart Association through their voluntary contributions of time, effort, and funds. Since 1948, this support has increased more than eightfold. It is a convincing reaffirmation of public confidence in the Heart Association program and an eloquent expression of the people's determination to conquer cardiovascular disease. [Applause.]

Dr. SPRAGUE. Thank you, Dr. Chamberlain.

The close working relationship between the American Heart Association and the National Heart Institute is effectively illustrated by the activities of our next speaker. Having spent the major part of his professional life in the conduct and administration of medical research and public health, he has served as Director of the National Heart Institute since 1952. He is a member of the editorial board of Circulation, the American Heart Association's official journal, and he has served on numerous Heart Association committees during the past several years. It is my privilege to present Dr. James Watt. Dr. Watt. [Applause.]

Dr. WATT. Dr. Sprague, Senator HILL, Congressman FOGARTY, guests, friends: We shall, in the next half hour or so, hear what Dr. Sprague has so aptly called a unique report. It is, indeed, so far as I know, the first time that such a message has been conveyed to the American people in this way. I am delighted that Senator HILL and Mr. FOGARTY asked the Heart Institute to join with the Heart Association in putting together this story of 10 years of progress against heart disease. As we shall soon hear, it is a dramatic story—a story of service and solid achievement.

I think, too, that all of us here owe a debt of gratitude to the two distinguished legislators sharing the platform this morning. It is, of course, to the Congress that the Heart Institute owes its existence; for in 1948 it was the 80th Congress that created this research arm of the Public Health Service, with the pasasge of the National Heart Act.

Since that time we have come a long way. We now have a substantial research establishment at Bethesda where a unique combination of resources enables us to pursue both basic and clinical studies under one roof. Research workers in these laboratories have made many outstanding advances. When these achievements are added to those of our grantees throughout the country, a picture of progress emerges that has few parallels in the history of medical research. Though an uncharted wilderness still remains to be explored, we have blazed a long trail toward heart disease prevention and cure. In our 10-year journey, dramatic milestones in heart surgery and drug therapy have followed close upon one another. New diagnostic methods are facilitating tremendously the work of our cardiovascular surgeons. With the combined efforts of the American Heart Association and the National Heart Institute lending an ever-brightening prospect to the hopes of heart patients, who can say whether the next 10 years may not reveal a means of prevention or cure for arteriosclerosis or high blood pressure?

With so much of our national substance going into the awesome but indispensable weapons of defense, it is easy to lose sight of the need for stocking medicine's arsenal. I am reminded of a remark my predecessor, Dr. C. J. Van Slyke, the first director of the Heart Institute, made some years ago. Commenting on the need for increased support of medical research, he said, "* * * there is no phase of Government spending in which there is a greater return to all of our citizens. It is an investment in which the balance sheet of the future will show returns in human lives as well as dollars."

We are now privileged, I think, to witness this prophetic statement nearing fulfillment. [Applause.]

Dr. SPRAGUE. Thank you, Dr. Watt.

We come now to our report to the Nation on "A Decade of Progress Against Cardiovascular Disease." Each of our six panelists has been assigned a specific area for discussion and has been requested to restrict his presentation to 5 minutes. One of our panelists will discuss prevention, one diagnosis; three will discuss advances in treatment, with one each being assigned to the specific areas of arteriosclerosis, hypertension, and cardiovascular surgery. Our final panelist will discuss basic research in its many applications.

The 5-minute restriction imposes a severe handicap. We know you can summarize the story of creation in less than 10 words: "In the beginning, God created heaven and earth."

I mention this because it would be difficult for any of our doctors to report on progress in their respective areas within the time allotted. Indeed, it might even be said that the telescoping of so much progress in 5 minutes is in itself a major achievement.

Before we begin our progress reports, I want to direct your special attention to the cards which have been distributed with your programs. If you will write your inquiries on each of the cards, they will be collected later and the doctors will attempt to answer them in this question-and-answer period.

I wish to draw to your attention that this question-and-answer period has been moved to the very end of the program.

My assignment today involves three special roads: those of chairman, moderator, and panelist. Having undertaken assignments one and two, I now turn to the third: a discussion of what has happened in the past 10 years in the field of diagnosis.

Fortunately for all of us, diseases of the heart can usually be discovered by a physician using his ears, eyes, and sense of touch, with the help of simple instruments, such as the stethoscope; but the impressive advances in treatment of heart ailments in the past 10 years, particularly in surgery, have made the simple description of the kind of heart disease not adequate in those cases in which special treatment is now available.

The detailed diagnosis of the damage to a heart valve by rheumatic fever, the exact nature of complex congenital defects in the heart, the remediable kinds of high blood pressure, and the extent of coronary artery blocking remain the major challenges for diagnostic study.

The past decade has supplied tools for such study. The vast and growing fields of radioactivity and electronics are rapidly adding instruments of amazing utility in the area of heart diagnosis, and the contributions of the American Heart Association, and of the National Heart Institute, have made these tools and techniques more widely and quickly available than in any other way.

While X-ray science is 63 years old and was early used to delineate the heart, it has developed recently the ability to photograph in rapid sequence a series of views of the heart as an opaque liquid passes through it, showing its course and the time elapsing for the substance to flow into the arteries of the lungs and the rest of the body. A very new device, the image intensifier, which gives a brilliant view of the heart on the fluorescent screen, with considerably less exposure of the patient to the X-rays, permits not only motion pictures to be made, but the transmission of the living image to a television screen in another room, where a large group of physicians can study it.

The cardiac catheter, first threaded into a vein and thence into his own heart by an intrepid German, Forssmann, in 1924, has turned to tremendous advantage in heart studies by Cournand and others in this country. Now it is possible to pass it directly through the chest into the left side of the heart and to measure the pressures behind and ahead of the two valves most commonly affected by rheumatic fever. The catheter is actually exploring the coronary arteries and, cooperating always with the X-ray, it is discovering the regions of blocking of those arteries by outlining them with a readily absorbed gas, carbon dioxide. By the catheter method, also, electrocardiograms and records of heart sounds can be led from inside the heart itself to instruments at a distance from the patient.

The electrocardiograph has developed from an instrument which, in a sense, looks at the heart electrically with one eye into a new electronic device, the vectorcardiograph, which traces on a fluorescent screen the actual course of the electrical energy of the heart. This can be photographed in stills or moves and transformed into a stereoscopic view with three dimensions.

Radioactive tracer material is widely used in cardiovascular research but in clinical diagnosis chiefly in discovering disturbance of thyroid function, which can upset the heart's action.

The striking expansion of chemical knowledge leads the physician daily to the chemical laboratory for information about the subtle diagnostic changes in the blood, urine, and tissues of his patients. The discovery of alterations in salts, fats, enzymes, and the multiude of chemical components of our bodies guides the treatment of all forms of heart disease. Sensitive chemical or biological detectors can show us the presence of a special tumor of the adrenal gland which, if removed, will cure a type of high blood pressure; or the amount of sodium

coming from one kidney may reveal a disturbance which, if relieved, may cure another type.

The ultracentrifuge with a force 300,000 times that of gravity; the electron miscroscope with a magnifying power almost a hundred times as great as that of the ordinary microscope, are discovering diagnostic elements in human tissues.

The "electric eye" oximeter measures the oxygen in the blood, the gas phase chromatograph tells us the elements of complex fats in food and body substances.

Chemical analyses which have always been extremely time-consuming are now performed by electrical instruments of superhuman ability, and electronic computers give us data at unbelievable speed.

Cardiovascular diagnosis of the present day looks forward to a future when these new methods can signal dangers which, hopefully, new methods of treatment can combat in the wholesale prevention of heart disease. Based on the advances made during the past 10 years, and the assumption that cardiovascular research will be highly accelerated and intensified, I would prophesy that we can look forward to markedly reduced heart disease in young and middle-aged people.

It was not many years after the turn of the century that our next speaker informed his friends he planned to specialize in cardiovascular medicine. Since so very little was then known about the heart and its disorders, they greeted this annoucement with astonishment and disbelief. Yet time has amply demonstrated the rightness of his decision. He has achieved a high measure of eminence among the world's cardiologists, many of whom affectionately regard him as a sort of living legend. A founder and former president of the American Heart Association, a former member of the National Advisory Heart Council of the National Institutes of Health, now president of the International Society of Cardiology Foundation, and emeritus professor of medicine of Harvard University, he is, of course, Dr. Paul Dudley White, who will summarize the past decade's progress in the area of prevention. Dr. White. [Applause.]

Dr. WHITE. Dr. Sprague, ladies and gentlemen, when I was a child, a medical student, a young doctor in the hospital, they said it couldn't be done. What couldn't be done? A lot of things that threatened the lives of all of us. I shall name a few. First there was still a high infant mortality. My earliest days as an intern were spent in a pediatric ward where babies died like flies, mostly of dysentery before the days of the routine pasteurization of milk. This was the will of God. The next year I had under my wing adult wards which were overcrowded every fall with patients severely and often fatally ill with typhoid fever and at other times of the year with pneumonia, empyema, meningitis, rheumatic fever, and malignant endocarditis. There was no room for cardiovascular patients even if we had been interested in them. Tuberculosis was still a great menace and syphilis and diphtheria quite common. Deformities of the heart and great arteries were strictly untouchable. And sudden deaths were acts of God. Often the good died young, no matter what their social or economic status. Only a small minority of Americans survived 70 and you were growing old at 50. There was only one threat to life in those days, that is, before 1920, that was infinitesimal compared to its huge size today and that was the toll from the automobile on the Nation's highways. Incidently I have personally come to believe that even more as a hazard to life and limb from acute injury, the automobile has become a symbol of the soft life unnecessarily engendered among our fellow citizens by our slavery to automotive devices and to the rusting effect of our enriched diets; even our everyday breads are no longer what they used to be. I shall not, however, belabor these points further except to appeal for the maximal amount of intensive and extensive research to answer for once and for all the questions on every tongue and in every news sheet and TV program today.

And what remains? Still enough rheumatic heart disease, acute and chronic, to keep us busy in its treatment and control for another generation, following the excellent program set up by the American Heart Association during the last 10 years. But the toughest problems are still unsolved. The three which demand the highest priority in cardiovascular research are in the order of their prevalence: (1) A serious degree of atherosclerosis of the arteries supplying blood to heart muscle, brain, viscera, including the kidneys, and the legs; (2) high blood pressure of the so-called essential (especially the malignant) type with serious effect on the heart and arteries; and (3) congenital defects of the heart and blood vessels of almost infinite variety. There is no reason to doubt, based on our experience of the past, that we can protect our young and middle-aged males by diet, exercise, medicines, and other measures from the ever-increasing threat of coronary heart disease, provided we support to the full medical and other scientific investigators working hard on this disease entity. I am sure it can be done, but we must maintain a well-organized and vigorous offensive to guarantee victory in our time. Although high blood pressure is a less dramatic problem, it too needs much patient study to render it not only controllable as it is already in some cases, but, much more importantly, preventable. A harder nut to crack because of its complexity and infinite diversity is that of congenital heart and blood-vessel disease secondary to injury during fetal life or to defects in the germ plasm or to both. But even here too, if we go at it in the proper way, we should be able to accomplish much within a generation.

It has been a source of the greatest satisfaction to me to have had the privilege and opportunity to have served both the American Heart Association in its early development and in recent days in its annual heart drives, and simultaneously, to have served as a member of the first National Advisory Heart Council under the U.S. Public Health Service after the passage of the National Heart Act which in June 1948 established the National Heart Institute. I would like to express to my colleagues and friends (both of the staff and among the consultants), who have given me such a wonderful 10 years, my deepest appreciation and affectionate regards. Also a word of gratitude to you gentlemen of the Congress serving on the committees of the House and Senate; I thank you from the bottom of my heart. I am sure that what has been started in the last decade in this country can now develop throughout the world as I have already seen some of its beginnings in other countries like Finland, Canada, and Australia. Thank you. [Applause.]

Dr. SPRAGUE. Thank you, Dr. White.

We now leave the area of prevention and turn to the field of treatment, where cardiovascular medicine has scored some of its most dramatic advances over the past 10 years.

Our exploration will get underway with a summation devoted to treatment within the broad framework of atherosclerosis. For this presentation, we are indeed fortunate to have with us one of the Nation's foremost medical scientists, Dr. Irvine H. Page of Cleveland.

Dr. Page, a past president of the American Heart Association, and formerly a member of the National Advisory Heart Council of the National Institutes of Health, has been Director of Research of the Cleveland Clinic Foundation since 1945. Dr. Page. [Applause.]

Dr. PAGE. Dr. Sprague, ladies and gentlemen, I doubt that 5 minutes is too long to talk about a disease described 5,000 years ago that kills about 500,000 Americans a year.

The problem of the prevention and treatment of arteriosclerosis, whether in the brain or the coronary vessels of the heart, differs from the prevention and treatment of infectious diseases where a single microorganism can be the cause of the trouble. It was during the past decade that medical science crystallized a profoundly important conclusion; namely, that arteriosclerosis is not just a degenerative disease and an inevitable concomitant of the aging process. On the contrary, we now know that arteriosclerosis affects all age groups and may well be reversible. Furthermore, it has many facets, the importance of each varying greatly in different people. Thus it has:

One, a strong hereditary factor. Formerly, this meant that nothing could be done about it but to make more careful selection of your parents, but the more modern "blue gene" age now has it within its power to change the hereditary mechanism. All that remains is to decide what it wants.

Now, the second factor is a hypertensive one. Elevation in blood pressure, even a small one, increases the amount of arteriosclerosis. Fortunately, treatment for hypertension has advanced rapidly in the past 10 years; hence, this factor is, in large measure, controllable.

Third, an exercise factor. Exercise seems to have several mechanisms by which it reduces the tendency to develop arteriosclerosis. We are a generation who seems about to give up the use of legs. As far as I can see, women are the only ones smart enough to find a use for them. [Laughter.]

Fourth is the stress factor. This seems to me to be overstressed. It may be that extreme stress might be more concerned with the development of a clot in the vessels of the heart or brain, rather than of arteriosclerosis itself. Children and Russians being what they are, it is hard to see how stress can, in turn, be much reduced. [Laughter.]

Smoking and alcohol are considered stress factors by some. This all depends on who is doing the smoking and/or drinking. I'd like to point out that 76 percent of the body is composed of water and some of my friends might like to keep it so. [Laughter.]

Now, fifth, there is a sex factor. This factor does not seem to have been invented primarily with the intent of preventing women from developing arteriosclerosis, but in practice it seems to be working out this way. Femaleness seems to be much more than sex, as many of the richer males are finding out. [Laughter.]

Femaleness seems to assure that women will inherit this earth, at least. [Laughter.]

Sixth, a diet factor. Obesity has long been believed a factor hastening development of atherosclerosis and overeating of certain kinds of fat in the diet as well. What constitutes the proper amount and kind of fat has been the subject of much talk and less investigation. There is growing evidence that saturated or animal fats in too great quantities are detrimental and that unsaturated or liquid fats are less so. The Bantu of South Africa has been the center of this controversy, although it is doubtful if he realizes it. [Laughter.]

It is possible that the low fat content of his diet protects him against coronary arteriosclerosis; unfortunately, there is much to suggest that being an American is more fun than being a Bantu. [Laughter.]

Diet is a facet of arteriosclerosis most likely to be investigated on large numbers of people to determine whether changes will reduce the incidence of heart attacks and

strokes. This is now a practical possibility, in my opinion.

Thus I can summarize by making several relatively commonsense suggestions for the prevention and treatment of arteriosclerosis.

1. Reduce weight if obese. Eat less in the hope you will live longer to eat more.

2. If heredity is poor and blood cholesterol level is high, see your doctor and try to reduce the level by changes in dietary habits.

3. Reduce blood pressure if it is elevated.

4. Reduce the proportion of solid animal fats to the liquid vegetable fats and reduce the quantity of both. A balanced diet is important and extremes of all sorts should be avoided.

5. Increase the amount of regular exercise.

6. Avoid excesses of all kinds, but don't miss anything. [Laughter.]

7. Accept life's challenges. Come to terms with the inevitable and live as though you would live forever, and in spirit you will.

Thank you. [Laughter and applause.]

Dr. SPRAGUE. Thank you, Dr. Page. I can assure the audience from my long knowledge of Dr. Page's habits that he lives by his own precepts. [Laughter.]

For a summary of advances in treatment, with special reference to hypertension, I now turn to a colleague who has a distinguished record as a clinician, teacher and medical scientist. A former president of the American Heart Association and a pioneer in the use and development of drugs to control hypertension, he is Dr. Robert W. Wilkins, professor of medicine at the Boston University School of Medicine. Dr. Wilkins. [Applause.]

Dr. WILKINS. Dr. Sprague, friends, since 1950, a number of new drugs have come into use for the treatment of high blood pressure and, considered together, they represent one of the great advances of medical science during the period of our report. These drugs have changed not only our treatment of hypertension, but also our concepts of the nature of this disease. Except in a few rarer forms, the cause of high blood pressure is unknown. None of the new drugs used in treatment, therefore, was designed to get at the cause. Rather, they were designed primarily to relieve the result; namely, the elevation of blood pressure, whatever its cause might be. However, the action of these drugs in lowering blood pressure has provided new information on the nature of hypertension and has brought us closer to a true concept of the cause or causes of this condition.

There are five main categories of drugs now in use for high blood pressure. These are (1) rauwolfia, or Indian snake root, and its derivatives; for example, reserpine; (2) hydralazine or apresoline; (3) veratrum viride and its derivatives; (4) the nerve-blocking agents, such as hexamethonium; (5) (and probably most important) chlorothiazide and similar diuretics that stimulate the kidney to excrete salt.

Each of these agents acts to lower blood pressure, but each acts in a different way. Rauwolfa has a tranquilizing action on the brain and lessens nervous tension. Hydralazine dilates the blood vessels directly, especially those in the kidneys. Veratrum also dilates blood vessels but reflexly through the autonomic nervous system. The nerve-blocking drugs, on the other hand, prevent reflex constriction of blood vessels by blocking excessive nervous reactions. Chlorothiazide and the other diuretic drugs seem to change the body's content or its distribution of sodium chloride and other salts, lessening the blood vessels' constrictive reactivity and the resultant elevation of blood pressure.

Thus, the doctor today has in his bag new chemical tools for lowering blood pressure, and he has a variety of them. One of the most interesting findings has been that these chemical tools are more effective when used together than when given singly, even in increasingly large doses. This is an old trick in treatment, familiar to everyone in the use of different drugs together for pain; for example, aspirin, phenacetin, caffeine, and codeine for severe headaches. The trick is that when the drugs, each in a small dose, are used together against a single undesirable effect, they "gang up," as it were, on that effect, whereas their own bad side effects are so dispersed that they produce no unpleasant symptoms. Thus, the doctor has learned that when rauwolfia, the mildest agent, is not effective alone in a hypersensitive patient, he must add apresoline or chlorothiazide, or both. He may then achieve a very satisfactory result which he could not obtain with any one of the drugs used alone.

The results of treatment of high blood pressure with drugs are most dramatic when the disease itself is so severe or malignant that without such treatment it would be quickly fatal. In less severe cases of hypertension, drug treatment may be as dramatic in lowering the blood pressure; but since many of these patients have not as yet been incapacitated by the disease, their symptomatic improvement is not as striking as in the malignant cases. Nevertheless, all observers are in agreement that treatment of all such cases is most worthwhile. The area of disagreement is now restricted to the question of whether the very mildest or earliest of cases should be treated with drugs in a preventive way, before strains develop in the heart and blood vessels and especially in the kidneys.

It would appear that in patients with a strong family history of serious high blood pressure this may also be worthwhile, since it is now clear that high blood pressure is definitely a familial disease that tends to progress with age. Finally, the newer diuretic drugs, by shedding light on the handling of salt by the body, have tended to reemphasize the important role of the kidney in hypertension, and of salt excretion, which normally is under the control of the adrenal glands. Thus, one can say that drug treatment is not only helping people who already have high blood pressure, but is also teaching us more about the nature of the disease, and how to prevent it, or at least how to prevent its more serious effects.

Thank you. [Applause.]

Dr. SPRAGUE. Thank you, Dr. Wilkins.

Our summation of advances in treatment—this time with special consideration of heart and blood vessel surgery—continues with a report by an outstandingly eminent authority in this area. Winner of the 1954 Matas award for work in vascular surgery, cochairman of the committee on medicine and surgery of the National Research Council, member of the National Advisory Heart Council of the National Institutes of Health, and chairman of the Department of Surgery at Baylor University's College of Medicine, he is Dr. Michael E. DeBakey of Houston. Dr. DeBakey. [Applause.]

Dr. DEBAKEY. Dr. Sprague, ladies, and gentlemen, few areas in medicine have exhibited the phenomenal progress that has taken place in the field of cardiovascular surgery during the past decade. Indeed, the advancement made during this period far surpass all previous efforts in this field of surgery. Among the most striking features of these advancements, and undoubtedly important factors underlying their attainment, have been the increasing intensity of research endeavors and the bold ingenuity and aggressive approach characterizing the surgical attack on these grave diseases. As a consequence, many conditions which only a few years ago were considered hopeless are now amenable to effective therapy. No less important has been the fact that these surgical investigations have contributed significantly to greater knowledge and better understanding of the underlying fundamental factors involved in the pathologic, physiologic, and biochemical disturbances of cardiovascular diseases.

This is well illustrated by the progress which has been made in recent years in the surgical treatment of acquired diseases of the aorta—the main artery of the heart—and major peripheral arteries, particularly aneurysms and occlusive lesions. An aneurysm is a ballooning out and thinning of the wall of an artery.

Aneurysms of the aorta, for example, have challenged physicians for centuries; and although various methods of treatment were devised and attempted, none were effective. Within the past decade, however, curative therapy has been accomplished by the development of the surgical principle of extirpation of the lesion with restoration of normal function. The successful application of this method of treatment and development of these principles is dependent upon a number of factors, among the most important of which are the principles of blood vessel suture and arterial graft replacement.

The development and refinement of these principles were brought to full clinical fruition in the research laboratory. More recently, and as a result of these investigations, the problem of replacement of diseased arteries has been effectively solved through the development of substitute arteries made of such plastic materials as nylon, Dacron, and teflon; and these are now as readily available in the operating room as suture material.

Surgery to replace diseased arteries has become a complete reality. Deadly lesions which were formerly considered hopeless are now amenable to curative treatment.

Equally striking has been the progress made in the treatment of arteriosclerotic occlusive disease, the gravity of which has long been recognized. In arteriosclerotic occlusive disease, the thickening of the wall of the artery gradually narrows and ultimately blocks the opening in the artery.

Owing to its predilection to involving and blocking of such vital arteries as the aorta and those which supply blood to the brain and heart, it is by far the most common cause of death and disability among vascular lesions. As a consequence of intensive research and clinical investigations during the past decade, an important concept of the disease has been evolved which has led to the application of highly effective methods of surgical treatment. This concept is based upon the demonstration that in many forms of this disease the atherosclerotic occlusive lesion is well localized and segmental in nature with relatively normal arteries proximal and distal to the diseased segment of the vessel. From this fundamental knowledge, methods of surgical treatment were developed to restore normal circulation by removal of the occlusive lesion or by its replacement with a substitute artery. Within the past few years, sufficient experience has accumulated with these methods of treatment to establish their efficacy; and it can be stated that a high proportion of patients who formerly would have died or been seriously disabled from gangrene of the lower extremities, strokes, and high blood pressure due to arteriosclerosis, may now be completely relieved.

Equally significant are the brilliant advances made in surgery of the heart. Although pioneering efforts in cardiac surgery were made at the turn of the century, most of the important developments have occurred during the past decade. During this short period, intracardiac surgery was introduced. Although at first the scope of operative procedures on the valves and septum was limited by the fact that maintenance of cardiac function was vital during intracardiac manipulations, the efforts and contributions of the era of closed heart surgery were truly impressive.

Recently a major obstacle in heart surgery was overcome with the introduction of methods for open heart surgery. This problem was solved by the development of mechanical devices to substitute temporarily for the function of the heart and lungs, such as the pump oxygenator—or mechanical heart lung, as it is generally known—which is now in widespread use. Whereas less than 10 years ago only a selected few cases of congenital cardiac disease were amenable to surgical correction, today the majority of cardiac anomalies are completely correctible.

As outlined in this brief account, the tremendous strides that have been made during the past decade clearly reflect the vigor and intense activity characterizing the current status of cardiovascular surgery and portend other advances of even greater importance. With continuing generous support of these research endeavors, only the limits of imagination should restrict their progress.

One thing is certain: The future of cardiovascular surgery is brighter than ever. [Applause.]

Dr. SPRAGUE. Thank you, Dr. DeBakey.

Up to now, our discussions have largely concerned the clinical aspects of cardiovascular research. Our final panelist opens a new and vital area of exploration. He is to discuss the role of basic research in making possible the achievements already described and those we fervently hope will be forthcoming. One of the world's foremost authorities on renal function and electrolyte metabolism, he came to the National Heart Institute in 1950 and has been its associate director in charge of research since 1954. It is my privilege to present Dr. Robert W. Berliner. Dr. Berliner. [Applause.]

Dr. BERLINER. The tremendous stimulation of research which has occurred through the efforts of the American Heart Association and the National Heart Institute has already been cited to you by our chairman as a major achievement of the past 10 years. Much of this research is basic research. Thus the greatest portion of the research supported by the American Heart Association's national program falls into the category of basic research or has basic implications. Similarly, the philosophy that guides the research appropriations of the National Heart Institute also recognizes the vital importance of fundamental studies.

It is characteristic of basic research that its advances have the immediate purpose only of increasing our fundamental knowledge of ourselves and the world in which we live. In what way some specific bit of information will eventually serve its useful purpose is very difficult to predict. The basic research worker, however, does not concern himself with the application of his contributions, since experience has shown that it is upon such fundamental knowledge that the advances in applied science are built. Rather than attempt to guess which of the many major and lesser basic scientific discoveries of the last 10 years will eventually find important application in the control of cardiovascular disease, I would like to start with the other end and fill in the background of one of the more important practical achievements of recent years. In doing so, I hope to illustrate the practical results of scientific research done originally only out of scientific curiosity.

Dr. Wilkins has already mentioned the important advance made in the development of chlorothiazide. This drug has not only markedly improved the management of hypertension but, because of its capacity to cause loss of salt in the urine, has greatly facilitated the treatment of heart failure. It has reduced the need for rigid and onerous low-salt diets and practically abolished the need for repeated hypodermic injections in the management of cardiac patients. I would like to recount the development of chlorothiazide.

The story begins nearly 40 years ago. At that time, biochemistry was in its infancy as a science. One of the substances which quite naturally came under study was carbon dioxide, the main waste product of the burning of foods in the body. We eliminate it when we exhale. It was found that the blood can carry carbon dioxide, a gas, to the lungs because the carbon dioxide can react with water to produce carbonic acid. In the lung blood vessels, this is converted back to gas and excreted as we breathe out. However, when the rate of this conversion was studied, it was found to be quite slow. The question arose as to how the conversion could possibly occur fast enough so that the blood could give up its carbon dioxide during the very few seconds it spends in the lung blood vessels. It was concluded that there must be a substance in the blood which speeds up the reaction. Studies to find the substance resulted in an enzyme known as carbonic anhydrase. Subsequent studies showed that the enzyme was present in a number of tissues, although the nature of its function in these tissues was not clear.

Perhaps 20 years later we pick up the next thread of the story of chlorothiazide—and in an entirely separate context. It begins with the discovery in the late thirties that sulfanilamide was effective in the treatment of bacterial infections. As an unfortunate side effect, it was noted that patients treated with sulfanilamide developed a disturbance known as acidosis; but sulfanilamide was soon supplanted by other closely related drugs which did not have this side effect.

Nevertheless, some basic research workers remained interested in this property of the now obsolete sulfanilamide. It was finally shown that sulfanilamide was an inhibitor of carbonic anhydrase, the enzyme discovered some years earlier. The production of acidosis was attributable to this blocking action of the sulfanilamide on the substance that speeded up the elimination of carbon dioxide.

In the next few years, studies of the mechanisms of urine formation showed that carbonic anhydrase also had an important function in the kidney. When it was inhibited, not only was acidosis produced, but sodium was lost in the urine.

Now, since producing sodium, or salt, loss in the urine is one effective way of treating heart failure, it was suggested that sulfanilamide might be useful for this purpose. It was tried and found to have some favorable effect, but again its toxic effects were too numerous. Nevertheless, this led to the synthesis and trial of a large number of other carbonic anhydrase inhibitors; and finally one called diamox was found, which, although only moderately effective, found a considerable place in the treatment of heart failure.

Now, the search began for a more effective carbonic anhydrase inhibitor. One was found that proved to be far more effective than any other. This was chlorothiazide.

My story could end here but it doesn't, for a new twist has been added with the discovery that although chlorothiazide was synthesized, tested, and started on clinical trial because of its capacity to inhibit the enzyme carbonic anhydrase, it actually turns out to owe its effectiveness to a new and as yet unexplained activity.

Now investigators are following this trail back into pharmacology, physiology, and biochemistry. By the time they explain how chlorothiazide really works, which enzyme it inhibits and what that enzyme does in the body, who knows where and in what form it will turn up again in clinical medicine?

Chlorothiazide's story is, of course, but one example of the practical results that eventually grow out of basic research, chosen because it relates to one of the major advances of the period reported on here today—the control of hypertension. But of equal importance is the fact that the past decade has witnessed a great accumulation of basic new knowledge about the most fundamental processes involved in life itself—knowledge we need to break down the barriers of ignorance that nature has placed in our path.

As someone has said, "Basic research is a way of making nature talk." Before too long, I am confident, her voice will be loud enough in the land to show us the road to victory over the most pressing problems of cardiovascular disease.

To quote the recent report of a committee of consultants by Dr. Bayne-Jones to the Secretary of Health, Education, and Welfare, "Pressures of the practical results cannot be allowed to supersede the kind of fundamental studies which, in the long run, result in revolutions rather than mere improvement in health standards." [Applause.]

Dr. SPRAGUE. Thank you, Dr. Berliner.

May I ask you now that any of you who have filled in cards, pass them to the right and left, not the center aisle, where they can be collected.

A report to the Nation, which necessarily focuses on past achievements would be incomplete without inclusion of a statement regarding the future needs and aspirations of cardiovascular medicine. For this summary, we are privileged to have with us today Dr. LeRoy E. Burney, Surgeon General of the Public Health Service, Department of Health, Education, and Welfare. Dr. Burney. [Applause.]

Dr. BURNEY. Dr. Sprague, Senator HILL, Congressman FOGARTY, and distinguished Members of Congress and guests, I think one has an advantage in appearing at this part of the program because all of the worthwhile things have already been said and one doesn't expect too much. [Laughter.]

I'm sure all of you have been impressed with the complexity of the problem of the cardiovascular diseases; and if one only takes a look at the various gentlemen here on this platform and whom they represent, I think one would even be more impressed with all of the forces we have used in our country to combat this No. 1 cause of death.

You have heard representatives of the American Heart Association, representing the thousands of volunter workers throughout the United States, who give not only of their dollars but of themselves, unselfishly, enthusiastically, to this program of education, of research and of service.

You have heard one of your fellow Congressmen here, Senator HILL, and you will hear from another one who represents the very interested and understanding and, I should say, very generous support that the Public Health Service through the National Heart Institute has received for funds for research training, for research projects, and for the construction of research facilities in which this research should be done; and I think I can say without contradiction that nowhere in the world have we had a legislative body that has been so interested and so generous in the support of research as we have in these United States; and through the very fine leadership of our leaders in Congress and through Senator HILL and Congressman FOGARTY who are here before you today, I think we can be very proud of this contribution.

Then we see all the doctors here on this platform representing medical schools, universities, and laboratories that are doing clinical and basic research and we see Dr. Watt, the administrator of the National Heart Institute—all of whom are important contributors to this very great problem—if this does nothing more than to impress upon you that there is a complex problem; that it

is not the isolated issue of any one group, whether it is official or voluntary or research or public.

I think of the vast cooperative enterprise so characteristically American which has brought us so far within a period of 10 years and which undoubtedly will carry us to new heights a decade from now. We in the Public Health Service are proud of the part we have played in this aspiring story of achievement. The report we have heard this morning is one of great hope for the future. The advances we have heard about represent not just dollars, not just research, but they represent human lives that have been saved; and we cannot overestimate the progress so meaningful to humanity.

In looking ahead, however, we must soberly evaluate the vastness of cardiovascular diseases as a national health problem, even an international or world health problem. We are, in fact, just beginning to realize the magnitude and complexity of this problem. I submit that even this realization is a measure of our progress. It is a measure of progress because it points to an intensification of two trends, now already discernible, which will chart our direction against heart disease in the next ten years. The first is a strengthening of basic research, whose great promise has been so ably presented this morning; and, of course, necessary for that is the continued emphasis on training of research manpower and the facilities in which research people can perform their research work. The second is the speedy application of research findings to the lives of human beings. It isn't enough just to have the knowledge, unless that knowledge is speedily applied to the people who need it.

Now, as you can well understand, this calls for a comprehensive attack. It calls for a total involvement of all groups, all agencies, all the individuals who can contribute to our forward progress; and, as Disraeli once said, "The health of the people is really the foundation upon which all of their happiness and on which all of their power as a state depends."

Thank you. [Applause.]

Dr. SPRAGUE. Thank you, Dr. Burney.

When I opened this meeting, I referred to Senator HILL as one of its spiritual architects. Before turning to the question-and-answer period, it is fitting that we bring our formal part of the program to a close with remarks by the Representative in Congress who joined Senator HILL in requesting this meeting. He is well known to all of us for his stanch support of medical research and related programs. I refer, of course, to the distinguished Representative from Rhode Island, the Honorable JOHN E. FOGARTY. [Applause.]

Representative FOGARTY. Mr. Chairman, my distinguished colleague of the Senate, Senator HILL, distinguished guests, and ladies and gentlemen, the American Heart Association epitomizes the present urge of the American people to achieve better health through voluntary collaborative effort. It is one reason why medical research, in contrast with most other fields of research endeavor, finds as much support from private as it does from public sources. There is lasting strength in such diversity, and I am confident that a balanced pattern of support will be maintained in the years ahead.

The Public Health Service's National Heart Institute, Federal partner of the Heart Association, mounts its programs through tax funds—your tax dollars and mine. As a legislator with some responsibility for the activity of the Federal Government in medical research, I think I have some evidence that the people of our country unequivocally support the use of tax funds for medical research.

In a sense then, since Federal funds are and must be used in a way that is responsible to public forces, its funds too are volunteered by the people for the purpose of bringing heart disease under control.

As I have listened to these reports of progress that have been made against heart disease, I feel its impact primarily in human terms. Broad statistics are, of course, important in appraising all or a segment of the national health and medical research scene. We must never forget that 54 percent of all deaths in the United States are caused by some form of cardiovascular disease, that this means about 900,000 deaths from heart disease last year and that the total number of deaths from the more than 20 disorders of the heart and blood vessels about which so little is known can be expected to increase, I am told; but one must never forget that behind all these statistics are people, human beings—their families and their friends and their community of which they are a living part.

When premature and tragic death strikes, deaths which would be unnecessary if man knew as much as he should about his life processes, it is a hundred percent failure for medical science as far as the individual and his loved ones are concerned.

The decade of progress that has been summarized today has permitted the percentage, in the case of many people that you and I know, to be, on the other hand, a 100-percent success. For example, I know a child who suffered an acute attack of rheumatic fever which led to heart disease. Once she would undoubtedly have been stricken again and again with increasing damage to the heart and early death; but today, because of research and because of the discovery of antibiotics, with antibiotic prophylaxis and sound medical care she can avoid increments of damage to her heart and predictably can live a normal, healthy, and happy life.

I know a man in his early forties, a man with average income and a family of three young children, who was afflicted with severe hypertension. Again, with a combination of sound medical care and therapy, with blood pressure lowering agents that have been recently developed, he is living a normal productive life as a father and a breadwinner; and, as now defined, not only can he keep the hypertension under control but it will become less difficult to control as time goes on.

I know a child, a boy of 3, born with a congenital heart defect—a large hole in the wall of one of the chambers of the heart. Just a few years ago, that defect could not have been repaired and the child would have been doomed to a few years of half living and premature death before his teens. Today the defect has been located and measured. New surgical techniques have been developed, making it possible for the opening to be closed. The child and his parents are now awaiting the time when the doctors think it best for the operation to be performed; but, as Dr. White has said a while ago, there is of course no absolute guarantee of success, but I am told the chances are well worth taking and the parents will be eternally grateful to medical science because today they have hope instead of the hopelessness of a few years ago.

These are just three among many people I know and you know who measure the past decade of progress against heart disease in the most meaningful terms of all, but the long tortuous road to better understanding and to better ability to control the diseases of man stretches out ahead. We cannot know its lengths or its turns or the lanes that lead off into a network of pathways that may or may not lead back into the main route again; but we can do two things, I think. First, we can express and demonstrate our confidence in the scientists and doctors and research institutions—professional societies and the American Heart Association and other health agencies—that lead in the support of and search for new knowledge and the means for its application to better health; and, second, I think that we can assure the people that we will not impede progress against disease by failing to provide adequately through our contributions and our appropriations for the support of health and medical research activities today and for the increased resources required, if the health challenges of tomorrow are to be met.

I join with you wholeheartedly and pledge that I shall continue to do everything in my power to see that these needs are met.

In recent days I have had the opportunity to study the appropriation requests for medical research that we are studying this week. The appropriation hearings have just started in the House of Representatives before the committee, of which I am chairman; but I am very sorry to report to you this morning that apparently the Bureau of the Budget feels it must go backward instead of moving ahead, if one can judge by the appropriation requests for medical research that have been placed before our committee for the coming fiscal year.

As a Member of Congress, I share a responsibility to create and maintain an efficient and responsible Federal Government. As a Member of Congress, I also have a responsibility to see that basic human needs are going to be met. I deeply believe that in the interests of efficient and responsible Government, its health programs must advance—not stand still or fall back—notwithstanding any action of the Bureau of the Budget to the contrary. [Applause.]

From the record of Congress in the past, from the sentiment I sense in Congress today, and from my personal knowledge of the convictions of many of its Members—and may I say at this point that in the 13 years I have had the privilege of serving on this particular committee, we have had occasion to disagree on many items in our appropriation bill; but when it comes to appropriating funds for medical research, I can say, without fear of contradiction, that politics was swept aside, there is no middle aisle, that men and women on both sides have cooperated fully and selflessly. I think that is a wonderful record for the Congress of the United States; and I would like to include many who are here in our audience today—leaders of our Federal Government, leaders in our House and in the U.S. Senate.

I am happy to see my counterpart on this committee, Mr. LAIRD, from Wisconsin, and the chairman of the full committee, Mr. CANNON, from Missouri, both of whom have shown keen interest in research in the medical program; and I think I can assure medical people that because of their support of medicine in the past that their Congress will continue to act for their better health as long as we have the manpower and the facilities and the will to solve these problems.

To me the words "better health" mean more than the words "balanced budget"; and in this matter, I don't believe we could have a stronger ally than one of the most stimulating, energetic, able leaders in the field of medical research and one of our truly great Senators—my colleague on the other side of the Capitol, the Honorable LISTER HILL, from that great State of Alabama. [Applause.]

Dr. SPRAGUE. Thank you, Representative FOGARTY.

We now end the formal part of this Report to the Nation and go on to the question-and-answer period.

I have a few questions here; and from looking at the early ones, I can see that the gentlemen who are going to answer them can either spend an hour with each question or they can say, "I don't know." [Laughter.]

I think we had better take a compromise position.

Dr. White:

"You are a noted advocate of snowshoveling. When you hand a man over 50 a shovel, how do you know what the condition of his arteries may be?"

Dr. WHITE. I don't hand a snowshovel over to such a person unless I know he is used to vigorous exercise and is in good condition; and I think one of the great faults of today is that at about the age of 25, especially with our men, we begin to lead soft lives, and for the next 20 years they accumulate trouble and at 45 it may prevent one shoveling adequately. I think we've got to have a campaign to keep active, especially our men; and then I think they can shovel snow right through till they are a hundred years old. [Applause.]

Dr. SPRAGUE. Thank you.

Dr. Wilkins:

"How close are we getting to discovery of the underlying causes of essential hypertension?"

Dr. WILKINS. I'll also have to say, "I don't know." As I tried to indicate in my report, I think we're getting closer and closer to it.

Dr. Page on my left is very fond of saying that the causes of hypertension are mosaic, they are not simple, and they are probably not single; and, incidentally, this is the phase of health and disease work that we're in now.

I think it's perhaps a little naive to expect that we're going to find—from here on, at least—many diseases for which there is a single cause; but the mechanisms and the causes combine to give different people—perhaps different mechanisms in different people—hypertension.

We're coming closer and closer to understanding, and I think perhaps the next 10 years will see that pretty well delineated—perhaps not completely.

Dr. SPRAGUE. Thank you.

Dr. DeBakey, we have one for you:

"From time to time we hear conjectures about the transplanting of human hearts. What are the chances of this happening in the foreseeable future?"

Dr. DEBAKEY. Well, this is dependent upon further basic knowledge about the transplantation of tissues from one person to another.

So far as the technical aspect of transplanting a human heart is concerned, this I think has been solved and can be done now, but there is a basic factor involved in the transplantation of tissues, and that is what we call the rejection phenomenon.

Now, there is much work being done in this field and, of course, this opens up a whole new vista of surgery if we solve this problem of the transplantation of tissue. Now, whether it will come in 5 years or 10 years is something I can't say yet.

Dr. SPRAGUE. Dr. Page—listen very carefully [laughter]: "Would you advocate a 'crash' program against heart and blood-vessel diseases—something comparable to what we did in producing the A-bomb and are now trying to do with ICBM's?"

Dr. PAGE. No. [Laughter.]

Dr. SPRAGUE. May I ask why you said "No"?

Dr. PAGE. Yes; because I think you can buy research up to a certain point and after that point you begin to just multiply a spinning of the wheels. I think what you don't get is creativity—that is, new ideas.

In other words, I would advocate a maximal efficiency in the spending of money but realizing full well that this goes only up to a certain point and then you don't go any faster than that because you don't have the creativity which is necessary to do this.

I think that there are many ways that we can improve the efficiency of research today.

Please don't misunderstand me on that score; nevertheless, I think there is an upper limit.

Dr. SPRAGUE. Dr. Berliner:

"How can we get more well-qualified medical scientists interested in doing basic research?"

Dr. BERLINER. Well, I would think that the most important factor in getting more qualified people into basic research and more people qualified to do basic research is to try to increase the understanding of what basic research really is and what its eventual products are so that the scientist gets a little more of the credit and a little more of the understanding from people for his achievements.

Dr. SPRAGUE. I think that this audience might be interested to realize at this time that the term "basic research" is often a matter of semantics. A discussion of this appears this week in Science wherein it is pointed out that universities, when they are asked, "How much do you think is given by the Federal Government to basic research?" come out with a figure which is twice as much as the amount which those who distribute the money think is given for basic research.

In other words, the motivation which occurs in in the recipients, themselves—determines the basic nature of the use of this money; so we shouldn't be too confused by a statistical approach in relation to this term "basic research."

Now, I can't avoid answering a question addressed to me:

"Why do some people die suddenly of heart attacks after the doctor has given them a clean bill of health?" [Laughter.]

I have a standard reply to this. I say, "If I knew the answer to this, I would be working for the life insurance companies only." [Laughter.]

Actually, there are some types of heart disease that can be readily diagnosed; but in the case of coronary artery disease, which is the type which causes sudden death in most instances, diagnosis may be very difficult—particularly if the patient has no symptoms and there are no changes in the electrocardiogram.

An answer to this might be one suggested by my friend, Dr. William Castle, some years ago; and that is that each one of us should engage every day in what he calls "sublethal exercise"—that is, we should exercise to the point where we don't drop dead. ]Laughter.]

And that would help to build up, as Dr. White pointed out, sound coronary blood vessels.

Now, Dr. DeBakey, I have a question for you which says:

"I saw a story recently which said, in effect, that an impending stroke might be detected by X-ray and that if this were so, perhaps the surgeon could actually go in, make certain repairs, and thus prevent a stroke. Is this possible?"

Dr. DEBAKEY. Yes; definitely. Now, some strokes are due to an atherosclerotic process partially blocking and then finally blocking part of the arteries which supply blood to the brain. Now, usually these can be diagnosed precisely by opaque substances injected into the arteries and they can now be operated on successfully to restore the normal opening in the artery and thus prevent the artery from becoming blocked.

Dr. SPRAGUE. Thank you.

Dr. White:

"During the past 10 years, what, in your opinion, has been the most beneficial discovery in the field of heart disease?"

Dr. WHITE. Well, research teaching and practice is the fundamental reason for the great advances that have been made; and then 10 years ago came this united effort—private and public enterprise hand in hand—the recognition of the need of that and of going along with these heart drives. We can't submerge them into community heart drives; the time is not ripe for that yet.

I think the realization that all research must be supported—I think that's possibly the most important advance. We know of many detailed advances which would be equally beneficial.

Dr. SPRAGUE. Also Dr. White:

"Are we keeping pace with the Soviet Union in heart disease research?"

Dr. WHITE. Well, I think so. I think we are ahead of them, actually. They are just planning to start a Russian heart association. It wasn't in operation last September, I know, but they said they were going to establish one and join the International Society of Cardiology.

Well, I think that's about the way we were a good many years ago.

Dr. SPRAGUE. Dr. Watt, there is a question that says:

"We haven't heard very much this morning about the so-called epidemiological approach to heart disease. Do you think that this approach has received sufficien emphasis in the past decade?"

Dr. WATT. I think it's one of the really neglected areas and yet one that has seen quite a lot of development in plans and in activity within the last—oh—2 to 3 years. I would add that this is going to be shortly accelerated with a National Conference on Epidemiology, planned by the Heart Association and the heart institute to be held within the next 2 months. Work on planning that meeting is already actively underway.

Dr. SPRAGUE. This question is for Dr. Wilkins:

"You told us how high blood pressure is being controlled. Can it ever be cured?"

Dr. WILKINS. I think it's conceivable that we may be able to cure hypertension if we really find enough causes in individual cases that we can remove. Actually, we cure hypertension now—as I may have wished to indicate in my report—and they are the rarer forms. There are very severe cases of hypertension due, let's say, to a removable cause, a single removable cause, such as one bad kidney or a tumor of the adrenal gland. These can be removed, and the hypertension is cured.

I'm glad you asked that question because many times patients or the lay people misunderstand the word "treatment." They think of that as being synonymous with "cure" but it isn't. The treatment you must continue in order for it to be effective, at least at some level.

"Cure" means you give the treatment, the patient is cured, and you can stop the treatment and he stays well. We are not at that stage yet, but I believe that it may be possible that we will achieve it in time.

Dr. SPRAGUE. Dr. Page:

"We hear much about fats being a possible factor in developing heart disease. Does the present body of knowledge indicate that we should now recommend any significant changes in the dietary habits of Americans?"

Dr. PAGE. That's a loaded question. [Laughter.]

Dr. SPRAGUE. The intention is so. [Laughter.]

Dr. PAGE. Well, I think that you have to divide the problem really into two sections: one, the question of treating sick people—and if you say then that they should change—rather, people with heart disease or arteriosclerotic heart disease—if you want to lower the fat content of their diet I think it would be desirable, particularly if their blood cholesterols are elevated. There is another group of people who have a high hereditary factor in the thing with high blood cholesterols, and I think those people might well be prone.

Now, when you talk about the problem of changing the fat content of the diet of the entire American public, I think you're talking about something else again because you're dealing with problems of youngsters, problems of old age; and I think the whole

problem simply deserves more careful consideration rather than any wholesale recommendation at the present time. I think it has to be individualized.

Dr. SPRAGUE. There is a question addressed to me:

"What, in your opinion, will be the next important advance in the diagnosis of heart disease?"

As I indicated earlier, I think the diagnosis of latent or incipient coronary disease is most difficult, and perhaps we may be able to find a coronary-prone individual for whom we should do more, perhaps, than for the general population.

Dr. Page has told you about the hereditary factors in coronary heart disease and it does seem that—at least in early life—under the age of 40, certainly, it is common in males and it is extremely uncommon in females. There is one coronary differentiation, and it does seem, perhaps, as if coronary disease is more common in muscular individuals who put on weight after the age of 25, but it's very difficult to be sure of a true coronary type.

Dr. Watt:

"In testing new cardiovascular drugs, what are the immediate needs—where are the critical gap areas?"

Dr. WATT. The immediate needs and the critical gap areas can be summed up in a few short words—the current shortage of trained clinical investigators to test and evaluate these new cardiovascular drugs. Just the other day I heard that something like 6,000 compounds were developed during the past year alone. To test these compounds adequately and to make them available readily, means that we literally have to have more trained people to be effective in carrying out studies to determine the safety and effectiveness of these drugs.

Dr. SPRAGUE. We have about 3 minutes. We started 5 minutes late and I'm going to end this at the proper time.

I'm going to ask Dr. White a question and Dr. Page a question.

Dr. White:

"You mentioned nothing about anticlotting drugs in preventing recurrences of heart attacks and strokes. Don't these drugs deserve listing as a major achievement?"

Dr. WHITE. Some of us used to be skeptical, and I think rightly so, until we had more proof; and now there seems to be more proof that anticoagulants, properly administered and carefully controlled, can help a good deal in persons who already have had evidence of thrombosis or embolism in the past or perhaps in those who in the past have had insidious symptoms of angina pectoris; so there is a place and this has been an important advance, without doubt.

Dr. SPRAGUE. I will address this final question to Dr. Page. There are several that come in this same category and they have to do with this rather popular notion at the present time that the emotional stress of our lives has something to do with the development of atherosclerosis of the coronary arteries.

Well, how do you feel about this, Dr. Page?

Dr. PAGE. Well, I feel I have answered the question many times before. I think that this problem is one that suffers from lack of objective definitions.

What do we mean by "stress"? It's always been with us. For instance, children have been defined by the agony of their illness and by the exhaustion of their well-being. [Laughter.]

And yet we have to have them, I am told. [Laughter.]

Now, I think that, again, stress has been in every generation. Every generation thinks they have more stress than the others. I am sure that building pyramids must have been a great stress for the people. It must be of some satisfaction now to know that the pyramids are holding down the Pharaohs. [Laughter.]

Now, I think that, lastly, this problem is a peculiarly human one in the sense that man is the only individual who really meets a challenge. Challenge is the one way we strive for success in the world. If there is a purpose in the world—and I believe there is one—then that is defined in terms of challenge; and if people can't meet challenge, they are something less than human in my book. Therefore, I would say that let's meet the challenges of the world as best we can because that is our purpose; and then let's not worry about the consequences of it.

We'll live the best we can; we'll take things as inevitably as we can; but let's still remain human beings.

Thank you.

Dr. SPRAGUE. I would like to end by saying that I agree with what Dr. Page says. If we let our citizens become so soft and fearful that the normal challenges of living may be harmful, then there is great danger that a less timorous and less pampered nation may well take us over; and I think that if stress were the important thing in the production of coronary disease, all these members here on the panel would go home and have a coronary thrombosis; and I don't think they are going to.

Thank you very much. [Applause.]

## The Unsung Heroes

EXTENSION OF REMARKS

OF

### HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 5, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a brief but concise editorial on the American Legion post service officers which, although long overdue, gives proper credit where credit is rightfully due to these outstanding veterans and offices of a great veterans organization.

The editorial follows:

THE UNSUNG HEROES

The post service officer of the American Legion—an unsung hero of war and peace. Without fanfare or publicity he carries on in one of the greatest humanitarian assignments in the country.

The post service officer is essentially a volunteer. He works for the good he can do. His reward lies in the happiness he brings to the lives of distressed veterans and in the smiles of the faces of war widows and orphans.

He is a true friend of all those upon whom the burden of war has fallen most heavily. He helps the sick veteran to get hospitalization and medical treatment. He assists the disabled veteran in qualifying for compensation or pension for his physical handicap. He has extended help in getting readjustment benefits for the eligible of World War II and the Korean war. He counsels and consoles the widow and sees to it that she gets compensation or pension and other death benefits. He assists in arranging for scholarships for the children of the service-connected deceased veterans.

He is the sympathetic consultant for all distress veterans and their dependents. They rely on him as having understanding, sympathy, and the know-how of effective assistance. He stimulates that warm glow of feeling to the disabled veteran that comes from the realization that no veteran in need stands alone but that the American Legion is fighting for his rights.

It is through the post service officer that the American Legion is able to measure the effectiveness and adequacy of Government service to veterans. It is upon him the organization depends for seeing that despairing veterans are adequately counseled and assisted. He and his department service officer are the effective team rendering this service.

The post service officer gives daily substance to the American Legion ideal of consecrating the association of legionnaires to mutual helpfulness. He may be little known beyond his community but his devotion to duty is the beautiful symphony of unselfish service to God and country and fellowmen that has made the American Legion great.

## Full Text of Senator Douglas' Article: "A Catholic Can Become President"

EXTENSION OF REMARKS

OF

### HON. BARRATT O'HARA

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

*Thursday, March 5, 1959*

Mr. O'HARA of Illinous. Mr. Speaker, by unanimous consent, I am extending my remarks to include the following article by the senior Senator from Illinois, the Honorable PAUL H. DOUGLAS, in the current issue of Coronet:

A CATHOLIC CAN BECOME PRESIDENT

(By Senator PAUL H. DOUGLAS)

I think a Catholic can be elected President of the United States.

Given the right man, a Catholic should be elected President.

It saddens me that it should still be necessary in America today to document these beliefs. Yet the issue is clouded by so much confusion that both non-Catholic and Catholics can profit by its frank discussion. For the closer we move toward the 1960 political conventions, the greater the danger that, in the heat of debate, matters of principle may become further distorted by the cobwebs of myths and religious suspicion.

The chief argument advanced for the contention that a Catholic either cannot or should not become President are:

1. Gov. Alfred E. Smith, of New York, the only Catholic presidential candidate in U.S. history, lost disastrously in 1928 because of his religion—and the memory of his defeat remains too fresh.

2. The religious views of a Catholic President would necessarily conflict with his constitutional duties.

3. The electorate still is not sufficiently tolerant to elect a Catholic.

4. Even if the electorate might prove willing to elect a Catholic, the professional politicians would be too cautious to nominate him.

Let us examine each of these arguments.

There can be no question about the overwhelming extent of Al Smith's defeat. He lost to Herbert Hoover by more than 6 million votes. He failed to carry four States of the solid South. He even lost in his beloved native State of New York and wound up with just 87 electoral votes.

It is also true that the Democratic candidate's Catholicism was a long and bitterly discussed issue. Methodist Episcopal Bishop

James Cannon, Jr., argued that "no subject of the Pope" should be President. The Republican national committeewoman from Virginia declared: "We must save the United States from being Romanized and rum-ridden, and the call is to the women to do so." A well-circulated cartoon depicted a kneeling Al Smith inviting his running mate, Senator Joseph Robinson, to kiss the Pope's bare toes. At the upper end of the intellectual scale, a noted attorney, Charles C. Marshall, addressed a 5,000-word open letter to Smith in The Atlantic Monthly, questioning the Governor's qualifications on the basis of the past pronouncements of various Catholic spokesmen. In reply, Smith issued a moving 4,000-word manifesto.

Nevertheless, historians now believe that the religious issue was only one of several that caused Al Smith's downfall. Quite probably it was not even the most important one. For Al Smith's America differed greatly from the America of the space age in one almost forgotten respect. Bishop Cannon also attacked Smith as the master henchman of evil forces representing the foreign-populated city called New York. William Allen White of Kansas' Emporia Gazette railed against him as the agent of saloon, prostitution, and gambling interests.

It is a little difficult not to smile at the motion today, but the fact is that in Al Smith's day much of rural America was in a state of undeclared war against its urban counterpart. To many voters in the rural South and Midwest the stereotype of the cigar-chewing machine politician from the East spelled government by city slickers, corruption, and foreigners. Happily, education, automobiles, television, and other unifying factors have pretty much wiped away these prejudices. Moreover, about 63 percent of the population now lives in urban areas.

Most difficult for Al Smith, perhaps, was the prohibition issue. Again, it may be hard for voters now in their 20's and 30's to picture how many people sincerely—and vehemently—opposed the legalized sale of liquor. Smith was an ardent wet and said so. After the votes were in, Prof. William F. Ogburn of the University of Chicago made a study of 173 counties and concluded that the prohibition sentiment was 3 times more decisive than the religious issue.

I am convinced, in view of this, that Al Smith's fate should not be too significant for any Catholic candidate of the future.

Since I am a Protestant, I feel I can discuss objectively the claim that the teachings of the Catholic Church would lead a Catholic President into inevitable conflict with our laws. Frankly, this so-called danger does not worry me.

It is, of course, possible to find some basis for conflict between church and state in the writings of the Catholic hierarchy of the past. This is particularly true of Pope Pius IX, who asserted in 1864: "To say in the case of conflicting laws enacted by the two powers, the civil law prevails, is error." The statements of Pius IX were, however, made primarily in reference to European conditions, and were issued a long time ago. I am convinced, however, that in our modern United States such areas of potential dispute would seem to exist chiefly in the realm of theory alone. Certainly Al Smith thought so when he answered Charles Marshall in the Atlantic Monthly:

"I believe in absolute separation of church and state * * * I believe in the support of the public school as one of the cornerstones of American liberty * * * I recognize no power in * * * my church to interfere with * * * the Constitution of the United States."

In other words, Catholicism is a matter of faith and morals for most members of the Catholic Church. Catholic officeholders have had no difficulty reconciling their faith with their politics in this country. As the militantly Protestant journal, Christian Century, pointed out during the 1928 campaign:

"Catholic political action in modern times has shown itself more modern than Catholic. France was overwhelmingly Catholic; it threw off the yoke. Italy was overwhelmingly Catholic; it destroyed the temporal power of the papacy. Catholics do not act as a unit at the wave of the Pope's baton. In actual practice, American Catholics love their country as much as Protestants do."

To which I would add: just what could a Catholic President of the United States do—against the will of the non-Catholic majority—to aid the Pope? The Constitution provides ample checks against the usurpation of powers by the executive branch, so that we need not—and indeed we must not—deny to 36 million Americans the right to have a qualified member of their faith elected to the White House.

Not only do I think that a member of a minority religion would do nothing to offend the beliefs of the majority, I believe there is strong evidence that Catholic officeholders would bend over backwards to avoid charges of religious prejudices against themselves or their coreligionists.

There is, for example, no record that Catholic members of our highest tribunal, the Supreme Court, ever found themselves in conflict with the laws they were chosen to interpret. This is true of two Catholic chief justices, Roger Brooke Taney and Edward Douglass White, who presided over the Court about 40 years. More recently, another Catholic justice, the late Frank Murphy, voted in favor of the right of a Jehovah's Witnesses minister to set up a public address system in a municipal park and make anti-Catholic broadcasts on Sundays. Currently, Supreme Court Justice William J. Brennan, Jr., a Catholic, has also shown himself to be a stout defender of individual rights and civil liberties.

Looking over the ranks of my Catholic Democratic colleagues in the Senate, I must confess that the average quality of their performance seems to surpass the average performance of my fellow-Protestants.

There is Senator JOHN F. KENNEDY of Massachusetts, who is considreed the front-runner for the Democratic presidential nomination in 1960; Senator MIKE MANSFIELD of Montana, the Democratic assistant majority leader; such veterans as Senators JAMES MURRAY of Montana and JOSEPH O'MAHONEY of Wyoming; newer Members like Senator JOHN O. PASTORE of Rhode Island, FRANK LAUSCHE of Ohio and PAT MCNAMARA of Michigan; and newly elected Senators PHILIP A. HART of Michigan, EDMUND S. MUSKIE of Maine and STEPHEN M. YOUNG of Ohio. In addition, there are two other freshmen Senators who have served with distinction in the House of Representatives: EUGENE MCCARTHY of Minnesota, and THOMAS J. DODD of Connecticut. In the House, for the first time, there are nearly 100 Catholic Members.

I find these men remarkably free of prejudice and, as a group, less self-righteous than a large proportion of my fellow-Protestants. It may be that most Catholic legislators are above-average at their jobs because they had above-average obstacles to overcome in achieving election. Whatever the reason for their collective stature, I would like to see more such men in Congress.

If a Catholic is nominated for the presidency in 1960, or at any other time in the foreseeable future, I must admit that his religion would—regrettably—be held against him by some voters.

The Gallup poll has been asking a cross section of voters: "If your party nominated a generally well-qualified man for the presidency this year, and he happened to be a Catholic, would you vote for him?"

In 1955, 23 percent replied "No." In 1956, 22 percent. Last October, 25 percent.

To me, however, the more significant points established by these polls are:

1. Anti-Catholic voters are clearly in a minority.

2. Since a Catholic candidate almost certainly would be a Democrat, the majority of anti-Catholic votes in the public opinion polls were cast by Republicans who would not vote for him anyway.

3. The above figures compare with a "No" vote of 31 percent in the same poll taken in 1940.

4. The October 1958 Gallup poll also shows that anti-Catholic prejudice is significantly lower among younger voters and voters with a college education.

Clearly then, the trend is toward less religious prejudice in our voting habits. And it should be. Historically anti-Catholic feeling in this country has been an anti-immigrant prejudice against the stereotyped Irish cop, saloonkeeper or favor-peddling ward heeler. Catholics, Protestants, and Jews live in more or less separate social compartments. Nowadays, economic and social barriers are dropping rapidly. There is much more interfaith communication than ever before. We know and understand each other better than we ever did. The war and military service in a common cause melted away many hatreds. Few Americans still blindly believe that a man wears invisible horns because he worships the same God in a different church.

Recent election results bear this out. The electorate of Maine is only 26 percent Catholic and not noted for upsetting political apple carts. It was a State with a firmly fixed tradition that no man of immigrant stock and no Catholic could be elected to high office. Yet in 1954, Maine elected MUSKIE—a Catholic and the son of a Polish immigrant tailor—as the first Democratic Governor in 20 years. In 1956, it reelected him by the greatest majority ever given a Governor of either party. In 1958, it made him the first Democrat ever popularly elected U.S. Senator from Maine.

Analyses of the 1952 and 1956 election results also show that quite a few Catholic candidates for Congress ran substantially ahead of Adlai E. Stevenson. Among these were Representatives LEO W. O'BRIEN and JAMES J. DELANEY of New York (who ran 16 and 15 percent ahead of the national ticket, respectively); PETER W. RODINO of New Jersey (21 percent); Senator KENNEDY (12 percent); Senator PASTORE (12 percent); Senator LAUSCHE (26 percent); Representative CLEMENT J. ZABLOCKI of Wisconsin (33 percent); Representative (now Senator) EUGENE MCCARTHY (12 percent); and Senator MANSFIELD (21 percent).

Many of these front runners undoubtedly come from areas with relatively heavy Catholic populations. But I believe that most of their constituents voted for these men simply because they thought they would do a good job.

By the same token, I will concede that many southern delegates who jumped on the KENNEDY-for-Vice-President band wagon at the 1956 Democratic convention did so largely because of their distaste for the alternative choice, my friend ESTES KEFAUVER of Tennessee. But it was an historic change to see delegates from the South (where, according to Gallup, only 51 percent of the voters would accept any Catholic Presidential candidate) rally to the KENNEDY banner—even for the second place on the national ticket. It showed that the South was willing to live with a Catholic Vice President.

There is no question in my mind that the increased acceptance of Catholics in public office is also attributable to the efficiency and fairmindedness of most Catholic officeholders at the municipal level. Robert F. Wagner, Jr., in New York, Richard J. Daly in Chicago, John B. Hynes in Boston, deLesseps S. Morrison in New Orleans and David Lawrence in

Pittsburgh have two characteristics in common. All are Catholics. All have been excellent mayors.

Because of his fine record, the voters last year elected Mayor Lawrence the first Catholic Governor of Pennsylvania. Three Catholics already were Governors of other States and making good records: Stephen L. R. McNichols of Colorado, Albert D. Rosellini of Washington, and Foster Furcolo of Massachusetts. Nor was Lawrence the only newly-elected Catholic Governor. Chosen in the last election were Christopher Del Sesto of Rhode Island, J. J. Hickey in Wyoming, Michael V. DiSalle in Ohio; and, most notably, Edmund G. (Pat) Brown in California. Brown defeated Senator William F. Knowland by 1,029,000 votes.

I think, therefore, that an impressive case can be made for the argument that the vast majority of today's voters look their candidates over for merit, not for religious beliefs. Now what about the politicians who nominate Presidents?

Here we are on more speculative ground. Politicians are worriers. Worriers are cautious. I am afraid there is evidence that a Catholic presidential candidate might aid, rather than hurt, the cause of the Democratic Party. At least this is the conclusion of a careful statistical study sponsored in 1956 by John Bailey, the Democratic State chairman of Connecticut. Its most intriguing findings were that Catholics tend to vote more diligently than do Protestants, and that their voting strength tends to be concentrated in 18 large cities of 12 key States. The study concludes:

"The Catholic voters in these cities can usually determine the size of the Democratic margin in these cities. The size of the Democratic margin in those cities usually determines whether these States go Democratic. Whether these States go Democratic usually determines whether the Democrats win the election."

This is a rather coldly clinical approach to the issue of religion in politics. But the men on the floor of our nominating conventions are clinicians who should be impressed by such statistics. They should also be impressed by the consistently spectacular showing made in the Gallup polls by Senator KENNEDY, whose Catholicism is not precisely a secret.

The second point I would raise with our over-cautious politicians is the same that I want to raise with all Americans: Hasn't the time come for us to quit thinking of our public officials in terms of their religious faith?

I think it has.

This is the 20th century, not the 18th or 19th century. We should not let the fears of the past dominate our thinking today. And surely it is essential that we cast aside all remnants of prejudice in a time when the whole world is watching to see whether we live democracy, or merely talk it. Personally, I believe that when the right candidate comes along—regardless of his religion—the American people will do the right thing. They usually do.

## Red Conspiracy in Latin America

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. FLOOD. Mr. Speaker, in the course of a number of addresses to the House on the subject of the Panama Canal, I have dealt at some length with communistic conspiratorial activities in the Caribbean area. That these were only a small part of agitational operations of hemispheric scope has long been evident.

A highly informative summary of such activities by David Lawrence, distinguished editor and columnist in the Nation's Capital, was published in his syndicated column in the March 4, 1959, issue of the Evening Star, Washington, D.C.

His reference to communistic influences with respect to the Panama Canal are taken from an address by me to the House, on February 25, 1959.

Under leave to extend my remarks, the indicated column is quoted:

RED CONSPIRACY IN LATIN AMERICA—COMMUNIST HAND SEEN BEHIND RIOTS AGAINST U.S. EMBASSY IN BOLIVIA

(By David Lawrence)

And now it's trouble in Bolivia. Yesterday it was in Cuba, and before that in other Latin American countries where hostility against the United States was artificially intensified by the Communists.

Unfortunately, maneuvers of the Communists in the cold war are usually poohpoohed by too many people in this country, despite bold propaganda operations that obviously are planned with care. When the anti-Nixon incidents occurred on the Vice President's tour of South America, it was conceded, of course, that an antagonism such as was manifested against the United States could readily have been brought into the open without the slightest stimulus by the Communists. But this was no reason to ignore the impetus given anti-American sentiment there or anywhere else in the world by the Communists.

It so happens that this week an article reporting an alleged remark by a minor American official was published in a magazine reaching Bolivia from the United States. The idea that a chance comment in a magazine, circulating a relatively small number of copies in that country, could produce a riot against the United States Embassy and cause the evacuation of its personnel is too fantastic to believe. Only an organized conspiracy by those malcontents with a desire to focus international attention on relations between the United States and an important South American country could have brought about the tragic episode.

The Bolivian Minister of the Interior, says a UPI dispatch, told newsmen last night the attack on the American Embassy was led by a known Communist named Victor Villegas Busaldo.

The other day in Congress, Representative DANIEL J. FLOOD of Pennsylvania, Democrat, declared that Communist influence is back of some of the demands being made by the Government of Panama for an extension of its territorial waters which would adversely affect American rights in the Canal Zone. He said:

"Those in charge of the Communist movement in Latin America, and especially in the Caribbean area, have undoubtedly focused their conspiratorial activities on the Panama Canal with the purpose of causing destruction of amicable relations between the United States and Panama, with complete liquidation of United States control over the canal itself."

Nor is Communist activity confined to any one part of the globe. It is noticeable just now in Africa, where fuel is being added to the flames of nationalism. It is operative also in the Far East. A few days ago a United Press International dispatch dated Manila said:

"The foreign office warned yesterday it has received reports pointing to growing infiltration by Communists among the Philippine student population.

"Foreign Secretary Serrano conveyed the warning to Representative Lenardo Perez, chairman of the House Committee on Anti-Filipino Activities, and told him to put his committee on alert."

The pattern of student infiltration is worldwide. In Latin America, in particular, many of the anti-American demonstrations have originated in the colleges. To plant young leaders who will use any provocation to work up passionate outbursts is a relatively easy device. It has been revealed in Cuba in the so-called youth movement. While the top officials there vehemently deny that the Communists have anything to do with the Fidel Castro regime, it is an open secret in Havana that the Communists are busy causing mischief wherever they can in the little republic which is struggling to recover from the ill effects of the Batista dictatorship.

In the Middle East the Communist plotters have been more successful than anywhere else. Everyone who has watched the situation in Egypt is aware that the Communists have played an active part there in anti-Western demonstrations. The Nasser government, which at first welcomed such supporters, now is troubled by them. Iraq is an example of a successful conquest by the Communists of a country which until recently was one of America's stanchest friends.

Despite the denunciations of anything that even remotely resembles an intervention in their own domestic affairs, the Soviets are spending hundreds of millions of dollars fomenting internal trouble inside many of the countries sympathetic with the West.

In the United States, the effects of some of the insidious operations by Communists are more and more noticeable. Having won many a big battle in the courts through the aid of legal technicalities, the Communists have continued to plant their propaganda in important places and among groups which are gullible and naive, thus enlarging the scope of the Soviet propaganda drive.

Sooner or later the American people will come to realize that the Communists are succeeding in their infiltration of many countries and are dangerously impairing the relations between the United States and peoples in different parts of the world who normally would be very friendly to the people of this country. It's a significant type of fighting in what has been misnamed the cold war.

## The Corregidor Bataan Memorial Commission Has the Grave Responsibility of Marking Hallowed Ground With a Fitting and Enduring Monument Symbolizing an Epic Struggle in Mankind's Quest for Peace

EXTENSION OF REMARKS
OF
### HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. VAN ZANDT. Mr. Speaker, in stressing the importance of an appropriate Corregidor Memorial it is pertinent to recall the stirring remarks made when Corregidor was returned to the Philippines, October 12, 1947.

Today the United States of America conveys to the Republic of the Philippines the last tangible bit of America, the island of Corregidor. It is right that this be done. But in a deeper sense, Bataan and Corregidor do not belong solely to any one country, even to the heroic Philippines there is more to this hallowed spot than what we here convey, and its that which belong to the ages and to all men who believe in human liberty. Nations yet unborn will strive for freedom and receive strength and courage from nearby Bataan. Men now living and yet to be born will carry on inspired by the true meaning of Corregidor. They are now enshrined in the temple of hope for mankind with Runnymede, Valley Forge and other places where the fires of freedom were lighted and kept burning.

The blood of Americans and Filipinos mingled indissoluble in the soil of Bataan and Corregidor, each defying the forces of autocracy and slavery. The bloodshed by your sons and our sons cannot be separated in the hallowed earth of Bataan and Corregidor. This spot will tell the story to oppressed and groping people how they, too, can attain liberty by devotion to the democratic way of life.

Mr. Speaker, my service as a member of Corregidor Bataan Memorial Commission has given deep satisfaction to me. It is a highly patriotic service in a cause of far-reaching importance to our entire foreign program.

My greatest regret is that its purposes and plans are not fully understood.

The history of every public endeavor of this kind records opposition and, strange to say, the objections are largely the same. There has been very little opposition to the Corregidor Memorial, but widespread support. The critics have been quite active, but their numbers have never been large. The opposition in almost every case, has approved the idea of the memorial, but they wish the memorial to take a different form. They do not oppose the expenditure of the money, but they want all or a part of it to be expended for some civic need in which they have a particular interest. The Commission has noted that those opposed to the form of the memorial, disagree as to what form the memorial should assume. Their ideas differ greatly, the objectors have suggested these various ideas, a park, a building to honor jointly those who served in the far Pacific and General Rizal, a hospital for veterans—one has been recently built by the United States—a colossal statue of Christ on Corregidor, a theater—since Manila has no air cooled auditorium—and so forth, and so forth.

It is evident that if the objector's own pet project were not chosen he would still be opposed.

In commenting on the objections to the proposed memorial, the chairman of the Corregidor Bataan Memorial Commission, expressed his feelings as follows:

I have something which rebels within me when I see the pure sacrifices of our soldier dead used as a selling argument to provide some civic need. This need should be provided in some other way, not by capitalizing the death of a fallen soldier. When this is done a bronze plaque is placed on the side of a wall, and the civic service continues without further thought or remembrance of those who died.

Mr. Speaker, as I have said the comparatively few objections are similar to the experience of every group charged with erecting a memorial.

Some of the opposition have placed in the CONGRESSIONAL RECORD erroneous statements as to the memorial plans. In order that Congress and the general public may have a thorough knowledge of the concept and purposes of the memorial, I am incorporating in my remarks the following information furnished by the chairman of the Corregidor Bataan Memorial Commission. This information answers questions which are pertinent to the subject of a memorial on Corregidor.

BASIC FACTS ABOUT THE MEMORIAL

It will be a symbol to every participant in the Pacific war both in the United States and the Philippines of the months and years of his service and sacrifices in the preservation of liberty against an aggressor bent on conquest, tyranny, and enslavement. To such a veteran, and there are over 4 million of them in every part of the United States, it will be deserved recognition of each one's service to his country. Primarily it will be a reminder and record of those who gave their lives to preserve freedom in the world.

It will be a sensitive and appropriate recognition of the most remarkable feat of arms in the world's history, America's participation in World War II, undertaken not for conquest.

The Philippines were a part of the United States until July 1946, almost one-third of our existence up to that time. It will be a symbol to every Filipino who sees it, and they will be numbered by countless thousands, of our understanding and appreciation of that long association unique in the annals of history. It will make clear our recognition of the price the Filipinos paid through 4 long years for remaining true to the United States and the cause of democracy. That deliberate choice caused them to suffer more loss of life than the combined losses of the American forces in both the European and Pacific areas combined. Further, it had deep meaning and will have far-reaching influence that an oriental nation, the Philippines, decided to stand by an occidental nation, the United States, against another oriental nation.

The memorial will stand on the sacred soil of Corregidor in the shadow of nearby Bataan, where commingled the blood of Filipinos and Americans. Manila is the crossroads between the East and the West, and only a relatively short distance from the mainland of Asia. Those who travel by air will see it, and all ships going to or from Manila must pass close to Corregidor. At night a perpetual shaft of light will carry its message far our across the China Sea. Its meaning will be clear to Asiatics, and we believe that it will be understood as a dedication of democratic peoples to the cause of peace and freedom.

All Corregidor will actually be a memorial. Malinta tunnel, the headquarters of the United States Army and the capitol of the Philippines in the early days of the war will be restored by the Philippine government. The memorial edifice will have appropriate sculpture, and so built that it may house libraries and the memorabilia of the war in the Pacific.

If our country through this commission and the architects can place upon Corregidor the type of symbolic memorial we are trying to create, it will reach the minds and hearts of millions of people who do not know and little appreciate the real United States. It may sound chauvinistic but something unheard of has risen in the world in recent years—an entire nation going to war on two occasions with its major objective the freedom and happiness of other nations. There was no thought of conquest of others, but there was on the part of the people of the United States an awareness that we were sure to suffer great loss of life and staggering financial burdens for years to come. It is true that we evaluated the impact upon our future of the defeat of free nations by dictators, but irrespective of that, the United States fought primarily to help other nations to live as free men.

The decision of the Philippines to stand with us was built upon their confidence after almost 50 years of association, in the truth and fairness of the democratic way of life, as cherished and lived by the United States.

The presence of this memorial on Philippine soil will be an aid in enlightening Asia and the world as to democracy and the character of America. All that we do in monetary assistance as a part of our foreign policy will be short of our objectives until the nations we help understand the United States. We can do more to bring about that understanding than is being done.

We are confident that with the actual memorial and the living memorial we can make a very important contribution to that end.

This memorial will be placed by the United States not in Washington or some other American city for the edification of ourselves, but on Asiatic soil which will mean a great deal to all Asiatics. Such a tribute on foreign soil is somewhat unique, and cannot fail to better explain to the world, especially Asia, what is the truth as to the real America, as an exemplar of democracy.

We do not intend to let it rest there. This sensitive symbol will become and be used as a living memorial. We have done a great deal of work to develop activities under the aegis of the Corregidor Bataan Memorial which we believe will do much to offset the effect of the all-out Communist effort in the Far East. We have an invaluable asset in the friendship of the Philippines, a democratic nation, just as Russia has in Communist China. This is not now fully evaluated nor adequately utilized. Russian communism, according to authorities, is daily gaining ground in Asia, largely accomplished in the name and with the assistance of China. We have reason to believe that we can secure active cooperation and abundant financial support which will make the actual memorial, when completed, continue to serve effectively as a living force. It is consonant with a memorial in the spirit that these dead shall not have died in vain.

---

THE COST OF THE MEMORIAL

World War I and World War II have been thoroughly memorialized in the European theater at an expense of over $40 million.

The far Pacific theater has not been memorialized. One cemetery, for Americans only, is in Manila and that practically is all that has been done in the far Pacific.

Instead of many memorials as in Europe, the Corregidor plan is to concentrate our country's memorial effort in one impressive, sensitive memorial, that will cost not over $7,500,000 as against the $40 million spent in Europe.

The memorial, to inspire the viewer, and be properly expressive as to what happened in the war in the Pacific must be heroic in size and inspirational in form. This is of even greater importance in the Far East than in our country. It will be an important

contribution to our foreign policy, and, for generations to come, it will be an influence for good between the East and West. It is believed that a dollar spent in this way will bring more returns than dollars now being spent in many other ways in our foreign work.

The long association from 1898 to 1946 of the United States and the Philippines justifies a reasonable expenditure to commemorate that long union. It will impress other nations that the United States places upon Asiatic soil a tangible, sensitive expression of its respect and affection for the Philippines. It is now being quickly forgotten that the Philippines elected to stand with the United States, in World War II, and by reason of that decision suffered more casualties than all the United States Armed Forces in the Pacific and European theaters combined. And even today the Philippines stand defiant on the doorstep of Communist China as an open and avowed ally of the United States and democracy.

This merited tribute to the Philippines would justify the cost of this memorial, even if there were no other reasons for the memorial.

The Island of Corregidor should be preserved forever as a shrine because of what occurred there and what it represents. Corregidor and Bataan should be so preserved as to keep alive the memory of the sacrifices and high purposes of the greatest exploit of arms in the world's history. This expenditure will restore Corregidor to a place of inspirational beauty, marking Malinta tunnel and other historical spots so that it will be the focal point of travel from all parts of the world.

It is a matter of common knowledge that the Philippines are in a distressing financial condition. In its noble desire to be free, it began its sovereignty in 1946 under impossible loads. The obligation assumed by the United States as to the Philippines in 1898, increased by the loyalty of the Philippines in World War II, makes it certain that the United States will not desert the Philippines now.

This memorial can be of material financial aid to the Philippines, and would be justified from that standpoint, if no other, as a part of a plan to assist them in this critical period of their history.

It is well to bear in mind, certain surprising facts. Although the Philippines remained loyal to us in World War II and no other country in the Far East did so, according to a Commerce Department report, Foreign-aid money from the United States was disbursed from 1946 to 1957 as follows:

| | |
|---|---|
| Indonesia | 122,000,000 |
| Japan | 2,184,000,000 |
| Korea | 1,665,000,000 |
| Formosa | 711,000,000 |
| Vietnam | 547,000,000 |
| India | 214,000,000 |
| Pakistan | 150,000,000 |
| The Philippines | 144,000,000 |

About $5 million of the $7½ million to be provided for the memorial will be spent in the Philippines, in a manner greatly needed there, for common labor materials and services. Money being spent in erecting the memorial, could well be evaluated as a part of the help which must be made available to the Philippines soon. If our country is to continue foreign aid I believe that the erection of the memorial on Corregidor will serve the purposes of our foreign policy better than a like amount spent in any other way.

After its erection, the memorial will be of practical value to the Philippines in regaining financial stability. It will become one of the greatest tourist attractions in the world and be the means of creating jobs and services auxiliary to the operation of the memorial.

Further, it is believed that the erection of this memorial by the United States will result in raising money from private sources for the living memorial to be expended largely in the Philippines possibly more than the cost of the memorial itself. This amount, of $7½ million the authorization of which is being asked by the Corregidor Bataan Memorial Commission will be all the money that the United States will be called upon to furnish.

The greatest justification for the expenditure of $7½ millions is that:

It will honor the 4 million Filipino and Americans, living and dead, who served in the war in the Pacific;

It will commemorate the greatest and most unselfish feat of arms in the history of the world;

It will serve to combat communism;

It will create a war memorial, dedicated to the promotion of the cause of peace;

It will save for posterity as a shrine the hallowed island of Corregidor. There will be concentrated and preserved, the history of the War in the Pacific, its memorabilia, its records and its true meaning.

If the U.S. Congress continues foreign aid and expenditures designed to create tangible and intangible values of real importance to the betterment of our national existence, we believe that the Corregidor Bataan Memorial should have a high priority. The money requested is not a recurring item. Moreover the cost of the memorial is in the nature of an investment which will bring returns for generations to come to the Philippines and the United States.

Almost 15 years have elopsed since the end of the War in the Pacific. The work of the Corregidor Bataan Memorial Commission should be expedited by Congress.

---

VALUE TO THE PHILIPPINES?

In consdeiration of this point the inspirational value of the memorial, which is of incalculable worth, will not de discussed—only its dollars and cents value.

In the first place, there is no decision to make as between investing U.S. dollars in some civic need or in a memorial. There is nothing before Congress to provide for the civic need, but Congress has authorized the erection of a memorial edifice without cost to the Philippines. Those who think in terms of a civic need would simply defeat the memorial and start something entirely new, in which effort there would no doubt be a great difference of opinion as to what it should be.

It is important to note that the erection money for the Philippines will be largely spent in the Philippines, perhaps $5 million, which no duobt would mean a great deal now to the economy of the Philippines. This would probably be spent in purchases, labor, and manufacturing costs.

When the memorial is finished it could be made to furnish employment to many collateral services for years to come.

Quite a few years ago there was a bill before Congress to spend Federal money on a then isolated spot on Lake Superior. A speech, a classic of sarcasm, was delivered by Congressman Knott. He attacked the idea as the ultimate in folly, and today Duluth, Minn., stands on that spot.

Corregidor is potentially one of the greatest tourist attractions anywhere, and certainly the outstanding one in the Philippines. The greatest drama of modern history occurred there and on nearby Bataan. In the early days of 1942 it was the Capital of the Philippines and President Quezon's office was Malinta tunnel and a chair just outside its entrance. It was the headquarters, also, of General MacArthur and all that was left of the high command of the American forces. It was there that the Treasury of the Philippines was located. It was the hospital for the sick, wounded and dying Filipino and American comrades in arms, as well as the only real shelter for the intrepid, starving troops from the vicious bombings by land and air.

General MacArthur said he could never forget their gaunt faces, unafraid.

If sensitively and beautifully memorialized, Corregidor will be recognized as an outstanding world tourist attraction, in the same way as the Taj Mahal, Gettysburg, and many others. Four million men served in the far Pacific; many of them have expressed their desire and intention of returning to the Philippines when the memorial is completed. A value to the Philippines may be anticipated in creating greater tourist travel, since it increases interest in the Philippines and its possibilities for the investment of capital. A recognition of this fact is just plain good business sense.

This cannot be done by the placement of a simple cemeterial shaft on Corregidor. It must be commemorated by a memorial which reflects the monumental effort of the war in the Pacific, and its worldwide historical significance. History records nothing comparable to World War II in magnitude or in unselfish service to mankind.

The Commission has corresponded with Mr. Modesto Farolan, president of the Philippines Tourist and Travel Bureau. We believe that his fine abilities and imagination will produce results in this field. Those who think that the 26 miles to Corregidor will defeat its value as a tourist attraction probably have not made a thorough study of the subject. The chairman has in his files a tabulation furnished by the Interior Department as to visitors to national parks, monuments, historical, and memorial parks. Many of these are in isolated areas, yet they are visited by millions every year. Many are quite isolated—hundreds of miles from large city populations.

It is true that conditions are not the same in the Philippines as in the United States from the transportation standpoint, but the Philippines has an advantage in a 12-month tourist season.

Corregidor will be at its maximum when the memorial is completed which will then have many other features which will attract large numbers of visitors. As an example, the memorial will have steps leading to observation points even to its full height; hundreds of thousands go to the top of the Washington Monument for the view and the excitement. One cannot imagine a more magnificent view from places hundreds of feet above the seas surrounding Corregidor. Malinta tunnel must be fully restored, with all its historic story fully explained. The entire island will be landscaped and beautified.

There is no serious doubt that the people will go there in great numbers if Corregidor is properly prepared.

The Philippines alone has a population over 24 million.

Almost 2 million lives within 75 miles of Corregidor.

The interisland steamers going to Manila pass within 3 miles of Corregidor, as well as the large liners and other ships carrying passengers. It would be little trouble to have scheduled stops.

In these days of air travel it is not too imaginary to depict service in short hops to Corregidor by planes, especially by passenger helicopters, a growing service, for such a trip as Corregidor would require.

It is true in America today that people like to accomplish an objective by making a trip. Thousands go to Mt. Vernon by excursion boats, a daily service, and the boat trip is an asset, not a deterrent.

It is hoped that some day the route of the "death march" will be a memorial highway. It will furnish an interesting approach to Corregidor for a short shuttle ferry from a point on Bataan to Corregidor.

We have had no expert traffic study made, but there is little doubt the Corregidor will experience the same thing which has occurred everywhere in this country as to thou-

sands of visitors making their way even to somewhat inaccessible points.

The usual small fees will carry the maintenance and upkeep, and perhaps will leave a sizable balance.

The memorial itself will need no appreciable amount for maintenance at least for 5 years, and then very little after that due to its construction. This is the opinion of the engineers.

This statement may seem to some to be too optimistic, but we believe from the experience of all resort areas in the United States it is not too much to expect.

The Philippines will have a tangible asset worth far more than the proposed maximum of $7,500,000. This is less than the cost of one B–52 plane which has an expected life of very few years.

Every State in the United States has spent large sums of money to create points of interest within their boundaries to attract tourists. It aids not only the States which own the areas, but the entire economy of the State. All kinds of groups, families, schoolchildren, and many types of organizations arrange trips in order to have an objective for a vacation or a weekend. If Corregidor, with little cost to the Philippines, can become one of the most outstanding and interesting objectives of travel (which it will), it will be of tremendous practical value to the Philippines.

WIDESPREAD SUPPORT OF THE MEMORIAL

Every Philippine President—Rojas, Quirino, Magsaysay, and Garcia—has been deeply interested in our efforts to place a memorial on Corregidor and given their support. The Government of the Philippines set aside Corregidor to be preserved as a shrine and created the Philippine National Shrines Commission. It was directed to work with the Corregidor Bataan Commission and has done so enthusiastically. It has officially and unanimously expressed its full endorsement of the concept and plans for the construction of the memorial. The members have individually and collectively expressed their unqualified appreciation of the winning design and officially approved it. They have stressed the great desire of the Filipino public to see the proposed memorial erected soon.

The Honorable Eulogio Balao, when Secretary of Defense, stated, "I hope very soon, we shall see standing on Corregidor a living symbol of the gallant struggle."

The Honorable Carlos Romulo said, "It is for this reason that we in the Philippines are happy to know that the United States Government has created a Corregidor-Bataan Memorial Commission and that plans are underway—and we sincerely hope they can be carried out soon—to build a memorial with Corregidor as its pedestal. Done with proper sensitivity, this memorial will be a perpetual beacon light to show the world the road to peace." On July 17, 1958, he said, "You are rendering an incalculable service to the cause of Philippine-American friendship."

The Defenders of Bataan and Corregidor, the representative veterans' group in the Philippines has written in part as follows:

"The veterans organization in the Philippines will be eternally grateful for the magnificent plans you have for the monument. * * * I can only say that they are with me 100 percent behind the idea."

General MacArthur said in a letter to the chairman:

"It is indeed a most worthy purpose. For no soil on earth is more deeply consecrated to the cause of human liberty than is that of the island of Corregidor and adjacent Bataan Peninsula. There, American and Filipino blood is intermingled to immortalize that gallant stand taken to resist against desperately overwhelming odds the onrush of the forces of despotism which sought to blot the concept of freedom from the face of the earth.

"I am quite confident that you will find among our countrymen few who will hesitate to support the erection upon that hallowed ground of so suitable a memorial to those who there fought and bled and died in desperate resolve that liberty should live."

Fleet Adm. Chester W. Nimitz has endorsed wholeheartedly the proposal and served on the jury of award which selected the winning design for the memorial.

Gen. Jonathan M. Wainwright wrote as follows:

"Even while the fighting was going on, I visualized such a thing in the future, and of course, I am more than interested in seeing the project go through."

Major General Moore, who surrendered the Corregidor forces said:

"I feel that such a symbol erected on that hollowed ground would exert a deep influence throughout the Far East and impress upon all who see it the unselfish ideals of American democracy."

Similar statements could be quoted from Gen. A. M. Jones, one of the commanding generals on Bataan; General Krueger, who commanded the Army ground forces, and General Kenny, who commanded the Army Air Corps, both served on the jury of award and are giving their support to the cause.

No effort has been made to collect endorsements and these are but a few of many statements agreeing with the goal of the Commission.

Mr. Speaker, in summarizing my remarks the following are some of the purposes of the Corregidor Bataan Memorial. rial.

To honor the 4 million Filipinos and Americans living and dead who served in the war in the Pacific. They are in every State in the Union.

To commemorate the greatest and most unselfish feat of arms in the history of the world.

To use the living memorial as an instrumentality for combating communism.

To dedicate for posterity the hallowed island of Corregidor. There, will be concentrated and preserved, the history of the war in the Pacific, its memorabilia, its records, its true meaning as well as the names of those who served.

To place this impressive, sensitive memorial on Corregidor as an expression of appreciation from the United States which will mean much to the Philippines and the Far East.

If the United States continues its policy of foreign aid, and particularly to the Philippines, in my opinion every dollar spent on this memorial will serve the purpose of our foreign policy better than a like amount spent in any other way.

## Statehood for Hawaii

EXTENSION OF REMARKS
OF
### HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. LINDSAY. Mr. Speaker, the subject of statehood for Hawaii is today under further consideration by the Rules Committee. It is the hope of many that the bill will be reported out for action by the House. I am happy therefore to include with my remarks the following excellent editorial on this subject which appeared in the New York Times today:

HAWAIIAN STATEHOOD ADVANCES

The drive to secure admission of Hawaii into the Union as the 50th State is making significant and heartening progress. The latest evidence of this is the unanimous approval for statehood given by the Senate Committee on Interior and Insular Affairs. Last month statehood was approved by the corresponding House committee and the House Rules Committee has recently been holding hearings on the measure. In the latter hearings, unfortunately, Representative HOWARD W. SMITH, of Virginia, has been leading a last-ditch fight against Hawaiian statehood.

Nothing has been more impressive in the recent discussions of this issue than the flimsiness of the arguments of those who oppose statehood. Sometimes these arguments are directly contradictory, as when some critics charge that Hawaii is in the hands of a few large corporations, while others claim it is really ruled by henchmen of Harry Bridges. Sometimes these arguments enter the realm of fantasy, as when they allege that admission of Hawaii as a State would give Communist propaganda grounds for accusing us of colonial imperialism.

But the most unworthy argument against statehood is the one which stresses the non-Caucasian nature of most of Hawaii's population. This is racism with a vengeance and directly contradictory to every ideal of our democracy. American citizenship is not, and should never be, restricted to white men, to people of European origin, or to any other such narrow elite. It is the glory of our Nation that here men of every color, origin, and religion have come together to live in freedom and equality, though these ideals have not everywhere been realized. Hawaiians of every background have proved their loyalty by fighting and dying for our country on equal terms with Americans from the mainland. Against that background statehood for Hawaii is an obligation the rest of us have long owed our fellow-Americans who live in those beautiful islands.

## The Man on the Firing Line

EXTENSION OF REMARKS
OF
### HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, February 5, 1959*

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD an article which appeared in the February 22, 1959, Los Angeles Times, entitled "The Man on the Firing Line."

Written by Mr. Kyle Palmer, political editor of the Times, the article is about a remarkable public servant on the American scene, Vice President RICHARD M. NIXON.

More and more it is being realized that Vice President NIXON possesses an amazing understanding of the host of problems, both domestic and international, that confront our Nation and our generation. This article gives an insight into that quality and I commend it to the attention of the Congress and the public.

The article follows:

THE MAN ON THE FIRING LINE

(By Kyle Palmer)

Republicans are finding that the road back is long, rocky and occasionally complicated by detours. They should be heartened by knowing that the road, despite its difficulties, leads on to success if it is traversed with enough determination and intelligence.

Some of the trials to be encountered and the means of overcoming them were furnished the California GOP last week by a remarkably well-informed, down-to-earth young man who used commonsense to illustrate his points.

RICHARD M. NIXON was born January 9, 1913, in Yorba Linda, Calif. Today, at 46, he is one of the best-informed, most experienced and authoritative figures in the public affairs of the world—and he has been in the public service less than 13 years.

His rapid rise in the political world has occurred during a time of stress, strain and turmoil. And were he less a natural leader, less a man of conviction and courage, he would be as many another of his contemporaries—just a run-of-the-mine politician regarded as dependable but not outstanding.

Instead, in a unique way, he is outstanding. He may never be President of the United States, but it is a good thing to know that our Nation continues to produce men such as he—men who devote their lives, their talents and their well-being to the cause of national progress and security.

The real NIXON—not the NIXON variously described by political friend or political foe—stood out clearly and simply last week when the Vice President appeared at a dinner given in his honor by the Greater Los Angeles Press Club.

NIXON had indicated that, instead of making a set speech, he would much prefer to answer such questions as members of the club and the working press might submit to him. He set up no conditions and established no limits as to the nature of the queries he would undertake to acknowledge.

His performance under such circumstances was not only brilliant but remarkable.

Covering a field that encompassed virtually every aspect of domestic and foreign affairs, he gave prompt, straightforward—and thoroughly informed—responses. Questions ranged from the frivolous to the profound. Here is a summary of the questions and a paraphrasing of NIXON'S rejoinders:

How is the Nixon dog, Checkers? Fine, but a little too fat.

And what about the practicability of exploring outer space?

The cost will be great and the economic returns may not appear too promising, but the exploration will represent man's never-ceasing search for knowledge and on that account will be worthwhile and necessary.

Will the Federal budget be balanced, and how important is it that a balance should be reached?

First, a balanced budget will aid the wage earner to enjoy more of the benefits of his labor, will help the manufacturer to gain greater returns from the sale of his products and second, will bolster the United States in its struggle for coexistence with a Communist world seeking to destroy it in the international market place.

Should the scientists or the military control future development of space vehicles and research?

Civilian control should gradually be accomplished, with due attention to the requirements and the opinions of military experts.

What are the plans of the Cabinet Committee To Combat Inflation, of which President Eisenhower has designated him Chairman?

The Committee hopes to bring home to labor, to business and to government the imperative need for reaching a balance between wages, prices, and production to the end that the dollar will buy more at home and command more respect abroad.

What about our status in world trade?

Trade is a weapon the Russians can use to our disadvantage in a cold war just as it could use its military might to injure us in a hot war.

Whom would he prefer as a running mate in 1960?

NIXON will not be a candidate for Vice President next year.

Has he any suggestions as to a successor for Secretary of State Dulles?

While Dulles is Secretary of State, where his services are more valuable than could be rendered by another, it is inappropriate to discuss a possible successor.

Has he any plans for a visit to Russia?

While the Berlin crisis and other critical differences exist between the free world and the Soviet Union, an official visit would be out of the question.

Is there hope for labor union reform legislation in this session of Congress?

Congress should enact legislation with teeth in it to prevent exploitation of unions by their leaders, should give members full control of union policies and correct abuses brought out by the McClellan committee.

What about the future of the Republican Party?

The party should have less concern with the image its opponents seek to give it as the friend of big or little business and concentrate on the principles it espouses and the caliber of the candidates it supports.

For the most part the questions submitted to the Vice President were thoughtful and serious; his replies were in character.

Absent from the running give-and-take of question and answer was any suggestion of a desire on the part of those participating in the affair to slant it, or soften it, or use it as a vehicle for self-aggrandizement.

The press, take it by and large, is a rather cynical body. Newspaper reporters see so much of the other side of a public figure they seldom are impressed by the side he shows to the public. But if you were to take a vote of the members of the press who attended the Press Club dinner meeting you would find an astonishing unanimity of opinion: NIXON is a right guy.

Others under different circumstances but of a like turn of mind might express this good will differently, but to be a right guy to the men who write the news of the day you must have a great deal more than appearance to make the grade.

Aside from his few public appearances while in California, the Vice President made considerable progress in heartening and giving new avenues of approach to the Republican leadership and rank and file.

Counseling all and sundry to forget personal antagonisms and to subordinate party differences to party principles, he was remarkably successful in engendering an improved atmosphere in GOP councils.

DICK NIXON is a candidate for the Republican nomination for President in 1960. He now is able to speak for himself rather than primarily as a spokesman for the national administration.

During the coming months he will be able to give further evidence both of the independence of his views and of their substantiality.

And, whatever the outcome of the great contest of 1960, all of the people will know that few men in our history have sought the Presidency with a greater or more detailed knowledge of all that the post entails.

## Broadcast Music, Inc., Has Rendered a Real Service to the People of America by Commissioning Four New Busts of Lincoln, Two of Which Were Unveiled February 9 in Washington

EXTENSION OF REMARKS

OF

### HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 5, 1959*

Mr. SCHWENGEL. Mr. Speaker, on Monday, February 9, I had the honor to participate with the distinguished Senator from Kentucky, Mr. JOHN SHERMAN COOPER, in unveiling two magnificent new heads of Abraham Lincoln executed by the internationally known sculptor, Avard Fairbanks.

This event took place at the headquarters of the Lincoln Sesquicentennial Commission in the Archives Building and was one of the numerous affairs scheduled in connection with the celebration of the 150th anniversary of Abraham Lincoln's birth.

Dr. Fairbanks, the sculptor, is consultant in fine arts to the University of Utah and resident sculptor on that campus. He will be remembered as the sculptor of the bronze statue in Greece of Lycurgus, the Spartan lawgiver; the doughboy of Idaho; the pony express for the Utah centennial; the celebrated statue of Lincoln for New Salem, Ill.; and a statue of Albert Woolson, last survivor of the Grand Army of the Republic for the cemetery at Gettysburg. He also created the 91st division memorial at Fort Lewis, Wash.; and the Marcus Whitman statue in the Capitol.

The heads unveiled by Senator COOPER and me at the ceremony depicted "The Young Lincoln" and "Lincoln, The President." They were commissioned as two of a series of four busts by Broadcast Music, Inc., of New York City, whose president, Mr. Carl Haverlin, is a distinguished Lincoln collector and an honorary member of the Lincoln Sesquicentennial Commission.

The completed heads—these were plaster models that we unveiled—will be 21 inches high, 10 inches wide and 9 inches deep. They now can be seen at the Broadcast Music, Inc., exhibit of Lincolniana at the Statler Hotel in Washington.

The other two heads, when completed, will depict Mr. Lincoln at other stages of his life.

These are inspiring works which reflect fully the statement made by the sculptor that, "The truth of spirit is more important than external form." The external form is there, however, for the model used by Dr. Fairbanks was the Volk life mask of Lincoln, cast in 1860.

Mr. Haverlin, speaking for his company, said that the four heads will be executed finally in marble by Dr. Fairbanks and will be donated to the Lincoln Sesquicentennial Commission and

thereafter made available for perpetual display at an appropriate place in Washington where our millions of visitors, both American and from foreign shores, may take from them the same inspiration that those of us who participated in this ceremony experienced last Monday.

Among those present on that occasion from the Congress of the United States in addition to Senator Cooper were Senator Frank E. Moss of Utah, the Honorable Arthur V. Watkins, former Senator from that State and Senator Ralph Yarborough of Texas.

I believe that Broadcast Music, Inc., has rendered a tremendous service to the people of this Nation through this generous gift.

## State-Owned Ferries Should Be Exempt From Excise Tax

EXTENSION OF REMARKS
OF
### HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

*Monday, February 9, 1959*

Mr. PELLY. Mr. Speaker, I have long held the opinion that a State-owned nonprofit ferry system is a link between State highways similar to a bridge or a tunnel, and as such ferry tolls any more than tolls of a State-owned bridge or highway should not be subject to Federal transportation excise taxes.

The Washington State Toll Bridge Authority, which constructs and operates both toll bridges and ferries, held this same view in contrast to the claim of the Commissioner of Internal Revenue. In this resulting dispute to allow for an orderly judicial determination, an agreement was arrived at whereby the State in 1957 increased its ferry system fares in the amount of the Federal tax and the amount of revenue accruing as a result was to be deposited in escrow. This fund contained originally 3 percent of property freight charges and 10 percent of fares of passengers. Subsequently, when Congress repealed the 3 percent tax on freight, I had hoped for a refund or some relief to the ferry users on account of the termination of the one transportation tax but the agreement provided for the taxes under the modified law to be held until final settlement.

So until final judgment the escrow of funds is continuing, but if the United States repeals or otherwise modifies existing laws so as to specifically exempt States from the 10 percent tax on passengers, the deposits, of course, would cease.

The funds on deposit collected from users of the Washington State ferry systems on property is $114,862.05; the amount which is regularly being added on account of possible tax liability from passenger transportation at the end of January 1959 was $239,060.97.

In the 85th Congress, 1st session, I introduced H.R. 2028 to amend the Internal Revenue Codes to make it clear that this tax on transportation of persons and property did not apply to ferry service provided by State-operated ferryboats. That was before the repeal of the tax on property. But other legislation took precedence and the Ways and Means Committee was unable to consider my bill.

Now I have introduced a new bill to exempt these State-operated ferryboats from the tax imposed by section 4261 on persons transported on a nonprofit basis by a State as defined in section 7701(a)(10) or by an agency or instrumentality thereof. The tax under my bill would cease on and after January 1, 1959.

I hope now the committee will take up this bill promptly. Meanwhile, let me make it clear that the passage of my bill would not admit any previous liability of the State. Rather its passage would clarify the State exemption which I believe already exists, and, of course, the excess fares which are being collected and placed in escrow would no longer be required.

The text of the bill is as follows:

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That section 4263 of the Internal Revenue Code of 1954 (relating to exemptions from tax on transportation of persons) is amended by adding at the end thereof the following new subsection:

"(g) STATE-OPERATED FERRYBOATS.—The tax imposed by section 4261 shall not apply to amounts paid for ferry service provided by a ferryboat operated on a nonprofit basis by a State (as defined in section 7701(a)(10)) or by an agency or instrumentality thereof."

SEC. 2. The amendment made by the first section of this Act shall apply only with respect to amounts paid on or after January 1, 1959, for transportation on or after that date.

## Fiftieth Anniversary of Mutual of Omaha

EXTENSION OF REMARKS
OF
### HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 5, 1959*

Mr. CUNNINGHAM. Mr. Speaker, I am proud of the fact that in my district there is the headquarters of the world's largest health and accident insurance company, Mutual of Omaha. This firm has been a pioneer in the field of health insurance. It is because of firms such as Mutual of Omaha that literally millions of American families have been able to afford the tremendous costs of major hospitalization and the loss of income that all too often go with major illnesses or serious accidents.

Mutual of Omaha celebrates its 50th anniversary this year. I am pleased to called to the attention of my colleagues the fine record of this firm in serving the public for half a century, and under leave to extend my remarks, I include a statement on the history of this company:

THE HISTORY OF MUTUAL OF OMAHA

On March 5, 1959, the largest company in the world specializing in health and accident insurance celebrates 50 years of service. This golden anniversary year sees the company as a record-setting leader in its field, while only 50 years ago, it was a small enterprise on the brink of seeming failure.

When the men who formed the company needed leadership, they called in an aggressive young medical student, Dr. C. C. Criss. He was earning his way through medical school by selling insurance. The other men listened to Dr. Criss but deemed his ideas too radical. They gave him the company—and its debts.

The dynamic leadership of Dr. Criss brought about an immediate change in the company. The previously limited policies were liberalized and the young doctor's ideas brought other men into the business. It has been said that the success of this now multi-million-dollar operation was based on Dr. Criss' ability to show young men how they could serve their fellow men through health and accident insurance.

Dr. Criss knew that men needed insurance to replace their incomes during time of disability. He know that people wanted and needed an insurance policy which would pay these income replacement benefits for a lifetime. He introduced his radical lifetime benefits policy to the public and Mutual owes much of its success to this idea. Even today, many of the firms in the field of health and accident insurance do not offer this essential benefit. Mutual is the only firm which offers lifetime benefits to a man who is a standard insurance risk.

Beside the doctor as he built Mutual of Omaha into a nationally famous firm were two people instrumental in many of the early decisions. They were his wife, Mrs. Mabel Criss, and his brother, Dr. Neil Criss. Mrs. Criss worked tirelessly at the side of the two brothers and from the very beginning accepted the responsibility of directing the operation of Mutual's home office. She is presently the company's director of personnel and planning. Dr. Neil Criss has also been with Mutual from the outset and is active to this day as medical director and treasurer.

Mutual's first office, a single room in an Omaha department store, was the beginning of an enterprise which is today housed in a modern home office containing over one-half million square feet of floor space. The staff, once composed of the two Drs. Criss and Mrs. Criss, is now composed of some 10,000 field representatives and 3,000 home office personnel.

Mutual was the first health and accident firm to employ an IBM 705 electronic data processing machine. This electronic brain remembers all policy information on 2 million of Mutual's policyholders and aids in even better service.

In the early times, Mutual sold policies only in Nebraska—then Iowa—and then the advanced ideas of Dr. Criss spread the fire of health and accident insurance across America at an unexcelled rate. Today, the company serves all of the United States, Canada, Hawaii, the Canal Zone, Puerto Rico and portions of the West Indies.

Revolutionary has always been a routine word for Mutual, as it pioneered insurance plans which other companies failed to try until Mutual had led the way. It was revolutionary when mutual allowed policyowners to keep their policies without war clauses during World War II. It was unheard of when the company moved forward with an even stronger line of policies which paid disabled policyowners lifetime benefits.

Mutual also made insurance history by offering its low cost commercial air travel insurance to the passengers of the Military Air Transport Command. Through this program, Mutual now has foreign service facilities in 37 countries.

When the Government passed the Dependents' Medical Care Act in 1956, it was natural for the Defense Department to choose Mu-

tual to administer the program in a number of States because of the traditional low cost of the Company's clerical operation. In doing so, Mutual has proved that its average cost for handling these benefits to dependents of servicemen is most economical.

A guiding light in the growth of the company has been Mr. V. J. Skutt. When Dr. Criss retired as president in 1949, Mr. Skutt took the reins and continued in the tradition of his predecessor. Mr. Skutt has more than doubled the premium income of the firm since he attained this position—and he has emphasized many of the ideas on benefits to policyowners which Dr. Criss initiated.

Mr. Skutt's philosophy of business has been the key to company expansion: "We want to provide the maximum insurance coverage for the largest number of people possible at the lowest cost." It is this theory which has kept Mutual on the "grow" for the last 10 years—and it is this theory which is behind Mutual's policies.

Today, Mutual of Omaha has not only maintained its position as the largest company in the world of its kind, but it has also given the people of North America an immense amount of service in time of hardship. Each week, Mutual pays out an average of $2,250,000 in benefits to policyowners—people who would otherwise have to seek charity or public welfare assistance—or people whose homes might be broken by the financial hardship which accompanies disability.

Mutual of Omaha is a company whose history is based on service to millions—service in the form of prompt cash payments to sick and injured policyowners.

## Pay Something Off

EXTENSION OF REMARKS
OF
### HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. WRIGHT. Mr. Speaker, as evidence of the continuing and growing editorial interest throughout the country in the necessity for a systematic program of national debt reduction and eventual retirement, I am taking the liberty of including here for the reading of those Members who are interested, a very fine editorial which appeared on Monday, March 2, in the Scripps-Howard newspapers, which include the Washington Daily News and the Fort Worth Press:

PAY SOMETHING OFF

At the close of business last Friday, the Government's debt stood at $285,495,075,863. This is approximately as high as it ever has been. On the same date last year it was $274 billion.

The debt is blamed on World War II, and most of it was incurred then. But at the end of the war it was only $269 billion and by 1948 it had been reduced to $252 billion.

How come it is so high now? Because the Government has continued to spend more than it took in. And because nobody has done anything about retiring the debt.

Now two young Texas Congressmen have a plan. They have introduced a bill to require the Secretary of the Treasury, by law, to budget each year a 1-percent payoff on the debt.

The analysis worked out by JIM C. WRIGHT, of Fort Worth, and FRANK N. IKARD, of Wichita Falls, in support of their plan is astonishing, if you haven't thought of it before.

If the Government doesn't pay off any of the debt, in 28 years it will have laid out in interest an amount equal to the debt and will still owe every penny of it.

If it paid off only 1 percent a year, in 100 years the whole debt would be retired for $778 billion, principal and interest. But if it paid nothing on the principal for 100 years, the cost to the taxpayers in that time would be $980 billion and we would still owe the debt.

That is, our grandchildren, and great-grandchildren and great great-grandchildren, who had nothing to do with incurring the debt, would still owe it. It doesn't take a financial wizard to prove how ridiculous, and unconscionable, this would be. It's simple arithmetic.

Mr. WRIGHT says it will take some self-discipline to get started on this plan. Is that too much to ask of Washington? Unless we start now, he says, we'll never find a good time for paying off the debt.

"To expect some vague, future Utopia in which it will somehow be easy to reduce this obligation suddenly and dramatically," Mr. WRIGHT told the House, "would be to live in a fool's paradise."

Washington is living in it now.

## Abraham Lincoln

EXTENSION OF REMARKS
OF
### HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Thursday, February 26, 1959*

Mr. MACK of Washington. Mr. Speaker, a very interesting and heartwarming tribute to Abraham Lincoln appeared in the Grays Harbor Post, of Aberdeen, Wash., February 12 of this year. Is was written by W. D. Fechter, retired Aberdeen postal employee and Lincoln student and admirer. Because of the beauty of its language and thought I place it in the CONGRESSIONAL RECORD. Mr. Fechter's tribute to Lincoln follows:

When Lincoln was about 8 years of age, his mother, wearied, broken down with the struggle, gave up the struggle and as she lay on her dying bed she called little Abe to her bedside and said, "Abe, when you are a man, I hope you are able to sing." She was always interested in music, especially singing. Old Tom Lincoln, gruff and unsentimental, said, "Shucks, he'll never be able to sing. No Lincoln ever could learn to sing." "Well," said his mother, "if he can't sing, I hope he can make others sing." What a pity his mother did not live to realize her wish and hope. Lincoln never learned to sing, but when he struck the shackles from 3 million slaves, he made them sing. They sent up a chorus that was heard the world around. Lincoln reached the sublime in music when he said, "The mystic chords of memory, stretching from every battlefield and patriot grave to every living heart and hearthstone all over this broad land will yet swell the chorus of the Union when touched again, as they surely will be by the better angels of our nature."

In Lincoln there was some quality that drew him to the people and kept them in tune with the music of his great humanity. He was proud of his humble birth. He often said, "I was born and have always remained in the most humble walks of life." He had no illusions of greatness. He knew that the river of time flows steadily on and that sooner or later the mightiest of the earth are swept out into the great sea of oblivion. He often recited the opening lines of his favorite poem:

"Oh, why should the spirit of mortal be proud,
Like the swift flying meteor, like a fast passing cloud,
Like a flash of lightning, like a break of a wave,
Man passes from life to death and the grave."

Many years ago, the then outstanding British statesman, David Lloyd George said of Lincoln, "In his lifetime he was a great American. He is one of the great figures of whom there are so few in history, who lose their nationality in death. They are no longer Greek, Hebrew, British, or American. They belong to the world."

George Washington was a great man, but Abraham Lincoln belongs to the common people in every land. Simplicity is greatness. He was meek, gentle, kind, and lowly and the elements so mixed in him that nature might stand up and say to all the world "This was a man." (Shakespeare). This might well be applied better to Abraham Lincoln than to any other man since the day 2,000 years ago when the meek and lowly Nazarene died on the Cross of Calvary.

"From humblest origin to loftiest estate,
He lives forever with the great.
Through all the ages yet to come,
His name will stand as one who
Served his God by serving men."

## The Late Pope Pius and His Efforts To Aid the Jews

EXTENSION OF REMARKS
OF
### HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, February 4, 1959*

Mr. ANFUSO. Mr. Speaker, the interesting story of how the late Pope Pius XII aided the Jews of Europe against nazism, and particularly during World War II, has recently become known to the world at large. At a time when Hitler's Nazi henchmen were conducting mass extermination and genocide of a whole people in the gas chambers at Auschwitz and other concentration camps, Pope Pius XII made a fervent plea that the Jews should be welcomed as friends.

Part of that story is depicted in an article "Pope Pius XII and the Jews," by Joseph L. Lichten, published in the October 1958 issue of the ADL Bulletin, a monthly publication of the Anti-Defamation League of B'nai B'rith. The author, Dr. Lichten, is the director of the organization's foreign language department and is known as a specialist in international and ethnic affairs. I commend the article to the attention of all my colleagues:

POPE PIUS XII AND THE JEWS

(By Joseph L. Lichten)

On June 4, 1944, when the Allies entered Rome, the Jewish News Bulletin of the British Eighth Army spoke out:

"To the everlasting credit of the people of Rome, and the Roman Catholic Church, the lot of the Jews has been made easier by

their truly Christian offers of assistance and shelter. Even now, many still remain in places which opened their doors to hide them from the fate of deportation to certain death. • • • The full story of the help given to our people by the church cannot be told for obvious reasons, until after the war."

Today, 496 million Catholics all over the world, among them almost 35 million Americans, mourn the passing of their spiritual leader, Pope Pius XII. Representatives of other religions extend their profound sympathy to the Catholic world on its great loss. And today, almost 15 years later, much more can be told about Pope Pius XII and his efforts in behalf of Jews at critical moments in world history.

It is known today that Pius XII was, to a large extent, personally instrumental in organized action to help Jewish victims of nazism and fascism. He made clear his profound concern in many ways. After the liberation of Rome, while there was apprehension over the fate of Jewish prisoners in Nazi-Fascist hands in northern Italy and Germany, he made one of his most fervent pleas for brotherhood:

"For centuries the Jews have been most unjustly treated and despised. It is time they were treated with justice and humanity. God wills it and the church wills it. St. Paul tells us that the Jews are our brothers. Instead of being treated as strangers, they should be welcomed as friends."

Eugenio Cardinal Pacelli became Pontiff 6 months before the begining of World War II. For a long time he realized that the world was on the brink of the bloodiest war in history. The preservation of peace—"the fairest of all God's gifts"—was his driving concern. His temper and reactions were controlled by an acute, brilliant mind trained in the diplomatic service of the Vatican. It was a mind simultaneously active on several levels—diplomatic, humanitarian, charitable. During the early years of his reign he made very few solemn political declarations lest he contribute to the angers and dissension of the world. His interest was not war, but peace.

But his opposition to nazism and his efforts to help Jews in Europe were well known to the suffering world. Despite the fact that Cardinal Pacelli had spent 12 years in Germany as a papal nuncio and was instrumental in signing a concordat between Germany and the Vatican, both Hitler and Mussolini—through a violent press campaign—tried to prevent his election as new Pontiff.

The day after his election, the Berlin Morgenpost said: "The election of Cardinal Pacelli is not accepted with favor in Germany because he was always opposed to nazism and practically determined the policies of the Vatican under his predecessor."

After the war started, on March 11, 1940, Von Ribbentrop, after a formal request for an audience, was received by the Pope. The German Foreign Secretary went into a lengthy harangue on the invincibility of the Third Reich, the inevitability of a Nazi victory, and the futility of papal alinement with the enemies of the Fuehrer.

The Pope listened patiently and impassively to the very end of Von Ribbentrop's speech. Then he opened an enormous register on his desk and, in perfect German, began a recital of the catalogue of persecutions inflicted by the Third Reich upon individuals in Poland. He listed the date, place and precise details of each crime. The audience was terminated, the Pope's position clear.

Pius XII's humanitarian efforts to ease the lot of the Jews continued throughout the war. French, Dutch, Ukrainian bishops acted on behalf of Jews on instructions from the Pope. Their success or failure was determined, to a large extent, by the degree of cooperation received from the local population.

The Holy See established several offices devoted to rescue work among the victims of Nazis—including, of course, Jews. The Relief Commission and Commission for Help to Refugees were among them. The three letters—U.I.V. (Uffizio Informazioni Vaticano—Vatican Office of Information) are remembered by hundreds of thousands who first heard them in connection with news of relatives who had been missing, interned, or enslaved.

When the Fascist regime in Italy started to expel Jewish citizens from governmental and scientific positions, the Pope invited many of them to the Vatican. The president and two professors of the University of Rome and a famous geographer, all Jews ousted by the Fascists, received important positions in the Vatican City. Bernard Berenson received asylum in a villa near Florence, which belonged to the Minister of the Holy See to the Republic of San Marino. Under the flag of the Vatican's diplomatic immunity, he and his family lived there until British and American troops arrived in the late summer of 1944.

When Rabbi Herzog appealed to Pius XII from Jerusalem, the Pontiff answered that he would do "all in my power to end the persecution of the Jews."

Thousands of Jewish refugees poured into Vatican City; thousands of others sought shelter in the basilicas and other buildings of the Holy See outside the Vatican wall. No less than 15,000 were sheltered at Castel Gandolfo. The Pope sent by hand a letter to the bishops instructing them to lift the enclosure from convents and monasteries so that they could become refuges for the Jews. When the Nazis forbade ritual slaughter, the Pope sent shohetim into Vatican City to perform the ritual slaughter there and store food for Jews sheltered there. Throughout the city, priests and nuns often at great personal risk smuggled Jews to places of sanctuary in churches, monasteries, and other institutions. More than 180 places of refuge were made available in Rome and secret asylum given to more than 7,000 fugitive Jews.

As a result of these activities, often reported in the official press of the Holy See, the Fascists press even referred to the Osservatore Romano as a mouthpiece of the Jews.

At one point, Hitler threatened to enter Vatican City. The German Ambassador in Rome talked him out of it.

Once, the chief rabbi of Rome was summoned and told that he was expected to deliver to German authorities, by noon of the following day, 1 million lire and 100 pounds of gold. If he failed, the Nazis said, they would order the immediate dispersal of Jews, which meant atrocities and death. The Jewish community of Rome did not have 100 pounds of gold and the chief rabbi appealed for help to Pius XII. The Pope immediately instructed the Vatican treasurer to raise whatever amount was still needed. In less than a day, by melting down religious vessels, 100 pounds of gold were raised.

Italian Jews know how much they owed to Pius XII. A prominent Jewish citizen of Rome declared: "Our Catholic brothers have done more for us than we can ever do to repay." And another Jew, at a meeting of the National Committee of Liberation, said: "It was in the name of the frankest feeling of brotherhood that the church did its utmost to rescue our threatened people from destruction. The supreme ecclesiastical authorities and all those priests who suffered for us in imprisonment and in concentration camps have our eternal gratitude."

After the war, Pius XII addressed a group of European Jews who had come to the Vatican to thank him for his generosity on their behalf during their persecution." The Pope, obviously moved by the demonstration, told them that the church "could rise above all narrow and arbitrary limits created by human selfishness and racial passions."

## Rehabilitation

EXTENSION OF REMARKS
OF

## HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 5, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a timely and appropriate editorial which appeared in the National Tribune, the Stars and Stripes, on March 5, 1959:

REHABILITATION

Rehabilitation is a six syllable word which can mean so much to so many people. Among its other meanings it signifies a restoration on a proper basis or into a previous good state again, to restore, to reestablish.

In the course of a lifetime many a man and many a woman has wished that he or she might be restored to a proper basis or previous good state again.

At this moment of writing the National Rehabilitation Commission of the American Legion is holding its 36th annual conference in Washington, D.C., to discuss ways and means of reestablishing men and women who served in the Armed Forces in time of war to a proper basis, a basis to which they aspire but which they sometimes lose sight of in the cares and troubles of a life of maladjustment after their war service.

Some 700 or more representatives of the American Legion rehabilitation service are meeting in the Nation's Capital this week to discuss ways and means of furthering the rehabilitation of our war veterans to the end that they might once again take their place in our country's forward progress and to see that they are not left behind in the desire to achieve a reputable position in their community, State, and the Nation.

Except in the case of the purely selfish person whose motto is "Let the Devil take the hindmost," most of the decent American citizens are willing to lend a helping hand to their fellows along the rough highway.

Among this group of rightminded citizens we find a dedicated group. In this group we find the service officers of the American Legion, the field officers representing the national organization—all men who have devoted their lives to seeing that their more unfortunate comrades or the widows and orphans of other comrades receive their just dues from the country they served in time of war.

Some 32 years ago we were initiated in the objectives of the American Legion insofar as it concerned the welfare of veterans and their dependents. We were fortunate to have learned under the "Old Master," Watson B. Miller, who, despite his years, is still an interested in the conduct of the rehabilitation commission as he was when we first met him back in 1926.

In view of this early training we have learned the value of the service rendered by the Legion from the local service officer in the post to the department service officer and on to the excellent staff of workers in the national office of the rehabilitation commission where final argument is offered to further the cause of the interested veterans or their dependents.

Thirty-six years ago the National Rehabilitation Committee of the Legion in the Washington office was composed of approximately 10 or a dozen employees. Some of them are there yet, still working a behalf of their comrades.

Since that time the Legion has expanded its rehabilitation service to such an extent that when we attend a meeting of the group now we find ourselves lost in the maze of

new names and new faces but, despite the new names and new faces we find that same devotion to service as was evidenced when the Legion first decided to create an office to serve the veteran in his search for justice at the hands of the Government he served in war.

During this week, Preston J. Moore, national commander of the American Legion, has presented the Legion's program for the welfare of war veterans and their dependents to the House Committee on Veterans' Affairs. The text of this presentation appears on another page in this issue of the National Tribune-the Stars and Stripes. It outlines the wishes of the American Legion as expressed in its mandates at the last annual convention of the organization.

It is only right that the national commander should offer the wishes of his organization to Congress. This is as it should be. He is expressing the aims of the Legion as they have arisen from the needs discovered by the men at the bottom of the ladder in Legion rehabilitation and passed on to the higher echelons which, in turn, have submitted these findings to a national convention which has found them worthy of support.

In considering this question of rehabilitation as it concerns veterans, we must realize that it stems, first, from the local community where an unknown service officer learns the problems of his comrades at first hand, studies them, presents them to the Veterans' Administration and, when he finds himself frustrated in his attempt to secure justice for the veteran, forwards the problem to a higher group who have the privilege of arguing the rights of the case before a higher tribunal of the VA.

Thus, the origin of the service carried on by the Rehabilitation Commission of the Legion must not be lost sight of because were it not for that unknown post officer the case might never reach the point where it can be considered in its entirety, with justice, and achieve its natural and successful conclusion.

In view of these thoughts, we wish the National Rehabilitation Commission of the Legion in its sessions this week all success. We know that because of the knowledge of the representatives attending the meetings, from the post service officer to the director of the commission, sensible recommendations will be made and offered for the removal of present obstacles in the path of final rehabilitation of the men and women to which the Legion has given its service for nearly 40 years.

## Article on Costa Rica Written by Rev. Dr. Joseph F. Thorning

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Post, of Frederick, Md., of February 24, 1959, announcing the new article by Rev. Dr. Joseph F. Thorning, on Costa Rica, now available at the Library of Congress and other leading libraries. Dr. Thorning is the pastor of historic St. Joseph's Church, Carrolltown Manor, Md., and honorary professor of international relations in the Catholic University of Chile, a pontifical institution:

ARTICLE ON COSTA RICA WRITTEN BY DR. THORNING

WASHINGTON.—The Library of Congress and other leading libraries have received the second supplement of the Catholic Encyclopedia, including a new article on the Republic of Costa Rica by Rev. Dr. Joseph F. Thorning, pastor of historic St. Joseph's Church, Carrollton Manor, Md., and honorary professor of international relations in the Catholic University of Chile, a pontifical institution. Father Thorning, who is also associate editor of World Affairs, gives the facts about Costa Rica, often called a rural democracy, under eight heads: (1) Geography and climate; (2) the people; (3) commerce and industry; (4) history; (5) constitution and government; (6) international communications; (7) literature and music; and (8) religion.

Among other interesting facts, the author notes that coffee, now Costa Rica's principal source of wealth, was introduced into Central America by a parish priest, Padre Felix Velarde, in 1796. He adds that, as early as 1829, the "black grain of gold" had become the country's principal export.

Dr. Thorning observes that, in the past 100 years, the number of priests, relative to the needs of the people, did not increase: Whereas, in 1850, there was one clergyman for every 1,600 inhabitants; in 1958, there was one for every 5,200. The article concludes with a comprehensive record of the work of religious communities of both men and women.

## Independent State of Ghana

EXTENSION OF REMARKS
OF
### HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. DIGGS. Mr. Speaker, 2 years ago, on March 6, 1957, as an official representative of the United States Congress, I had the great privilege of witnessing the emergence of the Gold Coast of Africa into the independent State of Ghana. Today that occasion is being commemorated in the world as a triumph not only for the African people of this State, but for all men and women who believe in human freedom, individual dignity, and justice. In the 2 years since its independence, the State of Ghana has made significant economic, political, and social advances, despite the difficulties of its new statehood. It has evidenced a strong capacity for leadership in which the institutions of free and democratic government everywhere in the world have a vital stake. How great is this stake is made clear by the words of Prime Minister Nkrumah, of Ghana, who said recently:

The hopes and ambitions of the African peoples have been planted and brought to maturity by the impact from western civilization. The West has set the patterns of our hopes and by entering Africa in strength has forced the pattern upon us. Now comes our response.

The American people feel these ties and are personally gratified, therefore, by the progress which the State of Ghana has made under the banners of democracy and freedom. Mr. Speaker, on this occasion, as a Member of the House of Representatives of the United States, and of the Foreign Affairs Committee of the House, I would like to extend congratulations to the State on Ghana on its second anniversary and on its progress and success. I am certain all of us share intimately the hopes of this people for a future that finds them an increasingly strong and free nation working among the family of nations for dignity, peace, and friendship among all mankind.

## Enforcement of Our Antismuggling Laws

EXTENSION OF REMARKS
OF
### HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. ANFUSO. Mr. Speaker, during the past dozen years or so since the end of World War II there has been a considerable increase in the illicit traffic in narcotics throughout the world, and we know that there is much smuggling of narcotic drugs into our country. We also know that the growth of juvenile delinquency in recent years is attributable in large measure to narcotic addiction among teenagers, who are driven to commit serious crimes in order to obtain funds to purchase these drugs.

In a report to the United Nations Economic and Social Council regarding its session in Geneva in May 1957, the Commission on Narcotic Drugs discusses the resolution it adopted concerning the illicit traffic in narcotics. The resolution states:

ILLICIT TRAFFIC

The Commission on Narcotic Drugs, noting that the volume of illicit traffic in narcotic drugs throughout the world is considerable and that there are indications of an increase in this traffic, considering the seriousness of the problem of this traffic in its different stages (production, transit, consumption), recalling that the Economic and Social Council has, on several occasions, requested Governments to give particular attention to the control of illicit traffic—

1. Urges governments to apply strictly the provisions of Economic and Social Council resolutions 159 II A (VII), 246 E (IX), 436 C (XIV) and 548 J (XVIII).

2. Again urges Governments to take appropriate measures to combat the illicit traffic, in particular by:

(a) Increasing their efforts to detect and suppress the illicit production and illicit manufacture of drugs, and strengthening the measures for apprehending traffickers.

(b) Imposing on persons convicted of narcotic offences very severe penalties in every country.

(c) Reviewing preventive measures for the purpose of satisfying themselves that the competent administrative bodies have the power everywhere to combat the illicit traffic.

(d) Arranging for the direct exchange of information with the authorities which in other countries are responsible for the control of the illicit traffic.

(e) Discharging fully the obligations placed on the states parties to the international narcotics treaties, in particular so far

as the communication of information relating to the illicit traffic is concerned.

Mr. Speaker, you will note that the resolution speaks of the increased volume in the traffic of narcotics and the seriousness of the problem. It then urges appropriate measures to combat this illicit traffic and recommends five steps. I should like to call your attention to step (a) which advocates strengthening the measures for apprehending those who traffic in narcotics, and step (c) which calls for a review of preventive measures to ascertain that the competent administrative agencies have the power to combat this traffic.

Regarding the first of these steps referred to above, it is interesting to note that instead of strengthening the ranks of customs enforcement officers whose task it is to apprehend traffickers in narcotics, their ranks have actually been reduced to a point where we now have fewer officers in the Customs Enforcement Division since its establishment in 1909.

Furthermore, in order to make up budget deficits, it has recently become customary to close customs offices on Federal holidays and to give the enforcement officers time off. Smugglers are quick to take advantage of this situation which provides them with a safe period in which to carry on their operations. It should be realized that law enforcement should be carried on at all times. Crime does not take a holiday.

Not to be confused with customs agents or customs inspectors, the customs enforcement officers are the only armed personnel regularly assigned to our ports of entry and international airfields on a 24-hour basis in order to detect and apprehend anyone engaged in smuggling activities. Thus the customs service has sole responsibility to prevent smuggling and its enforcement officers constitute our first line of defense against smuggling. It is imperative, however, that this remain a 24-hour-per-day service if is to be effective.

As for the other step listed above, that is, a review of the preventive measures to give the agencies the power to combat the traffic in narcotics, it is quite obvious that at the present time the competent administrative bodies do not have such power everywhere to stop this traffic. In the same connection, it is interesting to reproduce the opinion expressed a little over a decade ago by the then Commissioner of Customs in a letter to our distinguished majority leader, the Honorable JOHN W. MCCORMACK, when a reduction in the Customs appropriation was considered. Mr. MCCORMACK inserted that letter into the CONGRESSIONAL RECORD of March 11, 1947, and from it I quote the following paragraph:

> Careful examination of the possibilities for meeting this situation (i.e. curtailment of activity) satisfied me that the only activity that can be discontinued without a substantial revision of statutory law is that directed toward the prevention of smuggling. While this is a clear statutory duty of the customs service, there is no statutory prescription as to how it shall be conducted and the effectiveness of our smuggling control has always depended upon the action of the Congress in furnishing funds.

This clearly shows that the extremely important work performed by the Customs Enforcement Division is not established by law. This was the time when the Customs Border Patrols were discontinued entirely and the Port Patrols were decimated to the point of ineffectiveness. The doorways of entry into our country remained wide open and practically unguarded. Narcotic control had ceased then, and soon thereafter we read in the newspapers of school children buying narcotics from peddlers and dopesters on our city streets.

It is absolutely necessary to expose the narcotics trade and the evil men who smuggle this poison into our country and force it into the inexperience hands of thrill-seeking youths. Narcotics are smuggled in by ship and plane, as well as across our borders, and then distributed to the dope traffic. If we can succeed in plugging up this evil trade and the corrosion of human lives, we will have solved much of this problem. Several years ago, Harry M. Durning, the collector of customs for the port of New York, stated that only one out of every five ships entering New York can be searched for smuggled narcotics because of the lack of sufficient personnel in the customs service. This situtaion has not improved since then, if anything it is worse today.

Congress must take effective action to suppress this vile trade by giving the Customs Service the means and the personnel for the proper enforcement of our antismuggling laws. In order to achieve this, I am introducing a bill to establish a Customs Enforcement Division in the Bureau of Customs in order to improve the enforcement of the antismuggling laws. The purpose of the bill is to make statutory the position of the Customs Enforcement Officer and the Enforcement Division under which he operates. This branch of Customs was originally created by Executive order of President Taft, but since 1947 its effectiveness in enforcing antismuggling laws has been seriously impaired due to budget deficiencies.

In addition to narcotic drugs, the bill also advocates the enforcement of laws relating to the prevention of clandestine introduction of biological, chemical or radiological weapons into the United States. This is a very important phase of our national security for which adequate means should be taken now to safeguard our Nation against future dangers. It should be done through specially trained enforcement officers, with special equipment and established at strategic locations.

The bill stresses that the Customs Enforcement Division is to be a major law enforcement body with adequate and most efficient means and facilities available, including radio-equipped motor vehicles, small watercraft and other equipment, for use in enforcement work in our harbors, airports and along the U.S. coasts. Enforcement officers shall be assigned to carry out their activities on a 24-hour basis, and they shall be empowered to make searches of all vessels, as well as make seizures and arrests in accordance with U.S. laws.

It should be noted also that in enforcing the antismuggling laws the customs enforcement officer renders other important public services. He helps safeguard the public health from diseases brought in by parrots, monkeys, and other animals used as pets. He helps protect our agriculture from destructive insects which accompany certain imported plants. He similarly helps protect the livestock industry from foreign animal diseases, such as rinderpest, foot-and-mouth disease, and so forth. Furthermore, he helps to apprehend stowaways who might be subversives, to intercept obsecene and seditious literature, and the enforcement of export-control and navigation laws.

Passage of this bill would once again tighten the cordon of men in our ports of entry and deal a formidable blow to the nefarious peddlers of narcotics. It would make the enforcement of the antismuggling laws a mandatory function of the Bureau of Customs. Our failure to pass this bill will result in continued violation of our laws, increase in crimes, and growing costs to the Nation and to the individual taxpayer. Hospital facilities would have to be increased to handle drug addicts, State and municipal police forces would have to be increased to cope with crimes and criminals, and the budgets of welfare agencies would have to be increased to aid victims and their families.

Mr. Speaker, there is no doubt in my mind that parents, teachers, welfare workers, church leaders, civic organizations, and especially our young people, whose health, morale, careers, and their whole future life are at stake, will heartily support this legislation. For the sake of our Nation's future, Congress must safeguard our youth.

---

## A Tribute to Harry McGregor

EXTENSION OF REMARKS

OF

### HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 2, 1959*

Mr. MACK of Washington. Mr. Speaker, the Honorable Hubert Scudder, of California, voluntarily retired from Congress last year after 10 years of service in the House of Representatives. Throughout those 10 years he was a member of the House Public Works Committee and a close friend and associate of the late Hon. HARRY MCGREGOR, of Ohio.

Mr. Scudder has written a short tribute to the worth and work of his friend, the Honorable HARRY MCGREGOR and asked me to have it inserted in the RECORD for him. I do so for him. Mr. Scudder's comments on Mr. MCGREGOR follow:

> Today, we pay homage to a man who long served his Government in both State and National affairs. HARRY MCGREGOR was not only a friend and a good companion, but a man who took a vital interest in the welfare of his country. He was a man of strong convictions and was not afraid to express him-

self for those things which he felt were right and for the continuation of our American way of life.

Too often we think only of today, but HARRY MCGREGOR thought of those who followed tomorrow and whether or not they would have a country such as we of this generation have been privileged to enjoy. His contribution to the highway program of this country will be a standing monument to his memory.

His sudden passing was a great shock and I desire to extend to his family my sympathy at their loss.

## Southerner Directs Attention to the Biggest Story in Dixie

EXTENSION OF REMARKS
OF
### HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. BOYKIN. Mr. Speaker, I ask unanimous consent to extend my own remarks and include a very wonderful editorial from the Mobile Press, of Mobile, Ala., of February 26, 1959. You will note, Mr. Speaker, that this great editorial is about one of the largest corporations in the world, an arm which reaches from one end of this Nation to the other—it reaches even beyond that—down to Venezuela, where this great company is bringing in thousands on thousands of tons of that rich iron ore to our port of Mobile, where they use the largest iron ore ships in the world, that bring in 60,000 tons at one time; I am referring to the great United States Steel Corp.

Recently the fabulous Tom Martin, chairman of the board of the Alabama Power Co., had a group of people visiting us from all over this great land. This group was headed by the great Dr. Charles F. Kettering, the man who did so much good for all mankind. We made a trip from the mouth of Mobile River to our Alabama State Docks, and to the great paper mills and all the other industries there in the City of Mobile, including the Aluminum Ore Company, the International Paper Company, the Hollingsworth and Whitney Division of the Scott Paper Company, and how I wish we could have gone on a little farther and shown these men the largest rayon mill in the world up the river just a little farther, the great Courtaulds Company from England; and then just a mile or so farther on up this same great river, the Stauffer Chemical Company from France and other parts of the world; then on up the river a little bit farther at McIntosh, Alabama, we have three great chemical plants, as a matter of fact, Mr. Speaker, a chemical kingdom—the great Olin Mathieson Chemical Co., have their big plant there located on the Southern Railroad, where they run their own barge lines all over this country from their special dock at McIntosh Bluff to their customers everywhere where they have the benefit of water transportation; then just a little farther up the river at McIntosh, we have the great Geigy Chemical Company. They get their chlorine from the Olin Mathieson Chemical Company; they have a double track railroad there, where they just switch cars from one company to the other. The Geigy Chemical Company are spending millions of dollars there on an expansion program. So we have all of these many industries there, and I wish everybody could have heard what this great Mr. Kettering had to say about the development there. He was telling Mr. Thomas W. Martin, Mr. J. L. Bedsole, Mr. Austill Pharr, and a group of us sitting at a table about our part of the South, with all of its great resources, not only natural resources, but human resources, and Tom Martin said this, among many other famous sayings; he said: "Surely, ladies and gentlemen, the last part of the 20th century belongs to the South." When anyone reads Art Wiebel's great statement which is published in part by a great newspaper, one of the oldest and best papers we have in the Nation, the Mobile Press Register, at Mobile, way down in our beloved Southland, well, it is time to look and listen. I wish everyone could read the facts which this great industrialist, Art Wiebel, has given to the world.

There are many other comments I could make on this subject, but I shall conclude my remarks at this time. I am very thankful for Art Wiebel; I am very thankful for everything he has said. May God bless him and his company, and here is hoping he will "keep on keeping on."

SOUTHERNER DIRECTS ATTENTION TO THE BIGGEST STORY IN DIXIE

Critical reports about the South from other parts of the Nation have obscured a much bigger and brighter story about Dixie, according to Arthur V. Wiebel, president of the Tennessee Coal & Iron Division, United States Steel Corp.

In a recent address before the National Society of Professional Engineers, Mr. Wiebel cited some interesting facts and then asked the visiting engineers from all sections of the Nation to take these facts home with them and help set the record straight.

The steel executive, a native southerner, said that the South's story of today is one of tremendous development.

"There is," he said, "a revolution going on in the South, but it has nothing to do with courts or Congress, laws, or legislation."

According to Mr. Wiebel this region is fast moving out of an agrarian blind alley toward a position of economic leadership to which its geography, its climate, and its natural resources entitle it.

"And that should rate a banner headline in any newspaper in the Nation," he said.

These are the important factors listed by Mr. Wiebel:

1. With one-quarter of the land area and one-quarter of the population of the 48 contiguous States, the South produces over half of the Nation's minerals.

2. This region has the Nation's greatest average rainfall as well as navigable waterways and mild climate. Alabama ranks second in the Nation in the miles of navigable waterways.

3. At the turn of the century, the South had 9 percent of the Nation's manufacturing facilities. Today it has 22 percent of American manufacturing plants.

4. Thirty-nine percent of American chemical manufacturing is now in the South and is still rising. The bulk of production of manmade fibers is in the South.

5. During World War II, approximately half of all American merchant ships of greater than 2,000 tons gross weight were built at southern shipyards.

6. The South has 40 percent of the Nation's forest area.

7. In the postwar decade from 1946 to 1956 factory employment in the Southeast rose 22 percent, as compared to 9 percent for the Nation as a whole.

Looking over the list above, we see that Mobile is particularly blessed since each of the factors named is directly linked with our city and this area of south Alabama.

Mr. Wiebel's words carry untold weight—this is not a voice crying in the wilderness. These are the words of an outstanding business executive who has grown up in and with the South.

In concluding his address, the speaker said:

"Tell your associates that under all the mountains of bombast and oratory there are cold hard facts and figures that reveal a South with which the world has not yet become familiar. And tell them for me that the conscientious, level-headed citizens of the South may one day hold the destiny of America in their hands."

And there the case rests. The facts are presented. The South is on the move to a bigger and better future.

We salute Mr. Wiebel for an excellent presentation of the facts.

## Encouraging Sign

EXTENSION OF REMARKS
OF
### HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. WRIGHT. Mr. Speaker, as evidence of the continuing and growing editorial interest throughout the country in the necessity for a systematic program of national debt reduction and eventual retirement, I am taking the liberty of including here for the reading of those Members who are interested, a very fine editorial which appeared on Wednesday, March 4, in the Wall Street Journal:

ENCOURAGING SIGN

A pair of Texas Congressmen want to pass a law which would require an annual reduction of 1 percent in the Federal debt. If it were in effect now, for example, the $283 billion debt would have to be reduced by $2.8 billion this year.

The two Representatives are JAMES WRIGHT and FRANK IKARD, both Democrats. They declare the American people are ready for the self-discipline necessary to carry out such a program, though acknowledging it would require some sacrifices.

Plainly, the legislators take the long-range view. They base their argument on the idea the Nation can't go on indefinitely building up and maintaining an even higher debt.

"In 100 years," Mr. WRIGHT said, "we could completely retire the debt by paying $495 billion in interest and $283 billion of principal, a total of $778 billion. But if we pay nothing on the debt itself, the interest alone for 100 years would be $980 billion, and we will still owe the debt of $283 billion, or a total of $1.263 trillion."

Well, we would wonder about adopting a debt reduction plan based on a rigid annual cut; circumstances would vary. But the general idea is sound and a heartening indi-

cator that there are in Congress some Democrats who are willing to push the Nation's fiscal well-being even though most of them seem interested only in how much they can spend.

## Legal Control of Outer Space

EXTENSION OF REMARKS
OF
## HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, February 25, 1959*

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Senator KENNETH B. KEATING:

STATEMENT OF SENATOR KENNETH B. KEATING (REPUBLICAN, OF NEW YORK), FORMERLY RANKING MINORITY MEMBER ON THE HOUSE JUDICIARY COMMITTEE, BEFORE THE HOUSE COMMITTEE ON SCIENCE AND ASTRONAUTICS ON MARCH 5, 1959

The United States has made great scientific strides in the year and a half since Sputnik I began its historical orbit around the Earth. Within a few months we had our first satellite, Explorer I, circling the globe with an apogee of some 1,600 miles. This has been followed by about half a dozen other successful orbiters and two space probers which penetrated into space to distances of 71,300 and 63,580 miles, respectively. And just 2 days ago our first Sun rocket was successfully launched.

I am confident that within the next decade we shall place a man on Earth's own satellite—the Moon. Nothing should be spared to assure our eventual leadership in this new field of astronautics. A second-best position behind Russia in this space race could spell disaster for the whole free world.

Americans are fully aware of the scientific challenge with which we are confronted, and I have no doubt of this Nation's willingness to make whatever sacrifice is necessary to meet that challenge. But it would be a fatal mistake to approach the space era solely in terms of satellites and solar probes. While we must not slacken our great technological effort, it is of importance also that we develop an appropriate basis for meeting other vitally significant aspects of the space era.

I believe that there has not been enough emphasis on the necessity for adapting some of our earthbound concepts to the requirements of this new age. For that reason I am very gratified at this committee's initiative in centering attention in these hearings on one of the most pressing of all the new nonscientific problems raised by the space age—the need for new rules of law for the settlement of space controversies.

It may be, as many people claim, that it will be the scientists who will chart the future course of the world. Their spectacular achievements certainly have merited them unparalleled eminence. But the scientists cannot be counted upon or expected to keep our moral progress abreast of our scientific advances. This responsibility ultimately lies with the people, and they will properly expect their lawmakers to take the lead in proposing the new concepts and principles which are necessary. These hearings can serve a historic purpose if they result in even the most tentative first steps in the direction of devising a new legal code for the space age.

There are some who underestimate the serious consequences of any lag between legal and scientific developments. They recall with nostalgia the centuries required for the flowering of the common law, and fondly anticipate similar development of the new space law. I grant that law is shaped and nourished by experience—but I also insist that it is fundamentally based on necessity. The necessity for new laws and concepts in this case is overwhelming. There will be no time for legal craftsmanship and judicial speculation after rival claims are made to the moon or to space itself. Civilization has now reached a point at which a gap between our moral and technological tools could be fatal. The rule of law in the age of space is not a matter of philosophy, but a matter of survival.

The legal problem is not a new one. Down through the ages man has striven to attune his legal codes to progress in other fields. Constant change to insure maximum justice has been the hallmark of progressive and successful legal thought. History reveals that the physical sciences did not reach fruition until the proper moral climate had been achieved in civilized sectors of the world. This was brought about by the rise of mature religions and the promulgation and acceptance of legal standards by which man's conduct could be guided.

We have made some progress in dealing with this new dimension of our national existence, but much remains to be done. One of the important steps in the right direction was the enactment of legislation for a new National Astronautics and Space Agency. This legislation authorizes the agency to develop a comprehensive program of research and development in aeronautics and space science "and related matters."

I emphasize the phrase "and related matters"—which was added to the original bill by this committee. In my judgment these words were added among other reasons, to make it clear that the agency should consider the legal as well as scientific aspects of our space program. I hope that this committee will confirm my interpretation and reexpress the intention of Congress that the exploration and regulation of our interplanetary exploits must develop hand-in-hand.

I have also been very gratified by the proposals made by the United States to the United Nations for international cooperation in the exploration of outer space. This was concrete evidence of this Nation's determination to foster world peace and security. It revealed in a most dramatic and impressive manner our intention to do all we can to use the new discoveries from space exploration for the benefit of all mankind.

I have long advocated such a course by the United States. More than a year ago, I urged the following three-point program for international action: First, an immediate declaration that outer space was not subject to appropriation by any nation; second, an international agreement barring the use of outer space for any military purpose; and third, the creation or utilization of an international agency for the joint exploration of outer space.

Such a program is urgently needed to promote a universal dedication to the development of outer space for peaceful, scientific and humanitarian objectives.

We should all be gratified at the initiative taken by the United States to block the use of outer space for military purposes and to shower its benefits on all mankind. Our proposals in this field should have a profoundly favorable effect on world opinion. They are a most fitting response to the challenge of outer space by a nation dedicated to man's constant spiritual and material advancement.

These are the broad outlines of the Government's response to the nonscientific problems of outer space. I advocate two additional steps to complete our reorganization for the space age. First of all, I propose that there be established a Federal Department of Science and Research or its equivalent. Such a department could coordinate the efforts of agencies such as the NASA, the Atomic Energy Commission, the National Science Foundation, and the Bureau of Standards. It would consolidate under one roof all fields of scientific endeavor in which our Government has an interest. This would facilitate the coordination of all these activities and guarantee cabinet-level consideration of the Government's overall undertakings in this field.

My second proposal is that there be established a Joint Congressional Committee on Outer Space modeled after the Joint Committee on Atomic Energy. At present each House has its own separate committee on outer space. In addition, other committees in both Houses, such as the Armed Services and Foreign Affairs Committees, are continuing to exercise their jurisdiction over some of the problems in this area. This has meant that a great deal of valuable time of our top scientists and military experts is being spent on Capitol Hill instead of in the laboratories and on the proving grounds. While the testimony of these experts is, of course, essential to the work of Congress, the creation of a single joint committee would avoid duplication and greatly expedite matters.

These are problems primarily of Government organization. There are many, many more legal problems of direct practical concern. One of these is the question of who owns space—or even more fundamentally the problem of what is space. In "Coke on Littleton" we find the maxim: "To whomsoever the soil belongs, he owns also to the sky and to the depths. The owner of a piece of land owns everything above and below it to an indefinite extent." This maxim barely survived the age of aeronautics. It holds little promise for the age of astronautics.

In 1902, shortly after the Wright brothers' first flight, a convention was proposed under which the air would be free to commerce and travel just as is the sea. This proposal was rejected. During the First World War, each nation began to assert exclusive control of the airspace over its territory. After the war, the law of absolute sovereignty over airspace was formalized in the Paris Convention of 1919. This provided that "every power has complete and exclusive sovereignty over the airspace above its territory." This principle has since been consistently adhered to in domestic legislation as well as in international treaties.

Significantly, the term "airspace" has never been defined in any of these treaties. Scientists have now established that there is no fixed separation between airspace and outer space. It is apparent that law and science will have to join forces in arriving at an acceptable definition of these terms.

Suppose one were to attempt to apply the principles of established international law by extending the boundaries of each nation into outer space. Because of the curved face of the earth, the extension would produce an inverted cone which would grow bigger and bigger in relation to the country as it reached farther into space. At some point these cones would overlap and more than one state would be occupying the same airspace. Moreover, the continuous movement of the earth on its axis means that the relationship of particular areas on the surface of the earth to space beyond the atmosphere would be constantly changing.

These solar facts illustrate the impossibility of applying existing concepts of international law to the control of outer space. In my opinion, space beyond the atmosphere must remain the common property of all the nations, or, what is the same thing, the property of no nation.

Another legal problem is determining the rights of nations to terrestrial bodies. Here again it is doubtful that the present earthbound rules of discovery and occupation are

suitable. I believe that only an early and firm assertion of international jurisdiction over such areas will avoid the kind of territorial conflicts in outer space which have plagued the earth for its entire history.

Looking ahead, it is apparent that we will also need new laws for the protection of persons, industries, and territories, from misguided missiles and plunging Pioneers. Rules will have to be devised with respect to liability for injury or damage from activities in outer space. What would you say as to the launching Nation's liability for damages if a satellite were to come crashing down on this room at this very moment?

I believe that an immediate start should be made in drafting a code for outer space which would cover such contingencies and numerous others. It could provide for such things as the filing of flight plans to prevent interstellar collisions and confusion; it could regulate spacecraft broadcast so as to avoid interference with present frequency allocations; it could set forth return-to-earth covenants, navigational guides, and the like. If we act in this field now, we can avoid the pitfalls which confront attempts to deal after the fact with comparable problems arising out of travel on the high seas and in the air and in the exploration of Antarctica.

Many legal scholars are pondering these problems. The American Bar Association has already organized a standing committee on space law. The International Astronautical Federation has become active in the field. Articles on the subject have been appearing in the legal periodicals. A report of the International Law Association deals extensively with these problems.

I have been very pleased to learn that these questions are being given serious consideration even by Soviet legal experts. A recent issue of a Russian legal periodical carried an article urging that no government be permitted to incorporate any portion of interplanetary space under its jurisdiction. The article suggests that a government's sovereignty over the space above its territory should be limited to a height sufficient to safeguard each nation from encroachments on its territory or from threats to its independence. In a more practical vein, the author urges that all satellites and other bodies sent into space be required to have identifying marks so that responsibility can be assigned for any damage caused by their falling back to earth. The article also recognizes the need for international agreement on assignment of radio frequencies for signaling apparatus sent into space. This is particularly interesting, since a complaint has been filed with the Federal Communications Commission protesting the Russian sputnik's use of radio frequencies in violation of international agreements for radio frequency allocation.

The official Russian line expressed by its representatives at the U.N. does not justify too much optimism about the adoption of needed international agreements for the legal control of space. Still we must not give up hope. A genuine international effort to define the rights of all nations in space is one of the world's compelling needs. Anarchy in space could be more dangerous than anarchy on earth. The United States should move ahead in this field with or without Soviet cooperation. If we succeed in promulgating a code which is reasonable and fair, world opinion might force its enactment as the law of the universe. Success in this effort, in the long run, may constitute our Nation's greatest contribution to the cause of peace and progress in this new era.

## Texans Would End Increase In Public Debt

EXTENSION OF REMARKS
OF
## HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. WRIGHT. Mr. Speaker, as evidence of the continuing and growing editorial interest throughout the country in the necessity for a systematic program of national debt reduction and eventual retirement, I am taking the liberty of including here a very fine article written by the veteran Washington newsman, Bascom N. Timmons, as it appeared on Monday, March 2, in the Houston Chronicle.

I was particularly grateful for this article because of the mention it makes of the very substantial and much appreciated support this plan has been receiving from our extremely able new colleague, the Honorable BOB CASEY of Texas.

The article follows:

TEXANS WOULD END INCREASE IN PUBLIC DEBT

Two young members of Congress have come up with an idea of paying off the national debt.

That two Members of Congress out of 534 should bring forth a proposal that the Federal Government not only begin living within its income but also begin paying the bills of World War I and World War II is no reason to stop the presses and replate first pages of the country's newspapers.

The proposal has been received so calmly that no radio or television chain interrupted a popular program to give the country the glad tidings.

There are probably many Members of Congress who believe the country ought to start getting out of debt for two global wars, the Korean conflict, a continuing cold war, a depression which began in 1929 and a recession which began in 1957.

But the duo which proposes to do something about it are both young men of rock-jawed determination and their congressional connections are good.

They are both Texans, which is no disadvantage in the present congressional setup. In fact, Texans have exerted great influence in every Democratic administration beginning with that of Grover Cleveland.

Texans also have wielded strong congressional influence even in the Harding, Coolidge, Hoover, and Eisenhower Republican administrations.

Being Texans, the two young Representatives, JAMES C. WRIGHT, of Fort Worth, and FRANK N. IKARD, of Wichita Falls, are Democrats.

So is Representative BOB CASEY, of Houston, who made his first speech in the House in favor of the Wright-Ikard bill.

This also is encouraging, for it is the Democratic Party which is widely credited with harboring a thought that the Nation is in some sort of a fairyland where debts need never be paid.

WRIGHT, like IKARD, is a man of ability and on his way up in the House.

IKARD is a member of the powerful Ways and Means Committee and one of his distinguished constituents at one time was Secretary of the Treasury Robert B. Anderson.

WRIGHT, like IKARD, is a man of ability and on his way up in the House.

Here is what WRIGHT and IKARD propose to do:

The national debt has reached the astronomical sum of $283 billion. On that debt the Nation is paying interest of $8,100 million yearly, and which, with increased interest rates, may soon go to $9,800 million a year.

WRIGHT, in a statement pointing out that "it is cheaper to pay than to owe," emphasized that if there is no reduction in the next 28 years we will have paid out in interest an amount equal to the debt without having reduced the debt itself by one penny.

So WRIGHT and IKARD propose that the Government live within its income and yearly earmark 1 percent of what the Nation owes for debt retirement.

That would not break any speed records in debt payment. It would, in fact, take 100 years to do it.

But no one can overestimate the psychological effect of a determined and systematic effort to pay off the Federal debt.

"One hundred years is, of course, a long time," said IKARD, "but the adoption of a definite plan for payment would be beginning, and now is the time that we should get started.

"During the past 4 years the debt ceiling has been increased four times, and only once since World War II has there been any debt reduction."

IKARD and WRIGHT have already introduced a joint resolution to accomplish the debt-paying plan.

Hearings on the subject will be scheduled by the Ways and Means Committee.

## National Milk Sanitation Act

EXTENSION OF REMARKS
OF
## HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 4, 1959*

Mr. WOLF. Mr. Speaker, I have today introduced a bill which may be cited as the National Milk Sanitation Act. There has been considerable controversy here in Washington recently concerning the quality of milk, and I hope that my proposal will resolve some of this controversy. I believe it is time that we consider seriously the desirability of a national sanitary milk law.

The main objectives of my bill are to protect the public health and to eliminate the use of unnecessary or unreasonable sanitary regulations which burden interstate commerce. Such regulations, in some cases, eliminate the possibility of a competitive market in milk. This bill would establish uniform standards of quality for milk so that if milk produced in Iowa or anywhere in the country meets these standards it can be sold anywhere in the United States.

The quality yardstick for fluid milk moving in interstate commerce, which would be used under my bill, would be that single standard for high quality milk which has already been set up by the U.S. Public Health Service as the U.S. Milk Ordnance and Code. Designed as a model for the industry, the code is now

being followed in 15 States, 2 Territories, and 1,900 cities and counties.

Mr. Speaker, my bill does not require any State or municipality to adopt the code, nor does all milk shipped in interstate have to conform to the code. However, milk which does meet the requirements cannot be excluded from any fluid milk market in the United States, regardless of varying local health regulations. Dairy plant inspections would be certified by the U.S. Public Health Service. Milk from certified plants could not be kept out of any market on health grounds.

This bill provides many safeguards for areas receiving milk shipped from certified plants. Local health authorities would retain the right to inspect the milk upon arrival to make sure it had not deteriorated in transit. From there on, the handling, processing, and sale of the interstate milk would be required to meet the standards applied to milk entering the market from sources inside the State.

Mr. Speaker, I am glad to join with Members on both sides of the aisle in both Houses of Congress who have introduced similar bills which would protect the State and municipal health authorities' right to control the quality of milk shipped within their State, but which would at the same time go a long way toward eliminating the use of sanitation regulations as trade barriers against good, clean milk from other States.

## H.R. 2734

EXTENSION OF REMARKS
OF
## HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, February 18, 1959*

Mr. BROOMFIELD. Mr. Speaker, I would like to call the attention of my colleagues to an inequity in our Federal gasoline tax law which I believe should be corrected. To that end, I have introduced H.R. 2734, while H.R. 101, H.R. 1343, and H.R. 3196 are similar measures dealing with the same subject.

Under the present Federal gasoline tax law, the refiner pays the 3 cents per gallon tax to the Internal Revenue Service on the basis of sales and in turn obtains reimbursement for such tax by adding the amount on the invoice to the wholesaler or jobber.

The gasoline is then stored by the jobber usually in above ground storage tanks, awaiting subsequent sale and delivery to dealers or commercial consumers.

During the time of storage and wholesale delivery, normal evaporation and spillage losses take place amounting to more than 1 percent of the volume handled.

Inasmuch as the jobbers purchase the product with the Federal tax included in the price, there is no way to recover the tax represented by these evaporation and spillage losses.

Based on a 1-percent average loss of product, the tax loss alone amounts to $300 for every 1 million gallons of gasoline handled.

The refiner does not experience any such tax loss because he pays the tax to the Government on the basis of sales and not purchases.

The dealer also pays the Federal tax on his purchases, but such gasoline is stored by him in underground tanks, where there is little or no fluctuation in temperature sufficient to cause evaporation.

This bill now under consideration by the House Ways and Means Committee would change the definition of the word "producer" so as to include the jobber segment of the petroleum industry.

The jobber would then buy from the refiner, Federal tax free, and would in turn pay the tax to the Internal Revenue Service on the basis of his sales and not purchases, thereby saving him the tax loss on evaporated and spilled gasoline.

This would place the jobber on even terms with the refiner and enable him to complete on an equitable plane.

There is no opposition by any branch of the petroleum industry to the enactment of the amendments proposed in this bill. The only opposition comes from the Internal Revenue Service who resist the added number of taxpayers which would result.

It is undoubtedly true that a little more work and expense would be added to the governmental collection machinery, but it is small indeed, compared to the burden that has been borne by the jobbers for years.

The refiners are the first to admit that the present law has given them an unfair competitive edge over a segment of small business.

MICHIGAN SMALL BUSINESS PENALIZED TWOFOLD

The independent jobbers in Michigan suffer an additional blow, because of the manner in which the State sales tax law is interpreted in relation to the Federal gasoline tax. *Standard Oil Co. (Indiana) v. State Board of Tax Administration*, 283 Michigan 85, held that Standard Oil Co. in making a sale to a commercial consumer could compute the State sales tax on the selling price of gasoline less the Federal gasoline tax. The legal theory which prompted such a holding was on the basis that the Federal gasoline tax attaches at the time of the first sale, and since the sale in question was from Standard Oil Co., a refiner, to a commercial consumer, that the Federal gas tax and the State sales tax attached at the same time; therefore, the sales tax should be computed on the net price of the product, not including the Federal gas tax.

In the converse, however, if a jobber makes a sale to a commercial consumer, he must compute the sale tax on the price of the product including the Federal tax, because by the time the gasoline reached the jobber, the Federal tax had become an integral part of the purchase price of the product to that jobber. As a result a sale from a jobber to a commercial consumer would carry a sales tax based on the gross price of the product.

This means that under the present Federal gasoline tax law, on sales made from a jobber to a commercial consumer, that the sales tax is approximately one-tenth cent more per gallon, than on a sale from a major refiner to a commercial consumer.

In order to remain competitive, therefore, a jobber would have to absorb the additional sales tax in order to retain a customer.

The bills under question would remove both of the foregoing inequities.

## Importance of the National Reclamation Program

EXTENSION OF REMARKS
OF
## HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
*Thursday, March 5, 1959*

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Teddy and Northern Montana," which was published last fall in the Glasgow (Mont.) Courier.

The editorial points out how President Theodore Roosevelt, who started the national reclamation program, exerted vigorous leadership toward the development of Montana's natural resources.

It is interesting, but depressing, to compare Theodore Roosevelt's energetic leadership in this field with the lack of leadership of the present administration.

Mr. President, I also ask unanimous consent to have printed in the Appendix two articles appearing in the March 1958 issue of the National Union Farmer. The articles are entitled "Reclamation Pays for Itself," and "Reclamation Crops Keep United States Healthly—And Do Not Add to Our Surpluses."

There being no objection, the editorial and articles were ordered to be printed in the RECORD, as follows:

[From the Glasgow (Mont.) Courier]

TEDDY AND NORTHERN MONTANA

Press and other media have been full of comments about a coming date, October 7, which is the 100th anniversary of the birth of President Theodore Roosevelt.

A positive man, physically fearless, Teddy Roosevelt goes down in history as one of the most colorful and effective leaders of our Nation. It is perhaps less well known that he had a considerable interest in Montana and some effect on its development and history.

The story has been told many times how, as a stockman on the Little Missouri when living just over the border in North Dakota, he participated in the organization of the Montana Stock Growers Association at Miles City.

Perhaps less well known is the story of his connection with the late John Willis of Glasgow, told in "Roosevelt in the Rough," which Willis related to Horace Smith, a former Butte newspaperman. The book was published in 1931 before Jack Willis' death. Oldtimers here will recall the Jack Willis ranch on Hell Creek along the Missouri.

The story begins in 1886 when Willis was living in Thompson Falls. Willis was a

commercial hunter. Roosevelt, then at Medora, N. Dak., had come across the mounted specimen of a rare antelope goat Willis had shot. He found the name of the hunter and wrote him that he wanted to hunt with him and shoot one of the rare animals.

Willis' brief reply to the future President was: "If you can't shoot any better than you can write, No."

Undeterred, Roosevelt went to Thompson Falls, and finally persuaded Willis to guide him on a hunting trip. From this developed a friendship and many more trips.

Roosevelt visited Willis in Montana and, when Teddy became President, Willis was several times at the White House, although he never was comfortable in the official atmosphere of Washington.

Although of opposite political persuasions, the two men got on well throughout a lifetime. This paid off for the hi-line in 1905 when Willis was selected with a Mr. Bingham of Havre and a Mr. Frank of Harlem to go to Washington to push for action on the Milk River irrigation project, as Willis says, "the first important work undertaken by the Government under the reclamation policy inaugurated by Roosevelt immediately after he moved into the White House."

Delegations had been getting nowhere with the Secretary of the Interior, and engineers had been delaying their findings on the proposed project. The upshot of the visit was Roosevelt's letter to Jack Willis, in which he said, in part:

"I have asked the Reclamation Bureau to take immediate action in the whole Milk River matter, and have authorized them to do what I have done in no other case—that is, go ahead with the scheme now before them." Work soon started.

So comes an interesting sidelight in history. There are many other delightful stories in the book, one of a banquet for Teddy in Butte when then warring copper factions were gathered around the table in armed truce.

This year, as we honor Teddy Roosevelt, it is well to remember his interest in Montana and his many acts that helped develop it.

---

[From the National Union Farmer, March 1958]

RECLAMATION PAYS FOR ITSELF—CUTBACKS AND NO NEW STARTS THREATEN TO STOP RECLAMATION'S 55-YEAR RECORD OF MAKING WEALTH DESPITE THE $21 BILLION ADDED TO U.S. INCOME

(By Roscoe Fleming)

What was once dry and unproductive western wilderness, now redeemed by reclamation, has generated $3.2 billion in income taxes for Uncle Sam's Treasury since 1940 alone.

In other words the Federal reclamation program has more than paid for itself—in addition to all other benefits it has brought the Nation—solely by the taxes turned into the Treasury from the prosperous farmsteads and blooming cities it has made possible.

The figures: Cost of the reclamation program, 1902–1957 inclusive, about $3 billion. Extra tax revenue since 1940 alone, about $3.2 billion.

This fact is particularly biting since the present national administration is now trying to hold down reclamation and plans no new projects this year in order to spend more money on defense.

Yet, at the current rate, what the Nation spends on arms in 1 week would finance reclamation for 4 years. To put it another way, 1 year's defense spending would finance 200 years of reclamation at the 1958 rate.

Further, in addition to contributing to the national strength needed to carry on wars hot or cold, reclamation literally almost rescued the Nation during World War II when the mighty generators of the Grand Coulee Dam were just coming on the line, and furnished the only possible source of quick power for much of the atomics program.

Such powerplants more than support themselves, and part of their profits go to help pay for the irrigation projects. And they attract industries, which build blooming new communities to use up the farm products. All this is good both for the region and the Nation.

UNITED STATES GAINS 7.7 MILLION ACRES

Recently the 55-year-old reclamation story has been freshly told in figures. Through 1957:

The Bureau of Reclamation has built or rebuilt facilities to furnish a whole or partial water supply to 7.7 million acres of tillable land. This translates into a land base for 125,000 farm families, and an additional 125,000 part-time farming suburban units.

Crop production from 77 projects in the 17 Western States now totals almost a billion dollars yearly, for a total of $13.5 billion during reclamation history. Yet almost none of this is of products now called surplus.

Net revenues to the Government from 41 powerplants under supervision of the Bureau of Reclamation totaled $41.5 million in 1957—after all expenses. Net revenue from all such plants during the life of reclamation total $359 million. Net for next 50 years from existing plants is estimated at more than $2 billion.

Payments to the U.S. Treasury for irrigation and city water supplies have so far totaled $130 billion, and such payments during the next 50 years from existing projects are estimated at $825 million.

FARM INCOME MULTIPLIED

Thus the net direct repayment to the taxpayer for the first 100 years of reclamation will be about $3.3 billion of which nearly $500 million has already been repaid. This is at the present level. If reclamation grows, so will the payments.

Income to reclamation-project farmers and workers totaled $666 million in 1956, for a cumulative 50-year total of $8.6 billion.

Income to the people of nonfarm urban areas created by reclamation totaled $952 million in 1956, and for the life of reclamation have totaled $12 billion.

Thus the total gross addition to national income from reclamation is estimated at nearly $21 billion.

This figure does not include the by-product income from fishing, boating and other recreation at reclamation reservoirs, estimated at $50 million annually. Such reservoirs are among the most popular resorts anywhere, and millions of people visit them yearly.

Billions of dollars worth of fresh specialty foods have been shipped to points all over the United States from reclamation projects to supplement healthy diets when the Midwest and East are snowbound.

The value of plant, property and equipment of all reclamation projects owned by you and me totals approximately $3 billion. This is based on original cost. At today's prices the value would be nearly doubled; and the cost, as shown, has been partly repaid.

Reclamation appropriations for construction, however, average only about one-fourth of 1 percent of the national budget—or one-fourth of 1 cent out of each dollar of national appropriation yearly.

These appropriations are among the best investments the people of the United States ever made, helping to keep our economy healthy and supplying the mighty muscles called upon in time of war. Yet reclamation is currently under fire as a luxury sort of enterprise that must be cut down to permit more spending elsewhere.

---

RECLAMATION CROPS KEEP UNITED STATES HEALTHY—AND DO NOT ADD TO OUR SURPLUSES

Theodore Roosevelt, whose powerful support of it as President started national reclamation, underestimated its benefits in one respect.

In an otherwise farseeing forecast of what it would do for the Nation, he foresaw reclamation as supplying food largely to nearby cities. But the advances of technology, particularly in the refrigeration art, make it possible for Americans everywhere to enjoy fresh vitamins from reclamation acres for several months each year.

Take just one such development, the so-called vacuum tubes that now can deliver virtually farm-fresh lettuce anywhere in the United States.

These tubes are actually big vacuum chambers. The fresh, washed lettuce is packed into crates and placed in these chambers which are then partly evacuated. This causes rapid evaporation, and evaporation means chill; the temperature goes down to just above freezing.

Three or four days later, housewives in New York or Chicago or anywhere in the winter zone are buying lettuce that appears as if it had been cut the day before and rushed to market.

The lettuce farmer in California's Central Valley or Arizona's Valley of the Sun gets an average of 5.5 cents per head of lettuce.

Shipping and other costs bring the wholesale price at New York City to 14 cents. But the New York housewife pays 29 cents. The extra 15 cents, or more than half the cost to her, is run up through chaotic, profiteering distribution in New York's produce jungles.

Western reclamation adds almost nothing to farm surpluses, though this charge is often made against it in the East. Instead, it supplies the Nation with fresh vitamins and calories when they are obtainable nowhere else.

In a recent talk before the Society of American Agricultural Engineers, Gov. George D. Clyde of Utah showed that 87 percent of the alleged surplus is in four farm commodities:

Wheat, 30 percent; corn, 29 percent; cotton, 20 percent; tobacco, 8 percent. Very little wheat (2 percent) is grown on reclamation projects, and very little corn (7 percent). Some cotton is grown, but it is not of the upland short-staple type which is in surplus. Instead, reclamation-acreage cotton is of the long-staple, Egyptian type, which is in heavy demand and far from being surplus. No tobacco is grown on reclamation projects.

Added Governor Clyde: "Crops grown extensively on reclamation lands are fruits and vegetables, alfalfa as a food for livestock, forage crops, sugar beets, and various specialty crops that make important contributions to the high-standard American diet and are vital to the health of the Nation.

"These crops are not surplus. It is the irrigated Southwest—and without irrigation there would be no farming in the arid Southwest—that gives America a large part of its fresh fruits and vegetables in wintertime. These crops do not compete with production in other parts of the Nation."

The winter of 1957–58 demonstrates what the Governor meant. With Florida and Gulf coast production virtually destroyed, America got its vitamins from fresh products grown on irrigated acres.

---

## Dr. Flemming's Formula

EXTENSION OF REMARKS

OF

## HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 4, 1959*

Mr. METCALF. Mr. Speaker, our new Secretary of Health, Education, and Welfare, Dr. Flemming, has developed the

Flemming formula to solve the classroom shortage.

He has discovered that if the States will repeal their statutory debt limits, amend their constitutions and cooperate by making other fundamental changes in their basic laws that the States and local school districts can raise more money for school construction. This discovery can have results in other educational fields beyond actual school construction.

The application of the Flemming formula to basketball would permit Ohio Wesleyan, the college of which Flemming was formerly president, to announce that it was going to win every game next season and set alltime records—an alltime high in scoring by Ohio Wesleyan and an alltime low in points scored on Ohio Wesleyan.

Under the Flemming formula, two midgets would be added to the Ohio Wesleyan team, one perched on each basket. The midget on the Ohio Wesleyan basket would deflect shots by the opposition. The midget on the opponents' basket would catch a ball fired by an Ohio Wesleyan player and drop it through the net.

Now this would require a change in the rules. Instead of limiting the number of players on a team, the limitation would be their total height. To do so would require a change in the rules of basketball and consent from the other teams, in addition to perfecting a side-saddle perch for the midgets. But those are minor problems for a man who claims he can solve the school construction shortage if only the States will change their constitutional or statutory debt limitations, and their basic tax concepts.

## Famous Women Inspiration to New Generation

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Mr. John C. Sciranka, editor of the American Friends of Slovak Freedom, which appeared in the Bethlehem (Pa.) Bulletin of February 6, 1959:

FAMOUS WOMEN INSPIRATION TO NEW GENERATION

(By John C. Sciranka)

With the new year many American women took over important public offices. For instance in New York State, new Governor Nelson Rockefeller appointed a woman secretary of state. In Pennsylvania, new Governor David Lawrence, appointed a woman judge of Pittsburgh, new attorney general.

We find women in many important posts to which we point with pride.

However, women played important roles centuries ago in various countries. I mention for instance Czechoslovakia where the women ruled almost since the founding of the state. We learn from history and Czech legends that when father Krok led the first Czechs to their present land of milk and honey as the historians call Bohemia, one of his three wise daughters—Libuse—the youngest, ruled the nation after her father's death and ruled it wisely. She is credited with founding of the historical city of Prague.

The first Christian ruler of Bohemia was Ludmila, a princess of the Premysl dynasty, who was the grandmother of the good King Wenceslaus (King Vaclav after whom the famous Vaclavske namesite (square) is named in the capital of the country). Ludmila spread Christianity and was beatified. The women championed and won their places as teachers in even higher schools almost a century ago. The Women's Club was formed in Prague way back in 1903 even against the rules of Austria. Bozena Vikova-Kuneticka, well known authoress was the first woman to be elected to the Viennese Parliament in 1912 being thus the first woman in Europe to be so honored. Here in America, the Moravian Sisters of Bethlehem, Pa., established the first schools of higher learning for girls.

However, the Slovak women in America had it much easier for the first women's organization the Zivena (Goddess of Life) was founded in New York City in 1891. The First Catholic Slovak Ladies Union was founded in 1892. The women took part in Sokol activities, both Czech and Slovak for the past 80 years in America. It is remarkable that the Sokol organization is active in America since 1863. Their official organ "American Sokol" is observing its 80 anniversary. Women always played important parts in this movement, so it is nothing new that they are making steady progress; receiving deserved recognition in political, as well as business and scientific world.

## New Legislation To Bring Relief to the Fishing Industry

EXTENSION OF REMARKS
OF
### HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Thursday, February 26, 1959*

Mr. PELLY. Mr. Speaker, for reasons which are pretty generally known, fishermen and the fishing industry have been suffering from cheap foreign imports. Tariff relief under regular procedure which should have been available to the New England industry, for example, was denied because of factors of foreign policy relating to national security. That is not an easy obstacle to overcome.

One of the great problems of fishermen is an item of expense arising from the cost of insurance which runs into hundreds of dollars for each boat. As I understand it, the high claims and experience of losses cause the insurance underwriters to continually increase their rates.

There have been various suggestions as to ways in which the Federal Government might help. One of these has been to underwrite a portion of these insurance premiums, but knowing and sharing the prejudice against special subsidies, I have come up with a proposal which might indirectly contribute toward a solution by means of greatly reducing insurance costs.

The idea has been incorporated in a bill which I introduced today. This measure would extend medical, surgical, and dental treatment in hospitals and stations of the Public Health Service without charge to seamen on American-owned U.S. flag vesels in excess of 20 feet in length regularly engaged in fishing in international waters.

This medical care and hospitalization is available, of course, to our sailors and seamen in larger oceangoing boats. My bill would simply extend this service and by the saving to insurance companies through lesser number of claims result in a reduction in premium rates.

Here is a means of assisting the entire fishing industry. As I see it, all fishermen, Atlantic, Gulf, and Pacific coast, would benefit by my bill. Accordingly, I offer it for consideration with the hope it might invite united support from the fishing industry and thus encourage the Congress to give it utmost consideration.

## A Mile High

EXTENSION OF REMARKS
OF
### HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, February 18, 1959*

Mr. DIXON. Mr. Speaker, I hope that Congress can soon stop trying to escape the agricultural dilemma by attacking Secretary Benson. We must rectify the existing farm program with courage and honesty. I commend to the attention of the Congress the following editorial in the Wall Street Journal of March 5:

A MILE HIGH

"If we don't stop Secretary Benson's policies," said Chairman WHITTEN of a House appropriations subcommittee, "the (farm) mess will get as high as Pike's Peak. * * * Many farmers will be out of business, and the Treasury will be bankrupt."

We concur—with the important exception that the mess isn't due to Mr. Benson's policies. It's thanks to the congressional farm bloc which has fought so hard to maintain the whole weird rigmarole of parity and high price supports. This program spurs the excess production that makes the huge surpluses that bulge both the Federal warehouses and the taxpayers' troubles. Mr. Benson has been trying to put farming on a rational basis, but the farm bloc has gone along slowly and grudgingly when at all.

As the Secretary himself answered Mr. WHITTEN: "If our opponents in the Congress had shown as much vigor over the past few years in making needed overdue changes in the old legislation as some of them have in attacking the Secretary of Agriculture, we would together be doing a better job for agriculture and the Nation."

The trouble, Mr. Benson noted on another occasion, is the legal—that is, congressional—requirement that the Federal Government support a few crops at unrealistic levels. Of those few, the worst is currently wheat. "If you combine wheat, corn, and cotton," the Secretary said, "you have represented 85 percent of the Government inventory of price-supported commodities. But these three crops produce only 20 percent of total cash farm income."

And he went on: "To me, the answer to this problem suggests itself in letters of fire a mile high: Eliminate as rapidly as practicable ineffective controls and use price supports at levels that will preserve and build markets."

Will those letters have to be burned into a mess as high as Pike's Peak before the farm bloc learns to read them?

## Origin of the Berlin Mess

EXTENSION OF REMARKS
OF
**HON. THOMAS J. LANE**
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an excellent article by William Randolph Hearst, Jr., editor in chief of the Hearst newspapers, which résumés the present Berlin situation with a reminder of our blunders and lack of foresight over the years concerning a very important matter:

ORIGIN OF THE BERLIN MESS

(By William Randolph Hearst, Jr.)

Berlin is so much in the news, and in our thoughts, that several people have suggested it would be of interest to recall how we got into this mess.

Accordingly, my desk looks as if someone had raided an attic. Its usual calm disorder is buried under a mass of clippings from the New York Journal-American memoranda from our Washington Bureau, such books as Dwight D. Eisenhower's "Crusade in Europe" and Field Marshal Montgomery's "Memoirs," interpretive pieces from the New York Times and scribbled personal reminders.

It has been worthwhile, if only as a refresher course for this column. A review of the blunders and misjudgments of the past can be valuable if it is used for an understanding of the present and a guide for the future, and not to needlessly revive old controversies. The latter is not the intention here.

The conclusion from any thoughtful study of the antecedents of the Berlin crisis is that we have been babes in the woods in our diplomatic-political dealings with the Russians.

Fortunately, due largely to Secretary Dulles, that is not so today. But it is easy to see how the epigram came about that we win every war and lose every conference.

The big mistake, which planted the seeds of the present crisis, was made toward the end of the European phase of World War II. It was the failure, apparently shared by both our military and political leaders, to recognize the tremendous psychological importance of Berlin.

It is impossible to determine, unless the information is in secret archives, exactly where, when, why, and how the decision was made to hold back our troops from Berlin.

But what we do know clearly indicates a lack of coordination of military and political objectives, and a trust in our Russian allies that in the light of today's backward look, was incredibly naive.

For example—and this sounds like something out of "Alice in Wonderland"—we neglected or did not feel it necessary to reduce to writing the agreement with the Russians to guarantee our rights of access to Berlin. An oral arrangement was all we had to go on until after the bitter lesson of the Berlin blockade of 1948–49.

In the closing days of the war in 1945 both Gen. George C. Marshall, then chairman of the Joint Chiefs of Staff, and General Eisenhower were single-mindedly concerned with ending it as quickly as possible.

As military men, that was their duty, and for that reason they considered Berlin of minor importance. Thus Gen. George S. Patton, Jr., had been deterred from what Gen Charles de Gaulle later characterized as his irresistible march as far as Berlin. And General Eisenhower, evidently on the instructions or with the approval of General Marshall, declined to support Prime Minister Churchill's plan to unleash Marshal Montgomery, with American assistance, in a drive to Berlin.

In "Crusade in Europe" General Eisenhower candidly writes:

"It (Berlin) was politically and psychologically important. I decided, however, it was not the logical or the most desirable objective for the forces of the Western Allies. The general plan was presented to Generalissimo Stalin.

"However, we quickly found that Prime Minister Churchill seriously objected to my action * * * he held that, because the campaign was now approaching its end, troop maneuvers had acquired a political significance that demanded the intervention of political leaders in the development of broad operational plans. He apparently believed that my message to the Generalissimo (Stalin) had exceeded my authority to communicate with Moscow on purely military matters."

As to the correctness of Mr. Churchill's views, there is this excerpt from Gen. Omar N. Bradley's book, "A Soldier's Story":

"We were less concerned with postwar political alinements than destruction of what remained of the German Army. As soldiers we looked naively on this British inclination to complicate the war with political foresight and nonmilitary objectives."

Naive as our soldiers were, this could not have been a purely military decision made in a political vacuum. The mystery is where the big OK came from. The gravely ailing President Roosevelt died April 12, 1945, and Germany surrendered May 8.

I do not pretend to be an international private eye in such complexities as diplomacy, but prior political events lend strength to the speculation that the decision was reached sometime before the dates above, or at least was an outgrowth of those developments.

In 1944 the European Advisory Commission, consisting of representatives of the United States, Britain, and Russia, met several times in London to discuss the future of postwar Germany. Our State Department recommended three zones of occupation (France was included later at Yalta) be drawn so that each would be in contact with Berlin like slices of a pie.

For reasons, if any, that are completely baffling, the War Department, then headed by Secretary Henry L. Stimson, rejected the idea. The War Department also objected to a British proposal for a corridor to Berlin from the western zones on the grounds that it was a military matter to be settled by military authorities.

This is not only completely baffling. It is completely idiotic. The result was that while agreement was reached on occupation zones in Germany and also in Berlin (later confirmed, after slight changes had been made, at Yalta)—no provision at all was made for access to Berlin.

It was not until June 1945 that this vital matter was taken up in consultations among Gen. Lucius D. Clay, our deputy commander in Europe, Lt. Gen. Sir Ronald Weeks, and Marshal Zhukov.

The upshot was an oral arrangement—a handclasp, in effect—for supply corridors to Berlin.

This situation existed until after the Russian blockade of Berlin was broken by the Allied airlift in 1949. In May of that year a meeting of the foreign ministers of the four powers was held in Paris. They agreed that each in its Berlin zone would have an obligation to take the measures necessary to insure the formal functioning and utilization of rail, water, and road transport.

So we got something in writing at last. But as Hanson W. Baldwin, military writer of the New York Times, has pointed out, there was still no specific written delineation of the military corridors to Berlin.

These, briefly, are some of the mistakes—of lack of military-political coordination, of misplaced good will, of judgment, or misplaced trust—that have led to our present predicament.

I do not cite them as reason for dismay but as a challenge to unity of purpose and a determination not to make them again.

The May 27 deadline announced by Krushchev for getting our garrison out of Berlin and dealing with puppet East Germany for right of access, is not far away.

Some of our Senators are calling for what amounts to outright mobilization to meet the threat. It seems to me at this time that it is too dramatic and overt a move.

I believe Congress should vote a strong bipartisan resolution supporting fully the administration's stand on Berlin; that our military men should go quietly about making sure our powder is dry, and that the American people should be trusted by our leaders to face up to the facts, which they will.

The one miscalculation that we have the power to prevent the Russians from making—right now—is that we are divided in purpose.

## Debt Reduction and Government Spending

EXTENSION OF REMARKS
OF
**HON. BRUCE ALGER**
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, February 2, 1959*

Mr. ALGER. Mr. Speaker, as one who has long been concerned over our apparent unwillingness in Congress to play fair with generations of Americans yet unborn, February 25 was a red-letter day for me. I do not know when I have been more heartened or encouraged than I was on hearing two Texas colleagues come out squarely, not only for a balanced budget, but for a sensible start toward paying off our debt—toward lifting the staggering mortgage we have all too heedlessly placed upon our children's futures.

Though the plan specifically advanced the other day involves no new idea, as its sponsors freely concede, I truly believe the Wright-Ikard resolution points the way to solvency. Of course, pointing—just pointing—is really pretty pointless, unless one is willing to travel in the direction pointed. In government, as in each of our households, there is little difficulty in formulating a balanced budget. The trick lies in liv-

ing up to one—in showing enough fortitude to say "no" to our own wants and desires until such time as a family or a government is living on its income.

We are fortunate that, unlike many of the problems confronting Congress, this one is entirely uncomplicated; even a schoolboy knows that he cannot regularly spend more than he regularly takes in without facing bankruptcy. He knows, too, that incessant borrowing to meet regular current expenses will only beget the need for heavier borrowing to meet interest costs, and will ultimately destroy his credit, and with it, himself.

I am perfectly confident that the Wright-Ikard resolution will be roundly endorsed by those of us who have tried consistently, over the years, to tighten our governmental belt to the point of solvency. What encourages me mightily is the fact that, judging by the speeches made here the other day, the resolution will apparently command the support of a good many others, as well, some of whom have, to say the least, not acquired any reputation as nickel-nursers during their political careers. That strong support for fiscal responsibility should develop, and that it should spring from some of the quarters where it appears to be developing, is indeed most heartening.

But while this resolution, as I said, points the way, let us not kid the public about what it can actually accomplish. Any proposed budget whether submitted by a Republican or a Democratic administration, can be only a list of projected expenditures measured against an estimate of anticipated income. No administration can stipulate the amount of money to be expended nor can it determine in any way the amount of the Government's income. Only Congress can appropriate money, and even Congress can only estimate the anticipated revenues from taxes imposed by the Congress. Just as in our households, all the "budgeteering" any administration may do, and all our directions to a Treasury Secretary to include a sum for debt retirement in his anticipated expeses, will not mean a thing in the world unless we here in Congress show the fortitude and determination to live within our governmental income. We can neither wish nor legislate away the obligations we have already contracted, nor can we simply direct a Treasury Secretary to do something about it if we ourselves fail to show a self-discipline to match our heralded good intentions.

As a gentleman from Wisconsin so aptly put it the other day, "all new recruits to the economy block" are certainly to be welcomed with open arms by an encouraged minority and a grateful Nation; and surely no one would be so mean as to suspect that any member's votes might not jibe with his avowals. However, I can not help but recall a Democratic leader's recent admonition about setting a coyote to guard the herd of sheep. Well, our Federal expenditures are based on votes, not speeches; and after a series of sheep killings, most of us would tend to judge a dog's trustworthiness, not by the wag in his tail, but by the wool in his teeth.

## Unemployment Compensation

EXTENSION OF REMARKS
OF
## HON. FRANK M. COFFIN
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. COFFIN. Mr. Speaker, I wish to place in the RECORD, on behalf of my distinguished colleague from the State of Maine, OLIVER, and myself, a statement regarding the unemployment situation in Maine, and its implications regarding proposals for legislation to improve the unemployment compensation program.

The continuing unemployment crisis, with its attendant human suffering, waste of productive capacity, and demoralization of workers and their families, demands early action by the Congress. There is a danger of becoming callous to the needs of the millions of unemployed as the recession stretches out beyond the shock of the initial job losses. Within a month the temporary Federal program extending benefits to workers who have exhausted their eligibility under the unemployment compensation program will cease, even for those workers in the 17 States which have taken advantage of this gesture toward the plight of those without work through no fault of their own. As unemployment continues, unless necessary legislation to establish adequate benefit levels and payment duration is adopted, the recession will tend to be self-perpetuating as purchasing power is reduced even further.

In our own State there are some 40,700 persons unemployed—10.9 percent of the total working force. In some communities the percentage is two to three times higher. Of those without jobs, 19,400 are now receiving unemployment compensation payments. In less than a year, 32.7 percent of those eligible for unemployment compensation payments—9,900 of the jobless—have exhausted their benefits. This means an additional burden on towns for relief payments at a time when there are increased demands for education expenditures. On April 1, the beginning of the new benefit year, some of these workers will receive payments again, but at a reduced rate.

The Maine State Legislature has closed the door to any improvement in the unemployment compensation program at this time. By refusing to extend the benefit period, even on a temporary basis, and by refusing, for the second time within 1 year, to take advantage of the Federal emergency program, they have dramatized the need for Federal action to establish adequate standards in the unemployment compensation program to deal with extended recessions.

There are many ways of looking at the impact of unemployment. We are conscious of the 4.7 million persons without jobs across the country; the empty factories, sitting idle in a land of plenty; bills in the home of an unemployed worker, where even inadequate unemployment payments have stopped, where children are hungry and where hope is dim; and lost purchasing power which reduces demand for products and causes other unemployment. However we view the problem, a crying need confronts us. Congress must take action and adopt legislation for Federal standards for unemployment compensation and extended duration for the payment of these benefits. Such action will give our economy needed stimulus and it will restore hope where there is fear. The legislation which we are supporting will not increase the Federal budget and it will not contribute to inflation. It is a minimum step designed to combat the recession and provide a basis for confidence for those who are without work.

## Hon. Harry McGregor

SPEECH
OF
## HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 2, 1959*

Mr. MACK of Washington. Mr. Speaker, it is most fitting that we who knew him best should gather here today to pay tribute to the worth and works of our friend and colleague, the Honorable HARRY MCGREGOR, of Ohio, who died during last year's fall recess of Congress.

I often think that the roadbuilder is among the greatest benefactors of mankind. The roads they build make it possible for people to get together easier and more frequently to exchange ideas and obtain inspiration from one another. Roads also facilitate the flow of commerce and the exchange of goods, thus promote prosperity and improve living standards.

Our friend HARRY MCGREGOR was a roadbuilder, one of the best and most effective of them, and therefore by his life and works one of the great benefactors of mankind. In private life he was a road contractor and during his 20 years in Congress he was a member of the Public Works Committee and its Subcommittee on Roads.

In the 83d Congress Mr. MCGREGOR was chairman of the Roads Committee and was the author of the Highway Act of that year which paved the way for the greatest advance in roadbuilding this Nation had ever made to that time.

In the 84th and 85th Congresses HARRY MCGREGOR was ranking minority member of the Public Works Committee and along with the Honorable GEORGE FALLON of Maryland, they did more than anyone else to write the present expanded highway program into law. This law, in my opinion, is one of the greatest achievents of Congress in the past 25 years.

HARRY MCGREGOR by his tireless work in Congress for better roads has paved

the way for a stronger, more prosperous and happier Nation for generations to come. His work has made all the tomorrows of our Nation better than its yesterdays. Such a life is most worth while.

HARRY MCGREGOR departed life carrying with him the affection of all of us who knew him for he had brought joy into our lives with his friendly and sunny disposition. He left us possessed of our admiration and gratitude because of his large contributions as a legislator to the strength and betterment of our Nation and its citizenry.

## Garnishment

EXTENSION OF REMARKS
OF
### HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 3, 1959*

Mr. LANKFORD. Mr. Speaker, the last of a series of articles dealing with garnishment in the District of Columbia is inserted at this point in the Appendix of the RECORD:

ADVICE FOR BUYERS ON EASY CREDIT

(By Morton Mintz)

Here is some hard advice about easy credit—the kind offered by a troublesome few of the many firms in the field.

It is meant for you, if you are that bedeviled lowest man on the credit totem pole: You have little or no cash or savings and a small income, and you can't get normal credit. Garnishment or attachment of your wages, or even a freeze on them for a week to 10 days, would be a disaster.

The advice comes from Municipal Court judges and lawyers who have tried to help others like yourself learn that easy credit can be the hardest credit there is—when it is dispensed by the tiny minority of District businesses that exploit you and the law.

You want to buy a suit, say, or a TV set or a car. These things aren't absolute necessities, but you want them, and the only people who will sell them to you are the easy credit operators.

In many States you couldn't buy those things because the seller couldn't afford to take a chance on you. In those States, the law says in effect: This person can't afford these things; he needs the money for necessities; if the seller takes a chance on such a bad credit risk, the law is not going to help him collect.

But you are in the District. Here you might fall into the hands of the few easy credit firms that will try to sell you far more than you wanted in the first place. Short of a new law that would put a damper on selling like this, selling done in full knowledge that you cannot afford to pay, there's nothing to stop you from buying but you yourself.

The great majority of merchants, whether they offer regular or easy credit, will discourage you from buying more than you can afford. An unscrupulous few will do the opposite, because they know that if you don't pay they are ready to grab your wages with a court order to your employer.

But you find yourself in front of the store operated by one of the few. You don't know it, but the man who takes you graciously by the arm and pulls you inside is paid to do just that.

You pick out a winter suit. The salesman says it's all wool, but it would be wise for you to look for a label certifying that.

You are told the price is $60 (there may be no price tag). If you had saved the money to buy the same suit for cash, you could have gotten it for perhaps $40. There is a major reason why you should expect the price to be higher: Easy credit is expensive to the seller. His price must take into account, for example, interest, costly bookkeeping and debts that are never collected, even by wage attachment.

But you don't have $40 with which to buy the suit for cash. You agree to easy credit, say, $10 down and $2.50 a week for 6 months. If you figure out the final price, you will find that it is $75. So, right off the bat, that suit may be costing you $35 extra.

WATCH THAT CONTRACT

You will be asked to open an account—to sign a sales contract. This is vital: Do not sign until:

1. You are certain you will be given an identical copy.

2. You are aware that the name of another person on it may make him responsible for the debt if you don't pay.

3. You are aware your wages can be attached if you don't pay—sometimes if you miss only one payment.

4. You know the contract is completely filled in and shows a complete total for your purchase and the exact amount of the payments and just when you are to make them.

5. You get an agreement in writing that you can return any merchandise that you may find you don't want within a reasonable time.

Let's say you still owe $53. Something goes wrong—perhaps you are out of work unexpectedly—and you miss some payments. You go to the seller and ask for more time. Don't buy more. Don't relax if you are told not to worry; get an agreement in writing. But the creditor won't give you a written paper of this kind, you find, and he files a complaint against you.

DON'T GIVE UP

Within a few days, a summons will be served by a deputy U.S. marshal. Be sure that you get it, for it can be served on any adult on the premises.

You will do yourself the most harm at this point if you do nothing, if you just give up. The best thing to do is to get a lawyer. Persons without funds can get free legal help from the District Bar Association's Legal Assistance Bureau and the legal aid office, which both the DBA and the United Givers Fund support.

The bureau has an office in room 201 of the Municipal Court Building at Fourth and E Streets NW. It is open from 9:30 a.m. to 12:30 p.m. Monday through Friday. Legal Aid's office, at 805 G Street NW., is open from 10 a.m. to 4 p.m. Monday through Friday and 10 a.m. to noon Saturdays.

A lawyer will check the complaint against you to see if it is valid. If he gets assurances from the creditor, the chances are good that they will be in wrting. He may be able to work out a plan with the creditor that will avoid garnishment of your wages. He will advise you on how to avoid going still deeper into debt. Most of the time it is necessary that an answer to the creditor's suit be filed, and the lawyer will do it within the 20-day deadline.

TREADMILL OF DISASTER

If you do not get legal help—and at least three out of five garnishment victims do not—you may well be on treadmill to disaster because:

If no answer is filed to the creditor's complaint with 20 days, the court hands down a default judgment against you. The creditor now can move to attach your wages.

If the creditor, however, waits 90 days after the default judgment to serve a writ of attachment on your employer, the judgment can only rarely be attacked—even if it asks more than you owe, even if you did not buy the merchandise in the first place, even if the statute of limitations has expired on the debt. The full force of the law is now behind the creditor, and, one way or the other, you are going to pay the bill.

You may not know that you may be eligible for an exemption, but your lawyer does, and he will seek it for you if you are entitled to it. This is an especially tricky field, especially for a layman.

The law seems, at least to a layman, to say that your income is exempt from attachment if it totaled $400 or less in the 2 months before the attachment was issued. The idea is that you need $50 a week for food and shelter, and this sum therefore should be exempt from attachment. In actual practice, however:

Some municipal court judges agree that the first $400 is exempt and that only income in excess of that can be garnisheed.

Others interpret the law to mean that nothing is exempt if your 2-month earnings topped $400 even by a nickel. Your fate may well depend on which judge is on the bench when your case comes up.

That suit of clothes—remember it?—cost perhaps $35 extra to start with. You may lose time off from work trying to escape the garnishment mess. Your wages may be attached, not only for the $53 balance but for court costs and 6 percent interest.

You may lose your job if your wages are attached more than once.

You may be evicted from your home because you have no money for rent.

Your children may go hungry because you have no money for food.

Even if you are entitled to an exemption, your wages will be frozen for 7 to 10 days until the court decides that you are eligible.

The question for you, then, is, how easy is such easy credit?

## Debt Payment or Drift to Repudiation

EXTENSION OF REMARKS
OF
### HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 5, 1959*

Mr. WRIGHT. Mr. Speaker, as evidence of the continued and growing editorial interest in the necessity for a systematic program of national debt reduction and eventual retirement, I am taking the liberty of including here for the reading of those Members who are interested, a further editorial published by the Fort Worth Star Telegram and appearing Saturday evening, February 28:

DEBT PAYMENT OR DRIFT TO REPUDIATION

Congressman WRIGHT, after an interlude for the proposal to soak in, has renewed his insistence that the Federal Government must without further delay face the issue of national debt retirement.

Mr. WRIGHT, who has been joined by Representative IKARD, also of Texas, as cosponsor of a bill to establish a hundred-year debt repayment program, asserts that the public response to his suggestion indicates a willingness to assume the sacrifices and inconveniences involved in the payment of $2.8 billion a year to the $286 billion debt principal.

If the issue is not faced once and for all, he has told his colleagues in the House, "we shall never find it convenient or expedient when gaged in the crisis of the moment to assign a top priority to debt retirement. Until we have already crossed that bridge and resolutely set our feet in the path of regular annual payments we shall never find a good time to pay off the debt."

What must seem peculiar in the matter of the debt is the fact that most Members of Congress realize the necessity of some such program as Mr. WRIGHT has offered, but seemingly thrust from their minds the responsibility for turning thought into action. As time passes, management of a huge and growing debt will become progressively more difficult and its presence more menacing to the monetary and economic stability of the United States.

What the House is now being asked to signify is its opposition to a drift into policies of repudiation, which assuredly will appear if the debt continues to grow and if nothing is done toward its orderly retirement. Inflation which past policies of deficit financing of the Federal Government have created and aggravated is itself a form of repudiation. If the American people, because of inactivity on the part of Congress toward meeting its fiscal responsibilities, should lose confidence in the ability of the Government to preserve the value of money or its interest in doing so, the result would be disastrous.

It is not enough merely to balance a paper budget and to continue to provide the $8 billion a year in interest payments on the colossal debt. As long as the debt remains as a great weight hanging over the American economy, the danger to stability will continue to exist. What must be achieved before it is too late is simple political honesty. If, paradoxically, that may seem a political liability, Congress may reflect that it is easier to prevent the wreckage of a nation than to repair it.

## A True Tall Tale: How Your Fir May Grow

EXTENSION OF REMARKS
OF
### HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 2, 1959*

Mr. PORTER. Mr. Speaker, earlier this week, through the courtesy of the Blitz-Weinhard Co. of Portland, Members of the Congress received baby Douglas-fir trees. It was my privilege to send the Oregon do-it-yourself kits as part of the Oregon centennial promotion.

Considerable interest has been expressed in these seedlings, and I want to call to the attention of my colleagues a story which appeared in the Eugene, Oreg., Register-Guard of February 27, 1959.

The hero of the story is a giant 430-year-old Coos County Douglas-fir which stood 283 feet tall and measured 9 feet, 10 inches in diameter at its base. This will give you an idea of how big a Douglas-fir seedling can get. Of course, this tree I have referred to is not of either record height or diameter.

The story by reporter-photographer Phil Wolcott follows.

FOUR HUNDRED AND THIRTY YEAR OLD TREE FELLED FOR CENTENNIAL

(By Phil Wolcott)

COQUILLE.—Oregon's generous forest gave up another of its giants Thursday, and even though it didn't come easy, it was for the good of the State.

The prime Douglas-fir was 430 years old, cut to be displayed at the Oregon Centennial Exposition in Portland this summer. Actually, only the 40-foot butt section, 9 feet, 10 inches in diameter at its base, will go to Portland. The remained will go into production channels.

Loggers from the Georgia-Pacific Co. worked off and on for more than 3 hours under the peering eyes of about a hundred spectators and school children to fell the 283-foot tree.

Although not a record Douglas-fir for either height or diameter, the tree was saved from timber sale and extinction by Dick Tyndall, Bureau of Land Management forester, at a site 40 miles east of Coos Bay 4 years ago, because of its symmetry. Trees as large as 10½ feet through have been cut in Coos County, according to B. T. Vladimiroff, the man in charge of the Coos BLM office.

This log tapers from the 9-foot, 10-inch diameter at its base down to 6 feet, 8 inches at the other end of the 40-foot section.

Actually, the diameter was measured at the cut, which was at shoulder height.

The display section contains about 19,000 board feet of lumber, enough to build almost three 2-bedroom houses. The whole tree was estimated to have in it about 40,000 to 50,000 board feet, Vladimiroff said.

The display log is expected to come through Eugene aboard a special 12-wheel Southern Pacific car next week.

## Trade Hypocrisy

EXTENSION OF REMARKS
OF
### HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 4, 1959*

Mr. WOLF. Mr. Speaker, how we deal with our friends abroad is a very vital subject. The largest circulation newspaper in the State of Iowa, the Des Moines Register, on March 2 carried an editorial comment on this subject which should be required reading for all those in the United States who sincerely believe in their hearts that through international trade and understanding only can come true peace in the world. I am not suggesting which of the two transactions mentioned in the following editorial is right and which is wrong, but I think that the matter deserves our thoughtful consideration:

TRADE HYPOCRISY

Our foreign friends are not being wholly stubborn and unreasonable when they protest that the U.S. Government talks out of two sides of its mouth about encouraging more trade between nations.

The Tennessee Valley Authority is being subjected to heavy pressure and criticism for its recent decision to purchase a big turbogenerator from a British company.

TVA received three bids on this giant piece of electrical equipment. The British company's bid amounted to $13,140,700. Two American firms, General Electric and Westinghouse, submitted bids of $19,453,725 and $19,673,780, respectively. Purchase of the equipment from the British firm resulted in a saving of better than $6 million.

But TVA is a quasi-government operation so it has been subject to private and political pressure to buy American irrespective of the difference in cost.

Recently, the Army rejected a bid by a British concern for another generator to be installed at Greer's Ferry Dam in Arkansas. The bid was lower than any submitted by an American company. But the Army is more vulnerable to political pressure from Members of Congress than is the TVA. Three years ago, a similar howl was raised over the proposed purchase of electrical equipment for a Columbia River project, and a low British bid was rejected.

The argument most commonly made is that foreign purchases are against the Nation's defense interests. That argument is now being made in support of the application of lower quotas on importation of foreign oil. Usually it is a self-serving argument rather than one honestly in the national interest.

In the heavy electrical equipment category, however, foreign imports account for barely 1 percent of the total sales of such machinery in the U.S. market.

Even if imports were many times larger it would be difficult for American taxpayers, let alone foreign businessmen and governments, to understand why $6 million is not worth saving—especially when it might also produce an added dividend of understanding and confidence among our friends and allies.

## Mrs. Roosevelt Discusses Need for a Food Stamp Plan

EXTENSION OF REMARKS
OF
### HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mrs. SULLIVAN. Mr. Speaker, all of the Members of the House who served here last year will remember the debate and vote on my bill to establish a food stamp plan for the distribution of up to $1 billion worth of surplus food a year to needy Americans. That bill, numbered H.R. 13067, was before us on August 18, 1958, and the debate was printed partly in the RECORD of August 18 and the remainder in the RECORD of the following day. I urge new Members to look up the debate and vote in the RECORD for those days; I am sure they will find it informative and interesting.

The vote on H.R. 13067 was 196 yeas, 187 nays, 1 present, and 45 not voting. Although a majority of the Members approved the bill, it was called up under circumstances requiring a two-thirds vote, and so it did not pass.

It is worth noting, I believe, that many of the opponents of the bill last year are no longer Members of the House.

WILL SEEK EARLY CONSIDERATION

Mr. Speaker, I am planning to ask the chairman of the Committee on Agriculture to plan for early hearings on the same bill which a majority of the House voted for last year. This year, the bill is numbered H.R. 1359. It is

identical with the bill we had before us last August. It is practically the same as the bill which I first introduced on this subject 5 years ago, and which has been the subject of widespread interest throughout the country ever since.

The point is that we have food in such abundance it is considered a national problem, whereas it could be a great blessing if it were properly used to help feed not only hungry people abroad but millions of our own Americans not now receiving an adequate diet.

HELPING TO BETTER THE LIVES OF PEOPLE AT HOME

Earlier this week, in her column in the St. Louis Post-Dispatch, Mrs. Franklin D. Roosevelt discussed the need for a food stamp plan in a manner which, I believe, makes convincing reading. I might say that when her article refers to the cost of storing our surplus food as being $1 million a year, it is either a typographical error or the result of misinformation, for this figure understates the actual cost rather widely. Actually, the cost of storing our farm surpluses is now 1,000 times $1 million a year—it is now $1 billion a year. It used to run $1 million a day, but the President has informed us that in the coming fiscal year it will be about three times that amount, or $1 billion a year.

Otherwise, I commend Mrs. Roosevelt's article and I hope all Members will read it. It speaks of the need to use our surpluses to help better the lives of our own people. Following her article, I submit for the RECORD the full text of H.R. 1359, so that the details of the bill will be available to all those interested in this matter.

First, Mrs. Roosevelt's column from the St. Louis Post-Dispatch of March 2, follows:

DISTRIBUTING SURPLUS FOOD

(By Eleanor Roosevelt)

REXBURG, IDAHO, March 2.—I have several letters in my mail about the question of our national food surpluses. People read about the great surpluses piling up in storage in this country and about the efforts made to send this food to foreign markets.

The reaction seems to be twofold. There is a willingness to share with other people in the world, but also a realization that sometimes, due to private situations which have brought about financial difficulties, there are many people here at home suffering from undernourishment. I quote from a letter of a Michigan correspondent. He writes:

"What is this so-called surplus? I think it is food, butter, beans, rice, flour, fruit, etc., that people in the lower brackets of income cannot afford to purchase.

"Millions of people, the aged, unemployed, those unable to work because of disability, etc., are unable to buy this much-needed surplus.

"Why not release this so-called surplus to more of the American people? They would soon reduce this vast hoard of food that our Government has purchased at a cost of billions of our tax dollars and is now paying $1,000,000 a year for its storage.

"Retired and handicapped people 65 or over living on Social Security checks could be presented with a card that would entitle the bearer to purchase some of this food for about the retail price.

"This would quickly reduce the surplus and help the Government to obtain a part of the cost of its expenditure."

I feel quite sure this could be done now: something like the stamp plan used during the depression might be inaugurated. But this does not mean that we should not make a careful study of what we can do for the world as a whole both by selling and by giving where it is necessary.

It is always said that anything of this kind should not be entered into lightly because it might upset the economies of areas elsewhere in the world. This is true, of course, and we should cooperate with Food and Agricultural Organization of the United Nations and get some of our best financial brains to study the problem of distribution.

It may well be that we will need to enlist our farmers, who are both intelligent and literate, in a real campaign to change the surpluses that we now grow. We have a great range of climate. We can produce more meat, if needed, by feeding cattle some of our surplus grain. We can process certain things and send them to distant areas of the world.

All of this will require study, ingenuity and determination to be really useful to our fellow men who are hungry in other parts of the world. But it does not in any way prevent us from looking at our own home situation. Wherever surpluses can be used for helping to better the lives of people at home, it certainly should be done.

Mr. Speaker, the text of H.R. 1359 now follows:

[86th Cong., 1st sess., in the House of Representatives, January 7, 1959. Mrs. SULLIVAN introduced the following bill; which was referred to the Committee on Agriculture]

H.R. 1359

A bill to provide for the establishment of a food stamp plan for the distribution of $1,000,000,000 worth of surplus food commodities a year to needy persons and families in the United States

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That in order to promote the general welfare, raise the levels of health and of nourishment for persons whose incomes prevent them from enjoying adequate diets, and dispose in a beneficial manner of food commodities acquired by the Commodity Credit Corporation or the Department of Agriculture in carrying out price support operations or diverted from the normal channels of trade and commerce under section 32 of the Act of August 24, 1935, as amended, the Secretary of Agriculture (hereinafter referred to as the "Secretary") is hereby authorized and directed to promulgate and put into operation as quickly as possible, but not later than January 1, 1960, a program to distribute to needy persons in the United States through a food stamp system such surplus food commodities.

SEC. 2. In carrying out such program, the Secretary shall—

(1) distribute surplus food made available by the Secretary for distribution under this program only when requested to do so by a State or political subdivision thereof;

(2) issue, or cause to be issued, pursuant to section 3, food stamps redeemable by eligible needy persons for such types and quantities of surplus food as the Secretary shall determine;

(3) distribute surplus food in commercially packaged form, preferably through normal channels of trade;

(4) establish standards under which, pursuant to section 3, the welfare authorities of any State or political subdivision thereof may participate in the food stamp plan for the distribution of surplus foods to the needy;

(5) consult the Secretary of Health, Education, and Welfare, and the Secretary of Labor, in establishing standards for eligibility for surplus foods and in the conduct of the program generally to assure achievement of the goals outlined in the first section of this Act; and

(6) make such other rules and regulations as he may deem necessary to carry out the purpose of this Act.

SEC. 3. The Secretary shall issue, to each welfare department or equivalent agency of a State or political subdivision requesting the distribution of surplus food under section 2(1), food stamps for each kind of surplus food to be distributed, in amounts based on the total amount of surplus food to be distributed and on the total number of needy persons in the various States and political subdivisions eligible to receive such food. The food stamps shall be issued by each such welfare department or equivalent agency to needy persons receiving welfare assistance, or in need of welfare assistance but ineligible because of State or local law, and shall be redeemable by such needy persons at local distribution points to be determined by the Secretary under section 2(3).

SEC. 4. Surplus food distributed under this Act shall be in addition to, and not in place of, any welfare assistance (financial or otherwise) granted needy persons by a State or any political subdivision thereof.

SEC. 5. In any one calendar year the Secretary is authorized to distribute surplus food under this Act to a value of up to $1,000,000,000, based on the cost to the Federal Government of acquiring, storing, and handling such food.

SEC. 6. For the purposes of this Act, a needy person is anyone receiving welfare assistance (financial or otherwise) from the welfare department or equivalent agency of any State of political subdivision thereof, or who is, in the opinion of such agency or agencies, in need of welfare assistance but is ineligible to receive it because of State or local law.

SEC. 7. The Secretary of Agriculture, in consultation with the Secretary of Health, Education, and Welfare and the Secretary of Labor, shall make a study of, and shall report to Congress within six months after the date of enactment of this Act, on the feasibility of, the costs of, and the problems involved in, extending the scope of the food stamp plan established by this Act to include persons receiving unemployment compensation, receiving old-age and survivors insurance (social security) pensions, and other low-income groups not eligible to receive food stamps under this Act by reason of section 6 of this Act.

SEC. 8. There are hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, such sums as may be necessary to out the purposes of this Act.

---

## General Rawlings Relinquishes the Helm of the Air Materiel Command

EXTENSION OF REMARKS

OF

## HON. GEORGE H. MAHON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 4, 1959*

Mr. MAHON. Mr. Speaker, news stories are appearing in the press this week on the imminent retirement of Gen. E. W. Rawlings, distinguished commander of the U.S. Air Force Air Materiel Command. Ed Rawlings, as we

have called him in Washington for many years, nearly 8 years at the helm of this vast Air Force logistics system, has exemplified that rare and fortunate phenomenon, the right man in the right spot at the right time. General Rawlings was appointed as commander of the U.S. Air Force Air Materiel Command at the time of the Korean war. His searching inquiry into the logistics operation was the result of the careful grooming he had had through a number of key Air Force staff positions. On more than one occasion General Rawlings has said that it was clear to him that the Air Force had the responsibility for building and maintaining for the indefinite future a capability for fighting both global and limited wars. Also, he has said, he realized that logistic support of that capability must be progressively molded to a continual and extremely rapid evolution of weapons and strategies, and that a new order of speed, flexibility, and precision, which had been undreamed of in the past was essential. He has also said that he realized very early the need for any logistic system to be economically feasible and supportable for the long, hard haul.

To the task of creating the logistics system which he visualized so clearly, General Rawlings brought a depth of experience and a sense of dedicated urgency which had been evident in his previous assignments. He had, and has continued to have, a seeking receptivity to new techniques, to new ideas, and to new potentialities. He brought with him to his high post as Commander of the Air Materiel Command a supurb gift for management, including the ability to fuse diverse elements into a single combination for the promotion of objectives.

General Rawlings' genius has had its impact upon the entire Air Force logistics system. He has done a good job. We, as a Nation, have been most fortunate in having a man of Ed Rawlings' caliber, a man with his insights and capabilities ready and available to lead in this complex Air Force operation. In this period of 8 years, the concept of war and the ways of fighting war, the tools, techniques, and the mechanics involved, have changed a great deal. General Rawlings has been at the forefront of the thinking, planning, and testing that has gone on, and he has insured that Air Force logistics have kept abreast of new techniques and concepts of war as these have evolved. Of necessity, General Rawlings, in his job, has spent a lot of money, but in his operations he has saved vast sums by his ability to cast aside quickly outmoded techniques. From a logistic standpoint, he has spent public funds on future requirements and not on devices and supplies overtaken by events.

Prior to his assignment as Commander of the U.S. Air Force Air Materiel Command, General Rawlings served in Washington for a number of years. He frequently appeared before the House Committee on Appropriations in his capacity as Air Force budget officer, Air Force Comptroller, or otherwise. His work was impressive; his high dedication to national defense was evident; his ability was outstanding.

Aside from all other considerations, General Rawlings will be remembered here for the warmth and charm of his personality and the wholesomeness of his character. He is, first of all, a gentleman in the finest American tradition. In my service in Washington, I have seen many able military people come and go, but I have never encountered a finer soldier and citizen than Ed Rawlings.

Mr. Speaker, I now wish to insert in the RECORD a story about General Rawlings which I observed last night in the latest issue of Time magazine. It is as follows:

BIG ED'S GOODBY

On the brass-spangled parade ground of Wright-Patterson Air Force Base near Dayton, Ohio, one day last week, a burly, handsome four-star general stepped forward to face Gen. Thoms D. White, Air Force Chief of Staff. Moments later, Gen. Edwin W. Rawlings was sporting a new piece of hardware on his chest; a first oak-leaf cluster to the Distinguished Service Medal. With this parting gift, Ed Rawlings officially concluded 30 years of extraordinary service in the Air Force, went on his way at a youthful 54 to a civilian job as director and financial vice president of General Mills. Left behind: a Rawlings-rejuvenated Air Materiel Command, the global 200,000-man complex charged with buying, storing, supplying, and maintaining all equipment used by the Air Force.

"The most important thing we've done," says Rawlings, who can look deceptively easygoing with pipe in hand and feet on desk, "is to cut the time in getting our product to its ultimate consumer." The product can be anything from a 4½-ton Atlas missile to a bucket of paint; the consumer can be a Strategic Air Command grease monkey in Morocco, an Air Force fighter squadron in Tokyo, a missile-testing crew at Cape Canaveral. Adds Rawlings: "Since 1951 we've just about equpped the Air Force with jet equipment. We've written contracts for $93 billion and spent about $83 billion. For that we've got an Air Force that's maintaining the peace in the world."

UNIQUE TALENT

Minnesota-born Ed Rawlings was a good pilot long before he was a management man. He got his wings in 1930, that year won the Distinguished Flying Cross for his part in the rescue of an air crew that crashed off the Hawaiian Islands. He pulled a ripcord twice to save his neck: in 1932 he bailed out of his burning biplane at 500 feet, and in 1940 he parachuted from a storm-battered fighter. In 1954, as a three-star general, he won the Soldier's Medal for helping to save the pilot of his B-17 when the plane caught fire on landing.

Pilot Rawlings early began to show a unique talent in the management skills that the Air Corps needed more than pilot's deeds. In 1939, after a tour in the administrative branch in Matériel he took a master's degree (cum laude) at Harvard's Graduate School of Business Administration, worked on Air Force logistics in World War II, later set up the division responsible for postwar production cutbacks and contract terminations. By 1946 he was the Air Force's first comptroller; he took command of the Air Matériel Command in 1951.

SHORTER PIPELINE

In quick time he and his carefully selected staff junked the outdated system of stockpiling millions of items without much regard for inventory costs, obsolescence of models or parts. In its place they aimed at shortening pipelines from manufacturers, installed carefully scheduled airlifts and sealifts and huge computers (including the encyclopedic Univac), tied their depots and control points with a network of electronic transceivers that punch cards automatically with orders.

"Largely due to his guidance and leadership," said General White, "spectacular increases in the effectiveness of Air Force logistics have been accomplished through new management methods, concepts and philosophy, and thus the Air Force is able to match the tempo of the jet missile and space era."

## The Fight Against Diversion

EXTENSION OF REMARKS
OF
## HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, February 11, 1959*

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the February 28 edition of the Milwaukee Journal, entitled "The Fight Against Diversion."

In testifying recently before the Committee on Public Works, I expressed my opposition to the proposed increased diversion to the Chicago Sanitary Canal, pointing out that, in the opinion of many impartial observers, no necessity has been established for the enactment of this proposal. I still hold those views and I would like to commend the Milwaukee Journal's editorial to the earnest consideration of the membership of this body:

THE FIGHT AGAINST DIVERSION

"Water steal" is the convenient and forceful epithet often hurled at Chicago's unceasing demand for more Great Lakes water to be diverted into the Mississippi watershed.

It's fair enough, for there really is a major issue of morality in the effect of diversion on the pocketbooks and property rights of the rest of the Great Lakes area. Indignation over this issue pervaded the antidiversion rally of public officials just held at Detroit and beamed at Washington, where a new diversion bill is pending.

Chicago wants to use Lake Michigan to flush the untreated portion of its sewage down the Illinois Waterway, instead of building complete treatment works. This said the law director of Cleveland, would be a subsidy paid by the rest of the Great Lakes and seaway region, just as surely as if we handed Chicago the money that it doesn't want to tax itself for.

Spokesmen for New York State and for Hamilton, Ontario, Canada's main ore receiving port and steel producing center, itemized how the subsidy would be paid, in the effects of artificially lowerer lake levels—in less cargo per trip, reflected in higher shipping costs and higher steel prices, chain reacting on many other prices; in hydroelectric power losses; in impairment of both public and private investments in harbor facilities, powerplants, vessels, canals, and dredged channels, etc.

Milwaukee Port Director Harry Brockel dramatized the costs of addiaional dredging to maintain harbor depths. Silt used to be removed for as little as 30 to 40 cents a cubic yard. Blasting solid rock, as in the Detroit River right now, currently runs up to $21 a cubic yard—a charge against every American taxpayer. As Wisconsin's Governor Nelson put it, an easy inch off the top for Chicago is a costly inch off the bottom for the seaway.

Foes of the water steal attempt are in the curious position of defending even Chicago's own port, and its related economy, against the damage that Chicago itself would do. Harbor and shipping interests around the foot of the lake, Brockel reported, are muzzled by this obsession of Chicago officialdom. Their silence further discredits the diverison cause.

The needful aim of the Great Lakes Harbors Association, in hurriedly calling the Detroit conference, was to try to catch the ears of a largely indifferent Congress with these ethical implications—as well as the economic, legal, and international ones—in the diversion bill.

## Fight To Save Reno From Freeway Destruction

EXTENSION OF REMARKS
OF
## HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. BARING. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to direct attention to a prepared statement of mine before the Special Investigating Subcommittee of the House Committee on Government Operations investigating the Federal Interstate Highway selection through Reno-Sparks-Verdi, Nev.:

BARING FIGHTS TO SAVE RENO FROM FREEWAY DESTRUCTION

Mr. Chairman, colleagues and citizens of Reno, we meet here today in defense of the city of Reno. We here constitute a vanguard to stave off a concrete onslaught upon the Biggest Little City in the World.

We are gathered to prevent a project that would wipe out every vestige of industry that Reno has today, and it would forevermore block a further advancement of industry in this city.

I intend to prove that the Third Street route is in violation of the Federal-Aid Highway Act of 1956, which in part reads that "Any State highway department which submits plans for a Federal-aid highway project involving the bypassing of, or going through, any city, town, or village, either incorporated or unincorporated, shall certify to the Commissioner of Public Roads that it has had public hearings, or has afforded the opportunity for such hearings, and has considered the economic effects of such a location."

I do not believe that any consideration has been given whatsoever to the economic effects of the Third Street location.

The situation we face today had its beginning back in 1955. The issue then played a very important part in the city elections of that year. Mr. Len Harris, who was a candidate for the important post of mayor of the city of Reno, declared that he would never tolerate a dual-lane highway through Reno.

Those aspiring to be city councilmen, with the exception of Mr. Mastriani, who was later appointed, stood firmly on their denunciation of a transcontinental highway bisecting this city.

I propose to introduce in evidence during this hearing newspaper advertisements to support these statements. After the elections were over things were different. When the time came to decide upon the routing of the freeway through or around Reno, the State highway department employed a firm of engineers to survey the several possible routes. The project cost the taxpayers $86,000, and their report rocked the people of our city like a supersonic blast.

Court Street had been recommended as the path of the interstate defense freeway.

You all remember what happened following that report. Many of you here in this room were up in arms. Some of you, who now belong to the Realistic Freeway Association, realized that your properties were endangered and you fought bitterly to prevent such a catastrophe. The result was a compromise. Raymond Smith, who decided to migrate to our city, recommended Third Street as such a measure. I cannot believe that he had any notion of what this would entail from an engineering standpoint. One bridge alone, in the form of a Y must diagonally cross the Truckee River at the city police department building at a cost of some $2½ to $3 million.

Eighty-six thousand dollars flew out the window, because the firm engaged by the State highway department did not even survey Third Street as a possibility.

During the events which led to the selection of Third Street, letters of protest began to flood my office. People of Reno pleaded with me to stop William Howard Smith, field enginer of the Bureau of Public Roads, from throwing his weight around, as they expressed it. They accused Smith and Houston Mills, our State engineer, of acting like a couple of dictators.

It is not uncommon for people to petition their Representative in Congress when things are not going well, and it was only in the line of duty that I responded to the voice of three-quarters of the population of Reno in their cry for help. I, too, am a taxpayer and a citizen of this city. As such, I opposed any routing of the freeway through town, and will fight to the end to prevent such a calamity, because once the freeway is built it is too late. The damage is done. Reno is fenced in and cannot expand. Its industry is knocked out. Homes are destroyed. Businesses are destroyed. Men are thrown out of jobs and many heartbroken citizens of Reno, who have worked hard all their lives to build the city will never again invest their money and their efforts to rebuild what they have lost.

Yes, I will fight, and fight hard, not only as your Congressman, but as a member of your community and my community to preserve our city against the onslaught of a concrete monstrosity.

However, beyond representing the will of some 17,000 of the people of Reno, there was another responsibility that I had to face. The Congress of the United States is charged with the responsibility of policing the expenditure of Federal funds. As you all know, the interstate freeway project is to a very large extent to be financed by our Federal Government. In the State of Nevada, some 95 percent of the cost of this freeway will be assumed by the Bureau of Public Roads in Washington. This money is appropriated by Congress, and I am a Member of that body. If I have been accused of interfering in a local matter the accusation is unfounded, and without the support of fact.

Realizing its importance to the defense of this country, the Congress of the United States appropriated a vast sum of money, which has now been raised to $27 billion, to build an interstate freeway system across the United States.

According to reports of the national chamber of commerce, the program has already bogged down because of local selfish interests. Some cities have attempted to exploit moneys appropriated to defend our country by diverting such funds to city improvements. Some city fathers have put their hands in the grab bag for local construction, because their city treasuries were exhausted. This happened right here in Reno. Certain city officials boasted that the only way to build railroad overpasses was with Federal funds. This greed has already taken a tremendous toll, both in loss of time and in increased costs.

To the north of Reno there is a natural bowl. The entire distance from Verdi to Vista can today be traveled by jeep. The inside rim of this bowl is referred to as the north rim route. It is approximately 17 or 18 blocks north of the post office in downtown Reno. It forms a natural line for the construction of a transcontinental defense highway.

Not only this, but the people of Reno want the freeway to skirt the city. I know this, because since I took up the fight some 3,500 people have written me commending me for the stand I have taken. These letters came from all over Washoe County, as well as other counties throughout the State—not just the people along the Third Street line.

As a child I fished the Truckee River from Lake Tahoe to Vista, and I do know every bend along the way, as many of you do. Also, as a college student, I took a course in geology, and I have prospected the greater part of Peavine Mountain. Two of my four years in college were in the department of engineering, and I certainly understand the topography of Reno. If the freeway, starting from the State line, followed a northeasterly course to skirt Verdi to the north, the entire route could be constructed without superstructures, and with the use of a couple of steam shovels and bulldozers the entire 19 miles could be made ready for concrete in short order, and the construction could be completed by snowfall of this year to service the winter Olympics.

There is no sane reason for following scheme J. That scheme crosses a deep ravine, and would require the construction of a trestle 125 feet high—as high as the Mapes Hotel—at a probable cost of $3 million.

There is no justification at all for the construction of an elevated freeway through Reno, at a cost of approximately $40 million, or $8 million per mile.

The Third Street line includes 13 turns, several bridges, and it has been said by an expert that, as designed, it would give a hotrodder a loop the loop, shoot the shoot, cheap thrill, driving 40 miles per hour.

To offset the destruction of the city, the destruction of industry, the destruction of homes, the destruction of established businesses, and I could go on, the Bureau of Public Roads has, in approving Third Street, relied entirely on what they term a cost-benefit factor. The benefit assigned to this factor is derived from a traffic study made back in 1955, and is nebulous at best. The cost is conservatively four times greater than the north rim routing.

It is amazing that such a nebulous benefit factor conceived 5 years ago can have the force to offset the expenditure of $30 million of taxpayers' money.

But how was the decision reached to follow scheme J and the Third Street line through Reno?

As you all know, the selection of scheme J was accomplished long before the so-called public hearings were held in Reno. Many Third Street advocates attended the Verdi hearings.

The board of county commissioners had rejected scheme J. It was not feasible. It would follow the sheltered side of the mountain, where snowdrifts up to 20 feet. The cost would be prohibitive.

However, on August 5, 1957, Ferin, Bureau engineer from San Francisco, wired William Howard Smith, Bureau of Public Roads engineer stationed at Carson City, that no Federal funds would be made available except for scheme J.

This information was immediately communicated to Commissioner Peterson, and a

special meeting of the board of county commissioners was held, at which meeting Peterson explained to the other board members that he had been notified that the Bureau of Public Roads would only support scheme J.

They then passed a resolution reversing their previous decision, and subsequently scheme J was submitted through the State highway department to the Bureau of Public Roads in Washington, requesting Federal approval. Third Street advocates were successful. They had gotten a foot in the door and had practically railroaded a downtown routing of the freeway through Reno.

Then followed the so-called public hearings at Reno. To say that inadequate notice was posted in the local papers is the understatement of the year. As was the case at Verdi, no mention whatever was made of any specific route. The papers did carry a notice that consideration of several proposed routes would be the subject of a public hearing 4 or 5 days later.

The meeting was a farce. Third Street supporters immediately stole the show. They were given every opportunity to speak their piece, and the mayor was booed off the stage, for belying his campaign promises. As the day faded, the people became tired and restless, many having already left. Members of the United Freeway Association were finally recognized late that evening, but were given admonition to make their stories brief. Actually, in the presence of Bureau of Public Roads officials, the Chair explained that no routing outside of the city of Reno was under consideration, as the Bureau would not provide Federal funds, except for a selection through the city.

Furthermore, the transcript of the hearings included the startling information, evidenced by a statement made by Mr. Holcomb, assistant engineer, who was in charge of the hearings, that he did not know where the north rim route was.

The Third Street selection was dressed up like a Christmas tree in all its tinsel and spangles. The people were told that it included railroad overpasses, and, as a matter of fact, this was the biggest selling point. For years, north and south bound traffic has been held up by passing trains, sometimes by long and slow moving freight trains. At last Reno would be rid of this bottleneck. This was the big selling point, yet after the Bureau of Public Roads in Washington denied the Third Street routing as submitted and explained to Mr. Houston Mills, our former State engineer, that the Federal Government could not build railroad overpasses, Mills took the trimming off the tree and returned the Third Street proposal to Washington without the railroad overpasses, and deliberately omitted a new public hearing. This was a flagrant violation of the Federal law which requires that a public hearing be held and a study be made of the economic impact for each new proposal submitted. I have already quoted the law.

Even though the overpasses were used to bait the public, he claimed that the omission of these overpasses did not materially alter the original Third Street plan and that it was not necessary, therefore, to hold new hearings. This was typical of his insolent attitude and indifference toward the people of Reno.

He did, however, turn to the city council, the board of county commissioners and the State highway board for their approval, so he must have recognized that a new proposal existed.

The same Mr. Mills, who has consistently refused to survey the north rim route at the request of the people of Reno, stated publicly that he did not believe the Bureau of Public Roads was right in refusing to build railroad overpasses, but, in any event, he would find funds from other sources, such as primary and secondary funds, to build them with.

I maintain that the State highway department did not follow Federal law in resubmitting Third Street without a new public hearing, and that there have been irregularities throughout all of the events leading to the approval of the Third Street line.

I want to call it to the attention of this committee that the people of Reno are fighting mad. Many of these people are fighting for their very homes. They are fighting to protect their city against the small handful of men who have always dictated what shall be and what shall not be done.

Yes, for the first time in their lives, the people have stood up against the city fathers. This issue is bigger and hotter than any issue that has ever faced the people of Reno.

It was made an election issue. Two county commissioners, a governor, a State controller, an attorney general, and one city councilman who sought a position in the State legislature, were defeated at the polls—this because they supported the Third Street routing, while at the same time my vote increased in Washoe County by some 8,500 votes, each of them a vote for the north rim route.

Had the freeway question been submitted to the people as a referendum, the Third Street issue would have then been resolved in triumph for the United Freeway Association, and the citizens of Reno.

Immediately after the election, with a new highway board, consisting of Governor Sawyer, Attorney General Foley, and Controller Keith Lee, I asked the Bureau of Public Roads to stop all further work and to freeze Federal funds until the new highway board could either affirm or disaffirm the decision of the old board.

Congressman BLATNIK, chairman of the Government Operations Subcommittee on Legal and Monetary Affairs, formally requested Mr. Turner of the Bureau of Public Roads to issue a stop order. When he refused, Congressman DAWSON, chairman of the full Committee on Government Operations, made a similar request. I will not say here, but I have a strong suspicion that it was not until a person even more influential than either of these two gentlemen interceded that Mr. Turner finally agreed to withhold Federal funds until this issue could be decided.

I had already asked for a congressional investigation of the whole mess, based on an excessive and unwarranted expenditure of Federal funds, as well as irregularities in the selection of the Third Street route. Nevertheless, Mr. Houston Mills, our former State engineer, stated publicly that he didn't care whether BARING had asked for a congressional investigation or not, he was going to build the Third Street Freeway, and went right ahead.

As a matter of fact, word has come to me from several different sources that the firm employed by the highway department is still surveying, driving stakes, and otherwise spending Federal funds, so in addition to other charges I have made, I must now charge that department with contempt of Congress.

Before closing I should like to leave with you a few thoughts. Picture, if you will, the Third Street Freeway come to fruition. There are two ammunition depots in the proximity of Reno. Ammunition trucks heavily laden with supplies and ammunition would rumble through the heart of town. Large tankers, transport trucks, and other vehicles practically bumper to bumper would roar their presence.

Elevated sound becomes more intense as it blankets the city. Many of the larger vehicles parallel the noise of our transport planes, and we all know the disturbance of a single plane flying over town. This noise would render motels, rooming houses, and homes absolutely valueless, because people cannot sleep in the vicinity of an elevated freeway.

Yet the owners of this property have no redress at all under our statutes. Only property actually taken must be paid for.

Picture again what might happen should a gasoline truck explode—one did on the Los Angeles Freeway only several months ago—we would have a burning inferno in downtown Reno.

More than ever before, we recognize the need of a defense highway. The Congress recognized this need when it appropriated $27 billion for its construction. Ammunition must be transported. In the event of an emergency possibly the entire population of towns must be evacuated. Foodstuffs must be brought in. We need a transcontinental freeway, but we certainly don't need all of this in the middle of our city, and parallel to a transcontinental railroad. One bomb could knock out both.

I have received several letters, with documented statements of the American Medical Association, stating that noxious gases emitted from this tremendous trucking industry would be conducive to the occurrence of cancer. There is a far better opportunity for these gases to dissipate out of the city in the open spaces.

In summary, only $13 billion were originally appropriated to support the Federal highway program. This sum has already been advanced to $27 billion.

It is in instances like those we face today, asinine plans that involve expensive trestles, river crossings, unnecessary elevated sections and the acquisition of expensive real estate to clear rights of way, that costs pyramid.

The freeway has not yet been built through Reno, but there is one thing that is certain—when it is built it will be built with your money.

Are we as taxpayers going to be coerced into spending millions of dollars unnecessarily to serve the selfish interests of a few individuals?

I have been in this fight for a long time, and I can assure you I have been thoroughly castigated by the Reno press. For 10 months there wasn't a newspaper that didn't carry a headline, "BARING Blasted." I became the most blasted man in the county. Even the Bureau of Public Roads engineers called me a rabble rouser, and quite a few able and responsible citizens of Reno have also enjoyed the same treatment from the press.

I have also been accused by my opponents of using the freeway issue for political gain. If fulfillment of my oath of office is politics, then politics is the science of government, rather than the means of gaining political favor.

Ladies and gentlemen, and my colleagues, if this committee permits the Bureau of Public Roads to construct a freeway through Reno at the cost of $8 million a mile, and if this committee permits the Bureau of Public Roads to continue to whitewash every action on their part, be it in wisdom or in ignorance, then there will be a thousand Renos across the entire country, exploiting Federal funds to fulfill local selfish interests. Then the Congress will have to appropriate many more billions of dollars, because the Federal road system will reach astronomical proportions, and the $27 billion now appropriated will not begin to scratch the surface. It is up to this committee and the citizens of Reno to prevent this. It is up to us to lend fulfillment to the purposes for which the Federal road program was conceived, and it is up to this committee to insure the construction of a defense highway around Reno, rather than permit the destruction of the homes of those very people who must pay for it.

## Centennial Birthday of Famous World Scientists To Be Observed on May 11

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Mr. John C. Sciranka, editor, of the American Friends of Slovak Freedom, which appeared in the Bethlehem (Pa.) Bulletin of February 6, 1959:

CENTENNIAL BIRTHDAY OF FAMOUS WORLD SCIENTISTS

(By John C. Sciranka)

On May 11, 1959, the scientific world in general and the Slovaks in particular will pay tribute to two great scientists—Dr. Aurel Stodola and General Milan R. Stefanik, who is better known as he cofounder of the first Czecho-Slovak Republic and also French general, astronomer, organizer of famous Czecho-Slovak Legion and member on the war staff of General Pershing. General Stefanik died in a tragic aeroplane accident on May 4, 1919. This is the 40th anniversary of his tragic death, mourned by all the freedom loving Slovaks all over the world.

Dr. Aurel Stodola is less known, therefore, let us state some facts on his most interesting life.

He was born in Liptovsky sv Mikulas, Slovakia (Czecho-Slovakia) on May 11, 1859. After his education there, he went to Prague in 1892 and joined the well known Rouston & Co. In 1892 he went to Zurich, Switzerland, where he became professor of the Technological Institute. There he spent the rest of his life.

His many books, and especially the 1,356 page book, published in 1927 by the McGraw-Hill Book Co. of New York City with 1,565 illustrations on the steam and gas turbines, is known as the bible of this art.

Famous German engineer, Dr. Lowenstein, who translated Dr. Stodola's works from German into English, writes this in the preface of his book "Steam and Gas Turbines" with a supplement on the "Prospects of the Thermal Prime Mover," by Dr. Aurel Stodola, professor at the Polytechnikum in Zurich, Switzerland.

Professor Stodola is recognized as one of the leading authorities on steam turbines, and his book on this subject has for years been considered the bible of the steam turbine art. No other book has in any way approached the completeness, thoroughness and the clear presentation found in his work. The book may well serve as a model of how an engineering subject should be treated. All the necessary features of steam and gas turbine study, namely the theoretical, the experimental, and the constructive, are presented completely and clearly.

"Knowing the need for an authoritative book in English on steam and gas turbines, the translator, who himself has devoted over 20 years to specializing in this field, has again translated Dr. Stodola's book. The first translation was made over 10 years ago and was based chiefly on the second German edition. The present book is an authorized English translation of the sixth German edition."

The D. Van Nostrand Co. of New York City, also published Dr. A. Stodola's works way back in 1905 (434 page book with 241 illustrations). J. Springer wrote several books on the life of Dr. Stodola.

He was honored by the University of Zurich, also the Hannover Technology and Prague University.

Dr. Stodola died during World War II (1942) when we were too busy to pay him honor. It is proper that we pay him tribute during the week of May 4 and May 11, 1959, when we wish to honor both of these great scientists—General Milan R. Stefanik and Dr. Aurel Stodola for their great contributions to science, humanity and freedom of the world. Your kind cooperation will be highly appreciated.

## What Is Brotherhood to Me?

EXTENSION OF REMARKS
OF
### HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. LINDSAY. Mr. Speaker, I am pleased to bring to the attention of my colleagues the prize-winning speech in an oratorical contest sponsored by the Benjamin N. Cardozo Lodge of B'nai B'rith, New York City. The winner of this contest was Miss Marcia Metrinko, a student at Mother Cabrini High School in New York City. I was honored to have been one of the judges of the finals held in New York City on February 19.

Each of the students in the finals has survived a long ladder of eliminations; each of them made splendid presentations both in substance and delivery. Miss Metrinko's performance was outstanding, demonstrated by the fact that she won.

The subject of the contest was an original statement on "What Is Brotherhood to Me?" Everyone who heard Miss Metrinko was deeply moved by the quality and depth of her oration.

The Benjamin N. Cardozo Lodge of B'nai B'rith, its president, Morris Goldman, its secretary, Frederick Berman, and the oratorical contest director, Louis Grossman, are to be congratulated for the excellence of the program:

WHAT IS BROTHERHOOD TO ME?

(By Marsha Metrinko, Mother Cabrini High School, New York, N.Y.)

What is brotherhood to me? First, it is a cluster of tender memories. I can still recall the playmates of my childhood. See what a happy picture we make as the sun lights up our laughing faces and the wind blows through our flying hair. The flaxen braids of Gretta and the glossy black curls of Violetta are close as the two little heads bend over a picture book. Giuseppe and Vladimir are playing with the school team while Chang-Shu, Carmencita and I call out our admiring encouragement. Then hand in hand we skip together toward the home where a smiling figure greets us at the door. It is my mother. Pointing to slant-eyed Chang-Su and dark-skinned Violetta, I whisper, "Mother, why are they so different?" "Would you like to play a piano that had only one note, or a fiddle with only one string? Would you like your garden to have flowers of only one color?" she asks. "You see, dear, God planted red roses, yellow daisies, white carnations, and black orchids in His garden. You and your friends are each a different colored flower blooming there beautifully. And God, the good Father, loves all of you."

But I was soon to learn that all people were not as understanding as my mother and as mutually affectionate as my playmates. The world before me was full of ignorance, prejudice, and problems.

So brotherhood became to me a series of questions.

A Negro family moves into a house near Levittown—so near to the City of Brotherly Love. Why must this respectable family, a potential asset to any community, be driven out by violence lest a restricted area become unrestricted?

Why should a highly skilled applicant be refused a job because of a thick accent and different features? And why can we so often find on the supply closet of a business establishment a sign which reads, "Mr. Negro, B.A., M.A., Ph. D., assistant janitor"?

Groups of children stand knocking at school doors just to plead for the equal opportunities in education that are theirs by right. The doors are abruptly locked in their faces. When, from the highest authority, an order comes commanding that the doors be opened, then the whole school system is closed. Why?

A man suffering from almost any phobia will seek psychiatric consultation. But one suffering from a phobia for certain types of his fellow men will set himself up as a leader preaching his irrational gospel of hate. Why can we not convince him and others that he is ill?

We know that the Kremlin's strategy is to divide and conquer. Then why do we continue to permit the weakening of our bonds of unity at this crucial hour?

What is brotherhood to me? It is the answer to all of these questions. It is a hymn of love to be sung by all human hearts. Consider a choir. There are altos, sopranos, tenors and mezzos; but all voices blend in a melodious unison. Could not all of us under the leadership of the Greatest Director of all, sing the sublimest hymn of all—the song of the universal brotherhood of man through the fatherhood of God? This hymn of brotherhood should be lived daily, hourly—in our family relationships, in extending a helping hand to a new neighbor, in giving a job to an immigrant or an ex-convict, in voting into office the fairminded advocate of American ideals.

May we never find the strains of this great hymn of brotherhood silenced in our hearts. But if ever feelings of repugnance should blind us to the justice due a weaker brother, let us not be blinded to the angel who stands at his side. It is the angel of the Lord, who reminds us of the Great Commandment of God—Thou shalt love thy neighbor as thyself for love of God; for "Whatsoever you do to the least of these my brethren, you do it unto me."

## Bill Introduced To Improve and Extend Rural Mail Delivery

EXTENSION OF REMARKS
OF
### HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. ANDERSEN of Minnesota. Mr. Speaker, I am today introducing a bill designed to correct an inequity in our rural mail delivery service that has existed for many, many years.

The present Postmaster General has effected more improvements in rural

mail service during his term in office than any other Postmaster General in my recollection. In my district alone, literally hundreds and hundreds of farm families have in the last few years seen desirable changes made in their mail delivery. These changes have included more expeditious handling of the mail in transit, greater efficiency in physical facilities of the post offices receiving and delivering mail, rural route extensions, and driveway delivery.

Having received my own mail on a rural route the better part of my life I know how much good mail service means to farm people and we are deeply grateful to Postmaster General Arthur E. Summerfield for the tremendous improvements he and his staff have made. We are also obtaining approval of house delivery in more and more of our towns and villages and that is a service long overdue in rural areas.

It will be recalled that one of the first improvements instituted by the present Postmaster General in behalf of farm people was the change in number of patrons required for rural route extensions from the previous rule of four to a mile to a more realistic three to a mile. Then, just last year, he announced that extensions would be approved on the basis of two families to a mile including retrace.

Regrettably, there are still many farm families who have to walk or drive long distances for their mail simply because they do not in their immediate area meet the test of two families to a mile of rural route. In some instances they fail to qualify by only a small fraction of a mile and it is inequitably unfair for them to have to go six-tenths of a mile or more for mail while a neighbor just one-tenth of a mile off the old route has his mail delivered to his driveway under the newly authorized extensions.

My bill proposes to correct most of these inequities and, at the same time, adhere to the Postmaster General's policy of providing rural mail delivery on routes averaging two families to a mile for the entire distance traveled. To illustrate the inequity I seek to correct, under present regulations a new route may be established or an extension approved if the new route or the extension will serve an average of two patrons per mile. However, where a route already exists extensions may be approved in only those instances in which the extension, by itself, will serve an average of two patrons per mile. This policy prevails regardless of the number of patrons per mile of the old, established route and regardless of the further fact that if a new route was being established it might gain approval with the proposed extension included on the basis of two patrons per mile of total length.

If approved, this bill would treat all families living in rural areas alike and I am advised that it would lead to extension of routes to serve virtually every farm family in a district like mine. All of us believe in the American principle that everyone be afforded equal treatment under the law and I propose such equality in this measure.

It seems elemental to me that a rural mail delivery policy of two families to a mile should be applied to old, established routes as well as to new ones. If it is the policy to approve an extension of a route on the basis of serving two patrons per mile of new route, then it should likewise be the policy to approve extensions where the total route, as extended, would serve an average of two per mile for its entire length. In simple terms, my bill extends to all farm people an equal opportunity for rural mail delivery on the basis of the present policy of the Post Office Department in approving proposed rural route extensions and the approval of new routes.

I hope the Committee on Post Office and Civil Service agrees on the merits of this proposal as it would be a wonderful thing for farm people to know that the Congress recognizes their entitlement to equal treatment in the delivery of their mail. American farmers have certainly not received equality of consideration in an economic sense and it seems to me the least we can do is to treat them fairly in the delivery of their mail.

The provisions of the bill are as follows:

A bill to extend rural mail delivery service

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That rural mail delivery shall be extended so as to serve, as nearly as practicable, the entire rural population of the United States. For the purposes of this section, it shall be considered practicable to establish a new rural mail delivery route or extend an existing route if the new route or the existing route as extended will serve an average of two families for each mile of its total length, including retraces.

## Statement in Support of H.R. 3090

EXTENSION OF REMARKS
OF
### HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 3, 1959*

Mr. ZELENKO. Mr. Speaker, at this time I wish to place in the RECORD the following statement I delievered today before Subcommittee No. 5 of the Committee on the Judiciary in support of H.R. 3090 and other civil rights legislation:

Mr. Chairman and my distinguished colleagues, I wish to thank you for affording me this time to speak in support of H.R. 3090. This legislation is similar to many of the bills now being heard by your committee to implement and to expedite progress toward the removing of the stigma of second-class citizenry from millions of first-class Americans.

Enactment of this type of legislation is immediately necessary for we have been most dilatory after nearly 200 years of our proclaimed credo of equality for all in making this principle a fact. In today's changing and turbulent world, we hear the birth cries of new nations achieving their independence. We hear the wails of those people's whose equality and independence is being stifled and we see the tears of those whose equality has been taken away. These sounds and sights are apparent now not only to us in Washington but also to the Communist overlords in Moscow.

In the present world conflict, more important than the material assistance we offer these people and countries, is our promise to treat with them on the basis of freedom and equality. How can we hope to convince them of our sincerity when it is so apparent to them that millions of our own citizens are in second-class status?

Opponents of this and similar measures argue that this legislation is merely an attempt to destroy their customary and long secured way of life. I respect their opinions but disagree with them that it is in the best interests of our Nation to maintain their status quo.

The history of short-lived nations and civilizations is undisputed in one important respect—that no nation can long exist which is built on the subjugation, in greater or lesser degree, of a large segment of its people.

We, as the leaders of the free world, offer to other nations the principle of equity. By what logic do we refuse it to our own people?

Let us in the spirit, heritage, and requirement of our democracy pass this legislation which is popularly called civil rights but which is freedom rights.

## Whose Interests Interest the FCC?

EXTENSION OF REMARKS
OF
### HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, February 25, 1959*

Mr. THOMPSON of New Jersey. Mr. Speaker, it is increasingly clear that the richer the broadcast industry becomes from advertising the poorer its showing is in the field of public service.

When the Federal Communications Act was framed in 1927 and revised in 1934, Congress intended it to preserve the airwaves for the American people and to license the use of broadcast frequencies for the benefit of the public.

With the advent of television and its commercials the broadcast industry has become richer while, at the same time, its service to the public has become alarmingly poorer.

This has been documented by a number of courageous journalists including Edward R. Murrow, which undoubtedly is one of the reasons Mr. Murrow is taking a year's sabbatical. Edward R. Murrow is one of the great journalists of our day, one of the giants of American journalism ranking with Bernard De Voto, Thomas L. Stokes, Elmer Davis, and Gerald W. Johnson. Mr. Murrow is leaving the air at one of the critical periods in our history, and we are all going to be much poorer because of this. The broadcast industry is showing its usual unconcern in this as in other matters which affect the public.

For the information of my colleagues I include here a report on the Federal Communications Commission by William Costello, a veteran radio commentator and White House correspondent for the Mutual network. Mr. Costello's article is appropriately entitled "Whose Interests Interest the FCC?"

This report is the outgrowth of a study which Mr. Costello made privately

for his colleagues in the Association of Radio-Television News Analysts.

The report was carried in the New Republic of November 24, 1958:

WHOSE INTERESTS INTEREST THE FCC?

(By William Costello)

One of the anomalies of Washington is that the last Congress could for months investigate an agency like the FCC without ever being able to comprehend why that agency is not doing the job Congress intended it should. That intention, when the Federal Communications Act was framed in 1927 and revised in 1934, was to preserve the airwaves for the people, and to license the use of broadcast frequencies for the public's benefit. On both counts the FCC is failing.

The Harris Subcommittee on Legislative Oversight did manage to smell out a few major and minor instances of unethical or possibly illegal conduct, but it scarcely more than alluded to the subject nearest the heart of the average listener—the subject of better public service in radio and television programs.

Yet it is an easily demonstrable fact that, since television elbowed its way into broadcasting, public service programs have been steadily downgraded. More and more stations carry fewer and fewer programs dealing with education, religion, agriculture, talks, discussion, and community issues, even when the national networks incur heavy expenses to provide material of this kind. As a whole the broadcast industry is phenomenally profitable, but, as Edward R. Murrow more than implied in his comments in The New Republic (November 10), the richer it gets in advertising, the poorer its showing in public service. Moreover, no enlightened effort has been made in Washington to defend the program spectrum which is supposed to reflect civic interest and well-being. The FCC, which is primarily responsible, is afraid to assert its lawful authority; and Cogress, which was the first to proclaim that the broadcast bands belong to the people, has shown a singular unwillingness to call the FCC to account or tighten up the basic statute.

Last summer there was a stir of interest in the industry when word went out that the FCC had finally decided to assert its legal responsibility to encourage better programing, but in the end the report proved nothing more than wishful thinking.

What happened was this: When 10 stations in Atlanta applied for the periodic renewal of their licenses, the FCC postponed action on all 10 applications and asked for more information on their program content. The implication—at least as outsiders interpreted the action—was that the Commisison would give closer scrutiny than usual to the kind of "community service" that the Atlanta stations were offering, possibly as a warning to other stations that glowing promises made in previous applications would have to be followed by better performance.

It soon developed that the Atlanta case was nothing more than another bureaucratic tribal dance. The request for information actually came, not from the Commission itself but from staff attorneys, and consisted of a form 309b letter of the kind usually referred to as an "informal inquiry." Four (those with experienced attorneys) immediately complied with the request for supplementary information, and received assurances that their replies were satisfactory. The littler stations, operating with inadequate staffs and inexperienced lawyers, waded through varying degrees of paperwork and documentation, then sent attorneys or other emissaries to conciliate the FCC's legal staff with promises of reform. Most of the effort was wasted, because no matter how lax their program standards it was almost a 100-per-cent certainty that in the end they would receive their renewals.

It could hardly be otherwise, since careful examination shows the FCC has no affirmative policy on programing. Almost from the beginning there have been two schools of thought within the agency.

School I holds that the function of the FCC is purely technical—that it should license frequencies and supervise the accuracy of their transmissions; should prevent the use of the broadcast spectrum by persons threatening national security, or by persons who might be commercially irresponsible. Otherwise, the FCC should not meddle in any way with what may be broadcast.

School II goes one step further. It contends that the FCC must interpret "public interest, convenience, and necessity" in more than just a technical sense. This group favors, for example, close scrutiny of a station's performance record in any renewal proceedings; it would require new applicants to commit themselves to programing patterns that would affirmatively serve the public interest. It would hold the industry to a high standard of social responsibility.

By and large, school I has been triumphant, although for a time, under the impact of changing political fortunes, the philosophy of the FCC veered coquettishly first in one direction, then another.

In 1946, under the chairmanship of Paul Porter, the Commission was prepared—or for a time appeared to be prepared—to defend policies that would have required every broadcast licensee to offer substantial proof of community service before being granted a renewal. In a show of righteousness, the Commission even picked its own horrible example of bad programing—the Hearst station, WBAL, in Baltimore—and pilloried it publicly. When the chips went down, however, and when Drew Pearson filed a competing application for WBAL's license, the Commission's instinctive conservatism asserted itself. Dealing in a commodity which by law was not property but which by custom had begun to be vested with property rights, the Commission feared to revoke WBAL's license. Pearson's application was turned down, although it seemed evident to many that almost anyone could have offered the public better programing than the WBAL management of that period.

From the quasi-liberalism of the Porter era, the FCC has steadily grown more conservative, more property-conscious, more timid. The tendency, starting under Truman, was accentuated when the Eisenhower administration took office. Since 1953, almost all pretense of regulation has been abandoned, and the ancient and discredited doctrine of laissez faire embraced.

As administration policies began to crystallize in the early months after the Eisenhower takeover, the FCC tended to agree with those who regarded radio as an obsolete adjunct of the burgeoning television industry, a nuisance which ought to be left to die quietly by the side of the road with a minimum of attention from the Federal Government.

As late as 1956 this attitude was reflected in a demand that the application form for radio license renewals ought to be simplified, at least in section 4a which calls for a percentage breakdown of station programing. The proposition was advanced that radio and television were radically different. Entertainment and the big money in advertising had gravitated to television; it was assumed that radio as an advertising medium had nothing to sell but spot announcements and that its programing would have to be governed by that consideration.

It was logical, from that point of view, to argue that the number of program categories in the application form might as well be reduced from 10 to perhaps 3 or 4. It was even suggested that these limited few might be music, news, sports, entertainment. This would have eliminated such categories as religion, agriculture, education, talks, discussion—in short, it would have eleminated every specific allusion to what might be called balanced public service programing.

Such a proposal was actually submitted to the second Hoover Commission and relayed to the FCC. Two years ago, the proposal was passed along to the Budget Bureau's Advisory Council on Federal reports, which turned the suggestion over to an industry subcommittee. At that point the idea was quietly done to death; staff experts at the Bureau merely say it never got off the ground, without trying to remember exactly why. The official explanation is that radio and television function under the same legal umbrella and ought to file the same reports. After being kicked back and forth for 2 years, the much-debated revision of part 4a of the renewal form is now awaiting final approval by the FCC Commissioners.

This episode boils down to the fact that public service programing, or even reports on public service shows, are largely distasteful to station owners and the FCC alike. In this field as elsewhere the philosophy of regulation fights a running battle for its life. The FCC might have seen more than procedural significance in the failure to kill off public service categories in the renewal form; it might have reasserted the corollary that listeners are entitled to a conscientious, ever-wakeful watchdog in program policy-making. There has been no such awareness. The accent has been on the routine of licensing, sales, transfers, wave lengths, antenna design, power output, and so on. And in a further abdication of moral responsibility, the FCC even recommended that licenses be granted for 5 instead of 3 years, a practice that would relax the regulatory tether even further.

For years the FCC has teetered back and forth on the horns of a regulatory dilemma. On the one hand, it is inhibited by stern congessional command against any attempt at censorship over what is broadcast. Believers in laissez-faire have used this section in the law to argue that even a critical scrutiny of programing can be interpreted as a kind of subtle, indirect pressure or censorship. Using the plea of editorial freedom as both a blank check and a smokescreen, the industry has insisted on dealing with the FCC on a strictly statistical basis. It reports quantitatively on its program content but not qualitatively, and the result is a hodge-podge that defies any interpretation.

At the same time, the FCC is constrained by order of Congress to protect the "public interest" in the broadcast industry. Patently this calls for a definition of "interest." The definition depends on which segment of the public is paramount, licensees or listeners. At various times, when the Commission felt strong enough to assert itself, the courts have effectively supported its contention that it could consider programing and listener-interest in passing on renewals and granting licenses. More recently the Commission has shown an inclination to fight the listeners' battles.

Yet, can anyone be so myopic as to suppose that the public is interested primarily in such matters as wave lengths, business probity and advertising ethics? Obviously, while people do have an interest in basic technological problems, their first interest is in what they see and hear, on the content of the programs entering the home. Over the years, though, not a handful of broadcast station licenses or renewals have been denied on the sole ground that a station's programs did not serve "public interest, convenience and necessity."

If this seems a singular history, it is no more so than the official gobbledygook offered to explain it. You will be told that, if there are no complaints against a station, and if there are no competing applications

for a license, the presumpttion is that the license-holder has lived up to the requirements and has earned a renewal. If, in addiition, the FCC goes through the motions of asking for supplementary information on programing content, it can argue that all the requirements have been met.

What the agency doesn't acknowledge is that this method of handling renewals represents a grudging minimum rather than a wholehearted effort to comply with the law. If the FCC were to go all-out for compliance, it would also acknowledge this fact: that the Federal Communications Act says renewals shall be handled in the same manner as original applications; and further that, on its own iniative, the Commission can order public hearings on any application. The record shows that few public hearings are held on renewals, and fewer still on the ground of inadequate programing.

It goes without saying that licensees are content with this practice. So far as rivals entrepreneurs are concerned, there is no inclination to file costly competing applications, hire attorneys, and go to the time and expense of demanding hearings. The WBAL precedent has stood for more than a decade, with no hint from the Commission that the policy might be reconsidered or reversed.

Yet it would be simple enough, in many instances, for the Commission to justify a call for hearings. The woods are full of "horrible examples" which are deplored by public-spirited broadcasters. For a typical case history, take this one: a radio outlet which happens to be the only station serving a one-county market. It is 90 percent commercial. The music it plays comes from records it gets free. Once a week it has a sustaining hour of popular operatic music; these records come from a listener. Public service is strictly transcribed spots, and once a week a transcribed quarter-hour that is distributed gratis by a foreign country. There is nothing controversial on the station; no talks, no discussions, no forums, and nothing local except the commercials and any news that shows up on the ticker.

It is argued, and I suppose not implausibly, that there is nothing sinister in the Commission's failure to hold hearings; for the shabby fact is that Congress has never, since the creation of the FCC, voted enough money to hire examiners, engineers and attorneys for all the de novo hearings on renewals that would be required to give careful scrutiny to program standards. Under the law all stations must apply every 3 years for an extension of their permits. Since there are now more than 4,000 radio and television stations, this means there are approximately 1,300 renewal applications a year or more than a hundred a month. In cases of this kind, full hearings would take days or weeks, depending on the size of a station and the complexity of its operation; and the FCC would need a small army of additional examiners to be able to comply with the spirit of the statute. In the circumstances it is easier for the Commission to shy away from innovations. A staff already overburdened shrinks from the thought of the extra paperwork and the possible resulting litigation.

Still, those with an intimate knowledge of the regulatory problem in broadcasting insist that the question of hearings goes to the very heart of the matter. There can be no possibility of reform in station programing until station managers know they may be compelled to defend their programing the next time they apply for renewal of their licenses. Moreover, the absence of hearings inevitably tends to discourage competition. If licensees get renewals by default, without ever having to prove they are fulfilling their promises to serve the public interest, there exists an almost impossible burden of proof on a rival who might feel more entitled to the license.

Station XOOX in Podunk may have absolutely no concept of public service; it may pour out commercials one-to-the-minute and spin rock-and-roll platters all day every day. There may be others in the community who would like to run a station and would be prepared to do a better job. But so long as station XOOX owns the license (or thinks it owns it), and so long as the FCC renews that license without any kind of qualitative judgment, no competitor is likely to get a foot in the door.

Parenthetically, it is only fair to note that networks, although they are unlicensed and subject only to the vaguest regulation, and although they have other and no less conspicuous programing sins to atone for, have nevertheless shown themselves over the years to be the chief custodian of the industry's conscience in public service programing. They make a varied and commendable effort to serve the public interest, only to be frustrated—as Mr. Murrow pointed out—by the XOOX's who refuse to clear time for what is educational or enlightening.

The really sinister product of official negligence is that, in the course of time, broadcast licenses which were originally intended to issue only temporarily on evidence of good faith and meritorious public service, are now assuming more and more the stature of private property. Little by little, their possessors regard them as they would a parcel of land, as a freehold in fee simple, a vested right. The congressional doctrine that the airwaves belong to the people is being slowly smothered. And Congress has been willing to acquiesce in this.

Far from trying to correct the shortcomings of the Federal Communications Act, or tackle the evils of the present licensing system, those in Congress and the FCC who have a vested interest in their mistakes are beginning to lend a sympathetic ear to an elaborate new rationale.

This new gimmick is a casuistry known as specialized programing. Now that there are so many broadcast outlets, the argument goes, why should the FCC insist that every station follow the same program pattern? The Community doesn't need six or 16 stations unless those stations can provide program diversity and can appeal to different segments of the listening audience.

Let's admit, they say, there is room for some stations with balanced program patterns; for some concentrating on popular music and news; for others rocking and rolling; for the good music station, and for those appealing to racial or national minorities, farmers, teen-agers and so on. The advocates of this line of reasoning can sound very persuasive, but their argument comes down to the fact that there are only two kinds of stations: those that comply with the law and those that do not. Broadcasting licenses were not intended merely to create new advertising media but to insure a responsible public service.

The FCC's chairman, testifying some months ago before the Senate Judiciary Committee, virtually admitted that he regards the Federal Communications Act as unenforceable. In a classic example of weasel-wording, he told the committee:

"The policies of this commission have been, where feasible, to further the broadest possible variety and balance in the programing of radio and television stations, and to further the public interest, convenience and necessity whenever possible where it relates to broadcasting. The absence of direct authority and statutory jurisdiction over specific programs has not been construed as disabling this commission from adopting policies to encourage overall improvements in programing as distinguished from encouraging or discouraging any particular program."

According to that view, the FCC feels lionhearted enough to strive for balanced programing where feasible—but don't get the notion that that's a firm commitment. The agency likewise feels entitled to promote public interest, convenience and necessity whenever possible, but it feels no legal constraint to obey the congressional mandate putting public interest first. A more cynical construction of a statute would be hard to find.

And finally, on the advice of some hair-splitting legal bureaucrat, the head of the agency backs in with a cautious double negative and allows as how—maybe, perhaps—the Commission does have jurisdiction over program content (as an abstract concept) if it wants to assert itself.

---

## Address by Under Secretary of Commerce Frederick H. Mueller, Before National Automobile Dealers Association

EXTENSION OF REMARKS
OF

### HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 5, 1959*

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to call to the attention of the House the following speech which was delivered by Under Secretary of Commerce Frederick H. Mueller before the recent convention of the National Automobile Dealers Association, in Chicago. In his address, Under Secretary Mueller gives his Department's stand on this subject of territorial agreements in the automotive field:

Your industry gave rise to the well-known expression "back-seat drivers." It is a curious paradox—or perhaps just poetic justice—that back-seat drivers have come home to roost. At any rate your industry, for the past year, has had more of them than any other business in the country. Everybody seems to have turned into a self-appointed expert on how to design, make, and sell automobiles.

One eminent economist, for instance, takes the position that 1960 will probably be a far better automobile year than 1959, since—and I quote—"most of the companies in 1959 are offering cars with features that consumers showed signs of rejecting in 1958." He thinks 1960 will see "cars with little more than 100-inch wheelbases" which he calls "markedly different in design from the clumsy behemoths the companies are trying to sell in 1959."

A November report of the Senate Antitrust and Monopoly Committee got into the act with a prediction that increases in advertising expenditures per automobile will have an adverse effect on the level of automobile sales. They go further, and state categorically that a $100 increase on a $2,000 car would tend to reduce annual sales by several hundred thousand cars. They express surprise that even in a recession businessmen don't usually cut advertising expenditures, which they term "the only significant cost element which businessmen consider increasing as a matter of deliberate choice."

Incidentally, suppose a dealer decided to absorb all or part of the cost of advertising and reduce his price per car accordingly. Would he want to tell potential customers

he was now selling at, say $100 less? And if he did, wouldn't that be advertising?

But let's get back to something more fundamental about the committee's viewpoint, its bemusement about maintaining or even increasing advertising expenditures when sales are lagging. The committee, viewing such expenditures simply as "costs," can't understand why any businessman would deliberately raise his "costs" in a recession.

The answer—which businessmen know but haven't got across to enough people—is that advertising that's worth buying actually reduces costs by increasing volume, making possible lower prices than would otherwise be possible by achieving the economies inherent in mass production and mass distribution.

If advertising were not profitable, how does the Senate Antitrust Monopoly Committee explain the otherwise perverse as well as huge advertising budgets of firms making and selling everything from razors and soap to hi-fi sets and automobiles? They must think every TV program is a giveaway program.

I could cite other examples, and so could you, of how the other fellow's business always looks easier to run than one's own. But I'm going to mind my own business—which is, in the words of the act creating the Department of Commerce, to "foster, promote and develop the foreign and domestic commerce and industry of the United States."

I don't intend to preach, or to tell you how to sell automobiles. But I do have a responsibility to relate my job to yours, and I do have some ideas which I hope will prove helpful and even cheerful.

In the latter category I should point out that all of the back-seat driving I mentioned indicates how important your industry is to the public. As an employer, as a purveyor of mass transportation, even as persons catering to the American yen for psychological satisfaction, those who make, sell, and service automobiles have achieved a public interest comparable to sex, shekels, and sin.

By the same token, any display of innocence or ignorance on the part of segments of the public with respect to your business you'd do well to view as in large part your own fault and in need of correction. For these are not only your customers—you hope—but also your governors—you know. If you don't take the mystery out of your industry, at the point of sale and at the manufacturing level, you court distrust and eventually hostile regulation. That's the closest I intend to get to preaching this morning.

However, before leaving this mystery theme, permit me one example. The December 20 issue of Business Week contained an article titled "Everybody Loves Posted Prices." Their reporters had found, on a coast-to-coast spot survey, that both dealers and public were pleased over the operation of the new Federal law requiring price tags for the basic car and all its optional equipment.

By taking that much mystery out of the traditional horse trading, it appears that customer confidence is growing and more stable prices and profits are being realized. Here is a case where public regulation had to step in to achieve the kind of dealer-customer relationship which businessmen themselves should have learned was just good business. You know how confidence breeds stability; and taking the mystery out of pricing is a big step in a sound direction.

Which brings me to an example of a trade practice on which the public and their political representatives particularly need enlightenment. I refer to the desire of some manufacturers and some distributors of automobiles to contract with respect to territorial security and protection. As you know, the right so to contract is now of doubtful legality under some current interpretations of the antitrust laws.

Right away we run into problems with the use of that term "protection." Shakespeare's Juliet asks, "What's in a name?"—and thinks she's said the last word when she states that a rose, under any other name, would smell as sweet. That's good romantic poetry.

However, Juliet wasn't in government and politics. There the choice of names and words for things is very important, and can even influence the smell of a rose if it's called skunk cabbage long enough. So if the automobile industry hopes to get public opinion behind territory protection or territory security, you'd better make clear who is being protected or made more secure by such franchise agreements. "Protection" and "security" are fighting words on both sides of the aisle in Congress, and in party politics throughout the country.

### WENT BEYOND POTTER BILL

In my statement before the Senate Committee on Interstate and Foreign Commerce last June, in support of the objectives of Senator POTTER's bill (S. 3865) to assure the legality of territorial agreements in the automotive field, I called them incentive payments for adequate servicing of cars sold in established trading areas. I went beyond the Potter bill to declare that all manufacturers and distributors of big-ticket items involving service subsequent to sale should be free to contract for territorial incentive payments by the manufacturer or outside dealer without running afoul of our antitrust laws.

I still personally feel that where a large investment by the customer and the dealer is involved, and where subsequent service is a big factor, manufacturer and dealer should be permitted to insure responsible and adequate servicing through appropriate agreements.

To any of your membership who share this view, I offer this advice: To talk about protected territory or preventing raids by outside dealers only plays into the hands of your opponents.

Such language make it appear that the protection sought is for the franchised dealers. This in turn conjures up a picture of the kind of protection symbolized by the Smoot-Hawley tariff of 1930, putting an umbrella over high-cost producers at the expense of consumers. It connotes a lessening in competition protecting entrenched sellers while raising prices to helpless buyers.

### INVITES ANTITRUST ACTION

Such a picture invites antitrust action, and properly so. If I thought these would be the results of a resurgence of exclusive territory contracts, I'd oppose the Potter bill or any reasonable facsimile. But it is because I view the persons ultimately protected, and made more secure in their purchases, as the great body of American car owners that I support such legislation.

At the risk of seeming to labor the point, it is an article of faith with me that protecting the consumer interest in a free market is the only feasible long-run way to protect the American worker, stockholder and businessman. It's simple arithmetic that the higher the price, the smaller the potential market; the smaller the market, the smaller the volume of sales; the smaller the sales, the higher the manufacturing and distributing costs; and the higher the costs the lower the profit.

But on these big-ticket items like automobiles, where subsequent service is involved, an important quality ingredient is also involved. To supply it must be profitable, or it ceases to exist. I refer to the equipment, experienced mechanics, and convenient locations which all add up to service to the buyer to keep his car operating satisfactorily. Unrelieved price competition can force responsible dealers into either loss of sales, loss of profits, or both—with service to the buyer the final victim.

One more observation, to make my position on territorial agreements altogether clear: I advocate no compulsion. Quite the contrary. I stand for freedom of contract and the principle that manufacturers and dealers should be permitted so to contract if they so desire. If the deal turns out to be unprofitable, such contracts would be canceled. As for the car buyer, as has been very well demonstrated since 1957, he retains the ultimate control of shopping around or not buying at all.

So now, let's have a brief look at today's and tomorrow's markets. As Secretary Strauss stated in his year-end outlook and economic review, the overall economy has regained the record high reached in mid-1957 and the prospect is for further improvement.

A key element in that improvement, as pointed out in the annual survey of the outlook for major industries by our Business and Defense Services Administration, is automobile production.

You know better than we in the Department how King Consumer is reacting to the 1959 automobile models. At the turn of the year, in spite of industrial disputes and the psychological scars of last year's poor auto market, the outlook was for production of 5.5 million cars, as contrasted with some 4.2 million last year, which was the lowest in a decade.

Naturally if this estimate of a 30 percent increase is realized, increased markets in metals, glass, rubber, and upholstery leather will be created; for your industry is the largest single customer for the output of these industries.

For the decade of the sixties, barring war or irresponsible interference with the workings of our free enterprise system, I foresee economic growth dwarfing our previous accomplishments. The impacts of population and household increases, and the flood of products growing out of past and current research and development, spell unprecedented opportunities for expanding job opportunities, capital investment, and sales.

Realization of this bright future, however, will not be automatic. It will take hard work and a willingness to produce in stable balance with our desire to consume. As so well put last December by Chairman Martin of the Federal Reserve, "Stability is not an end in itself but a means by which this higher standard of living can be attained and without which a lower standard of living becomes inevitable."

This, in the final analysis, is a test of our moral fiber.

One such test we face annually in considering the program of proposed expenditures of public funds. I make no pretense to being an expert in economics and public finance. But I hold certain truths to be self-evident. One is that public expenditures that do not add to our Nation's productivity are merely a means of transferring wealth, not creating it. The other is that the test of what we can afford to pay for Government at all levels is whether we are willing to pay for it in taxes and fees rather than through the hidden and destructive method of inflation.

Of course national defense deserves first claim on our resources, just as survival is the first law of nature. But anyone who holds that we can have that cake and eat it, too, deceives himself.

You who have such a direct stake in consumer confidence should certainly share my concern that it can be destroyed—as history has shown many times—when the people get used to the inevitability of the cheapening of their money. You should share my zeal in encouraging true economic growth through putting a premium on saving, investment, better value for the consumer's dollar, and productive employment.

If there were any easier and better way to peace and prosperity, mankind would have

found it by now. We've enough examples of how not to operate an economy to insist that it be peaceful, productive and progressive.

I started my talk in terms of protection and security, and asked—for whom? I end it by affirming that every man, everywhere, will progressively become more protected and secure when he has learned to make everybody's business his business. This is one job you can't delegate, for the interest of each involves all mankind.

## High-Cost Suicide

EXTENSION OF REMARKS
OF
**HON. ARCH A. MOORE, JR.**
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. MOORE. Mr. Speaker, much has been heard in recent months about American industry pricing itself out of foreign markets and at the same time becoming more vulnerable to import competition in the home market.

Under leave to extend my remarks I insert the following letter written by O. R. Strackbein, chairman of the Nationwide Committee on Import-Export Policy, and printed in the Washington Evening Star. Mr. Strackbein's letter goes far to explain the competitive difficulty in which our industries now find themselves when confronted by imports both here and abroad.

Until the past year or two our large mass-production industries were virtually immune to import competition but now we find even the automobile and the steel industries complaining about loss of foreign markets and invasion of the home market by imports.

In world markets the American motorcar is no longer king as it once was. It is down the line from cars of European make. At the same time nearly 400,000 foreign cars were imported into this country last year or close to 10 percent of the sales of domestic cars. Many of these imported cars, to be sure, were manufactured overseas by our own companies such as Ford, General Motors, and Chrysler. This fact can bring little comfort to the automobile workers here who are bypassed, or the steel workers or the workers employed in making glass, rubber, copper, and other products that go into automobiles, all of which are readymade and already assembled in the imported cars when they come in.

The steel companies have also seen their exports falling off sharply. Why? For the same reason. Mr. Strackbein in his letter points out what has happened. I commend it to the attention of all Members who are interested in the foreign trade question.

HIGH-COST SUICIDE

Your editorial entitled "High Cost Suicide," February 26, took note of President Eisenhower's recent comment on the competitive position of this country in foreign trade. You seem to agree with the President's view that our prices are too high and that we are pricing ourselves out of our accustomed foreign markets and at the same time finding import competition more difficult to meet in our home market.

What we witness today is but the surfacing of realities that have been in the making for some years. The results in the ordinary course of events were inevitable; but the end is not yet. This country has succeeded in making its economy very nearly untenable in the international competitive world. How did we do this so successfully?

We have systematically for 25 years striven to climb the very plateau upon which we now stand or lie economically. Had the rest of the world come along with us the competitive position would have remained the same; but it did not do so. We raised farm prices, we boosted wages and reduced hours of work, we instituted social security and established obligatory collective bargaining and we went into a world war which saddled us with an unprecedented debt; and we are now in a cold war. Without regard to the merits of these various steps, it must be clear that they raised the cost burdens of our domestic producers. We went a long way toward forsaking the free market in this country. Outwardly we sought to embrace laissez faire.

Now, while we were raising these costs at home, what were we doing outwardly, toward the foreign horizons? We reduced the average protective effect of our tariffs a full 75 or 80 percent. We shipped overseas billions of dollars worth of modern machinery and equipment and this was installed in foreign factories. We collected few debts. We brought nearly 10,000 productivity teams to this country to study our mass-production methods. We helped with the costs of rearmament. We instituted technical aid.

Thus, while our own competitive position was deteriorating under the burdens of our policies, that of many other countries was improving. Modern machinery was giving competitive effect to the low wages prevailing abroad. The question is not so much whether our wages are too high as it is whether foreign wages are too low—so far as this competitive problem is concerned.

The flight of our capital abroad is further evidence of the greater attractiveness of investments overseas, profitwise. This would not be the case if we had kept our own market more attractive to our own capital. On the contrary we have progressively exposed it to more and more ruthless import competition—all in the name of what President Franklin Roosevelt called the will-o'-the-wisp of foreign markets. Today even our most efficient industries, the highly automated mass-production industries, are groaning under the strain. What do you believe is happening to numerous smaller industries? Is it not about time that we reexamined a foreign trade policy that has come to the end of the road?

O. R. STRACKBEIN,
*Chairman, Nationwide Committee of Industry, Agriculture and Labor on Import-Export Policy.*

## Secretary of State John Foster Dulles

EXTENSION OF REMARKS
OF
**HON. ROSS BASS**
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 3, 1959*

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks, I would like to have included in the RECORD the following editorial from the Robertson County Times of February 26, 1959. I think this editorial expresses the sentiment of many of us regarding the illness of Secretary of State Dulles.

The editorial follows:

IF DULLES IS REPLACED HIS SUCCESSOR SHOULD BE CHOSEN CAREFULLY

The illness of Secretary of State John Foster Dulles raises serious doubts that he will be able to continue actively in his position. His policies have been widely criticized at times but even his severest critics have admired the diligence and devotion with which he has dedicated himself to his duties.

Opponents of Secretary Dulles concede that he is by far the best informed man on details of the many worldwide aspects of foreign affairs. Thus, even these critics are disturbed by the possibility that the conduct of our foreign policy might now go into other hands, with less knowledge and experience. This is particularly true in view of the serious situation facing our Nation in regard to Berlin, relations with Soviet Russia, and other matters.

Both by tradition and authority, foreign policies of the United States have been largely determined by the Presidents themselves, with the advice and counsel of their Secretaries of State. But President Eisenhower has delegated, to a very large extent, most of the responsibilities in foreign affairs to Mr. Dulles, and thus to a perhaps unprecedented degree our foreign policy and foreign relations have been in the hands of Secretary Dulles during the present administration.

The growing importance of foreign relations and the fact that the United States has great worldwide responsibilities makes it necessary, more than ever before, that our Secretary of State be of the highest caliber. If Mr. Dulles is unable to continue his service his successor should be carefully selected. He should be adequately informed concerning our current commitments and objectives and capable of carrying them out.

## Thomas G. Masaryk: Defender of Freedom

EXTENSION OF REMARKS
OF
**HON. EDWARD P. BOLAND**
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, February 9, 1959*

Mr. BOLAND. Mr. Speaker, Saturday March 7, is the anniversary of the birth of Thomas G. Masaryk.

It is especially appropriate for us in the United States to honor Thomas Masaryk. Here was a man who, as the founder and first President of the Czechoslovak Republic, stood for the principles embodied in the Preamble to the Czechoslovak Constitution, which bears a close resemblance to our own. The preamble unequivocably states the desire to consolidate the people in a Republic which shall establish a reign of justice, contribute to the welfare of all citizens, and secure the blessings of liberty to coming generations.

In it was stated also, that it was the desire of the newly formd Republic to take its place in the family of nations as a member at once "cultured, peace-loving, democratic, and progressive."

The ideals of this new nation were those of Thomas Masaryk, who led it, and who genuinely stood for all of these

things. Among his personal characteristics was a passionate love of truth. He advocated the scrupulous preservation of the rights of individuals and the fair and just treatment of minorities. A man of the people himself, he championed the people's cause. He succeeded in building a progressive democracy.

When he died, in 1937, one of his biographers wrote:

He had founded a state in which freedom was the watchword and he had educated a nation to be conscious of both the rights and duties of democratic citizenship. * * * But he never forgot the need of "a faith, a living faith in something higher than ourselves, something great, sublime, eternal."

That this nation to which he gave so rich a heritage should have since fallen behind the Iron Curtain with all of its curtailment of individual freedom, its insistence that man should serve the state alone, and its denial of a faith in anything higher than that state—that this should have happened to Czechoslovakia, conceived in the democratic ideal of its great leader, is the greater tragedy. But that that ideal lives on in the heart of Czechoslovakia today we have no doubt. No more have we doubt of that than we have of the permanence and effectiveness of the contribution of Thomas Masaryk himself, defender of freedom.

## Bar's Morning After

EXTENSION OF REMARKS
OF
### HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 5, 1959*

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following editorial from the Washington Post of March 5, 1959:

BAR'S MORNING AFTER

No one can blame President Ross L. Malone of the American Bar Association for valiantly trying to prove that his organization's house of delegates was not in contempt of court last week. By calling upon Congress to modify the effect of key civil liberties decisions of the Supreme Court, the American Bar Association's house of delegates seemed—to laymen, at least—to be saying that it was a better judge of the Constitution that the highest court in the land. But President Malone, in a speech at Syracuse, N.Y., now assures us that the delegates were talking about some other fellow. The lawyers were "not in any sense attacking the Court," explains Mr. Malone, but were only suggesting improvements in the security laws. However, the action of the Philadelpiha Bar Association in repudiating the implied criticisms of the Supreme Court suggests that Mr. Malone's colleagues know that the main target was hardly the Weather Bureau.

Mr. Malone, along with other high officials of the association, is a lawyer held in high esteem; his organization performs many important and salutary functions. Yet bar association members are not invested with infallibility in judging the Supreme Court. It ought to infuse some humility among the association's zealots to recall the instance on March 14, 1916, when seven former American Bar Association presidents told a Senate committee that a nominee to the Supreme Court was not a fit person to hold that high office. The Justice in question was Louis D. Brandeis. That unhappy incident caused considerable blushing in later years, and perhaps the same will yet be true of the house of delegates' more recent attempt to place the Court before the bar.

Mr. Speaker, I also recall when this same American Bar Association turned down the application for membership of the very distinguished New York City Justice Francis E. Rivers, because some of its members did not like the color of his skin. So far as I was concerned, that was the straw that broke the camel's back. I got out of the American Bas Association at that time and never rejoined it.

I am sure that the example set by the Philadelphia Bar Association in repudiating the action of the American Bar Association will be followed by other fine, respected, and respectable associations.

## Attack on the FBI—II

EXTENSION OF REMARKS
OF
### HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 3, 1959*

Mr. JOHANSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the second in the series of articles by Pulitzer Prize winning reporter, Edward J. Mowery. This series deals with the campaign to discredit the Federal Bureau of Investigation. The following article appeared in the Newark Star-Ledger of February 2, 1959:

REDS VILIFY FBI UNDERCOVER AGENTS

(By Edward J. Mowery)

WASHINGTON.—Communists and their sympathizers follow a consistent pattern of ridicule and vilification when the Federal Bureau of Investigation flushes traitors from the morass of subversion.

They pillory, deride, and humiliate ex-Communists and undercover agents who finger spies and saboteurs.

They berate the FBI for cooperating with informants to safeguard national security.

It happened during the sensational exposes by Whittaker Chambers, Louis Budenz, and Elizabeth Bentley, former admitted Reds. The shrieks hit their peak when Boris Morros and Mary Markward laid bare the results of their undercover operations.

No informant, however, has taken more abuse than Elizabeth Bentley who exposed the Silvermaster-Perlo espionage ring. On October 18 the Nation actually accused the FBI of trying to give Miss Bentley the brushoff.

A Bureau official who handled the Bentley case presents the factual version of how the spies were exposed.

Charge: The FBI was so lackadaisical about pursuing espionage leads that Elizabeth T. Bentley was kept waiting for months to tell her story.

The facts: This charge is wholly without foundation.

On August 23, 1945, she visited the New Haven FBI office for one main purpose: To verify the asserted Government connections of a self-described officer of the New York National Guard and bigshot Government spy engaged in dangerous work. She also wondered if she could be of any assistance.

Bentley said she worked for the United States Service and Shipping Corp., New York (headed by Jacob N. Golos, a Russian national long identified with Communist activities) and the bigshot Government spy urged her to stick with the firm because she could obtain valuable information for the Government on Russians doing business with the company.

She gave her address as Old Lyme, Conn. Her visit touched off a thorough and far-reaching investigation. And on October 8 she was contacted for another interview. She responded 8 days later.

Bentley repeated her story and charged further that persons connected with United States Service and Shipping were engaged in Russian and Communist activities. She had considerable information but said she couldn't name the Russians involved. She then admitted she was a former member of the Communist Party and said she felt she had been mixed up in Soviet espionage and intrigue.

Her disclosures were immediately coordinated in the handling of the United States Service and Shipping Corp. and the investigation widened.

The unrelated pieces of the puzzle, despite extensive information on the subjects in FBI files, didn't tie together until Miss Bentley was interviewed at great length on November 7.

At this session for the first time, she disclosed her involvement in Soviet espionage (as a courier for the Victor Perlo and Nathan Gregory Silvermaster groups). Her revelations aided authorities in knocking the wraps off one of the first big Soviet spy operations in the United States.

Charge: Even though the FBI knew Jacob Golos was an admitted foreign agent of the U.S.S.R. the Bureau failed to arrest him as a spy.

The facts: The Bureau's information in 1940 on Golos' activities was insufficient to serve as a basis for his arrest as a spy. Golos was arrested in 1940 subsequent to his indictment for failure to register, with the State Department as a foreign agent.

The indictment was based upon his activities as head of World Tourists, Inc. which handled travel arrangements for Soviet nationals and others going to the U.S.S.R. In March (1940) he entered a guilty plea to the charge (admitting he was an agent of the Soviets.)

Later, considerable information was developed on Golos' activities in connection with the investigation of Gaik Ovakimian, reportedly the Soviets chief OGPU (secret police) agent in the United States. In January 1941, Golos was identified as a contact of Ovakimian. And a separate investigation began on both World Tourists, Inc., and United States Service and Shipping Corp.

INFORMATION LACKING

The Bureau sought a complete rundown on Golos' activities. It was known he had long been connected with the Communist movement and was instrumental in arranging passage for Communists volunteering to serve with the Abraham Lincoln Brigade during the Spanish civil war.

Golos died in November 1943.

As of 1940, the FBI had no information that could serve as a basis for his arrest as a spy.

## In Further Support of My Bill To Curb the National Conspiracy of Gangsters Through the Enactment of H.R. 5186

EXTENSION OF REMARKS
OF
## HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. CRAMER. Mr. Speaker, I am including in the RECORD a copy of a wire received from the Honorable Nick Nuccio, mayor of Tampa, in support of my bill to give the Justice Department and the FBI jurisdiction to punish the use of interstate commerce in the furtherance of conspiracies to commit terroristic crimes and activities of gangsters and hoodlums. His wire clarifies, and properly so, the present situation in Tampa.

I also include my reply to the mayor which clearly indicates that my remarks, consistent with the position of the mayor, as made on the floor of the House on March 3 was in reference to the previous record of unsolved murders which, in my opinion, in order to have been perpetrated, must have been conspired on an interstate basis.

I also include a copy of my letter to the Attorney General, written on March 4, in transmitting a copy of my bill for his consideration, which further amplifies on my remarks.

I firmly believe that legislation of the nature I have introduced is essential if the people of this Nation are to be protected—whether it be in Tampa or in another community—from the nefarious activities of national criminal and racketeering conspiracies. As will be noted from my letter to the Attorney General, even the sheriff of Hillsborough County, on August 12, 1953, requested such help and my bill will provide Federal assistance when the crimes committed are of an interstate nature. My bill would make avaliable to local law enforcement the very type help requested.

The above-mentioned follows:

TAMPA, FLA., *March 5, 1959.*

Hon. WILLIAM C. CRAMER,
*New House Office Building,*
*Washington, D. C.:*

I wish to congratulate you on introducing a bill in Congress yesterday to curb terroristic conspiracies. As we have discussed before in regard to your thinking on this matter this is a law which is vitally needed and I am sure that all good citizens in our county join me in urging you to push for speedy enactment of this bill during this session of Congress. However, I would like to call your attention to the fact that Tampa is not the criminal city it was several years ago. It has always been my belief that organized crime cannot exist without the blessing of law-enforcement officers. Since my election as mayor of the city of Tampa 2 years ago, I have waged a vigorous compaign against all types of criminal activity and will continue to do so. Because of this Tampa today is living down its past reputation as a center of organized crime. The only recent killing was found to have no gangland connection after thorough investigation by city, county, and State law-enforcement agencies. Again congratulations on the job you are doing in Washington for the people of the First District of Florida.

NICK NUCCIO,
*Mayor.*

MARCH 5, 1959.

Hon. NICK NUCCIO,
*Mayor of the City of Tampa,*
*Tampa, Fla.:*

I wish to express my appreciation for your wire supporting my bill to curb national gangster conspiracies. I am fully aware of your announced purpose to wage a vigorous campaign against all types of criminal activity.

I congratulate you in this effort.

I trust that neither you nor my respected constituents of Tampa misinterpret any of my remarks or actions as being critical of Tampa's present local law-enforcement efforts.

I have referred to the 19 unsolved murders in Tampa's past history, without reference to the most recent killing that I understood the grand jury had found was outside the scope of the type of killing my bill is directed toward, that is, of interstate character inspired by a national gangster conspiracy: but it is my considered opinion, buttressed by information provided by the FBI, the Bureau of Narcotics, and the Justice Department, that other killings in Tampa's past history have the earmarkings of being part of an interstate conspiracy. My bill aims at that type of conspiracy because of its interstate nature, which is beyond the reach of local law-enforcement officials, the area where Justice Department and FBI assistance is needed to assist in stamping out such outside influences on communities such as Tampa.

I am forwarding by airmail a copy of my letter to the Attorney General dated March 4 in which I transmitted my bill for consideration of justice which I think clearly states my position. I am making your wire and this reply together with my letter to the Attorney General a part of the CONGRESSIONAL RECORD as further amplification of my remarks of the third in order to avoid any misconstruction.

WILLIAM C. CRAMER,
*Member of Congress.*

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
*Washington, D.C., March 4, 1959.*

In re H.R. 5186, a bill to establish the crime of conspiracies to commit terroristic crimes and activities when interstate commerce is used with the objective of stamping out national racketeering.

The Honorable WILLIAM P. ROGERS,
*Attorney General of the United States,*
*U.S. Department of Justice,*
*Washington, D.C.*

DEAR ATTORNEY GENERAL ROGERS: You will find enclosed herewith a copy of the bill above referred to which I introduced on March 3 and about which I made a speech on the floor of the House, a copy of which I have previously forwarded to you. I am herewith forwarding to you a copy of the bill for your consideration, anticipating that the bill will be officially forwarded to you by the Judiciary Committee for a report by your Department. Of course, I am hopeful that this bill will result in favorable consideration of some legislation that will accomplish the same objective.

To amplify on this matter, I am sure your files will indicate that some 4 years ago, subsequent to the occurrence of one of the murders which I referred to in my remarks as one of the "19 unsolved sawed-off shotgun gang murders," I directed a request to the Justice Department that the FBI and the Department act favorably upon the request of the local law enforcement officials and assist those officials in attempting to solve this murder by placing the Mafia on the subversive list which would make it subject to Justice Department surveillance.

I stated at that time that it was my opinion that because this was a murder similar to those that had occurred in the past and which were also unsolved, apparently it was being done on the basis of the killer being shipped in and out rapidly in interstate commerce and that there was a connection between such killings and national gangsterism and possibly the Mafia or Murder, Inc. It was on this basis that I thought the FBI could accept this responsibility but I was advised that the Department of Justice had determined that it had no jurisdiction in the matter because no Federal crime was involved and that the Mafia did not come within the definition of subversive and thus could not be placed on your list pursuant to Executive Order 10450.

The purpose of my bill is obviously to plug up the loophole and in the future to make the FBI and the Justice Department available in similar instances with the presumption that interstate commerce is involved when this type of killing or other crime takes place.

I want it clearly understood that my remarks in the RECORD refer to the national activities of Murder, Inc., the Mafia, and other gangster conspiracies which prey upon cities such as Tampa and I cited Tampa as an example that I think is one of the clearest indications that this nefarious outside influence is affecting the local community and that, because such influence is of an interstate nature, the local law enforcement officials have not been capable of coping with this problem. Such officials obviously are not equipped to cope with this problem when it is of an interstate nature as is clearly indicated by the request of Sheriff Ed Blackburn, Jr., of Hillsborough County, for the assistance of the FBI and the Department of Justice to place the Mafia on the subversive list pursuant to Executive Order 10450, his request having been made in the fall of 1953 and my request having been made to back him up. My predecessor, the Honorable Courtney Campbell, properly initiated the sheriff's request by forwarding it to your Department.

Since that time when we were advised that no Federal crime was involved and that the Mafia was construed not to come within the definition of subversive, you know, in that I have been in consultation with the Department on a number of occasions concerning it, that I have been in the process of considering legislation to make such interstate gangster activities a Federal crime and the enclosed bill is the consummation of those efforts.

I want to make certain that you understand that my citation of Tampa is for the purpose of indicating a concrete example of where, in my opinion, the outside influence of gangster conspiracies in the past has had a very telling effect beyond the power of the local law enforcement officials to cope with and my reference to the city's having one of the worst crime records of course refers specifically to the 19 unsolved murders in the past. It is obviously not in any way intended as a reflection upon the efforts of the local law enforcement officials to clean up the city. To the contrary, it is my opinion that in recent years much has been done within their jurisdiction to clean up Tampa but that this national conspiracy still poses as a threat to the future safety of the citizens of this community and communities throughout the country.

It is my hope that legislation of this nature will be enacted, first, in that it will be a deterrent to future national activities of gangsters having local effects similar to those that have happened in Tampa in the past, and, second, should crimes be com-

mitted of this nature in the future in Tampa or anywhere else, the Department of Justice will have jurisdiction to investigate the matter.

I believe this matter is of sufficient concern for you to give personal attention to it and that is the reason for my forwarding to you a copy of my remarks and a copy of my bill and for calling this to your attention again, it being a follow-up of my previous correspondence and discussions with the Department on this matter.

Thanking you for your attention to and consideration of this matter, and with kindest regards, I am,

Sincerely,

WILLIAM C. CRAMER,
*Member of Congress.*

## Voice of Democracy

EXTENSION OF REMARKS
OF
### HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. HORAN. Mr. Speaker, under permission granted me to extend my own remarks in the Appendix of the RECORD, I am pleased to include a radio script by the winner of the Voice of Democracy contest for the State of Washington, Mr. Ed Kauffman, of Veradale, Wash.

Last week the State winners met here in the Nation's Capital for the finals. The top winner was Mr. James W. Rachels, of Columbus, Ga. The runners-up were Derek L. Booth, of Boonton, N.J.; Herman W. Mast, of Lawrence, Kans.; and Sanford L. Orkin, of Sunbury, Pa. While our titlist did not win the top honor, we are very proud of him for he did exceptionally well in very vigorous competition.

I think that the sponsors, the National Association of Broadcasters, the Electronic Industries Association, and the State associations of broadcasters, in cooperation with the Veterans of Foreign Wars, are to be complimented on this fine project. It is all to the good. This contest was endorsed by the U.S Office of Education and was approved by the National Association of Secondary School Principals of the NEA.

VOICE OF DEMOCRACY

(By Ed Kauffman)

Democracy has not changed with the passing centuries and must not change in the years to come. Nevertheless, we can assume that there will again be forces attempting to take democracy away from the people and with it those freedoms and privileges to which the people have a God-given right.

Now let us examine the way a democracy accomplishes the things it is designed to do. Democracy sees each person as an individual with certain inallenable rights, abilities, and responsibilities.

All men have certain rights given to them by God, rights which cannot be usurped by any force. Our democracy recognizes these rights and grants to the people the freedom to exercise them. Our Bill of Rights guarantees this freedom and our laws make provisions to protect it. Free press, free speech, and free worship help to bring the meaning of democracy down to an individual level and by doing this illustrate the true meaning of personal freedom.

All men have certain abilities that help to distinguish them as individuals. Democracy thrives on these abilities. The development and utilization of these abilities is encouraged by providing incentive. In this country we call this incentive, private or free enterprise, the freedom of a man or woman to create and build something for himself and contribute it to his society as a working monument to his own initiative. The free enterprise system is responsible for the fabulous growth of industry, agriculture, and the general prosperity in America. However, in return for the freedoms and opportunities offered by democracy, the citizen owes that democracy a responsibility.

The people must be aware of their debt to society and willing to labor and give of themselves for the fulfillment of the goals of democracy. This awareness and sense of willingness to work for the benefit of all is, to a certain extent, aided by the freedoms and incentives provided by our democracy. The people assume the burden of self-government and with it the privilege of insuring their own happiness and prosperity.

Our democracy encourages individualism. Righteous individualism based upon God's law, individualism with the purpose of helping one's self and others to enjoy the fruits of democracy leads to a cooperation that gives democracy strength.

It is said by some that we have become complacent and incapable of defending our democracy in the face of great threats to its security I believe that democracy has a built-in defense system more powerful than any weapon of war or subversion. Throughout our history, the people have risen courageously to ward off threats to their security. Whenever the people see that democracy is imperiled, they work and fight as a team with a spirit that inevitably leads to victory.

Our system of private enterprise has brought America greater general prosperity than any nation in history.

Our democratic system of self-government has produced a few mediocre leaders but no dictators or tyrants.

We hear frequently of the American people, the American heritage, and the great American dream. In our democracy, each man has his own people with whom he can live and enjoy the fruits of democracy, each man has his own heritage and he is able to do with it as he wishes, and each man has his own dream and the opportunity to fulfill that dream.

Democracy gains its strength from those who live as well as speak for the freedom, ability, and responsibility of each man. Take a few moments and look about you, then live and speak for the democracy that gives and expects so much.

## Hiring the Handicapped in Our Town

EXTENSION OF REMARKS
OF
### HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. ALBERT. Mr. Speaker, the following essay by Miss Sandra Malin, a senior in Gray High School, Idabel, Okla., won first place in the annual contest sponsored by the Governor's committee on employment of the handicapped in Oklahoma. It was the second straight year the essay contest had been won by a student from the Third Congressional District.

Miss Malin's clear and intelligent reasoning on why it is important to hire the handicapped is well expressed and I feel contains a timely message for our entire Nation:

HIRING THE HANDICAPPED IN OUR TOWN

The girl was a teenager, just another student walking down the school hall. I spoke a hurried greeting, but afterward I felt a sense of guilt because I didn't stop and walk with her. You see, she was crippled in both legs. As I thought of her struggling to walk straight and trying so very much to be like other students, I asked myself, "What does the future hold for her? What kind of jobs can our town offer her when she graduates from school?"

The handicapped are everywhere. They are in small towns as well as big cities and are all sorts of people—rich, poor, fortunate, or unfortunate. These handicapped people are limited in their abilities, but they have an earnest desire to be accepted socially. They are people who, when they are doing jobs best suited to them, make invaluable workers, some of our Nation's best. Employers everywhere are realizing this, and greater efforts are being made to train them and help them get jobs. There are many obstacles to be overcome, however.

For instance, our town is a small one, and it has no large industries or factories. Many handicapped persons can never hope to find work if they must compete with persons who are not handicapped. Also the chief occupations of this area are farming and timber work which require hard manual labor that the disabled person cannot do. In spite of this, however, several handicapped people are finding their desire for a lucrative job realized.

A victim of infantile paralysis held the office of court clerk for over 20 years, and is now a State employee. Our county tag agent for the past 14 years is severely crippled in both legs, and our city clerk has only one leg. The chief of police, a few years ago, had only one leg, and at one time, a man without any legs and one arm held the office of county tax assessor. Our county courthouse was brightened a few years ago by the friendliness and cheerfulness of a man confined to a wheel chair by arthritis. He operated a small concession stand and was on hand every day, rain or shine, not only to sell his candy, but to satisfy his longing to be a part of the world of business so important to every man.

Our local newspaper has a practice of hiring deaf mutes. Recently, it employed two deaf men who worked as linotype operators and printers. Deaf people can do this type of work very well.

Other handicapped people of this area who have found employment are mechanics, radio and television repairmen, truckdrivers, an auctioneer, a schoolteacher, a barber, a social worker, a beautician, and even some farmers. These people are all doing their best to improve their communities, and they are doing a good job of it.

The vocational rehabilitation program has done a great deal for impaired persons in rehabilitating them and finding them jobs. At the present time, it is helping about a hundred people in our county of which approximately 60 are college students who are attending school through the aid of vocational rehabilitation. These students have such defects as paralysis, hearing difficulties, arrested tuberculosis, bronchitis, impaired vision, speech impediments, club feet, and damage from severe burns. They are studying to be teachers, secretaries, hospital workers, engineers, and radio and television workers. When they finish their courses, they will probably have no trouble in securing good jobs.

Our town has done much for the handicapped, but there is so much more to be done. A very small percent of the handicapped peo-

ple are actually working. Every year men and women stay idle drawing welfare checks, when with proper rehabilitation, they could be meeting their own needs. This saves the Government money, too, because it is less expensive to rehabilitate someone than to pay him a welfare check. We are all interested in saving our natural resources, then why not conserve our valuable resources in human lives?

The future looks bright for handicapped people. Even though hiring the handicapped is a new frontier for our town, I believe that as it grows and more industries are established, remarkable opportunities will develop for the disabled.

One way everyone can help the handicapped is by his attitude toward them. They don't want our pity and sympathy, but all they ask is an understanding heart and a chance to prove themselves.

There are some handicapped people who are the happiest people in the world. I once saw a boy who had stubs for arms playing in a football game. He couldn't run fast or carry the ball, but he could do a good job of kicking for extra points. His handicap couldn't keep him out of athletics because he had an indomitable spirit.

There is a woman that I know who has only one arm, but she can do almost anything a person with two arms can do. I believe she is happier than many other people because she has a spirit that won't quit.

Handicapped people can become quite successful. The lives of outstanding individuals have proved this. Socrates was one of the wisest men in all history, and yet he was ugly and deformed and was laughed at while he was living. Beethoven, while he was deaf, contributed much to the music world, and Charles Steinmetz, the electrical wizard, was never able to stand up straight. Helen Keller, who can neither hear, see, nor speak, has given much to her fellow man. Another outstanding example is Walter Davis who had infantile paralysis. He was told he could never run again, but he defied this and became the world's champion high jumper. These are only a few of the multitude of handicapped people who have overcome towering obstacles and climbed to great heights of success.

Yes, the handicapped can be very happy and useful citizens. I believe they have learned something which everyone could profit by in learning. They have learned that to forget oneself and lose his life in living for others is to really find life. May I, along with my town, urge everyone to "hire the handicapped—it's good business."

---

## GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

## LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

## REPRESENTATIVES WITH RESIDENCES IN WASHINGTON

OFFICE ADDRESS: House Office Building, Washington, D. C.

# Appendix

## American Strength and Preparedness

EXTENSION OF REMARKS
OF
**HON. LYNDON B. JOHNSON**
OF TEXAS
IN THE SENATE OF THE UNITED STATES
*Monday, March 9, 1959*

Mr. JOHNSON of Texas. Mr. President, in connection with the very important discussions we have had today concerning American strength and preparedness I ask unanimous consent to have printed in the appendix of the RECORD a letter I have received from the commander in chief of the Veterans of Foreign Wars.

John W. Mahan speaks from the heart and raises questions which I think are disturbing to every American.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
*Kansas City, Mo., February 27, 1959.*

The Honorable LYNDON B. JOHNSON,
*United States Senate,*
*Washington 25, D.C.*

MY DEAR SENATOR: As commander in chief of the Veterans of Foreign Wars, I recently had an opportunity to meet with leaders from your State during our annual legislative conference in Washington, D.C. Since talking with your constituents, I thought it advisable to write you on a matter that concerns all of us—national security.

The VFW, by resolution and by unanimity of opinion, feels that our country is losing basic military strength through proposed plans to reduce our Defense Establishment. We believe, and we are on record, that our country should have a balanced defense which is ready to move at a moment's notice whether on the ground, on the seas, or in the air. We further believe that a reduction in our ground forces in the face of the Khrushchev challenge over Berlin is unthinkable. Even though the Berlin situation might be settled peaceably, there are still many trouble spots in the world where American support has already been committed.

It is our understanding that unless plans to reduce forces are halted, the Army will lose one division and the Marine Corps will suffer drastic cuts in its combat strength. Our military strength must be great enough to insure peace.

We are told that Russia has 25 divisions on the borders of Western Europe alone. Instead of a reduction of forces, the VFW knows that the American people are willing to pay more for defense, if necessary, and we should keep our ground forces at least at the level recommended by the Congress which was 900,000 in the Army and 200,000 in the Marine Corps.

We would appreciate hearing from you on this matter and if you agree with us, I sincerely hope that you will lend your influence and support toward maintaining our military and naval forces at the above strength.

Sincerely yours,

JOHN W. MAHAN,
*Commander in Chief.*

## Needed: Leadership for Our Economy

EXTENSION OF REMARKS
OF
**HON. THOMAS J. DODD**
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
*Monday, March 9, 1959*

Mr. DODD. Mr. President, last Saturday, March 7, 1959, in Clarksburg, W. Va., the distinguished Senator from Missouri [Mr. SYMINGTON] spoke to a large audience of more than 400 people gathered together at a great West Virginia Democratic victory dinner.

I ask unanimous consent that the remarks of the able Senator from Missouri be printed in the Appendix of the RECORD. I suggest that my colleagues take the time to carefully read this speech, because it is a serious, brilliant, and responsible address concerning some of the gravest problems which confront this Nation.

I was told by my friend and colleague, the able Senator from West Virginia [Mr. RANDOLPH], who introduced the Senator from Missouri, that the effect of this speech on the audience was electric, and that it evoked a remarkably enthusiastic response.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NEEDED: LEADERSHIP FOR OUR ECONOMY

(Address by Senator STUART SYMINGTON, at Democratic victory dinner, Clarksburg, W. Va., March 7, 1959)

I am most happy to be with you at this fine victory dinner tonight. I bring greetings from the State of Missouri, which shares with you some beautiful mountain country, and also shares your faith in the Democratic Party.

We Democrats in Missouri, and throughout the country, are mighty proud of the Democrats in West Virginia. Last November, you led the entire country by electing not one, but two Democratic Senators; and five Democratic Congressmen.

No one could help admiring the spirit with which the Democrats of West Virginia have tackled the problems of your State. There is a big job to be done; and by their votes last November, the people demonstrated the extent to which they are behind you, and are working with you, for a greater, more prosperous State.

You can always tell a Democrat by his faith in the future—and by his willingness to work with the people to make the hope of the future come true.

For the past 2 months in the Senate I have watched your two fine Senators working together for their and your State—and for the Nation. There was never a better example of teamwork than that between JENNINGS RANDOLPH and BOB BYRD. Together, they have introduced bills to aid depressed areas, expand community facilities, research new uses for coal, and release more farm surpluses to feed hungry families.

They are joined in this effort by your Congressmen, my friends, including the beloved dean of your delegation, CLEVE BAILEY—and fine Congressmen and Congresswoman, ELIZABETH KEE, HARLEY STAGGERS, KEN HECHLER, and JOHN SLACK. These men and women are working to build a better future for West Virginia. They are doing everything in their power to restore prosperity to this State—so that your young people need not leave their homes and go to other States to obtain work. Surely this is a righteous cause which deserves everyone's support—and I intend to do everything possible to support it.

Your victory last fall was not easy. The Republicans poured everything they had into the West Virginia campaign. Someone said there were so many high Republican officials speaking and working out here last October, it would have been easier to get a Cabinet meeting together in Charleston than in Washington.

I wonder what has happened to all those Republican smiles and all that solicitude you saw in West Virginia, before last November 4. There was a lot of sunshine around here then, but it has all disappeared now. And it has disappeared from Washington, too.

I don't know what has become of all those bright Republican promises of the last campaign. The Republican administration does not seem so interested now in helping the people. We Democrats in the Senate passed a bill to provide more and better housing for people everywhere. The Republicans don't like it; they say it's too much, and that the President may veto it. We passed an airport bill, to keep our airports abreast of the rising tide of air travel, and to reduce the danger of airplane crashes. The Republicans don't like it; they say it's too much, and the President may veto it. And so it goes.

We Democrats want to do something about the growing shortage of school rooms and teachers. The President proposes to cut down on what little aid the Federal Government gives now to some school districts; and as for new schools, he comes up with a proposal that is about as helpful as trying to bail out a flooded cellar with an eyedropper.

The Republicans have their eye on the ball, all right, but it is the wrong ball. They are concentrating on the old dollar sign, and not on what the country needs to grow and prosper.

The Republicans' indifference to our needs at home is matched by their failure to properly recognize the growing grave dangers abroad.

We are faced with an immediate threat to our national security by the most ruthless and most powerful dictatorship the world has ever known. There is a real danger of a shooting war or a shameful surrender. But the Republicans seem more worried about a possible deficit in the budget.

Our Nation, which has increased by 30 million persons in a little more than 10 years, is bursting with needs for education, transportation and housing. But the Republicans are more worried about our gold supply.

In our mountains, fields, forests and streams, we have enough untapped abundance to double the standard of living of the American people. But the Republicans tell us we are practically bankrupt, and worry about whether we are living precisely within our income.

If William McKinley had told us that schools and public facilities and housing were not within our income, perhaps we could have understood it. In his day, the

American economy was not the mighty giant that it is today. But today we stand at the dawn of the space age, with science adding a hundredfold to the skill of our people; and for the Republican leadership to tell us that we cannot afford these investments shows a lack of vision which surpasseth all understanding.

My friends, with the countdown having already started toward a possible crisis next May 27 in Berlin, we must stop talking of what we cannot afford to do, and start talking of what we must afford to do. The brutal realities of the world in which we live today demand that we start marshaling our national strength—all our resources—so as to protect our country, preserve our freedom, and lead the world to peace. This kind of effort requires leadership. And if the last 6 years have taught us anything, it is that you do not get real leadership from the Republicans—but you do get it from the Democrats.

Let me talk tonight about one aspect of our Nation—our national economy—and what adequate Government leadership can do about that. All of us agree that economic strength rivals in importance our defense strength. For if we allow recession to permanently fasten its claws on our economy, undernourishing our people, lowering their morale and weakening their faith in the free American system, no amount of armament could prevent the present onward march of communism.

Here in West Virginia, as in many other parts of the country we are faced with just that kind of threat. A chronic condition of high unemployment is keeping you from the full benefits of the wealth that lies in your mountains and the skill of your people.

One thing is certain: A depression is not the fault of the people who suffer from it. Depressions are comparable to earthquakes. They are caused by deep-seated faults and shifts in the underlying structure of the country. Like earthquakes, tornadoes, or floods, they are beyond the power of any single individual to prevent.

But there is one difference. The people, acting together, through their Government, can prevent depressions. Let us look at what could be done—and should be done—for States where there is continuous high unemployment, in this, the richest country in the history of the world.

I spent many years in private business, most of them in effort to improve various companies.

When a business lags over a period of time, three things have to be done. First, emergency measures must be established in order to continue operating. Then invariably there must be a reorganization of plant setup and personnel. Finally, working as a team, the reorganized setup must work out comprehensive long-range plans, looking toward permanent growth and prosperity.

Let us apply these techniques to the situation now current in this great State of West Virginia.

For the emergency, there must be an immediate transfusion of the necessities of everyday life. Food is needed, especially proteins and calories, in order to bring the daily diet of the people up to minimum nutritional standards.

Our surplus agricultural commodities already total over $8 billion. The President himself estimates that next year the value of this stored surplus will be over $10 billion. Surely we can, and should, dip into this great ocean of food on an emergency basis, so as to give a more adequate diet to the victims of distress. We do this for the citizens of other nations. As example, right now we are shipping 450,000 tons of wheat a month to one country. I do not say this is wrong. But if it is right abroad, why is it not also right for our own needy people at home?

As a second step, our depressed areas must also be retooled, so as to increase income and employment. In industries where workers have been replaced by machines, they must be trained for new jobs. Where the flow of commerce and industry through the State is slowed by poor roads and inadequate airports, these, too, must be improved.

Such readjustment cannot be done solely by private hands, any more than can flood or tornado relief. There must be action by our Government to bring the men and the jobs together. Such action over here is essential if we are to counterbalance similar action now being taken by the two great imperialist empires which have sworn to destroy us—Russia and China.

A good example of the action required is the area redevelopment bill. I cosponsored this bill last year, and again this year, because America needs it far more than it needs further retrenchment and further unemployment.

Experience has shown that if it is to attract industry, a community must offer good living as well as good business. It takes more than a new factory building, ready for occupancy. It takes roads, schools, sewers, playgrounds, plus all the other things which make any town a good place in which to live and work.

And it also takes water supply development. Here in West Virginia, you have the greatest reserves of coal in the Nation. If nearby sources of water were readily available, it could be used in the process of generating power from coal. Generating plants could be built at the mouth of the mines. This would provide attractive industrial sites for more of the metal, chemical, and petroleum plants you need for your prosperity.

Can communities do this by themselves? Let's be realistic. Local government finances in many of our localities have been drained by the recession until there is barely enough left to meet payrolls. How, therefore, can they afford, on their own, to make the additional investment needed to attract industry?

Where necessary and right, loan capital should be furnished by the Federal Government. And that is exactly what this area redevelopment bill will do.

It was passed before, but vetoed by President Eisenhower. This year it should be passed over any veto.

Now there is something else which can be done that would help not just areas of high unemployment, but the whole country. For a number of years there has been increasing disagreement among certain segments of our economy—especially management, labor, and capital—on some of the most important problems incident to our growth and prosperity. There is disagreement on taxation, interest rates, hours of work, automation, the cause of inflation, and just how far the Government should go into the management of our economy. You have only to read the Chamber of Commerce Washington Report, the AFL–CIO News, and the newsletter of any large New York bank, to see how wide these gaps have now become.

Now, differences of opinion are all right. But these are not mere differences of opinion. These are hardening into battlelines. Like soldiers at the front, each group has stockpiled economic arguments to support its own position; and they spend a good deal of effort lobbing propaganda shells into the trenches of the enemy, each blaming the others for inflation, for recession, and for other economic woes. There is a lessening of the understanding and good will, the ability to see the problems of the other side, that has often characterized relations between these groups in the past.

Ninety-nine percent plus of the members of these various segments of our economy are good Americans who cherish freedom and our way of life. They know that this kind of internal quarreling isn't helping to solve any economic problems, or to cure the recession. It is just making it harder to work out a sensible policy.

I believe there is a much wider area of agreement among these groups than some of them would appear to admit. Why shouldn't these domestic differences be ironed out, face to face? We have heard a lot about summit meetings for international affairs. Why doesn't this administration sponsor a summit meeting for domestic affairs? Real leadership could reconcile most of the differences, find ways to curb inflation, and persuade capital, management, and labor to pull together for the good of America.

Benjamin Franklin said: "We must, indeed, all hang together, or, most assuredly we shall all hang separately." That observation was never more true than it is today.

We must all put aside our unilateral interests, and strive together for full production in our national economy. By full production, I mean the proper use of the great capacity of America, so that every able-bodied man and woman anxious to work can find work, at a wage compatible with self-respect.

Today, 20 percent of America's industrial capacity lies idle. This is not just a West Virginia problem. It is rapidly becoming a national problem. With the some thousand million people of the Sino-Soviet empire now working around the clock to surpass us, this nation can no longer allow a large percentage of its own production capacity to stand unused.

Therefore I recommend:

Interest rates which are low enough to allow businesses to borrow and expand, and homeowners to borrow to build.

A rise in the spendable income of the 7½ million people who still earn under $2000 a year. (The per capita income from farming of our millions of farm citizens is only $770 a year.)

If we can combine the increased investment opportunity of business with increased purchasing power, our economy will continue to grow and prosper.

So again, let me urge this administration to promote the general welfare by calling a summit conference of banking, business and labor leaders, in an effort to iron out the growing differences among them. These differences can only please the Kremlin.

Now, I want to talk with respect to one more thing that you have been hearing about, this wonderful "balanced" budget of the Republican Administration. I am for a real balanced budget. But this is a phony balanced budget. It hopes to be balanced by a margin of $100 million. That leaves a margin of error of just a little over one-tenth of 1 percent. But that's not all. It relies for its balance on a $9 billion increase in revenues that nobody is sure will happen, including higher gasoline and postage stamp taxation we know won't happen.

If a bunch of stock promoters got out a prospectus as misleading and as shaky as the so-called balanced budget of this administration, the SEC would be after them before they knew it. The budget this year is just as phony as it was last year, when they first claimed it was almost in balance, and then ran up a $10 billion deficit.

To slash into the needs of the Nation in order to conform to this phony budget is to sacrifice our opportunities, our future, and our national security on the altar of politics—and Republican politics at that.

You know better than I what the administration's phony budget will do to West Virginia. It will mean no depressed areas legislation; no help for the coal industry; no relief from unemployment. It will therefore add 12 more months of stagnation to your economy and 12 more months of suffering to your people.

It is now becoming increasingly clear that only the Democrats are willing to take the bold measures equal to the times we face. With Democratic leadership, following Democratic principles, we can break the bonds of economic stagnation. More than anything else, we want a just and lasting peace. To that end nothing is more important than a strong and vigorous economy. Because in addition to our physical strength, we know we must be strong morally and economically, by utilizing to the fullest the great natural resources which have been given us.

If we follow that course, and remain strong in our convictions, we know that we can remain a free people.

## Is Rudeness Also a Russian Invention?

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
*Monday, March 9, 1959*

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Roscoe Drummond. It is an interesting and informative portrayal of a basic reason why international relations remain strained and why the process of developing better mutual understandings between the West and the East moves forward so slowly.

There may be some doubt about the desirability and wisdom of Prime Minister Macmillan's recent visit to Russia, but there can be no doubt about the bad taste and untoward acts and statements of Communist leaders in Russia while he was there.

Since the Communists are wont to claim every new development or process as a Russian invention, one wonders whether the manner in which they endeavored to humiliate Macmillan is an indication that they are trying to convince the world that rudity is also a Russian invention?

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MR. KHRUSHCHEV'S NEW BRICK: CRUDE AND CAVALIER TREATMENT OF MACMILLAN

(By Roscoe Drummond)

You well know how hard it is, in any American sports contest, to tell the players without a scorecard. It's the same with the cold war. You can't tell what the Soviet players are saying without a special three-way dictionary: Russian-into-English-into-meaning.

And the trouble deepens when the Soviets decide to muddy the field, as in Moscow this week when, after an apparently candid exchange of views with Harold Macmillan, Premier Khrushchev waits until Mr. Macmillan is on an isolated trip 70 miles out of Moscow to drop a whole series of nyets which he had kept back from the British Prime Minister.

This is a crude and cavalier treatment of Mr. Macmillan.

The Khrushchev "nyets" were: He vetoed a big-four foreign ministers conference; he vetoed any big-four discussion of German unification, he vetoed any nuclear test ban unless Russia can keep a veto over the working of the inspection machinery.

They say that the Soviets always say no until the last split second, but this series, delivered publicly at a time when the British and Soviet premiers were apparently canvassing these very matters, hardly contributes to the climate of negotiation.

But there is another Khrushchev statement which needs a careful compass. It is this bland remark in the middle of what was described as a "warm and friendly" speech at the British Embassy in Moscow: "We understand that the reason for our differences lies in our social systems."

What does a statement like that mean? And is it true?

First, we have to look at what the "differences" between us are and at what Soviet actions created the tensions we would like to reduce.

There would be no cold war today if the Kremlin had not absorbed by force the independent nations of Latvia, Lithuania, and Estonia, imposed Moscow-dominated regimes throughout Eastern Europe while violating the Yalta agreements to hold free elections, tried to drag Greece behind the Iron Curtain, kept Germany divided, and abetted the aggression against South Korea.

Is Mr. Khrushchev saying that these actions were inevitable with a Communist government and that the Soviet Union just had to do these things because of its social system?

There would be no cold war today if the free world did not have so much evidence that the Soviet Union is determined to hold by force what it has acquired by force—Hungary is a grim example—and that the Kremlin acts to spread communism by every device it believes can be made to work.

Is Mr. Khrushchev saying that the use of force and subversion is an essential part of the Communist social system?

I would think that most Western-minded people would believe that the compulsion to try to dominate other peoples and other nations by force does not have to be an automatic part of the Soviet-Communist social system. When he has been addressing exclusively a Western audience, as in his CBS-TV show a couple of years ago, Premier Khrushchev actually said that as between communism and Western democracy: "Let the people decide."

But the fact is that the Soviets have never been willing to let the people decide—neither in Russia nor in Hungary nor in East Germany nor anywhere else.

There would be no cold war today if Mr. Khrushchev really believed in letting the people decide what kind of government or social system they wanted.

But Nikita Khrushchev knows more about communism than any non-Communist Westener and we better take it that he is right when he says that Soviet foreign policy is an extension of the Communist social system.

Mr. Khrushchev is a dedicated Leninist and it was Lenin who said that the whole world must choose between communism and democracy, that it will be "one or the other, there is no middle course."

The Soviets might sometime abandon this Lenin thesis, but Mr. Khrushchev shows no sign of doing so.

## American Bar Association Recommendations on Communist Tactics, Strategy, and Objectives

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
*Monday, March 9, 1959*

Mr. BRIDGES. Mr. President, there has been a substantial number of editorials recently which have praised the action of the American Bar Association in adopting the recommendations of its special committee on Communist tactics, strategy, and objectives. Several New Hampshire lawyers have been a moving and a vital force in making possible the drafting and adoption of the association's report.

On March 4, 1959, an editorial in the Concord, N.H., Daily Monitor paid tribute to three of these New Hampshire men, as well as stating the issues which were raised in the American Bar Association's report. I ask unanimous consent that this editorial entitled "Who Can Criticize?" be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHO CAN CRITICIZE?

New Hampshire played an active part in adoption of resolutions by the house of delegates of the American Bar Association dealing with much criticized decisions of the Supreme Court in Communist and security cases.

To its credit, the house of delegates spurned anything approaching hysteria and calmly affirmed the right and duty of lawyers to criticize court decisions in a constructive manner. After all, if lawyers cannot do this important work, who can?

Attorney Robert W. Upton, of Concord, and Attorney Leonard Sweeney, of Nashua, are members of the house of delegates. Attorney General Louis Wyman was a member of the 10-man American Bar Association special committee that wrote the resolutions adopted by the bar association. Certainly, not one of these men is against the Supreme Court as an institution.

There is every reason to believe an overwhelming majority of New Hampshire lawyers support what the house of delegates did. Its major action was to ask Congress to remove doubts and uncertainties in existing anti-Communist and security legislation.

It also urged clarification of procedures to overcome obstacles to contempt proceedings, enforcement of subpenas, and the right of the Government to protect itself against infiltration by Communists.

The house of delegates wants State statutes proscribing sedition against the United States to have concurrent enforceability with Federal laws. Under a Supreme Court decision State antisubversive acts have been set aside, not as unconstitutional, but on the ground that such was the judicially implied intent of Congress.

For those who do not possess a legal mind there is ample reason for failure to understand why the Supreme Court has balked and handicapped States, including New Hampshire, in their efforts to combat subversive elements in cooperation with Federal authorities.

The house of delegates wants Congress to consider the need for further legislation to define powers of its committees, such as the House Un-American Activities Committee and the Internal Security Subcommittee of the Senate.

It urges that the right of the Government shall be firmly established to require from a Government employee information as to Communist of subversive activities or any other matters relevant to the internal security of the Nation.

The bar association has not launched an assault upon the basic functions of the Supreme Court. It has not even tweeked the noses of the justices. It has emphasized that loopholes or quirks in antisubversive laws are for Congress to correct.

The bar association has pointed to the need for corrective action in this country's battle with Communists. But in doing so it took one important action that should not be overlooked. It took a firm stand against "proposals to limit any jurisdiction vested in the Supreme Court."

To this all thoughtful Americans should subscribe.

## The Place of Government in Agriculture

EXTENSION OF REMARKS

OF

## HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

*Monday, March 9, 1959*

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very thoughtful speech by the Honorable HAROLD D. COOLEY, chairman of the House Agriculture Committee, summarizing the farm situation. I think it is of such a character as to provoke discussion on one of the most important problems of our times, and it summarizes the very difficult situation that faces America's agriculture.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE PLACE OF GOVERNMENT IN AGRICULTURE

(Address by Representative HAROLD D. COOLEY, Committee on Agriculture, U.S. House of Representatives, before the National Farm Institute, Des Moines, Iowa, February 21, 1959)

Mr. Chairman, farmers and friends of farmers, I am indeed honored and I am bound in gratitude to you for the opportunity to speak before this great gathering of agrarian intelligence which is mingled here with the business leadership of this vast Midwest. I am always happy to visit this region where your economy rests fundamentally upon your agriculture, and where the farm people are making such a tremendous contribution to the health and strength of our Nation.

My mission today is to present to your attention, and to the conscience of the Nation, the troubled conditions on our farms and to make common cause with you to search out the approaches to solutions of our problems.

I am going to talk about the place of Government in agriculture. But, at the outset, I want to emphasize to you that it is people such as you here within the sound of my voice—students, thinkers, and leaders—who must discover the way out. You must master the means of unity among us. You must amass the Nation's opinion to solid solutions for these baffling problems which confront us.

In dealing generally with my subject, "The Place of Government in Agriculture," I shall endeavor to be impersonal and entirely objective. However, all of us must realize that it is hardly possible in these times to take any affirmative position on any matter relating to farm policy without exposure to the charge of political motivation.

THE PRESIDENT'S MESSAGE

The President has submitted his farm message to the Congress. Mr. Ezra Taft Benson has made his statement before our House and Senate Committee on Agriculture. The President and his Secretary of Agriculture have proposed further withdrawal of the Government from responsibility in the price stability of agriculture and from farm production adjustment undertakings.

Mr. Eisenhower called in his latest message for outright repeal of the parity principle, which is the only means under law to determine a fair relationship of farm prices and income with farm costs and the total of the Nation's economy.

These proposals by the President and the Secretary relate fundamentally to our subject, "The Place of Government in Agriculture." My views are vastly different. They represent my studied and sincere convictions. I am a farmer and I have lived close to agriculture all my life. My views are not political convictions. These convictions are of my mind and of my heart.

I am deeply persuaded that the parity concept, which the Nation had come to accept as sound and just, embraces the aspirations of the farm people for a decent sort of life, that they may walk in equal dignity with the people working in industry, in business, and in the professions.

Of course we should constantly seek the soundest and fairest standards for parity determinations. But we are told now that the principle of parity is old and outmoded, that its overall standards date back before 60 percent of our present population was born. It occurs to me that if mere age of a principle is sufficient to condemn it, why then cannot it be put forth, with equal force and persuasion, that we repeal the Bill of Rights, the Ten Commandments, or the Sermon on the Mount?

The Congress is called upon to scrap the parity principle and to provide price supports for our major crops at 75 to 90 percent of average prices in the market place for previous years. The proposition obviously would withdraw the Government from effective responsibility in the price structure of agriculture.

Why, now, is it not proposed that the Congress repeal the minimum wage and collective bargaining laws, and that labor be paid 75 to 90 percent of its average wage of preceding years?

Why is it not suggested that the Nation's greatest industrial plants, performing on multibillion-dollar Government contracts with profits guaranteed, henceforward be paid on these contracts at only 75 to 90 percent of the former price?

Why is it not now proposed that Federal and State regulatory bodies abandon the fair earning standards and fix the rates of railroads, airlines, and all the great utility and service industries, at 75 to 90 percent of their accustomed charges to the public?

THE FARMER'S PRICE—PAID AND RECEIVED

It is clear that the increases in prices paid by farmers for items required in farm production are no longer determined by supply and demand in the marketplace. The price tags on farm trucks, steel, farm machinery and other things bought by farmers represent "administered prices." This means that the prices are set by officials of the firms manufacturing these things and they proceed to "administer" those prices in making sales to their customers, limiting supplies as necessary to maintain these prices. The concentrated industries have the economic power to modify supply-and-demand substantially in fixing their prices.

This is the simple explanation why, in 1948, a farmer out here in the Midwest could sell 686 bushels of corn and buy a two-row corn picker, but in 1958 it took 1,972 bushels of corn to buy a two-row corn picker; it is why a farm truck cost 1,080 bushels of corn in 1948 and 2,813 in 1958; and why 1,133 bushels of corn would buy a tractor in 1948 but it took 2,897 bushels to buy a similar tractor last year.

And I make this prediction on the basis of staff studies: If the Government withdraws from the wheat program as it has from feed grains, within a few years it will take at least 2,600 bushels of corn to buy the cornpicker, 3,800 bushels to buy the truck, and 3,900 bushels of corn to buy the tractor.

Why is the farmer singled out?

Others rely upon Government protections, or upon concentrations of economic power, to protect their wages and profits, but the farmer is told to find his price in the naked competition of the marketplace.

That is where he was bankrupted in the late 1920's and early 1930's and thus he entered the whirl of the economic storm that brought on the great depression. That is where—helpless without bargaining power—the farmer is unable to set a price on what he produces but takes what is offered him. This is where, before we had a farm program in America, he was reduced to a lesser economic position so that others in our society treated him with mirth, calling him a yokel, a hayseed, a country bumpkin.

THE INHERITED PROGRAM

Mr. Chairman, I feel compelled here to identify myself as an advocate and a defender of the basic philosophy and purpose of our past farm program. In recent years the critics have been so numerous that I am sure you will welcome the words of one who is proud of this old program that it now is so fashionable to condemn.

The President, in his recent message to the Congress, gave support to efforts now abroad to convince the country that all of our present troubles in agriculture—with all the surpluses and all the costs to taxpayers—are caused by inherited programs.

To view agriculture with any perspective, we must look first at the program prior to 1953, and we must then make some comparisons with the program as it has been operated for the last 6 years. How can we truly examine the place of government in agriculture without asking questions and without making comparisons?

In 1953 we had a farm program under which for 11 consecutive years farm prices generally had averaged 100 percent of parity or higher. The Commodity Credit Corporation price support program for 20 years had cost only $1,064 million. Programs for the basic crops—corn, cotton, tobacco, wheat, peanuts and rice—actually showed a small profit of $13 million. In contrast, for the last 6 years net farm income has been almost $20 billion less than in the previous 6 years. CCC losses in these 6 years have been five times the total of the previous 20 years. CCC had commodities in inventory and on loan of a value of $2,452 million on January 1, 1953; as of January 1, 1959, the figure had reached the staggering sum of $8,716 million. Expenditures of the Department of Agriculture have increased from $1,800 million in 1952 to around $7,300 million for fiscal 1959.

It is true that war stimulated the farmers' markets during some of those 11 years when prices stood at 100 percent of parity or above; but it is true, also—though little noted—that during the last 6 years, because people generally have had more money to spend, the demand for what the farmer produces has been substantially greater than in wartime.

But here is the difference. In 1957, American consumers, with 13 percent higher per-capita incomes than in 1952, bought 11 percent more food from farmers, including more high cost animal products. Yet in 1957 the farmers received $600 million less than in 1952, although consumers paid $6,100 million more for the food in 1957 than in 1952.

The costs, to farmers and to taxpayers, during the last 6 years are not the costs of the farm program which was in operation prior to 1953. They are the costs of the program which has been recommended in the last 6 years and which the Congress reluctantly has allowed to be put into practice.

With misgivings, the Congress in 1954, allowed the sliding scale price supports to become effective. So did the Congress put into operation the soil bank of 1956. Then in 1958, with reluctance and grave doubts, the Congress authorized the reduction in support levels on corn and other feed grains and on cotton and rice.

The program we have today is not an inherited program. It is a completely redone program meeting every major request that the administration put to Congress in the past 6 years except the proposal to remove the minimum 75 percent of parity support level for all crops.

TWO PHILOSOPHIES

The great difference between the past and the present program is the basic philosophy for bringing production to reasonable balance with market requirements.

There are two main roads—two vastly different philosophies—to the accomplishment of essential balancing of supplies with available market outlets in agriculture.

The first is to set up machinery whereby farmers, at their own election, may bring their marketings into balance with assurances, as a matter of national policy, that they will receive, through price supports or other operations, profitable returns for their ample but not excessive supplies going to market.

The second course is to let farm prices decline—in the competitive marketplace—thus driving enough farmers off the land, and diminishing and weakening the productive resources of those who remain, so that total output will adjust itself to demand, in a mistaken expectation that prices may become and remain satisfactory to those who survive.

The old farm program took the first route. This program, based upon the parity principle, set up machinery for farmers to pattern their production to their markets and to give to farmers a voice—bargaining power—in the prices of their commodities as they delivered them into the markets. These are the requirements of any successful industry in a free enterprise economy. This program simply sought to place in the hands of farmers the tools for profit—control of their own supplies and price bargaining power—which have been used by industry since free enterprise was commenced.

Admittedly this program needed some changes in recent years, to adjust to the great technological advances in agriculture and thus to achieve the goals set for it. Adjustments were imperative, but never a change in the basic philosophy.

It is my opinion, it is my deep fear, that the policy we now follow surely will lead to the destruction of the family farm system which was our strength in the founding of our democracy, and it will wreck fine rural trading centers here in the Midwest and elsewhere throughout this great Nation.

Who would say that the Government has no responsibility in this?

FARM POLICY AND FARM INCOME

Let us assess for a moment the part farm policies have played in farm income.

Government programs in the past quarter of a century have increased farmers' net incomes by as much as 20 to 50 percent, in the years when these incomes otherwise would have been lowest due to excessive production in relation to market demand.

And hear this:

Government programs—even in time of dwindling effectiveness, probably have held net farm income at least one-third—$24 billion—higher than it otherwise would have been—in the last 6 years.

These figures and facts are on the authority of competent economists.

Government programs have reduced price and income uncertainty. They have accelerated the adoption of technological advances. On a national basis they have been a positive force for increased efficiency in agriculture.

Statisticians in the Department of Agriculture find that agriculture's efficiency has been increasing twice as rapidly in the past 25 years when farm programs were in operation, as in the previous 20 years.

Preliminary estimates indicate that the Commodity Credit Corporation by its loan and surplus disposal operations on a net basis removed $1.5 to $2 billion of farm products from commercial market channels in 1958. Without the soil bank payments and, had this additional $1.5 to $2 billion been pushed through commercial markets, it is reasonable to assume from past supply-price relationships that farm income in 1958 would have been $4 to $6 billion lower. Except for the price support operations net farm income in 1958 might have been only $7 to $9 billion, instead of $13 billion.

WHERE WOULD THE MIDWEST BE?

What would be the financial situation of Midwest farmers today if there had been no farm program since World War II? It is my considered judgment that most of you, and most of your financial and farm service institutions in the Midwest, would be flat broke.

What if the $8 to $9 billion of farm products now in Commodity Credit Corporation hands, or on loan, had been forced through commercial market channels in the last few years? What if the $1 to $2 billion of farm products sent abroad under Public Law 480 in each of the last few years instead had been channeled through commercial markets at home and abroad?

The questions go directly to "the place of Government in agriculture," the subject your program committee asked me to discuss.

You know the answers, and I am sure you understand my bewilderment when people vwho call themselves farm leaders, and who pretend to represent the Midwest farm opinion, come to Washington and tell us to destroy the parity principle, to scuttle what is left of the farm program and, as I must interpret it, to restore the farmer's freedom to go again into the marketplaces and, hat in hand, meekly accept in price not what he asks but whatever is offered him.

Is that what the great Midwest wants? Do you people out here want agriculture to be cast adrift again in the economic stream, while others, enjoying the protection of Government on utilizing the raw force of economic concentration, bargain away our profits, denying us fair rewards for the unmatched contribution our farm families are making to our great Nation?

I'll never believe it.

I say to the farmers of this great Midwest: Let your voice be heard. Let us know who speaks for you.

TRUE NATURE OF FARM INCOME PROBLEM

The critical elements in the farm problem today should be clear to everyone by now. Farmers are introducing new technology at such a rapid rate that they are fully replacing the labor which leaves the farm and in addition they are expending output faster than market outlets can be expanded.

Utilizing both a smaller crop acreage base and a shrinking labor supply, farm output increased 23 percent between 1950 and 1958 while total population increased only 15 percent. This increase in total farm output is largely the result of our excellent research and educational programs for farmers. It is a product of science and technology. We planned it that way. It is a wonderful blessing to American consumers, to the American economy, and to the hungry people of the free world.

But here is the rub. Individual farmers find it profitable to introduce these new production techniques, to expand their output even though the increase in total output outruns available markets, forces prices down, and reduces the total income to be divided among all producers. It is this feature of our agricultural economy which makes what is a blessing to consumers, economic suicide for farmers.

Other groups in our economy who manufacture and sell the supplies purchased by farmers, and those who process and market farm products have various degrees of market power. In the absence of marketing agreements and farm price supports the commercial farmers have virtually none.

Furthermore, this technological advance which tends to bankrupt farmers in the absence of an adequate farm program, would be substantially the same as it is today even though the current decline in farm numbers continues until there are only half as many commercial farmers in the United States as at the present and even though farms were increased to twice their current size.

As long as improved technology is available and farmers on an individual basis find it profitable to increase output more rapidly than markets can be expanded, it does not matter whether there are 5 million farmers, 1 million, or even 500,000, prices will fall faster than costs. In the absence of programs giving farmers bargaining power in relation to other groups in our economic society farm prices and incomes will be forced to disastrously low levels.

Any group, if it is to exercise bargaining power in the marketplace, must have a measure of control over its supplies. This is the key consideration in the formulation of an effective Government program giving farmers increased bargaining power.

THE ROAD AHEAD

Now where are we—the farmers of America—where are we headed?

We in Congress who have the well-being of farmers at heart are working on every conceivable approach to the problems now carying for remedies. But I must be frank with you. We shall never have another sound and effective farm program until a substantial majority of farmers—people like you who are gathered here—make up your minds. We shall never impose a program upon farmers. We are eagerly responsive to the will of farmers.

Now I have tried here to shed some light on the circumstances of agriculture and to illuminate the magnitude of the problems which confront us. It is far easier, of course, to reach an understanding on what is wrong in any particular situation than it is to agree on appropriate remedies.

But surely there can be no disagreement that the basic source of farmers' economic difficulties today in the rapid rate of technological advance in agriculture.

Surely there can be no disagreement that in the absence of a farm program in recent years farm income would have dropped precipitously.

Surely there can be no disagreement that current farm program costs are excessive in relation to the income of agriculture.

Surely no one will disagree that current stocks of storable farm products are excessive.

But can we agree on new approaches for dealing with the farm income problem I have described?

I have been bitterly disappointed in recent years in the wide differences in the recommendations of our national farm organizations. I was discouraged by the absence of constructive ideas in the President's farm message to the Congress last month.

Some basic determinations must be made. These determinations must precede any action by the Congress on a sound, long-range farm program. Our course must lie in one of a number of directions.

We can rebuild the old program, with more efficient means of production adjustment, more of the storable crops made eligible for such adjustment—all programs, as heretofore, subject to the election of farmers themselves—and provide assurance of reasonable prices for farmers who willingly adjust their outputs to market requirements.

We can provide a system of production payments or parity payments by the Government to pay to farmers the difference between the market price and a reasonable price, on all or part of what they produce.

We can formulate a program embracing a combination of production adjustment and price support, with supplemental production payments.

Or we can, if you desire it, employ either or both of these approaches to devise a program of tolerable security, as a shield behind which farmers may organize programs of their own for specific commodities, through marketing agreements, self-help plans or similar machinery designed to assure the producers increased bargaining power by creating an ability to regulate the flow of their commodities into the market. Producers of each commodity should be allowed a wide latitude to develop a program which would give them as much bargaining power as can be developed in the market.

Of course we must continue such programs as those making part of our overabundant supplies of food available to other countries in the operation of our foreign economic assistance program, and the programs of research into better distribution and utilization of food and more extensive industrial uses of farm commodities.

Those are perhaps the most discussed approaches. There are many other suggestions for the direction a farm program should take.

Now, what do we do? Where do we go?

Specifically, you have asked me: What is the Government's responsibility in agriculture? It is this:

The nature and the structure of agriculture are a matter of concern to all the people. I say to you that this exploding technology on the farm is creating a disastrous economic situation for agriculture. Our Government research and educational programs, mixed with the intelligence and labor of our farmers, have given us the most efficient agriculture in the world. They are giving consumers the cheapest food—in relation to wages—on record. Government cannot now stand idly by, wringing its hands, crying all old programs have failed and all new programs are doomed to failure. Government cannot say there is nothing we can do to avert the impending economic misery of the farmer resulting from this rapid rate of technological advance in relation to available market outlets. The Government has a moral, an ethical, an inherent, a constitutional obligation to create public policies that will open to the operators in agriculture the opportunities of due rewards for their management and their labor on a parity with the workers in all other undertakings in this free enterprise economy and in this democratic society. The safety, the health, the aspirations of all the people—the strength of our Nation—demand this.

This is my creed. It is the starting point.

The Government has given labor the minimum wage law and the collective bargaining law. It has given industry the corporate structure, the tariff and the many statutes that soften the perils of unregulated, unrestrained competitive enterprise. How, then, can the modern, highly mechanized farmer survive, ever selling in a free market and buying in a protected market? Where can there be doubt of the Government's obligation to agriculture?

I pledge common cause with the farmers of America to the fulfillment of this obligation, in public policies farmers themselves shall devise, and which will be fair alike to our farm people and to our great consuming urban populations.

## Is There a Budget Ceiling on Safety?

EXTENSION OF REMARKS

OF

### HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

*Monday, March 9, 1959*

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Is There a Budget Ceiling on Safety?" published in the February 1959, issue of Skyways magazine, the magazine of the National Business Aircraft Association, which has established an enviable record for aviation safety.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IS THERE A BUDGET CEILING ON SAFETY?

Under the Federal Aviation Act of 1958, the Civil Aeronautics Board was directed by Congress to investigate all aircraft accidents and to report the facts, conditions, and circumstances relating to each accident and the probable cause of the accident.

This act was made into law on August 23, 1958.

On December 30, 1958, there appeared in the Federal Register a Public Notice 13 which announced, in essence, that the Board could not carry out the provisions of the act because sufficient funds have not been made available to the Board to provide adequate facilities and personnel to handle the additional workload prescribed by the act.

The Board, in this Public Notice 13, requested the Administrator of the Federal Aviation Agency to take over part of the workload which Congress had directed the Board to carry out.

The Board said they would be able to investigate all rotary wing accidents, all accidents involving aircraft weighing over 12,500 pounds, and all accidents in which there were fatal injuries. The FAA, the Board requested, would have to investigate all other accidents.

What brought about this obvious circumvention of the intent of the Federal Aviation Act?

First, funds that should have been transferred from the Federal Aviation Agency to the CAB to continue its work through June 1959, were not transferred.

Second, and this is an incomprehensible example of the Budget Bureau flouting the will of Congress, no provisions were made in the 1960 fiscal year budget for the CAB to conduct its full-scale accident investigation program.

We do not seek to build an empire for the CAB—or for any governmental agency. There are ample safeguards, in this case, against this inclination—if there be any.

We do seek that the will of Congress, a direct reflection of the desires of an aroused citizenry, be carried out and that it is not thwarted by imprudent, ill-advised, and arbitrary budgetary mismanagement.

Why are we insistent on this point?

Many of our greatest advances in flying technique, many of the greatest advances in air-traffic control, many of the greatest equipment improvements have come as the result of exhaustive, detailed examination of all of the persons, procedures, and equipment involved in all types of accidents involving all types of aircraft.

Because, in 1953, the CAB was forced, then also by budgetary limitations, to delegate the investigation of accidents involving aircraft under 12,500 pounds to the Civil Aeronautics Administration, the aviation community has not been as well informed as to the probable causes of these aircraft accidents.

We could have learned from 1953 to the present date, we could have advanced, we could have saved many lives had the proper dissemination of the circumstances of all of these accidents been made.

Congress recognized this deficiency.

Congress acted to prevent its repetition in the provisions of the Federal Aviation Act of 1958.

Will Congress allow this subversion of their will by the Bureau of the Budget go unchallenged?

We pray that Congress does not.

## Picture of an Excellent Editor

EXTENSION OF REMARKS

OF

### HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

*Monday, March 9, 1959*

Mr. YARBOROUGH. Mr. President, when H. M. Baggarly, owner and publisher of the Tulia Herald, speaks about newspapermen, everyone listens with respect.

Mr. Baggarly has distinguished himself and his publication in this field as standing for what is best for the people and holding fast to ideals and principles.

Newspapermen occupy a special position in our society, charged as they are with accurately and fairly reporting the happenings of our world, and supporting worthy projects for a better life. H. M. Baggarly is a fine example of his vocation. He has built up a reputation as a fine, honest man and a thinker.

In a recent issue of his newspaper, he discussed some qualifications of a newspaper editor. I heartily agree with him.

Mr. Baggarly writes a column in his newspaper which he calls the Country Editor. Country editors, writing in weekly newspapers close to the people, have always been the backbone of American journalism and have often turned up ideas which the large daily newspapers could profitably follow.

I commend this editorial to the attention of my colleagues in the Congress and our friends in the press galleries will also find it interesting reading.

I ask unanimous consent to have printed in the appendix of the RECORD the editorial which was published in the Tulia Herald for February 19, 1959, under the heading "Always on the Side of the People."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ALWAYS ON THE SIDE OF THE PEOPLE

When the journalism department of a large State university asks a lowly country editor to give words of advice to a graduating class of prospective editors, it's like being asked to tell the story of one's life in one short paragraph.

The beginning editor, first of all, must get a clear picture of what he is supposed to be. It is assumed that he is a competent writer, that he fully understands the mechanics of operating a paper. If he isn't, he shouldn't be in the graduating class. But this isn't point 1. It only brings him up to point 1.

There may be many good thinkers in his community—men and women who have good and sound ideas—but most of them have neither the ability nor the facilities to express their thoughts. There may be many others who have the ability to speak (or write) with the tongues of men and of angels but who have nothing to say. The editor, if we are not being too idealistic, should possess both these abilities, he should be a combination of sound ideas and a golden pen.

To borrow another quotation from the Bible, the editor must "choose you this day whom ye will serve." The editor is truly a servant—but he is also a leader, a point around which like-minded persons can and will rally. While the editor will give an attentive ear—and space in his paper—to all persons and all good causes, regardless of their shades and even colors of opinions, still he cannot be all things to all people.

And right here we would warn him to abandon all such transient and meaningless labels as "liberal" and "conservative" which mean all things to all people. These tags are not those choices which we admonish him to choose this day. Rather we would have him choose between serving any one of a hundred special interest groups—and the people.

An editor may choose to hitch his wagon to the country club set. He may reason that it will be this special group which will buy his advertising space and will make or break him in the community. He may consider the social prestige that will be his because an editors' lack of economic resources can be offset by the power of his pen. The millionaires' club always has room for a nonmillionaire editor.

Or an editor may decide to cast his lot with the people—those young married couples, with starting families, who work for salaries, buy on the installment plan, and have difficulty making ends meet; white collared workers who serve in school rooms and offices; the family farmer who is striving to get ahead.

A price tag is attached to either choice.

In one instance, even his patriotism may be questioned if he rubs shoulders with too many common people, if he seems to attack the monarchy and uphold the democracy. Championing the cause of the people is often associated with such terms as "socialism," "leftist philosophy" and "reformer."

On the other hand, the popular course often is to promote the special interests who hide a multitude of sins under the gospel of "free enterprise" and "individual initiative."

After an editor has made his choice as to whom he will serve—and champion, all his subsequent decisions will fall in place in an orderly manner. If a man loves the people, one need have no fear as to how he will stand on such issues as public education, equality of opportunity and a hundred and one similar issues that will present themselves from year to year and from generation to generation.

To the prospective editor who is torn between two decisions, who is counting the cost of each decision, we would remind that someday some preacher is going to stand behind his bier and evaluate his contribution to mankind. They always do when editors die. That preacher will be able to summarize the editor's professional life in a mighty few words. He may say that Editor Jones gave his last full measure of devotion for the country club set and helping to make the rich richer—or he may say that the recently departed spent a lifetime fighting for and defending the masses of little men and women, young married couples, with starting families who work for salaries, buy on the installment plan, and have difficulty making ends meet.

Be not deceived * * * an editor cannot keep in touch with the people when he lives in an ivory tower or at the country club.

The decision must be made by the beginning editor and not by this or any other writer or adviser. But speaking for himself, this editor could want for no greater eulogy at his funeral than to have it said that "he was always on the side of the people."

## The American Stand

EXTENSION OF REMARKS
OF
## HON. THOMAS J. DODD
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

*Monday, March 9, 1959*

Mr. DODD. Mr. President, on February 6, 1959, the Most Reverend Patrick A. O'Boyle, D.D., Archbishop of Washington, delivered a penetrating address entitled "The American Stand," before the Catholic Laymans' First Friday Club in Washington.

Archbishop O'Boyle outlined with clarity and force the real foundations of our national strength. His thoughtful address deserves wide reading.

I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE AMERICAN STAND

(Address of Archbishop O'Boyle, First Friday Club luncheon, Feb. 6, 1959)

Upon this country, and this generation of Americans, is laid the heavy burden of preserving world civilization. There have been times in history when the lights of culture and progress grew dim, flickered, and seemed about to die. We know that great civilizations of the past were born, flourished, and decayed.

The lessons of the past should be a somber warning to us in the waning half of the 20th century. We know that nations decayed because they weakened from within. They lost their sense of purpose, even their will to survive. Younger and more vigorous peoples took over and built new cities on the ruins of the old, only in turn to grow old and die.

Perhaps this process of history is irreversible. The day may come when the United States we love and cherish may be no more. Only the providence of God will determine our future. But we pray the divine mercy that, if our time as a nation must come, it will not be in the near future. Let us make no mistake about the fact that youth and vigor today exists in the Communist world. If we weaken and falter in our position of world leadership, they will fill the vacuum.

We all know these truths. Indeed, they are so well known that they are truisms. Why repeat them today? My answer is that there were aspects of the recent visit of Anastas Mikoyan that made me wonder about the strength of our resolution. It is not that I question our ability to meet a clear and concrete issue, such as the Berlin question. Nor am I doubtful about our willingness to sacrifice to maintain an adequate defense, even when the cost is astronomical. What worries me is our reaction to sustained pressure in the fields of diplomacy and psychological warfare.

The Soviet tactics is both simple and effective. They try to promote world conferences, high-level ones if possible, as often as possible. They enter these meetings with attractive proposals for relaxing tensions and promoting peace. These capture headlines and win a favorable world reaction. Then, in actual negotiations, they raise difficulties and present impossible conditions. We have the unpleasant task of being negative. The conference fails. In the eyes of the world, the Soviet Union has sought peace; we have blocked it.

Even if agreements were reached, we can still be placed in a bad light. It is one thing to agree, another to perform. There can be delays, evasions, or outright flouting of solemn covenants. But the agreement is news and good propaganda; the violation is so prolonged and involved that most of the world overlooks it.

There is a twofold purpose in this tactic. The first is to mount world opinion against the United States, and some of its allies, as being the parties of war, while the Communist world can pose as the party of peace. Second, there is the aim to confuse, divide, and weaken the very nations that are bulwarks of defense for Christian civilization. Simple souls will plead for better understanding, when the real problem is not understanding, but the very will for peace. Some will ask for more negotiations, when our history books are crowded with the record of futile and even harmful negotiations. There will be a call to compromise, when compromise would mean betrayal of principle.

The very real danger of the Mikoyan visit is that it was well calculated to exploit this weariness born of incessant bickering. It was an unequal, even a one-sided contest, when the able and agile visitor from Russia was pitted against a group of businessmen or even reporters who have not specialized in foreign affairs. He could literally get away with murder, simply because his listeners did not have at their fingertips the concrete facts that could have demolished his facile answers. The result was that he left the impression of a reasonable, genial executive who was more than willing to go halfway in settling differences. It is significant, by contrast, that the only sharp words he used in public here came after his visit with experts in the State Department who asked the right questions and would not take the wrong answers.

Please do not mistake my attitude in regard to this visit. I am not sorry that our visitor had proof that we are a friendly, courteous, peace-loving people. But I hope that he did not go home with the illusion that smooth talk and the soft sell could take the place of performance. The American people have not forgotten Hungary.

Again, I would be happy to learn that he found us ready to forgive past evils. We are indeed ready to forgive. But the child at his catechism learns that the conditions of forgiveness are sorrow for the past, and a firm intention to avoid evil in the future.

I think that we should apply to Mr. Mikoyan some very wise words he uttered the day he left the United States. He said: "To renounce rigidity does not mean to renounce principles. We do not respect those who lack principles. Life is a many-sided thing. Sometimes even the smallest differ-

ences have great significance. What is needed is patience and understanding." (New York Times, January 21, 1959, p. 3.)

We can indeed be patient and flexible in negotiation, but we are ironclad in defending principle. We can bypass nonessentials, but we are adamant in defending justice, honor, and the rights of man. Russia may soar higher than we have in outer space, but we must always strive to soar to the summit in ideals and the truths that are the core of our national greatness.

The ideals that have been the backbone of America's strength are the love of liberty, respect for the rights of all men, and reverence toward Almighty God. Alexis de Tocqueville, one of the most perceptive visitors ever to come to our shores, noted this about our Nation. He wrote:

"I sought for the greatness and genius of America in her commodious harbors and her ample rivers, and it was not there. In her fertile fields and boundless prairies, and it was not there. In her rich mines and her vast world commerce, and it was not there.

"Not until I went to the churches of America and heard her pulpits aflame with righteousness did I understand the secret of her genius and her power."

It is indeed from the churches that has sprung the reverence for our fellow men which is the basis of our enduring love of freedom. It is not out of place to quote again the noble statements of great Americans in regard to liberty.

Jefferson said that "The God who gave us life, gave us liberty at the same time." Patrick Henry asked: "Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery?" Daniel Webster told us: "God grants liberty only to those who love it, and are always ready to guard and defend it." Another American, William Allen White, stated well our historic position: "Wherever a freeman is in chains, we are threatened also. Whoever is fighting for liberty is defending America." Contrast, if you will, these noble sentiments that express the soul of our Nation with the cynical remark of Lenin: "It is true that liberty is precious—so precious that it must be rationed." Or these words: "We will take eastern Europe; then the masses of Asia; then we will encircle the United States which will be the last bastion of capitalism. We will not have to attack. It will fall like an overripe fruit into our hands."

In these critical times, it is more necessary than ever to go back to first principles and fundamental truths. Without them, we lose our drive, our purpose, our will to succeed. We fall into the terrible morass of apathy, and, as Bernard Baruch said, "In time of peril, apathy is the unforgivable sin, the irredeemable error."

Let us remember that liberty is not maintained by forgetting discipline, seeking ease, and making the ultimate goals of our society to be adjustment and conformity. The clutter and complexity of modern living leaves little room for serious thought. Discipline and purpose in the cause of freedom alone can overcome the powerful discipline of the Communist state.

One of the greatest political mistakes of the modern world was its failure 22 years ago to heed the warning of Pope Pius XI when he issued his encyclical on atheistic communism. At that time Russia seemed weak and insignificant, a tyranny that bedeviled and destroyed its own people, but no menace to world peace. But with prophetic insight the Pope warned that the perverted idealism and the diabolically shrewd tactics of Communist Russia posed a basic threat to Christian civilization. "For the first time in history," he said, "we are witnessing a struggle, cold-blooded in purpose and mapped out to the least detail, between man and all that is called God." That, I repeat, was written 22 years ago, and it is most timely today.

Communism, in its path of evil, has all the world vision, all the burning zeal, all the fervor and devotion of the most zealous missionary preaching the true faith. Somehow it has instilled in its followers a willingness to sacrifice and even to die for a cause that to us seems so patently revolting and evil. Enthusiasm is contagious. When the uncommitted nations of the world are told that our society is soft, decadent, declining, and that the Communist world is vital, expanding, purposeful, which pattern are they likely to choose?

The answer to this challenge can be stated in the words of St. Paul: "Stir up the grace of God which is in thee * * *" (II Timothy 1:6). We must revive our strength by a return to the principles that alone will give true strength: faith, courage, discipline, dedication to duty, and some touch of austerity. Discipline and not ease in the school, at home, at work. Purpose and dedication in our political life. A life directed to what is right, not what is pleasant. These are some of the hard virtues, the manly virtues of the early Christians. They are also the virtues that conquered this continent and built a great and free nation.

If, as strong and disciplined men, we confront the Communist and the neutral world, they will respect us. They will know that we will not compromise with evil. They will realize that they, not we, must change if the world is to be blessed with peace and prosperity.

Our strength will then keep the peace. Our prayers will be that, in God's providence, the Communist world will realize the monstrous evil of its tyranny and that a new day may dawn for this dark and troubled world.

---

## World Medical Science Advances on Three Vital Fronts: The Hill Bill, The World Health Year, United States-U.S.S.R. Medical Exchanges

EXTENSION OF REMARKS
OF

### HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

*Monday, March 9, 1959*

Mr. HUMPHREY. Mr. President, I should like to invite the attention of my colleagues to several vital fronts on which, very fortunately, the health of the world is being advanced.

I was pleased to read in this morning's Washington Post and Times Herald an illuminating article by its distinguished columnist, Malvina Lindsay, under the title, "Lowering Global Disease Anxiety."

With her usual insight and understanding of the interplay of psychological, cultural, and scientific trends, Miss Lindsay has pointed up two of the major fronts in which man is making great strides toward the conquest of disease.

HEARING ON THE HILL BILL, S.J. RES. 41

The first of these fronts is on Capitol Hill—where, tomorrow the Committee on Labor and Public Welfare holds its final hearing on Senate Joint Resolution 41, introduced by the esteemed Senator from Alabama [Mr. HILL]. This resolution, which others and I are pleased to cosponsor, will establish a National Institute for International Medical Research.

WORLD HEALTH ACTION AGAINST EPIDEMICS

The second vital front to which Miss Lindsay refers is the action of the World Health Organization in leading the fight against the ancient scourge of pestilence.

Fortunately, mankind has been largely relieved of the fear of epidemics. Yet in this age of jet travel, the possibility always exists that with lightning fury an epidemic of cholera, yellow fever, bubonic plague, or the like, will race throughout the world, bringing mass death in its wake.

FORTHCOMING INTERNATIONAL HEALTH YEAR

In this connection, too, Miss Lindsay refers to the meeting in Geneva in May of the General Assembly of the World Health Organization. It will take up proposals for an International Public Health and Medical Research Year, possibly commencing in June 1961.

I am pleased that this action is largely at the initiative of the United States, in view of the unanimous Senate passage, last August, of Senate Resolution 361, 85th Congress, which I had introduced in order to facilitate such a year and which the Committee on Foreign Relations had reported without dissent.

UNITED STATES-U.S.S.R. MEDICAL EXCHANGES

The third vital front is in the field of medical exchanges.

In this connection, I cite a most interesting article from the front page of Sunday's New York Times, entitled "Soviet Exchanges Alter Brain Study."

The article pointed out that, thanks to current exchanges of medical neurologists and other specialists between the United States and the U.S.S.R., both countries have been aided in their specific research on the central nervous system.

Russia, it must be remembered, has a great tradition of study of the processes of the brain. Russian scientists like the great Prof. Ivan Pavlov have contributed some of our most significant knowledge on the workings of the reflexes and of the central nervous system as a whole.

I have been in communication with American, Canadian, and other brain specialists in order to advance research into such problems as epilepsy, multiple sclerosis, Parkinson's disease, and other disorders of the central nervous system.

It is only natural, therefore, that this very important subject of exchanges was one of the principal items for discussion in the course of my visit with Soviet medical authorities in early December 1958.

REPORT TO SENATOR HUMPHREY FROM STATE DEPARTMENT

A recent report which I have received from the State Department describes the welcome progress under the first year of the Lacy-Zarubin agreement in medical exchanges and in other fields.

I hope that these exchanges will be multiplied manyfold in the second year and that a broad new extension agreement will be negotiated. Exchanges represent one of the great hopes for advancing science and for improving relations between the East and the West.

In order, then, to point up the developments on these three fronts, I send to the desk the text of Miss Lindsay's article from the March 9 Washington Post and

Times Herald and of the New York Times story on March 8. I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, Mar. 9, 1959]

LOWERING GLOBAL DISEASE ANXIETY

(By Malvina Lindsay)

The fear of war may hang over mankind for a long time to come. But fear of scourge and pestilence, as well as of noncommunicable disease, is casting an ever-shorter shadow over the lives of people.

If medical research of all nations can be better coordinated—which is one aim of the proposed National Institute of International Research on which congressional hearings are now being held—many prevailing diseases can be conquered more quickly and more well-being brought to people everywhere.

This project, together with the activities of the World Health Organization, which is planning at its meeting at Geneva in May to set in motion an International Health Year, corresponding to the International Geophysical Year, will help prevent recurrence of the great traumas peoples have suffered from the beginning of human history as a result of disease visitations.

Recent outbreaks of cholera in Bengal and in Bangkok have shown that plague is not yet banished from the globe. Yet the speed with which these were countered by vaccination, disinfection, quarantine, demonstrated how well man today is mobilized to fight germs. But he needs a stronger intelligence corps to foresee and forestall their development.

It is hard for modern man, with his protection of hygiene and sanitation, his vaccinations and immunizations, to realize how disease has hampered, terrified, and devastated peoples of the past and left on them psychological scars that endured for years. It is hard for him to understand how the Black Death, the Great Plague of Europe, and later scourges of smallpox, yellow fever, typhus have influenced history and left legacies of mass debility and neurosis.

A society or culture, like a human being, has a "unique psychological fabric" on which any great crisis leaves its mark, Dr. William L. Langer, of Harvard University, said in an address in 1957 at the annual dinner of the American Historical Association. In support of this he cited the late Sigmund Freud. Contemporary man, said Freud, living in a scientific age in which epidemic disease is understood and, to a large extent controlled, is apt to lose appreciation of the enormous incomprehensible losses of life in past generations, to say nothing of the prolonged and widespread emotional strain occasioned by such disasters.

Dr. Langer suggested that the great epidemics of 165–180 A.D. and 250–280 A.D. may have contributed to the fall of Rome. The Black Death of 1348–49 he called the greatest single disaster that had ever befallen European mankind. In most localities up to half of the population was lost in a few months.

Europe was ravaged subsequently by disease for about 300 years, suffering epidemics of bubonic plague, typhus, syphilis, "English sweat" (influenza). Napoleon's defeat at Waterloo may have been in part owing to the typhus his army suffered during its invasion of Russia in 1812. These epidemics halted economic progress, led to emotional upsurges, as flagellant processions, searches for scapegoats, large-scale pogroms, flights of citizens from one place to another, outbreaks of riotous living. They caused moods of misery, depression, anxiety, a morbid preoccupation with death and, in the 15th century, the spread of witchcraft.

Yet international efforts to cope with such disasters began as early as 500 years ago at the time of the Black Death, the World Health Organization records in its recent issue of World Health. These quarantine efforts were strange, rigorous rituals, such as treating those exposed with fumes of boiling pitch and washing them in vinegar.

Quarantine efforts through successive years largely failed because they were not based on scientific knowledge. It was not until 1903 that an effective quarantine convention was signed to prevent the spread of disease over national frontiers. The World Health Organization, created in 1948, became the international authority on quarantine matters. The ideal to which the WHO now looks forward is the elimination of haunts of pestilence within nations so that measures at frontiers will not be necessary.

The proposed National Institute of International Medical Research should not only contribute to this but also to the conquest of other diseases that sap human energy and lower productivity in all parts of the world.

---

[From the New York Times, Mar. 8, 1959]

SOVIET EXCHANGES ALTER BRAIN STUDY

A shift in emphasis on research in mental disease is apparently following the recent freer exchange of scientific information between the United States and the Soviet Union. This was indicated here yesterday by three Soviet scientists just before they started on the last leg of a month-long tour of American laboratories. The laboratories are engaged in research on the physiology and pharmacology of the nervous system. The visit here follows one made to similar Soviet research installations by five American scientists in November and December. The tour is provided for in an agreement between both Nations, made in January 1958, to exchange missions in eight fields of medical science.

Shifts in brain research programs in the two countries have already resulted from exchanges made during a colloquium last October in Moscow, according to Dr. Vladimir S. Rusinov, head of the Soviet mission.

Dr. Rusinov is the director of the department of physiology and pathology of the nervous system at the Institute of Neurosurgery of the Soviet Academy of Medical Sciences in Moscow.

"During that colloquium," he said, "it became quite clear that our scientists were approaching the problem through studies of the cerebral cortex while your workers were concentrating on subcortical structures, such as the reticular formation at the base of the brain."

Since the colloquium, he said, some Soviet scientists have initiated new studies of the brain's subcortical structures.

He said he found it "especially pleasing" that several American scientists had shifted the emphasis of their research toward Soviet ideas brought out at the Moscow meeting.

Another example of how Soviet and American medical research programs appear to be moving toward a unified front was cited by Dr. Sergey V. Anichkov, head of the department of pharmacology of the Sanitary-Hygiene Medical Institute at Leningrad, the oldest institution of its kind in the Soviet Union.

Dr. Anichkov said his task was to find drugs that were active on the central nervous system. He noted that Soviet scientists conducted research in that field by studying the effect of a drug on the entire body. American scientists concentrated more on the drug's action at the level of individual cells.

"For a profound study giving important answers, it will be necessary to combine these approaches," he said.

The third Soviet scientist, Dr. Vasily V. Zakusov, said research on the central nervous system and on the drugs that affect it was on about the same level in the United States and the Soviet Union.

Dr. Zakusov is the director of the Institute of Pharmacology and Chemotherapy of the Soviet Academy of Sciences in Moscow. It is the newest such installation in Russia.

"Of course, there are some differences," he said. "For example, we are somewhat more advanced in studies of the central nervous system. You are ahead of us in the synthesis of new drugs."

It was because of deficiencies in the Soviet program for drug synthesis, Dr. Zakusov said, that his institute was created 4 years ago. He said his laboratory had no exact counterpart in the United States, but that some of the pharmaceutical laboratories he had visited here "come close."

The Soviet scientists gave one example of recent advances made in the discovery of new drugs to treat nervous disease. It was an alkaloid called nevalin from the snowdrop flower.

---

## Bill Decker, High Sheriff of Dallas County, Tex.

EXTENSION OF REMARKS

OF

## HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

*Monday, March 9, 1959*

Mr. JOHNSON of Texas. Mr. President, citizens of Dallas, Tex., recently honored at a testimony dinner one of their veteran public servants, Sheriff J. E. (Bill) Decker.

The record of this man's service is underlined by the qualities of ability, fairness, courage, and competence.

These attributes have been singled out in a recent editorial carried in the Dallas Morning News, for which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Dallas Morning News, Mar. 4, 1959]

BILL DECKER

The high sheriff of Dallas County, J. E. (Bill) Decker, is known by his 253 other colleagues as the best sheriff in Texas. We in Dallas know him as the best in Dallas history.

But that honor did not singly attract all those local citizens last night to his testimonial dinner. They appreciate how a young lad started in the courthouse as an elevator boy and rose to high places through ability, fairness, courage, and competence.

Twenty-five years ago the notorious Harvey Bailey escaped from the Dallas County jail. Decker, chief deputy under Sheriff Smoot Schmid, walked into the press-room and told reporters before he told anybody else.

That's why we in the newspaper business admire him. He never covers up. Even criminals respect him for shooting squarely.

A salute. And many more years of service.

## Bill Monroe Exemplifies Courageous Spirit of Handicapped Persons

EXTENSION OF REMARKS
OF
**HON. RALPH YARBOROUGH**
OF TEXAS
IN THE SENATE OF THE UNITED STATES
*Monday, March 9, 1959*

Mr. YARBOROUGH. Mr. President, once a year, a week is set aside for recognition of the broad strides made by the physically handicapped people of this Nation.

I believe this recognition should come more often. The things being done in America today by handicapped persons often constitute near-miracles.

For example, there is Bill Monroe, a student at Southewestern Baptist Theological Seminary in Fort Worth, Tex.

When I say broad strides made by handicapped persons, this has particular meaning for Bill. He was stricken with polio in 1952 while serving with the Air Force in Korea.

Although doctors told him he would never walk again, he has proved them wrong. Today he carries 18 semester hours of classroom work toward a bachelor of divinity degree. He has a part-time job as a minister on weekends. In addition, he has opened a book store in Fort Worth. He travels with Baptist youth revivals about 3 months each summer. He was an all-A student while getting a master of arts degree from Baylor University. He is also the father of two young children.

This young man's faith and courage can serve as an excellent example not only to other physically handicapped persons but to all of us.

Mr. President, as special recognition of these fine accomplishments of Bill Monroe and his family, and as a salute to the other physically handicapped persons of our Nation who are establishing such wonderful records, I ask unanimous consent to have printed in the Appendix of the RECORD an article which was published in the Fort Worth Star-Telegram for Sunday, February 22, 1959, under the heading "Polio Victim Kept Busy By Schedule."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POLIO VICTIM KEPT BUSY BY SCHEDULE

Bill Monroe, busy student and father, is proving a crutch is something to lean on physically, not mentally.

A first-year student at Southwestern Baptist Theological Seminary, Monroe is a polio victim.

But he has overcome the crippling disease, propelling himself from a wheelchair into a full life.

He was stricken while in the Air Force in Korea in 1952.

Military doctors told him he would never walk again. But time and determination have proved the experts wrong.

Monroe has a schedule that might turn a business executive's hair white.

He is carrying 18 semester hours of classroom work. His aim is a bachelor of divinity degree.

On weekends he preaches on a part-time basis. His latest venture is a bookstore at 1710 Gambrell, near the seminary, where he will sell books to students.

Each summer he travels the State from 12 to 14 weeks, working in Baptist youth revivals.

Monroe and his wife, Patti, attended Baylor together in 1953. He was graduated in 1956.

"She got a little behind because she took time out to have two babies," Monroe said. The youngsters are a son, Cam, 2, and a daughter, Cathy, 4.

Monroe also earned a master of arts degree at Baylor, completing the work in 1958. He was an all-A student at Baylor, and is maintaining the high level at the seminary.

Monroe, a native of Omaha, Nebr., appeared on the nationwide Quiz Kids program in 1943.

During the Korean war, Monroe served as a radio operator on an air troop carrier.

He explained that he became a Christian in a military hospital in Japan.

"I was so weak I couldn't hold up a magazine. But I was able to read a New Testament that a chaplain had given to me. He told me that I could find the answer to my problems in the Bible. I accepted Christ right there in the hospital."

Monroe went through Baylor in a wheelchair. In 1955 he began standing to preach.

Now he can climb stairs without hand rails. He averages about 120 bowling from his wheelchair.

"The Lord is the limit as to how far I can go," Monroe said.

## Air Force Chief of Staff Believes United States Should Accelerate Aircraft Nuclear Propulsion Program

EXTENSION OF REMARKS
OF
**HON. MELVIN PRICE**
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Monday, February 9, 1959*

Mr. PRICE. Mr. Speaker, I have noted with much interest that among the reservations held by Gen. Thomas D. White, Chief of Staff, U.S. Air Force, regarding proposed Air Force funding in the fiscal year 1960 budget, is one having to do with the nuclear-powered aircraft.

There is no doubt but that the United States could now be laying claim to the world's first nuclear-powered airplane were it not for delayed decisions and, worse, lack of decisions in past years.

I am in complete agreement with General White when he points out that our aircraft nuclear propulsion program is sufficiently advanced so that we should proceed with construction of the prototype airframe development and that we should accelerate the propulsion phase of the program.

I herewith include with my remarks the reservations which General White has set forth regarding the 1960 budget:

GENERAL WHITE SETS FORTH RESERVATIONS ABOUT FUNDS FOR FISCAL YEAR 1960

Gen. Thomas D. White has told the Senate Preparedness Committee what are the reservations he holds regarding proposed Air Force funding in the fiscal year 1960 budget. The following is the text of General White's communication to the Senate group:

"This statement is in reply to the direct request of the chairman, Senate Preparedness Committee. It confirms oral examples given to the committee at the time questioning and completes my recital of reservations concerning the Air Force fiscal year 1960 budget.

"The present Air Force fiscal year 1960 budget does not permit the replacement of B–47's as rapidly as requested. While certain scientific advisers do not feel that we are ready to start building a nuclear powered aircraft, I consider that our aircraft nuclear powered program (ANP) is sufficiently advanced so that we should proceed with construction of the prototype development airframe and should accelerate the propulsion phase of the program. The density of coverage that will result from the Bomarc procurement proposed in this budget is substantially less than the Air Force initially submitted.

"The Air Force military construction program is marginal in terms of support type of facilities and does not provide for the cumulative and growing deficit in many equally important areas. In fiscal year 1960 the Air Force operations and maintenance funding is minimal and will require deferral of certain programs which it would be desirable, and in some cases more economical, to accomplish with fiscal year 1960 funds."

## Salute to 4–H and FFA Programs

EXTENSION OF REMARKS
OF
**HON. ALEXANDER WILEY**
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
*Monday, March 9, 1959*

Mr. WILEY. Mr. President, today I welcome the opportunity to salute two of the most outstanding programs for youth development in America—that is, the 4–H Club and Future Farmers of America programs.

Over the years, participation in 4–H or FFA projects has provided a splendid opportunity for our rural youth to develop special knowledges and skills in farming; as well as to participate in excellent programs for building of character and traits of leadership as citizens.

In Wisconsin, particularly, we have both outstanding 4–H and FFA programs. Under FFA alone, for example, there are over 14,000 members in our 283 chapters throughout the State. Overall, these have given our youth an opportunity to develop practical experience in carrying out special farm projects; including management, safety, forestry, soil conservation programs, home economics, and a variety of other activities on the farm. Participation in these programs acquaint boys and girls with the fundamental knowledges of how to deal with problems in these fields individually; as well as to cooperate with other young folks in group work for the development of such programs.

Here, too, they learn the principles of self-government, as well as develop traits of resourcefulness, ingenuity, teamwork, clean living, devotions to

principle, recognition of duty, and have various other constructive experiences that better enable them to meet the challenges of their own future.

The 4–H and FFA programs, too, are constructive antidotes to delinquency problems that sometimes develop in rural areas. According to estimates, over 520,000 youths over America were involved in delinquency cases in 1957.

Unfortunately, the growing problem of delinquency may sometimes overshadow the fact that the vast majority of our youth, many of them participating in such constructive programs as FFA and 4–H, are making commendable and constructive efforts for development of personal capabalities and abilities to serve their community and the Nation.

In recognition of National 4–H Club and National FFA Club Week—February 28 to March 7—the Rice Lake Chronotype, of Rice Lake, Wis., published a splendid editorial saluting the outstanding FFA and 4–H Club programs. I request unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SALUTE TO YOUTH

This week is being observed nationally as 4–H Club Week and FFA week. The latter organization, to those acquainted with it, is the Future Farmers of America.

This edition of the Chronotype pays tribute to these two fine organizations and to the contributions of the young men and women who are members to the farm life of Barron County.

There are 4–H clubs in every corner of Barron County, composed of boys and girls who are pledged to the creed of "head, heart, hands, and health," and who are through 4–H becoming better citizens, more useful members of the farming community, better equipped to serve their families, their schools, their club, their country, and themselves.

Through their 4–H projects these youngsters are learning the rudiments of farm and home management. Herd management, gardening, farm safety, poultry raising, sewing, forestry, soil conservation—these are but a few of the projects these alert, bright-eyed, and eager youths have undertaken through 4–H.

As their years in 4–H pass and as they tackle more ambitious projects and take advantage of the widening circle of opportunities which the highly successful program affords, these youths grow in knowledge, self-assurance, usefulness, and good citizenship.

Much the same can be said of the Future Farmers of America. These boys are enrolled in an FFA chapter in their local high school, tied in with the agricultural training program at their school. The agricultural instructor is also their chapter adviser.

Improved farming methods, through recordkeeping, experimental grain plots, soil testing, reforestation projects—these are but a few of the undertakings of boys enrolled in FFA work. Through their chapters they learn the principals of self-government, so important to the youth in a democracy. They learn the rewards of a good showing in keen competition.

Resourcefulness, ingenuity, teamwork, clean living, devotion to duty—these are some of the things which the 4–H and FFA program instill in the farm youths who are enrolled as members.

For their personal achievements and for their contributions to a better life in rural America, and especially in Barron County, these young citizens are entitled to a well-earned salute from the older citizens.

## Fifty Years of Humanitarian Service

EXTENSION OF REMARKS
OF

## HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 5, 1959*

Mr. O'HARA of Illinois. Mr. Speaker, tonight at the Willard Hotel there will be a dinner, one of the largest attended dinners of the season, honoring John W. Edelman. The distinguished gentleman from Missouri, the Honorable RICHARD BOLLING, will be one of the many speakers from all fields of activity, paying tribute to a truly great American and one for whom for many years I have held admiration and affection.

No one knows the problems of housing better than John Edelman, and I am indebted to his constructive counsel and great founts of knowledge, statistic as to the past, wise planning as to the future, we vision wherein over every American family will be a decent roof, when I served as a member of the Banking and Currency Committee. Yet housing is only one of the many subjects that affect the welfare of the American people and in which John Edelman is numbered among the experts.

Mr. Speaker, by unanimous consent, I am extending my remarks to include the following article by Harry Conn, of Press Associates, Inc., and carried by the labor press throughout the country:

PIONEER UNION SPECIALIST

(By Harry Conn)

The trade union specialist—the trained professional expert who devotes himself to furthering the trade-union cause—is a common breed today.

This wasn't always true.

His path into the service of modern trade unions was blazed some 30 years ago by a small group of pioneers. They were trade unionists through conviction who went to work for unions to provide skilled assistance to union leaders.

The fact that specialists are so well integrated into the trade-union structure today attests to the effectiveness and zeal of the pioneers.

One of this group, John W. Edelman, Washington representative of the Textile Workers Union, is going to get some of the recognition which has been long due him when hundreds of his friends and associates gather at the Willard Hotel here on March 5.

John Edelman is being honored not just for his services to the trade union movement but to the cause of liberalism and humanity generally. It has been Edelman and those with the same outlook who have broadened the horizons of organized labor far beyond the bread and butter stage—and made the objectives of labor and liberalism one.

Edelman is the dean of labor lobbyists on Capitol Hill but his skills don't stop there. He has worked as a specialist in workers' education, publicity, housing, political action, legislation, community services—to name but a few.

"Today in the labor movement," he observed, "staff members are specialists in single fields or areas. It's political action or research or publicity or workers' education. In the twenties and thirties we were frequently called upon to be specialists in almost all fields."

His own interests and work remain wide and varied. He has an insatiable hunger for books, fiction and nonfiction. An unusually rapid reader, he has been known to finish several books a night.

Edelman is a slight, sharp-eyed man with thinning grey hair. His alertness, his preciseness of speech with a slight British flavor, his complete absorption with the subject at hand are familiar characteristics.

A fixture in the Washington area since 1939—and a frequent visitor before—Edelman has built up impressive relationships with Senators, Congressmen, trade unionists, the press, liberals. His deep regard for all persons, his warmth in these personal relations, have won him countless friends.

Asked by a reporter what was his title, Edelman replied: "I'm a labor lobbyist. It's a good name. I like it."

Testifying before congressional committees, Edelman holds his audience. He is a master of his facts; his preparation is sound.

Growled one reactionary southern Congressman after testimony on minimum wage: "I don't know what it is about him. He's about the only one of these labor guys I listen to, and damn it, he makes too much sense."

POLITICAL ACTION AT 14

Born in New Jersey, taken to England at the age of 9, Edelman spent his youth trying to find out what made sense. His stepfather was closely associated with the Socialists groups. At the age of 14, John Edelman branched out on his own and became a local secretary for the Independent Labor Party.

He joined his first union at the age of 16, the British Agricultural Labor Union, and did volunteer work with the exploited farmworkers. He had earlier experience, appropriately enough, assisting striking woolen workers.

At 17, he got his first newspaper job, writing for British and American papers. He joined the British Union of Journalists.

He returned to the United States several years later and eventually became Sunday editor and dramatic critic on the Springfield (Mass.) Republican.

Newspaper work, publicity, and even principal of a modern school in New Jersey, commanded Edelman's attention and skills for the next few years. Among his close friends were Clint Golden, later a leader of the United Steelworkers, and Edward Levinson, the late publicity director of the UAW.

It was during this period that he took what he calls the most constructive step of his life. He married Kate Van Eaton, a social worker from a good Ohio Republican family. He first met her when he was a private in the Army during World War I.

One of the first times that he really sank his teeth into social legislation was in editing a report, prepared by James H. Maurer and Abraham Epstein, on old-age pensions, for Gov. Gifford Pinchot of Pennsylvania. The report is still considered one of the finer social documents in America.

TO THE HOSIERY WORKERS

Edelman had steady contacts, at this time, with a comparatively small union, then called the American Federation of Full-Fashioned Hosiery Workers. The union needed someone with the skills which Edelman had developed over the years—in education, publicity, research and as a legislative expert. He agreed to go to work for the organization. The year was 1926.

Stephen Rauschenbush, who was on the staff of Governor Pinchot, as well as being a friend of Edelman, paints this picture of the period:

"Nineteen hundred and twenty-six was a terrible year for the trade union movement. It's hard to conceive of that atmosphere today. Some of us worked at it and talked—but it was mostly for the record. It was hard to believe that there was a future for unions.

"A professional man going to work for a union in those days was, in effect, casting his lot with those who would be underdogs all their lives and all his life. You had to be-

lieve when there wasn't tangible to believe in."

When Edelman took the job with the AFHW as an all-around specialist he became one of a very small number of such experts. Max Danish was editing Justice for the International Ladies Garment Workers Union. The late Marion Hedges was putting out the Electrical Workers Journal for the International Brotherhood of Electrical Workers, J. B. S. Hardman and Charles Erwin were working for the Amalgamated Clothing Workers. Eli Oliver had just been hired as research director for the Railway Clerks.

In the Hosiery Workers Union, Edelman worked with Gustav Geiges, then president of the union, and William Smith, secretary-treasurer, and later with Emil Rieve, who became president of the union around 1928. He also learned much about the South from two organizers—the late Harold Steele and Alfred Hoffman, both of whom later served as presidents of the AFHW.

"The Hosiery Workers Union," Edelman says, "was made up for the most part of young, militant, sanguine people who had in most instances quite an orientation toward trade unionism. I must say that there was an unusual degree of devotion and personal sacrifice on the part of these workers toward building of the union. Their dues were higher than average dues today and their union activities more intense."

HE RAN AND RAN AND RAN

Edelman, based in Pennsylvania, ran from spot to spot on assignments for the Hosiery Workers. He ran strikes. He put out publicity against scab hosiery operations. He ran an education and research program.

As a sideline, between strikes, negotiations, organizing, he conducted classes in labor history in Philadelphia and Paterson, N.J. One of his brighest students was Carl Holderman, now the Commissioner of Labor in New Jersey.

The immense importance of working with liberal, nonlabor groups has always characterized Edelman's activities. His work with the National Consumers League, for example, led to widespread public support and public sympathy for the trade union fight against sweatshops.

When many, in or out of the labor and liberal movements, think of John Edelman, they think of housing. He had no experience in this field at all before the onset of the depression.

Distressed by the housing problems of thousands of hosiery workers in Philadelphia who lost their homes during the depression, he tried at first to find a solution through organizing a cooperative housing corporation, but soon discovered that only through Federal financial assistance could an adequate remedy be found.

The way in which the resources of labor, Government, the community, and individual talents were mobilized to meet this situation is typical of Edelman's method of working. At the request of the union, the graduate school of Bryn Mawr under the leadership of Dr. Susan Kingsbury and Dr. Mildred Fairchild made a survey of housing needs and preferences of hosiery workers in Philadelphia. On the basis of this survey Architects Kastner and Stonorov designed a modern apartment project.

This project, sponsored by the American Federation of Hosiery Workers, was financed by a million-dollar loan from the Federal Government, supplemented with some assistance from private capital in the form of a private loan from William Jeanes, a young engineer with a social conscience. The project was named the Carl Mackley Houses in memory of the first hosiery worker killed in a strike.

HOUSING FOR ALL

In the year the project was built it was the only sizable construction job in the city of Philadelphia; it was the only such object of its kind in America, and created widespread interest and publicity. The Labor Housing Conference (later National Housing Conference) which grew out of this interest, actually became the initiator and the advocate of the first public housing legislation. James McDevitt, now head of COPE, was first chairman of the Labor Housing Conference; Edelman, secretary, McDevitt was chairman of the building trades in Philadelphia when Mackley was built. The Labor Housing Conference caused the first public housing resolution to be introduced at the AFL 1935 Atlantic City Convention.

Mention of other fields of activity where the Edelman imprint has been firmly marked is something like a congressional rollcall on major issues. Federal aid to education has occupied much of his time. In the field of foreign relations Edelman used his many talents for furthering interest in foreign economic aid. The labor attaché posts, which are now filled in embassies throughout the world with qualified labor people, were given much impetus by Edelman.

There is still another field where Edelman made his imprint—labor and social legislation—unemployment compensation, for example. It was in 1929 that he wrote the AFL resolution endorsing the program. Thomas Kennedy, vice president of the United Mine Workers, introduced it in the AFL convention in Vancouver, B.C., and for the first time the labor movement went officially on record for jobless benefits.

Minimum wage is another example of his pioneer work in the field of social legislation. Because of his interest and experience, the labor legislative committee assigned to him the principal responsibility for labor efforts in pushing the $1 minimum wage bill through Congress. Today Edelman and his associates are working for adequate Federal standards in many areas of labor and social legislation that are now well established as part of our economic makeup.

FIRST CIO EMPLOYEE

When the new Committee for Industrial Organization was set up by the new director, John Brophy, and his assistant, Katherine Ellickson, then Kitty Pollock, Edelman became its first employee. He was named a regional director in Philadelphia for the committee and later for the Congress of Industrial Organizations.

During this period of rapid development Edelman worked closely with scores of unions that brought thousands of members into the CIO. He served 3 years in this capacity before resigning late in 1939. A major disagreement took place with John L. Lewis over Communists and fellow travelers. Edelman felt that a strong stand had to be taken against them immediately.

He returned to Washington to take a job with the U.S. Housing Authority. Then to the National Defense Advisory Commission and then to the Office of Price Administration as CIO labor liaison officer.

OPA was the first of the war agencies that had clean-cut labor consultants established officially in conjunction with the Executive order. The order was, at least in part, the result of talks that Edelman and Philip Murray had with Leon Henderson, OPA director.

The cause of organized labor was still the closest to Edelman's heart. In 1943 he left the Government, at the request of Emil Rieve, to take over the Washington office of the Textile Workers Union. The office had been set up by Robert Oliver. Edelman has been running it ever since.

LOOKING BACK HALF A CENTURY

And John Edelman has been running himself since, too, to the far reaches of the country, wherever he can serve union men and women.

Here are some of his observations, today, as he looks back on 33 years of devoted service to trade unionism and 50 years of service to liberalism and social justice:

"The growing awareness of the necessity for legislative and political action is the most heartening development both within and out of the labor movement.

"It will take dedication of service, maximum political action, and legislative work, as well as the hard work of union organization, however, to eliminate exploitation and feudalism that remains in submerged groups in the South and agricultural labor. To this end we must mobilize the rank and file of our membership as well as citizens in the body politic."

And this word of advice from a successful father (3 children), grandfather (11 grandchildren) and husband (of Kate, of course): "An effective trade unionist or crusader for humanitarian causes is one who orders his own personal life to a reasonable degree."

To thousands John Edelman is a model—a tribute to clean, decent trade unionism and liberalism—a working fighter for humanitarianism.

John Edelman is a man who will go down in labor history as a man who never grew weary of making the hard fight in a good cause.

## Criticisms of the Supreme Court

EXTENSION OF REMARKS

OF

## HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

*Monday, March 9, 1959*

Mr. THURMOND. Mr. President, there have been bitter criticisms recently of the Supreme Court decisions, and in turn there have been criticisms of the criticizers. The Greenville News of Greenville, S.C., on March 7, 1959, reprinted from the Richmond News Leader an editorial entitled "How 'Law of the Land' Is Made." In this editorial the writer ably points out that some of the most blistering criticism of the Court comes from other members of the Court who are dissenting in particular decisions. I ask unanimous consent that this thought-provoking editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW "LAW OF THE LAND" IS MADE

A few months ago, in its angry opinion in the Little Rock case, the Supreme Court of the United States proclaimed its supremacy unto all mankind. When the Court speaks, said the Court, it speaks the supreme law of the land. No man may disagree.

And how is such supreme law devised these days? The Court's opinions of February 24 afforded a remarkable picture of this solemn process in action.

One of the day's most significant opinions had to do with income taxes levied by Minnesota and Georgia on the interstate earnings of companies doing business in the two States. Six of the justices agreed upon an opinion upholding the taxes; they cited an impressive list of prior decisions to support their point of view. But Mr. Justice Whittaker, joined by Frankfurter and Stewart, wrote a blistering dissent. These three members said their colleagues of the majority couldn't read the English language; they accused them of sham and deception,

of muddy writing, of gauzy thinking, and of trespassing upon the legislative powers of the Congress.

Another of the day's more important rulings dealt with the power of Ohio and Wisconsin to tax certain products—iron ore and wood veneer—that recently had been imported. Mr. Justice Whittaker and five others joined in an opinion upholding the levies. Mr. Justice Stewart took no part in the case. Frankfurter and Harlan dissented; they accused their infallible brethren of upsetting long-established law, disregarding economic fact, splitting hairs, and in effect violating the Constitution they were sworn to uphold.

A third notable decision came when the Court upheld Virginia's franchise tax on the Railway Express Agency, Inc. Mr. Justice Clark wrote an opinion that evidently was altogether agreeable to Warren, Black, and Douglas. Frankfurter concurred in the result. Brennan agreed with Clark, "with some reservations." Harlan went along with Brennan, but with different reservations. Whittaker and Stewart dissented outright.

In three other cases decided on February 24, all of them admiralty cases, Stewart, Whittaker, Clark, Harlan, and Frankfurter went one way, and Brennan, Warren, Black, and Douglas went exactly the other. Black complained sourly that his colleagues were giving "technical or esoteric readings to congressional language which is perfectly understandable in ordinary English."

Each of these cases involved some important point of law, whether under the statutes of the United States or under the Constitution itself. The Minnesota and Georgia cases went to the heart of the whole constitutional concept of interstate commerce. The Ohio and Wisconsin cases required a direct construction of the constitutional provision which says that no State, without the consent of Congress, may levy a tax upon imports.

In the admiralty cases, the switch of one justice would have changed the supreme law of the land from A to B. During the course of the day, Mr. Justice Whittaker was both dead wrong and supremely right. In the Railway Express case, a five-man majority of the Court expounded, infallibly, the supreme law of the land; and as of the moment that opinion left their lips, it became the solemn duty of every judicial officer in the land (to recall the Little Rock case) to support the opinion and not to war against it, yet four members of the Court at once voiced reservations or outright disagreement.

These are our godlike masters—these nine quarreling, backbiting, dissenting, fueding, disagreeing mortals, whose every caprice is our command. And this, one asks in wonderment, is the great institution of judicial review? This is what is meant by the supreme law of the land?

## Appropriations for Housing

EXTENSION OF REMARKS
OF
### HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
*Monday, March 9, 1959*

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "For Economy, but——" from the February 27 issue of the Newark Evening News dealing with the housing bill recently passed by the Senate. The views expressed indicate a keen understanding of the problems involved in the housing legislation. Such clear exposition is useful, indeed.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR ECONOMY, BUT—

The House Banking Committee has approved an omnibus bill appropriating $2,100 million for housing. This is $1,250 million more than President Eisenhower recommended. Republican members of the committee say the bill will bust the budget.

The News believes in a balanced budget and favors economy in Government. But Newark needs more public housing and it needs Federal help with its Penn Plaza redevelopment project, which the committee bill would permit.

The dilemma is a familiar one. Republican Congressmen confront it continually. Supporting both economy in Government spending and Federal benefits for the home State requires a certain amount of rationalization.

It can be claimed for Newark and New Jersey that they produce far more in Federal revenues and get less back than many other cities and States. Industrial areas are forced to put up most of the billions that go to subsidize farmers and pay for reclamation and other projects in rural regions.

If this Government activity, wasteful and extravagant in the eyes of city folk, were curtailed, Federal taxes could be cut and urban areas would have money to do for themselves the things that need doing.

This isn't going to happen, of course. The farmers and other favored groups are going to continue to get handouts. And if taxes are not going to be cut, neither are they going to be increased by a Congress looking ahead to 1960. So urban needs like housing can be satisfied only at the risk of unbalancing the budget, with more inflation and more difficulty in selling Government bonds.

Sound principles of public finance cannot be compromised. On the other hand, the redevelopment that cities need for survival is beyond the resources of most of them.

It is not always easy to be consistent.

## Excerpts From Address by Mark W. Cresap, Jr., at the 18th Annual Science Talent Search

EXTENSION OF REMARKS
OF
### HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
*Monday, March 9, 1959*

Mr. WILEY. Mr. President, the other evening it was my privilege to attend the 18th annual science talent search and to hear an address delivered by Mark W. Cresap, Jr., president of the Westinghouse Electric Corp. His address was a very interesting one. It stressed particularly the need to have young men and young women obtain a broader outlook upon life.

I ask unanimous consent that Mr. Cresap's address, beginning on page 2, be printed in the Appendix of the RECORD.

There being no objection, the excerpt from the address was ordered to be printed in the RECORD, as follows:

REMARKS BY MARK W. CRESAP, JR., PRESIDENT WESTINGHOUSE ELECTRIC CORP., AT THE 18TH ANNUAL SCIENCE TALENT SEARCH, WASHINGTON, D.C., MARCH 2, 1959

My duty is to congratulate the 40 young men and women in this room who are winners in the search this year. All of us share with you the satisfaction which must be yours at having made this promising start toward careers in science.

You have already demonstrated the interest and special talent requisite to a scientific career. Your job now is to develop that talent, to become increasingly skilled in the knowledge, the method and the mental discipline so unique to scientific endeavor. Factual knowledge you will gain as a matter of course; the scientific method you will come to accept as part of your way of life. But what may well be your greatest asset, to your profession and to society as well, will be your growth in the mental discipline of science.

This mental discipline I speak of is not easy to define. But as president of a science-based company, I have more than a casual opportunity to watch it operate. Every day I observe the stimulation which comes from some 7,000 productive scientists and engineers who are dedicated to those things from which the future will be made.

One might define this mental discipline of the scientist as an attitude, a philosophy, a sense of values. Or perhaps one can better define it through some of its characteristics: it is the conviction that what one is doing is eminently worth while; the attitude that one's best effort is what the job demands; the belief that competence is something to be sought after; and a sense of urgency about getting on with what is important to do.

Regrettably, this kind of philosophy is not one which permeates some segments of our citizenry. I join with those who are increasingly concerned about the growing tendency of so many individuals to accept mediocrity as a personal standard of performance. Mediocrity has not been our tradition. It did not colonize a wilderness and civilize a continent; it did not establish the world's greatest stronghold of human freedom; it did not create as near-perfect a system of government as man has yet devised; it did not build the vast industrial strength which has, on more than one occasion, preserved what was so dearly won.

Rather, these things have come from a national strength of character sparked in us by small groups of people imbued with more than their share of mental toughness, moral purpose and sense of destiny.

The results of scientific labors dominate almost every facet of the technological world we live in. It is the scientists who now face the great frontiers; theirs is a unique worldwide fraternity dedicated to the mastery of nature, not the mastery of men; in them we find the vision and spirit and purpose which have constituted the elements of leadership in the past.

Some 20 years ago an eminent English mathematician and astronomer, Sir James Jeans, expressed the vision and purpose of science this way:

"Our descendants of far-off ages, looking down the long vista of time from the other end, will see our present age as the misty morning of the world's history; our contemporaries of today will appear as dim heroic figures who fought their way through jungles of ignorance, error, superstition to discover truth, to learn how to harness the forces of nature, and to make the world worthy for mankind to live in."

Last spring, the American physicist, Dr. Edward Teller, expressed it in quite another way. In testimony before a congressional committee, he was asked why scientists wanted to explore space. "If we knew exactly," Dr. Teller said, "we wouldn't want to."

Such is the philosophy you embrace as you join the fraternity of scientists of the future. Congratulations and Godspeed.

## The Case for Nuclear Powered Aircraft

EXTENSION OF REMARKS
OF
**HON. MELVIN PRICE**
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 4, 1959*

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "The Case for Nuclear Powered Aircraft" which appeared in the March 2, 1959, issue of Aviation Week.

The editorial follows:

THE CASE FOR NUCLEAR POWERED AIRCRAFT

(By Robert Hotz)

Public hearings on the nuclear powered aircraft program will begin soon on Capitol Hill, thanks to the persistent proddings of Senator CLINTON ANDERSON and Representative MELVIN PRICE, of the Joint Congressional Committee on Atomic Energy. This will be the first opportunity for the American public to get any reasonably clear picture of the status of our military nuclear powered aircraft progress and the real reasons why this progress has reached a point of virtual stagnation.

Until now, this program, with some genuine cause, has been heavily shrouded in secrecy. Only its opponents have been able to make public statements supporting their secret decisions to retard or eliminate its financial support. We are all familiar with the "shitepoke" jibe of former Defense Secretary Charles Wilson when he tried to wipe out the entire program in 1953 and the more recent and technically indefensible statement of President Eisenhower that a nuclear powered aircraft, even if successful, "could only fly a few hundred feet off the ground"; and, of course, the monotonous chant of Deputy Defense Secretary Donald Quarles, with the leitmotif of technical timidity and false economy, is a key roadblock in any attempt to organize and sustain any type of fruitful program in this area. Mr. Quarles' consistent record of opposing any promising new technical development program proposed in the Pentagon during the past 4 years, including the initial USAF space-exploration efforts, the radar network to monitor Soviet missile tests, the WS–117L reconnaissance satellite, and efforts on basic research hardly lend credulity to his testimony against the nuclear powered aircraft program.

We firmly believe, along with congressional and USAF, Navy, and industry experts who have testified on the program, that there is a vital need for an accelerated development program aimed at producing militarily useful atomic powered aircraft. Within the limits of this space, we will try to summarize the case for this type of program.

First, there is a definite military requirement for nuclear powered aircraft.

For the Navy, a large nuclear powered aircraft with subsonic cruise speeds would make an ideal antisubmarine warfare weapon. Equipped with new and far-ranging detection devices now under development, a relatively small fleet of these aircraft could effectively comb critical expanses of ocean rapidly and effectively to locate enemy submarines and keep them under constant surveillance, even those using nuclear power. For the 40-kilometer speed of a nuclear powered submarine would avail little against the 350-kilometer cruise speed of a nuclear powered ASW plane. The Navy believes it can best utilize an airborne nuclear reactor to drive turboprop engines with a closed cycle type of operation. For only a few million dollars it could take the first vital step toward developing this aircraft using the British Princess flying boat hulls now in mothballs at Cowes.

For the Air Force, a nuclear powered aircraft would serve several useful purposes. It would provide a vital new element of flexibility and dispersal to out strategic deterrent capability that would be militarily more effective and economically more feasible than current airborne alert plans with chemically fueled bombers.

A relatively small fleet of nuclear powered bombers could remain on airborne alert continuously for periods of up to 30 days. They would require relatively short periods on the ground for maintenance and crew changes between missions. The entire fleet could be operated from a very few isolated island bases in the Atlantic and Pacific. These aircraft could carry heavy loads of long-range detection gear to provide a mobile flexible warning coverage beyond the capability of the fixed, immobile stations of the DEW Line and BMEWS that are so vulnerable to enemy ballistic missile attack.

The nuclear aircraft could also carry a sizable load of solid-fuel air launched 1,500-mile ballistic missiles that would provide an important, dispersed and quickly available element of our strategic deterrent.

In addition, the unlimited range of the nuclear powered aircraft makes it ideally suited for low level penetration to enemy targets under or around radar and missile defense systems. The high altitude nuclear explosions from Johnson Island during the Hardtack operations in 1958 marked the turning point for both offensive and defensive aerial delivery systems. The nuclear effects at high altitude are so widespread and devastating from heat and radiation that neither presently known aircraft structures nor nuclear offensive armament can remain useful when subject to its effect even at long range.

It is this capability for long range, devious, low level penetration, most probably through holes in an enemy's defense blasted by its own air launched missiles, that gives the nuclear powered bomber a capability utterly impossible for chemically powered aircraft even with aerial refueling.

The nuclear powered aircraft also fits into the military picture as a long-range, heavy cargo logistics support aircraft that could operate without refueling over intercontinental round trip ranges.

Second, the development of useful nuclear powered aircraft is technically feasible, and this feasibility has been demonstrated in an experimental environment.

The 13-year development program, starved for funds in its best years and almost choked lifeless by several economy-dictated decisions, has laid the basis for technical exploitation into workable hardware. If any doubts remain—and there are none among the technical personnel actually working on these projects—they will soon be dispelled by the public appearance of a Soviet nuclear powered aircraft whose existence was exclusively reported in Aviation Week, December 1. The public appearance of a nuclear aircraft during 1959 also was unequivocally promised by the official Soviet radio New Year's Day scientific broadcast. There are many difficult engineering problems, particularly in high temperatures metallurgy, between experimental feasibility demonstration of airborne nuclear power and production of useful operational hardware. But the latter goal will never be achieved unless we take the first steps with the determination to progress through increasingly better systems until the desired efficiency and reliability are achieved.

Third, radiological safety will permit operation of nuclear powered aircraft for military purposes, including exposure of aircraft crews and ground maintenance personnel and the civilian population at large.

Many horror stories have grown to credulity in the atmosphere of unnecessary military secrecy that has surrounded the radiological safety aspects of nuclear powered aircraft both in the air and on the ground. There is no good reason why the results of military and industry studies and tests in this area should remain secret any longer, and we hope Representative PRICE's group will pry it loose in the public interest.

Our nuclear powered aircraft program has suffered severely during the past 5 years from financial starvation and constant shifts in goals and pace by people who have had only the briefest and most vague contact with, or understanding of, the genuine problems involved in this undertaking. At this late date in the history of our technological weapons development race with the Soviet Union, it is imperative that we organize a technically sound and militarily useful nuclear powered aircraft program. Then, we must sustain it through its inevitable development problems and occasional experimental failures and finally employ its eventual products usefully in the military pattern of the future that is essential to maintain our position of leadership for the free world.

## Airlift Needed To Support Our Overseas Forces

EXTENSION OF REMARKS
OF
**HON. A. S. MIKE MONRONEY**
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
*Monday, March 9, 1959*

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Jim G. Lucas, a staff writer for the Scripps-Howard newspapers, regarding America's need for an adequate airlift to support our overseas forces in the event of a showdown. The article has been updated slightly to bring it up to date.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AIRLIFT NEEDED TO SUPPORT OUR OVERSEAS FORCES

(By Jim G. Lucas)

WASHINGTON, Feb. 25.—Senator A. S. MIKE MONRONEY, Democrat, of Oklahoma, said today Americans are kidding themselves if they believe we have the airlift needed to back our overseas forces in a showdown.

"With the exception of a few C–133s," the chairman of the Senate's Aviation Subcommittee warned, "we haven't a cargo plane which could cross the ocean nonstop with a payload."

MONRONEY said our 368-plane Civil Reserve Air Fleet, made up of commercial planes earmarked for use by the Armed Forces in an emergency, "exists only on paper and couldn't get out of the country." He said the CRAF consists of a hodgepodge of assorted passenger ships which do not meet the demands of modern war.

The Monroney subcommittee will soon have exploratory talks with Gen. William

H. Tunner, commander of the Military Air Transport Service (MATS), on adoption of a standard cargo design by military and commercial users. MATS has 500 four-engined planes and flies routes around the world. However, MONRONEY said these planes—of assorted sizes and speeds—are getting old and most cannot fly the ocean nonstop with a full military payload.

MONRONEY said a standard military-commercial design will eventually give us the airlift we think we have now. He warned however, it could call for an investment of more than $1 billion.

MONRONEY said his subcommittee will be accompanied by Senator STUART SYMINGTON, Democrat of Missouri, former Air Force Secretary, and Dalos W. Rentzel, former Under Secretary of Commerce for Transportation. Later, they will meet with representatives of major commercial airlines and aircraft manufacturers.

He estimated it will take the rest of this year to agree on a design, but that thereafter it shouldn't be too hard to get into production.

MONRONEY said his subcommittee is looking for a cargo plane about the size of the turbo prop C–133, but costing about half as much. He said the C–133, is far too expensive for commercial use. The Air Force has between 20 and 40 now in operation.

C–133s cost the Air Force $8 million each. MONRONEY said his group wants a comparable plane which could carry freight commercially at rates 10 to 20 percent higher than trucking. He said major aircraft companies have indicated such a plane is feasible, but none is in the design stage.

The Senator said commercial airlines now use passenger planes for cargo. He compared this to hauling freight in Pullmans and said it is no answer to our mobilization needs.

He said a fleet of 400 C–133 type cargo ships would solve our problem, but emphasized this figure is tentative, depending on his investigations. Of that number, he said, approximately 100 would go to MATS and the rest to the airlines to be ready to shift to military use on 6 hours' notice.

MONRONEY said 80 percent of our exposure to war involves the risk of limited conflicts, and that this makes even more imperative the need for an adequate airlift.

## Tribute to the Late Eleanor Stephens, Oregon State Librarian

EXTENSION OF REMARKS
OF
### HON. RICHARD L. NEUBERGER
OF OREGON

IN THE SENATE OF THE UNITED STATES

*Monday, March 9, 1959*

Mr. NEUBERGER. Mr. President, one of the outstanding State library systems in the Nation is that of the State of Oregon. This is shown by Oregon's high literacy rate and by the widespread use of books, magazines, newspapers, and other literary materials in Oregon. One of the people who contributed the most to the development of the Oregon State library system was our late State librarian, Eleanor Stephens, who passed away on February 25, 1959.

Because we are considering again this year Federal appropriations to strengthen rural library services and similar undertakings, I desire to call to the attention of my colleagues the death of one who has been so important a figure in library work in our State and Nation.

I ask unanimous consent, Mr. President, to have printed in the Appendix of the RECORD House Concurrent Resolution 7, of the 50th legislative assembly of the State of Oregon, paying tribute to the illustrious memory of the late Eleanor Stephens.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

HOUSE CONCURRENT RESOLUTION 7

Whereas Eleanor Stephens served the State of Oregon as State librarian for 17 years until her retirement of last month due to illness; and

Whereas the excellence of Oregon's library is the memorial to the constructive idealism of this wonderful woman; and

Whereas her personality and character enriched the lives of each person privileged to have known her and saddened the hearts of all on hearing of her death February 25, 1959; and

Whereas a poem of John Holmes, often quoted by Miss Stephens, seems particularly apropos this day:

"Under a strong light spread your map,
And plot the dear essential dream
In the fierce color of your blood,
Then say good-bye. Your star is up.
Trust your own heart to set you free
Along the curve of time, and go.":

Now, therefore, *be it*

*Resolved by the House of Representatives of the State of Oregon (the Senate concurring therein)*, That this legislative assembly pay homage to a truly great and beloved citizen, Eleanor Stephens, and express its appreciation of her many contributions to the State and its citizens and the great loss suffered by us all on her death; and be it further

*Resolved*, That a copy of this resolution be sent to her surviving family as an expression of sympathy from each member of this body.

## Statehood for Hawaii

EXTENSION OF REMARKS
OF
### HON. CLAIR ENGLE
OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

*Monday, March 9, 1959*

Mr. ENGLE. Mr. President, last week the Senate Interior and Insular Affairs Committee unanimously recommended passage of the bill of the Senator from Montana [Mr. MURRAY] to admit the Territory of Hawaii into the Union as a State. I hope that this legislation receives as prompt and as favorable action on the Senate floor. On February 25 I testified before the Territories and Insular Affairs Subcommittee in behalf of this legislation, of which I am a cosponsor, and I ask unanimous consent that the statement I made at that time be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR CLAIR ENGLE, DEMOCRAT OF CALIFORNIA, BEFORE THE SUBCOMMITTEE ON TERRITORIES AND INSULAR AFFAIRS OF THE SENATE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS ON HAWAII STATEHOOD, FEBRUARY 25, 1959

I am very grateful that this will be my last appearance before a Congressional Committee in behalf of Hawaii statehood.

It is not my intention today to go into any lengthy documentation of the case for Hawaii statehood. The record is formidable. It is replete with testimony that demands that the 86th Congress act without fail to make Hawaii our 50th State. For a number of years, as a member of the House Committee dealing with Territorial matters and as its chairman for 4 years, I was deeply involved in the question of statehood. I am convinced without question that the Territory of Hawaii has long been ready for statehood and that we will be guilty of grave dereliction if we delay any longer to bring it about.

The smoke screen of spurious arguments advanced by the opponents of Hawaii statehood has been thoroughly pierced, and in its disintegration it has been shown up for what it is—a device to hide the personal motives of the opponents of statehood.

The favorite line of the opposition has been to impugn the loyalty of Hawaii's citizenry, but the evidence shattering their accusations continues to grow in volume and strength. In June of 1953, Senator HUGH BUTLER, one-time foe of statehood because of possible Communist influence, made this statement at a Senate hearing:

"I believe the residents of Hawaii during the past 4 years * * * have demonstrated by positive action their awareness of the Communist danger and their determination to face it frankly and never let it strengthen its foothold. During those years they have fought it boldly, have restricted its influence, and to some degree have driven it underground. I believe they have shown that they are as well able as the Federal Government to cope with this measure."

James Michener, in his article in the December 1958 Reader's Digest, came to this conclusion after an extensive study:

"Hawaii does suffer from a Communist threat. So do San Francisco and Baltimore—and all America. Hawaii's problem is no different from that of any other area. * * *

"Hawaii is not a captive of the Communists. It is fighting back exactly like any mainland community. Its record is impressive."

It is no longer necessary to answer the argument of noncontiguity. It was answered firmly and finally when Congress last year made Alaska our 49th State. And there is no need to dwell on the argument of small population. It has been soundly refuted by the fact that Hawaii's 550,000 population exceeds that of five of our present States.

There remains then the basic question of whether Hawaii is economically, socially, and politically ready to become a State. These tests have all been met. There is no disputing the cold hard facts and figures that point up the economic prosperity of Hawaii. There is no mistaking the American culture and philosophy that dominates the lives of Hawaii's polyglot mixture. And there is no disputing the political maturity of the men and women in the legislative halls and the executive corridors of the Territory of Hawaii.

Last fall a joint congressional committee visited Hawaii. It went there with open eyes and open mind, self-consciously aware of the need to keep itself free of preconceived ideas and foregone conclusions. Members of the committee walked and rode and flew around the islands talking to people in every phase of life and meeting with labor and business groups and with fraternal, political, and community organizations. The committee came back enthusiastic. It came back secure in its conviction that Hawaii must become a State. In its report, the House members of the committee concluded that "admission of Hawaii, with its mixed races and its geographical position will vastly improve our posture and relationship throughout the vast Pacific area, where we are

striving with all our might and means to keep 800 million free and friendly."

Hawaii will, of course, benefit immeasurably from statehood. But let us not underestimate the economic, political, and diplomatic advantages that the United States as a nation will gain in having as a strong outpost in the Pacific a member of its "family of states." And let us not underestimate the fact that if we fail to bring Hawaii into this family we face the possibility of the Territory becoming a Commonwealth and all that that implies—a nation that belongs to us and yet does not.

In conclusion, I want to emphasize that the question of Hawaii statehood is as much an international issue as it is a domestic issue. The nations in the Far East and elsewhere are watching us very closely on this. If we want to maintain their faith and confidence in us as a great democracy, we cannot afford to equivocate on this matter. There is a gap here between our pretensions and our performance. Let us close the gap by waiting no longer to make Hawaii our 50th State.

## Inflation—Take It With a Smile—But It Is Still Just as Deadly

EXTENSION OF REMARKS

OF

### HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

*Monday, March 9, 1959*

Mr. MUNDT. Mr. President, economists throughout the Nation, students of our fiscal system, and thoughtful leaders in our Government, have continually warned against the dangers of inflation.

Another viewpoint has been offered in the writings of Elmer Roessner, business writer for the McClure Newspaper Syndicate. His approach is in a humorous vein, but nevertheless, Mr. Roessner recognizes the deadly, inevitable results—complete crippling of our economic system—should inflation fail to be controlled.

Although Mr. Roessner has written his articles with tongue-in-cheek, it does not take much reading between the lines to understand that while today we can look at these problems with some humor, there will not be any laughing tomorrow for the millions of elderly people and salaried persons on fixed incomes who will suffer the most if we fail to halt inflation.

Added to the persuasive words of wisdom and economic science Mr. Roessner has brought out a statement of sarcasm, cynicism and humor in an effort to alert Americans to the perils of inflation as they exist today.

Mr. President, I ask permission to have printed in the Appendix of the RECORD my weekly newsletter, which includes one of Mr. Roessner's columns, and a second column by Mr. Roessner.

There being no objection, the newsletter and article were ordered to be printed in the RECORD, as follows:

FISCAL SOUNDNESS AN ESSENTIAL CONDITION OF ECONOMIC HEALTH

Sharpest debate in the Congress these days concerns the effect that inflation has on the economy. This concern over the dangers of inflationary practices is also reflected in the statements by many economists and leading administration spokesmen. The debates are not without humor, and for one tongue-in-cheek observation, I refer your attention to an article written by Mr. Elmer Roessner, noted business writer for the McClure Newspaper syndicate. His article follows:

"BUSINESS TODAY—INFLATION HAS GOOD POINTS—RUNAWAY ECONOMY BOOSTS INCENTIVE

"(By Elmer Roessner)

"NEW YORK.—Inflation is good.

"It is the cocktail of democracy.

"Yeah, I know. For years your boy has been denouncing inflation. He has called it the hole in the dike of business, the leukemia of the economy.

"Now your columnist, with a switch typical of his addled thinking, espouses inflation.

"Like lanolin, filtertips, and hexochlorophene, inflation is good for you. Here are some of the benefits:

"1. It rewards the smart. The wise ones who put their money in growth real estate and growth stocks gain more than the saps who store the cash in banks, Government bonds, or insurance.

*"Robin Hood angle*

"2. Inflation penalizes the rich and helps the poor as far as it diminishes the real indebtedness of those who owe money and diminishes the equities of those who lend it.

"3. Inflation is an incentive for simple people to work harder. The only way they can keep up with rising food prices is by swinging the axe faster or hitting the gong harder.

"4. It gets lazy wives off the sofa. Since inflation constantly increases the cost of living, more wives have to go to work to get more income to support their families. Government statistics show that the number of working females has risen directly with inflation."

"5. It encourages private enterprise. Workers often get weary of the wage-price rat race, in which they must strike once every year or so to get enough to keep even. They go into business for themselves, adding to the number of free enterprises in the country and eventually to Dun & Bradstreet statistics.

*"Ants punished*

"6. Inflation penalizes those who imitate the ants. It reduces the buying power of hoarded money and rewards the grasshoppers who, living for the day, spend their income.

"7. It keeps oldsters out of mischief. Because their savings are attenuated and Social Security benefits rise slower than prices, old people must keep to their grindstones. This keeps old gaffers from wasting their time flirting with girls.

"8. It keeps the younger generation alert. Youths realize that if they do not learn the economics of inflation along with reading, 'riting, 'rithmetic, and fingerpainting, they will be the knuckleheads of tomorrow.

"If a young man can't parse inflation, he's likely to spend his later years washing dishes—either in a hashhouse or in a jail for income-tax law violators.

"So, it's obvious that inflation is good for the Nation and anyone against it is in a class with those opposed to mother, clean fingernails, bright teeth, and the Boy Scout oath."

ANDERSON SOUNDS WARNING

Secretary of the Treasury, Robert B. Anderson, testifying before the Joint Congressional Economic Committee, illustrated fully why inflation is not merely an "opportunist political slogan," but is a stark dangerous reality that seriously threatens our economic stability.

In clearly defining the need for a balanced budget, Mr. Anderson said he is fearful "that price pressures may eventually revive, if we do not * * * close the budget gap," and expressed the belief that a nation as rich and productive as the United States, in times of prosperity, must "at least pay its way."

He said, "The fact of the matter is there is almost nothing which is more positive and more important * * * than fiscal soundness. This is an essential condition of our economic health, without which we can have neither adequate military security nor the adequate provision of other needed governmental services. Meeting our expenses currently and all that that means in the way of fiscal soundness and a healthy economy is a highly positive objective which deserves the support of everyone."

DEFICIT SPENDING FANS FIRES OF INFLATION

Dr. Don Paarlberg, administration economist, said, "* * * deficit spending is far more likely to fan the flames of inflation than to add substantial increments to economic growth. Little good and much harm can come from a price rise which is the result of fiscal irresponsibility or a speculative orgy."

Dr. Paarlberg rejects the contention that inflation is necessary for economic growth. Faster growth results primarily from actions undertaken in the private sector of the economy and by Federal measures to encourage and unleash private enterprise—not by Federal deficits. He said, "Historically, economic growth has been achieved by such methods as improving efficiency, accumulating savings, and encouraging investment. Solid and continued economic growth cannot be achieved by having the Federal Government continuously live beyond its means."

MASSIVE IRRESPONSIBILITY MEANS BANKRUPTCY

Senator BARRY GOLDWATER, Republican, of Arizona, in a Senate floor speech, said, "We are witnessing the spectacle of massive irresponsibility by those who believe that spending funds we do not have will bring an unprecedented prosperity." He warned that if inflation is not halted, there will be nothing to prevent Americans from hauling a wheelbarrow full of dollars to the grocery store to buy a loaf of bread.

"The four horsemen of bankruptcy ride again—deficit, debt, inflation, and waste—spurred on by the disciples of massive irresponsibility, and if their mad gallop is not stopped, their devastation of our money and the future of world peace will be complete," GOLDWATER said.

BUSINESS TODAY—HERE'S HOW TO GIVE THE PEOPLE WHAT THEY WANT WITHOUT INCREASING TAXES

(By Elmer Roessner)

Things were tough in the republic of Democrastan. The people were clamoring for new schools with swimming pools, government sponsored art shows, and classier pensions.

But income taxes had reached 90 percent in top brackets, every thing from autos to light bulbs carried excises, and milk was taxed so much that the people would have drunk whisky instead if it were not for the fact it was taxed even more.

The President called in his Chancellor of the Exchecquer and the head of his Federal Reverse Board. "We have taxed everything to raise money," he said. "Nothing is made, nothing is done without the payment of a tax. We tax the dead, we tax the unborn—the former with estate taxes, the latter by loading them with a share of the national debt. We tax everything. Well, everything except savings."

*An idea*

"Hm." said the Chancellor. "Not savings? How did that escape us?"

"We wouldn't dare," said the President. "Thrift—the ant and the grasshopper—Benjamin Franklin and all that. It would undermine our cultural and ethical concepts. Besides the banks, the insurance companies, the savings and loan associations and all the other savings institutions would raise hell. We can't afford to have trouble with them if we ever hope to get elected again."

"Right," said the Federal Reverse man. "We couldn't just tax savings. People would say," his eyes twinkled, "that it would be confiscatory. But perhaps we can dip into the people's savings without calling it a tax, without even letting them know it's happening."

"It doesn't sound honest—I mean I don't think we could get away with it," said the President. "How would we go about it?"

*The old formula*

"It's easy," said the Fed man. "We just give the peoplel all the things they want, even the swimming pools. But instead of increasing taxes, we borrow the money."

"Couldn't we just print more?" asked the President.

"Of course not," said the Fed man. "That would be debasing the currency. People wouldn't stand for it. We'll borrow the money from banks, giving them bonds to hold. Then whenever they need money, they can put up the bonds as security, thus increasing the supply of credit."

"How will that tax the savings?" asked the President.

"By doubling the amount of credit, the plan will simply cut the buying power of savings in half," the Fed man answered. "The plan takes away half the real value of the savings and uses it to build swimming pools—or highways, apartment houses, or whatever the people want."

"Won't the savers object?"

*No one alarmed*

"Not very much. In the first place, this plan works fairly slowly. It will be years before they realize that half their savings are gone. Even then, what they have left will have the same name as their savings used to have—a thousand pesos, 10,000 marks, a hundred thousand dollars, a million pounds, or whatever the label was.

"Besides, those who own real estate or stocks will think they are richer, because the name of the prices of those things will have gone up. A one-hundred-simoleon stock will be worth 200 simoleons; a 10,000 bucko house will be priced at 20,000 buckos. Of course, they won't be any more valuable. It will just seem so because there is so much more credit bidding for them."

"Say, this is a great system," exclaimed the President. "We raise the money and the people we take it from never know its gone until it's too late. Something as good as this ought to have a name."

"It already has a name," said the Chancellor of the Exchequer. "It's called inflation."

"Nice boomy sound to it," remarked the President. "I have only one other question. Is it honest?"

## Aid to Underdeveloped Countries

EXTENSION OF REMARKS

OF

## HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

*Monday, March 9, 1959*

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled "'Pappa Fix' No Longer?" published in the Tulsa, Okla., Tribune of March 4, 1959.

This article deals with the need for an International Development Association, to facilitate the making of loans, mixing hard and soft currencies, to achieve aid for underdeveloped areas.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"PAPPA FIX" NO LONGER?

When Oklahoma's junior Senator, MIKE MONRONEY, was in Bangkok, Thailand, in 1956, he was struck by a strange contrast.

The Thais were full of talk about two recently completed engineering projects. About the first, they were intensely proud. It was an irrigation dam built on the Chao Phya River at a cost of $35 million, which would increase their rice production almost 50 percent. The special reason for their pride was that they had financed the project themselves, on their own credit, with help of an $18 million loan from the World Bank.

But about the second project, a new 148-kilometer section of the Northeast Highway, they were strangely shamefaced. They were embarrassed because the road was built for them at American suggestion, with American engineering and supervision and $21 million of American money, as compared with only $1 million of Thai money. Senator MONRONEY's impression was that the Thais felt they had lost face and sovereignty in accepting the highway. The whole subject was a hot political issue.

The Oklahoma Senator cites this contrast as one reason why our lavish foreign aid program so often fails to win friends in the have-not nations of the world.

And it's one of the most dramatic arguments for the new approach toward foreign aid which he has been formulating ever since that 1956 trip. It is a businessman's approach, designed to put idle money to use, cut down our expensive foreign aid bill for gifts and grants, and promote rather than sap the self-respect of the needy nations on the receiving end.

He has a bill in Congress at this time to achieve that through the creation of an adjunct to the World Bank, which he would name the International Development Association. The bill has many supporters both in and out of Congress, but at this time its progress is being stalled by the ponderous wheels of the State Department.

Here's how the IDA would work. It would loan cheap money to needy nations on a second mortgage basis, probably as a supplement to make up the gap between what the World Bank can lend and what the nation in question needs. The money would be offered on lenient terms of perhaps 2 percent for 40 years, as compared with the stricter 6 percent for 20 years of the World Bank.

Where would the money come from? Ah, there's the beauty of this proposal. Instead of being precious hard-currency dollars such as the World Bank deals in, the IDA loans would be made largely in the so-called soft currencies which the United States receives from the sale of farm surpluses—currencies which often lie idle for lack of reinvestment opportunities.

Another beauty of this proposal is that the IDA probably would be capitalized by members of the World Bank. Thus, the almost exclusively American burden of helping have-not nations would be shared with many other free nations. Prosperous West Germany, in particular, might find great investment opportunity in the IDA.

Is this, then, the beginning of the end of the American taxpayers' foreign-aid burden? (Remember, foreign aid is costing Uncle Sam $4 billion this year.) Senator MONRONEY hesitates to guess how much it would reduce our burdens, except to say, "Probably substantially."

We would go further than that, though. If this program can be worked out, it might completely shift the emphasis of our foreign aid from a giveaway to an earn-your-way program.

And it won't be a minute too soon. It is an incredible paradox that this Nation, which pulled itself by its bootstraps from poverty to prosperity without help from anyone—indeed in the face of war and hazards—should have become so deeply committed to a giveaway program. It is so completely foreign to the nature of our competitive society that we should continually subsidize others.

We are not without compassion for the tremendous suffering of many have-not nations. It is our duty and our privilege to help. And we are aware, too, of the political implications of abandoning to communism the uncommitted nations which look to us for help. For it is not enough, as Senator MONRONEY points out, merely to offer them freedom, for to a hungry man freedom is abstract; only bread is real. It is important to demonstrate to the needy nations that democracy can offer them bread, as well as freedom, and that they do not have to turn to totalitarianism to satisfy their hunger.

But with all this, the principle must be one of helping those who will help themselves. The "pappa fix" emphasis of our present foreign aid has earned us few friends and some enemies. And it has the Russians laughing up their sleeves.

Senator MONRONEY's bill is one of the best hopes yet of putting an end to that.

## The Farm Sale

EXTENSION OF REMARKS

OF

## HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

*Monday, March 9, 1959*

Mr. CARLSON. Mr. President, the article written by Mrs. Byron E. Guise, whose column "Ramblings" appears in the Marysville Advocate, brings back memories to everyone who has lived on a farm and observed the trend that is taking place in every agricultural area of the Nation. Those of us who remember a farmstead on practically every one-quarter section of land in Kansas have followed this trend with deep regret.

This article brings back many personal memories of my own early farm life, as I am sure it will for everyone who has that background.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RAMBLINGS

(By Mrs. Byron E. Guise)

The most poignant phrase in the advertisements of the rural press is the oft repeated opening statement: "As I have decided to quit farmings."

Rural America is producing her own brand of displaced persons as farmers sell their lifelong way of life for the pottage of a job in town or forced retirement.

Never eulogized is the heartbreak of a farmer who has nursed the soil, watched the clouds for lifegiving rain to strengthen newborn blades of green and then witnessed the slow death of towering stalks of corn from the withering rays of a July sun.

Neither are there spoken words of sympathy for the man who watches the last balky cow loaded in the truck or the last stubborn hog, nursed from piggyhood to the porkchop stage, poked into the loading chute, or listens to that old tractor which bore several mortgages, slowly grunt into lethargic movement before it is driven from the farmyard for the last time.

He turns into the dark barn, its stalls now empty of livestock. Only the mingled odors of dried alfalfa hay and barnyard stench reminding him of the once sweet fragrance of foaming milk and the refrain of its steady stream filling the milk pails, of the purring kittens, their tails standing straight as bearing a flag, as they eagerly await the foam poured into the rusting drinking pans, and collie patiently thumping his bushy tail against the soft ground waiting to accompany his master to the lighted house.

Some of the freshly painted and cleaned machinery still stands in silent rows, as tombstones in a graveyard, awaiting the new owner's trailer hitch on the tomorrow to vacate the yard as empty as the now silent barn.

For the last time he makes the rounds, closing the heavy board yard gates where countless times before livestock was steered into a big truck for market, pulling together sliding doors on the now empty corncribs, once bulging with ears of golden corn, hinging the yawning doors on the henhouse where no longer the early morning cackles are heard and taking a last look at the omniscient quiet of the vacant chicken pen.

Habit is strong as he closes doors without reason, for no animals are left to get out, and he sees again in the reflection of the yard light the pink, green, and yellow sales bills bearing the words, "As I have decided to quit farming." The large type of his own name blurrs in the stark glow of light as the name of a stranger.

In this last hour alone with his soul before he faces his family in the farmhouse eagerly anticipating a move to the city, he recalls the purchase of his first steer as a 4–H Club member, his pride in feeding, washing, and currying the animal, his reluctance in parting with him to a new owner. Pride wells in his breast as he remembers with a glow the day he first rented the farm.

Again he hears the chant of the auctioneer, "I got 150; make it 60; who'll give 65?" endless as the procession of farm implements, livestock, and tools fell to new owners under the charm of his coaxing chant.

As the big yard is empty of life, he ponders, was it crop failures, poor management, not lack of hard work which prompted those fatal words, "As I have decided to quit farming"?

Soon the yard will be weed grown as spring arrives and the house, now brightly lighted in the evening sunset, will be dark as another farmer adds the 160-acre farm to his large farm operations and more deserted homes and empty farm lots add to the depressed scene.

An unknown fear aches in his heart as he faces the future in town. All of his life he has plowed the soil, milked cows, and slopped hogs. What use is such experience and background in applying for a new job? Only the endurance of physical strength of years of loading and lifting bales of hay, of pulling a mired tractor out of the mud, of long hours in combining wheat or milo or corn in harvesttime. Can a city employer use such a reference?

All of his life he has watched the sun and clouds for signs of weather in raising and garnering his crops. Now he must watch a clock. The hour hand will point time to work, time to eat, time to go home, but no time for the freedom of standing in the dark in a lonely, empty barn contemplating the future, no time for stopping the tractor in the field and leaning over the fence and exchanging views on the operations of new-model tractors, no time or place to see the sunset or the early morning dawn light the sky, no time to help the kids curry an animal for the 4–H fair, no time to go fishing when the grass greens in the pasture after an early spring freshet, no time to stop at a neighbor's and offer to exchange help in haying, no time to pat Collie's soft neck ruffle of fur in reassurance.

Here there is no boss to remind him he is loafing if the snow blankets the earth and he remains under his own roof, or oversleeps, to be awakened by the bellering of a cow. Never has he known competition except with his own sense of need of getting the work done.

There is a sudden feeling of kinship with Collie, limping with stiffness of old age. Neither knows what the future holds, because "I have decided to quit farming and move to town."

## State of Oregon Allows Citizens of Former Territory To Reunite During Centennial Celebration

EXTENSION OF REMARKS
OF
### HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Monday, March 9, 1959*

Mr. NEUBERGER. Mr. President, as a part of its celebration of 100 years of statehood, the State of Oregon is giving a birthday present to citizens now residing in its former territorial boundaries. To all people living in the area of the once vast Oregon Territory, the centennial gift from Oregon is the privilege of being reunited with the present State. Thus, Mr. President, all residents of the States of Washington and Idaho and those residing in Montana and Wyoming west of the Continental Divide can, during this centennial year, enjoy the material and spiritual benefits of being Oregon citizens. No gift of liberation could be greater than to provide the displaced persons of the Oregon Territory with the right to return to the homeland.

Gov. Mark O. Hatfield, of Oregon, has designated members and officials of the Oregon Advertising Club as agents of the State in reclaiming for the State those portions of the Pacific Northwest which made up the original Oregon Territory. This is the expanse between the 42d and 49th parallels of latitude, and from one marine league seaward in the Pacific Ocean to the Continental Divide. I am sure that the residents of the original Oregon Territory will welcome this opportunity to reunite. The Governor's action declaring the territorial lands to be reunited with the mother State is not an act of aggression on the boundaries of the adjacent region, but an act of friendship and welcome.

So that Congress may know of the action taken by the State of Oregon to annex its former Territory and share benefits of Oregon citizenship with others less fortunate, I ask unanimous consent to have printed in the Appendix with my remarks the notice issued by Governor Hatfield and his open letter to residents of the Oregon Territory.

There being no objection, the notice and letter were ordered to be printed in the RECORD, as follows:

TAKE NOTICE

Being entrusted with sacred obligations relative to the general welfare of the people of Oregon, and attending to the advisement of the Oregon Advertising Club, a body pledged to promote progress, industry and commerce within the great Commonwealth of Oregon, I do hereby advise and admonish a resort to return to the great State of Oregon those lands and peoples rightfully hers, which are presently incorporated within the boundaries of the original Oregon Territory.

I hereby grant amnesty and restoration of Oregon citizenship to all peoples now residing between the 42d and 49th parallels in the present States of Washington and Idaho, and those parts of Montana and Wyoming west of the Continental Divide. I declare those lands to be reunited with the mother State immediately, and, beginning in this year of 1959, the centennial anniversary of Oregon statehood, and that Oregon law shall spread its protective and loving arms throughout the original Oregon Territory, and that present boundaries within said Territory be declared null and void.

To this I do set forth my hand and seal:

MARK O. HATFIELD,
*Governor.*

OFFICE OF THE GOVERNOR,
SALEM, OREG., *March 9, 1959.*

*An open letter from the Governor of Oregon:*

As spokesman for Oregon and its citizens, I am honored to confer on you greetings and extend to you a sincere welcome home during this year 1959, the centennial of our great State.

I say "Welcome home," because where you now live is a segment of the Oregon Territory, a vast area that once reached from the Continental Divide to the Pacific Ocean, and from the 42d parallel to Canada. A parcel of land which, if reunited into one great Oregon would easily become the second largest State in the union, exceeded in size only by Alaska.

In recognition of this, and as Governor of Oregon, I hereby grant to you and to all people living in the Oregon Territory full amnesty and restoration of your Oregon citizenship beginning with this year, which commemorates the statehood centennial of your mother State, Oregon.

Welcome home. Come visit the Centennial Exposition and International Trade Fair beginning on the 10th day of June; see the summer-long century of days' events in communities throughout the area. We'll be looking for you. Come early and stay awhile or a lifetime.

MARK O. HATFIELD,
*Governor.*

## Address by Gen. Lyman L. Lemnitzer Before Military Government Association

EXTENSION OF REMARKS
OF
### HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
*Thursday, March 5, 1959*

Mr. THURMOND. Mr. President, one of the ablest men in the entire Depart-

ment of Defense today is Gen. Lyman L. Lemnitzer, Vice Chief of Staff, U.S. Army.

On Saturday, October 25, 1958, General Lemnitzer made an address at the annual conference of the Military Government Association at Augusta, Ga., on the subject "The Role of Civil Affairs and Military Government." Mr. President, this is one of the most informative and enlightening addresses on the role of CAMG I have ever heard, and deserves the attention and consideration of all appropriate military commanders and staff officers.

Mr. President, I ask unanimous consent that General Lemnitzer's address be printed in the Appendix of the RECORD. There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE ROLE OF CIVIL AFFAIRS AND MILITARY GOVERNMENT—ADDRESS BY GEN. LYMAN L. LEMNITZER, ACTING CHIEF OF STAFF, U.S. ARMY, AT THE ANNUAL CONFERENCE OF THE MILITARY GOVERNMENT ASSOCIATION, HOTEL BON AIR, AUGUSTA, GA., SATURDAY, OCTOBER 25, 1958

I consider myself greatly privileged to address this distinguished gathering of people dedicated to one of the vital activities of the Army. The title of my remarks is "The Role of Civil Affairs and Military Government." Actually, there could be little point in my talking to this group of experts on a subject of which you have such specialized knowledge and experience. More specifically, therefore, I shall direct my remarks to a discussion of the role of civil affairs and military government today, as it appears in the light of current considerations and of the Army's thinking with regard to the future.

Basically, the role of civil affairs and military government today may be said to be unchanged from what it has been in the past. Simply stated, that is to relieve commanders of combat units of the problem of administering the local population in the zone of operations; and beyond that, to influence the civilian population so that their cities and facilities not only cease to be liabilities but become assets. While the conditions which can be expected in modern war greatly complicate this task, the task itself is in principle the same obvious, basic one which has always existed in war.

I have just said that this task is both a basic and an obvious requirement in war. And yet, it is astonishing to consider the blunders which so many nations have made in this field. Possibly the best illustration in modern times of sheer, blind stupidity concerning the need for a sensible military government program was provided by the Nazis during World War II when their troops went into Russia.

You will recall that when the Germans launched their offensive against Russia, the troops who marched into the Ukraine were hailed as liberators and were offered bread and salt in the traditional gesture of welcome. Following up the combat forces, however, were the Nazis' so-called civil administrators and SS units. Their sole aim was to subjugate the local residents and extort from them every possible material resource. This objective could have been gained in large degree by persuasion and decent treatment, but the manner in which it was pursued was in complete defiance of the principles of humanity and benefit to the governed which are such important elements of our own doctrine.

Quite naturally, the Ukrainian people resented such treatment. They soon realized that the totalitarian domination which they had suffered under the Soviets had been replaced not by liberation but merely by totalitarian domination on the part of the Nazis. The Ukrainians' attempts to resist brought on brutal and ruthless retaliation. The result was the rapid growth of a widespread guerilla operation which had a serious impact on the German army's lines of communication, and which in the long run was a significant factor contributing to Germany's disastrous military defeat on the eastern front.

Brutality such as the Nazis displayed in the Ukraine is totally foreign to our own national character and violates basic principles of our doctrine for civil affairs and military government. Although we certainly have never been guilty of any such behavior, during the early months of World War II while we were building up our own military capabilities we committed serious errors of oversight in our planning, through our omission of adequate preparations for military government activities. These errors created major problems for us when we got into combat.

The fundamental difficulty, I believe, stems from the fact that some military men tend to think of civil affairs and military government as an activity whose necessity does not develop until there is a war or an emergency. Thus, there is an inclination to overlook it; or if it is not overlooked, to play it down or even to eliminate it altogether. Certainly, this situation existed before World War II. From time to time, the same attitude manifests itself even today, despite our experience, much of which was gained painfully and expensively.

Let me review some of the highlights of that experience, particularly those aspects which I observed myself.

Although just prior to World War II there had been some planning in the War Department and some instruction in the service schools with respect to civil affairs and military government functions, no organization existed for handling such matters. It was not until after Pearl Harbor—in fact, not until May of 1942—that the Army's School of Military Government was opened at Charlottesville, Va. Although the first gradautes of this school were trained in time to take part in the north African invasion, we had not yet clearly developed the concept of military government operations with the combat troops. We had given consideration to the administration of areas through which combat had passed, but not to the vital requirement of relieving the combat commander of the burden of taking necessary action with regard to civilians in the immediate combat zone. As a matter of fact, the administration of civilians in north Africa required us to divert substantial numbers of combat troops from other important tasks to perform this function and to protect our supply installations and communications. However, the situation could have been much worse if the civilian governmental administration had broken down. The question of continued local government and continued maintenance of utilities was one of the specific matters taken up with General Mast during the submarine operations which General Clark and I undertook on October 22, 1942, shortly before the landings. As a result, except for a short period in the areas where there was considerable fighting, local government continued to function.

This experience taught us a lesson, and we were more realistically prepared for the campaign in Sicily. The increasing efficiency of the Military Government School in Charlottesville as the lessons of actual experience became available, and the establishment of a combined British and American school near Algiers for allied military government officers showed fine results, and the difficulties with which we had been faced in the north African campaign were not repeated in Sicily. By the time we moved into Italy we had an efficient and smoothly functioning operation. The continuing progress showed again in Normandy, where despite the concentration of large numbers of troops in a relatively small and thickly populated area, civil affairs and military government personnel—among whom was your association's president, Gen. STROM THURMOND—made an invaluable contribution to the success which our forces achieved.

Notwithstanding the clear lessons of our past experiences, there are occasional recommendations today for civil affairs and military government to be eliminated as a peacetime activity of the Army. The thinking behind such recommendations is perhaps understandable in the light of the pressures upon the Army. These pressures stem from the requirement, in a period of rising costs and limited funds, to carry out essential missions including widespread operational activities, training, and logistical support functions for those activities, research and development to produce improved weapons and equipment, and modernization to replace wornout or outmoded items.

To mention a specific instance of the effect of these pressures, a few months ago the Department of the Army received recommendations which, if they had been approved and acted upon, would have abolished the Civil Affairs and Military Government School, transferring its functions to other existing agencies, and would have inactivated all civil affairs and military government units in the Active Army. The author of these recommendations was trying sincerely to effect worthwhile economies, and he had hit upon civil affairs and military government as an area in which he honestly believed that our current and wartime needs have already been met.

The viewpoint reflected by these recommendations was, of course, extremely shortsighted. Not only did it ignore the lessons of our past experience, but it failed to consider both the requirements of the future—about which I shall have something to say later—and those of the present.

Right now, for example, there are about 750,000 American military personnel stationed outside the United States—not including forces in our country's territories and possessions. In addition, there are some 23,000 U.S. citizens employed by the Military Establishment in these overseas areas. As you can well imagine, the presence of all these Americans in countries with cultures and values which are different from our own gives rise to problems which are numerous, varied, and often complex. Furthermore, these Americans exercise a positive influence on our relations with the nationals and the governments of the areas in question. If we are to realize the maximum benefit from this influence, it is essential that there be a point of coordination for the various aspects of their activities.

Besides these Americans, at our overseas military installations we are employing thousands of local foreign nationals who contribute enormously to the success of our mission. The relations which we have with these people influence not only our military effectiveness but have a significant impact on our chances for success in achieving our national objectives. The dealings of our military forces with these indigenous employees constitute a major civil affairs responsibility throughout the world.

I should like to make specific reference to this activity in the Far East—partly because I have fairly recent experience in that area, and partly because, as an area which is in many respects very different from our own in culture and outlook, our relations with the local populations there are of great importance.

First, I shall consider Japan. As you no doubt know, the United States and Japanese Governments have an administrative agreement dealing with the use of facilities and areas, the sharing of costs, the jurisdiction over persons, certain privileges and exemptions, and the methods of continuous mutual consultation necessary for our Armed Forces to carry out their missions effectively. When the Far East Command was disestablished on July 1, 1957, the Headquarters of U.S. Forces Japan was set up as a subordinate unified command under the commander in chief, Pacific. This headquarters includes a Deputy Chief of Staff for Civil Affairs, who is the U.S. member of a joint committee for consultation between the United States Armed Forces and the Japanese Government. Although the U.S. Ambassador in Japan is of course the principal American representative in the country, the senior military commander is authorized to negotiate with Japanese governmental officials on all matters relating to the administrative agreement. The joint committee is the forum for these discussions and negotiations.

One of the principal civil affairs tasks in Japan has been to deal with the large numbers of skilled and unskilled Japanese workers required in support of our activities, particularly during the Korean war. A monumental task which was successfully carried out was the development of a master labor contract with the Japanese Government, through which at one time we were employing almost 190,000 workers. Although this total has been reduced by half, there is still an essential civil affairs responsibility in connection with policy covering the rights and privileges of Japanese labor working for the U.S. forces, the establishment of sound labor relations, and the spread of information about our objectives with the object of gaining public acceptance of them. These functions are complicated in some instances by the rapid growth of Japanese industry and the consequent competition for facilities which occurs, and by our changing requirements.

I should like to make reference, also, to the very important civil affairs function in connection with the community relations councils which have been established. In Japan as in other countries where our forces are located, these councils have been instrumental in encouraging sound relations between the military units and the neighboring civilian communities.

In comparison with Japan, our civil affairs responsibilities in Korea are somewhat different. One of the chief differences results from the fact that in Korea there is a state of suspended hostilities rather than a condition of stable peace. To carry out his essential military mission in this situation, the commander in chief of the United Nations Command, as the principal representative of our forces, requires certain control and authority which, under normal conditions, would be vested in civilian agencies. These necessarily include economic assistance—particularly in support of defense activities—relief, and rehabilitation.

Our civil affairs program in Korea has been immensely rewarding. In addition to the United Nations rehabilitation programs, direct assistance has been rendered by our Armed Forces through the AFAK program—Armed Forces assistance to Korea. This program has been and continues to be a vital force in the reconstruction of the country and in the improvement of standards of living and general welfare. Through joint Korean-American effort, it has brought about the completion of some 3,500 projects with a value in money of almost $65 million. The value in good will between our two countries and in the welfare of the Korean people is incalculable. These projects have included schools, churches, bridges, public health facilities, orphanages, and flood control, among others. At the present time, almost 200 projects are underway.

Achievement of such noteworthy results would not have been possible without the effective coordination of the energies and objectives of many different agencies and organizations. The accomplishment of this coordination continues to be a major civil affairs responsibility.

The community relations program in Korea is inherently related to the AFAK program and, like it, is a concern of civil affairs. The community relations councils not only make it possible to combine the resources of our forces and the communities on a local basis for specific beneficial purposes, but permit a cooperative effort on the part of both military and local civilian officials to eliminate or prevent development of sources of difficulty and friction, to improve conditions, and generally to work to the best advantage of everyone concerned. This program is most valuable in achieving a relationship between our units and the Korean population which is beneficial to us in our activities in support of our national objectives, and which is highly important to our effectiveness for carrying out our military mission.

In this connection, the civil affairs function in Korea includes the vital task of planning for the handling of refugees in case an emergency should develop. In a heavily populated country with a limited road net and very difficult off-road mobility, such as Korea, this function is of particularly great importance both to facilitate military operations and to minimize the hardships for the civilian population in a zone of active combat. Such planning can surely reduce significantly the type of thing which occurred at the time of the invasion by the North Koreans in 1950, when thousands of refugees clogged the roads. Actions which prevent or minimize such mass flights are of very great importance, militarily and from humane considerations.

Before ending my discussion of our current civil affairs activities in the Far East, I should like to tell you something about the Ryukyu Islands, of which Okinawa is the largest. As most of you know, the chief of our civil administration in that area is the High Commissioner, Lt. Gen. Donald P. Booth.

Unlike Japan and Korea, the Ryukyu Islands have never, during reasonably recent history, been sovereign and independent, but they are now governed by a local government of their own choosing, which was first established during the U.S. occupation. As a result, among the important functions of civil affairs in the Ryukyus is assistance in the development of local government and in promoting the well-being of the people. This has required active cooperation with the local authorities in the development of financial and economic policy, in the greater utilization of local resources, and in a host of other aspects of government.

The record of civil affairs in the Ryukyus is one of major achievements. A new society has emerged from the almost complete destruction which occurred during the war. New standards of health, education, and welfare have been established, and new economic opportunities exist for a rapidly increasing population. A new political consciousness has taken root and has grown, and the people are participating actively in the conduct of their own affairs.

I have spoken to you of some of the important activities of civil affairs in the present. Now, what of the civil affairs function in the future?

An important part of our chances for success in any undertaking in the future depends upon the soundness of the actions which we take in the present. This fact emphasizes the importance of some of the major functions which are performed by the Chief of the Civil Affairs and Military Government Agency in the Department of the Army Staff. He is charged with formulating and developing civil affairs and military government plans and programs and with recommending civil affairs and military government policies for the Department of the Army. This function gains importance from the fact that, as you know, the Joint Chiefs of Staff have designated the Army as the service having primary responsibility in this field.

In addition the Chief of Civil Affairs and Military Government has important responsibilities in connection with the development of CA/MG units. Although direct training responsibilities for these units, of course, rest upon the commanding general of the Continental Army Command, the Chief of Civil Affairs and Military Government has staff supervisory responsibility in this field, to include developing doctrinal literature, maintaining liaison, and conducting periodic inspections of training, exercises, and other activities of both active Army and Reserve component units.

In my opinion, the development of clear understanding of civil affairs and military government functions throughout the Army and the maintenance of CA/MG units which are ready to perform their functions promptly in case of emergency are of greater importance today than ever before.

One of the characteristics of a nuclear war would be a great expansion in the area of the combat zone, with a corresponding increase in the number of people who would be caught in the path of the combat forces. Another pertinent factor would be the mass hysteria which the use of atomic weapons, or even the rumor of such use, might well be expected to cause in the civilian population of the combat zone. Still a third significant point to be noted is the greater tactical dispersion of combat units which would prevail. Finally, there is the fact that an atomic battlefield would be marked by extreme destruction.

All of these characteristics combine to intensify the importance of the civil affairs and military government role. If ground combat units are to operate successfully in a nuclear war—and their successful operation will be an essential element of victory—they must be able to concentrate rapidly from dispersed positions, to strike swiftly in exploitation of their nuclear strikes, and to disperse again quickly. The emphasis in each of these phases, as I have indicated, is on speed. But if the roads and the countryside are thronged with refugees it will not be possible to move speedily, and it may not be possible to move at all. If any illustration had been needed, the early months of the Korean war—even without atomic weapons being used—demonstrated this fact clearly.

Also, the wide dispersion which I mentioned as a characteristic of nuclear warfare on land will make infiltration by enemy agents or even troop units more feasible. Control of civilian movement will thus be of increased importance for the security as well as for the mobility of our forces. Again, the Korean war's early stages illustrate the point conclusively.

In short, in future operations, whether or not atomic weapons should be used, the responsibilities of civil affairs and military government will not only be no lighter than they have been in the past, but in all probability will be tremendously magnified. Therefore, we cannot sit back and assume that the organization and doctrine to carry out these vital functions can be created after hostilities begin. We must make every possible preparation now, so that in case of emergency the urgently needed steps could be taken promptly and efficiently. This is a need which, I am glad to say, is generally recognized and which is being met by a continuing and effective effort.

Your presence here today testifies to your own recognition and acceptance of a significant share of this important responsibility. Your varied professional skills, oriented through your military studies and training for application in the civil affairs and military government field, and your demonstrated willingness to render this vital service are among the Army's major assets in its efforts to prepare itself to meet whatever challenges the future may bring.

## Lincoln Day Address by Governor Underwood of West Virginia

EXTENSION OF REMARKS
OF
## HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES

*Monday, March 9, 1959*

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Gov. Cecil H. Underwood, of West Virginia, at the Lincoln Day dinner of the Lincoln Club of Kentucky, at Louisville, Ky., on February 14, 1959.

The Lincoln Club of Kentucky, one of the oldest in the United States, was honored by the presence of Governor Underwood and Mrs. Underwood, and particularly by his great speech. His speech differed from many other Lincoln Day speeches. It was a thoughtful and eloquent discussion of the principle of the Republican Party, and it suggested a chart for its future.

Governor Underwood is a young man, one of the youngest Governors in the United States. In his service as Governor he has already demonstrated his ability and leadership. I predict that he will continue to advance in the esteem of the people of West Virginia and in the service of the people of West Virginia and of the Nation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF CECIL H. UNDERWOOD, GOVERNOR OF WEST VIRGINIA, AT THE LINCOLN DAY DINNER OF THE LINCOLN CLUB OF KENTUCKY, BROWN HOTEL, LOUISVILLE, KY., FEBRUARY 14, 1959

As an American, as a West Virginian, as a Republican, I am honored to join with you in the observance of the 150th anniversity of the birth of Abraham Lincoln.

Of all the States in the Union, West Virginia owes most to President Lincoln. If there had been no Lincoln, there would probably be no State of West Virginia today. West Virginia is the only State in the Union created without the consent of the parent State and without the sanction of the Constitution; it was a war measure. President Lincoln's personal influence created widespread support among Members of Congress and the leaders of the new State.

After he had signed the Statehood Act, the President issued a public statement which included these words: "We can scarcely dispense with the aid of West Virginia in this trouble; much less can we afford to have her against us in Congress and in the field. Her brave and good men regard her admission into the Union as a matter of life and death. They have been true to the Union under several trials. We have so acted as to justify their hopes and we cannot fully retain their confidence and cooperation if we seem to break faith with them.

"The division of the State is dreaded as a precedent. But a measure made expedient by war is no precedent for times of peace. It is said that the admission of West Virginia is secession. Well if we call it by that name, there is still difference enough between secession against the Constitution and secession in favor of the Constitution. I believe the admission of West Virginia into the Union is expedient."

He thus made ours the 35th star in the American flag. Your invitation to the Governor of West Virginia, the war-born State godfathered by Lincoln, to speak to you as you honor Lincoln has a special meaning to me.

Since the November election, many people have become concerned about the future of the Republican Party. Prompted by post-election glee, the opposition would like to think the Republican Party has no future. Discouraged by post-election confusion, many Republicans see all sorts of things in the party's future.

By any measurement, the party suffered year, 1854, the year of Lincoln's election to a characteristic of off-year elections does not explain the extent of these losses. The reasons extend to more basic and fundamental problems.

This defeat, with certain bright exceptions, was nationwide. If we are possessed of doubts and fears about the Republican Party's future today, let us consider another year, 1954, the year of Lincoln's election to a second term. Civil war raged throughout the land; political leaders and writers thought the President was washed up politically; many important men in his own party viewed Lincoln's position as wrong.

Listen to the chorus of adversity.

A Union League worker in New York: "There are no Lincoln men. * * We know not which way to turn."

The Washington correspondent of the Detroit Free Press: "Not a single Senator can be named as favorable to Lincoln's renomination for President."

Henry J. Raymond, editor of the New York Times and chairman of the Republican National Committee: "The tide is setting strongly against us."

Horace Greeley (September 28): "Mr. Lincoln is already beaten. He cannot be elected. And we must have another ticket to save us from overthrow."

Even Lincoln himself admitted in an August memorandum that the November election seemed a lost cause. But he possessed hidden strength among the people of the Nation which had won him nomination and produced a landslide for him in the election. Most important was his courage to meet the issues of his day with faith and determination, placing his country's good above personal fortune.

Today's view is a picture of defeat; it should not be a portrait for despair. Its aftermath should be a time of resolution, not resignation, a time for action, not apathy.

I am encouraged—and so should every Republican—by the healthy response to this challenge. The course of the Republican Party is already being seriously debated by its leaders. There has been and there will continue to be controversy over the route of this course.

Honest difference of opinion about the party's position can be a sign of health. We are not hiding, in the closets of our party, any skeletons of shame and silence to haunt our political and national consciences. But controversy, to be productive, must be resolved in unity, a unity of purpose and means. We cannot afford to dissipate our opportunity for shortsighted, personally prejudiced motives.

I do not wish to stir dead ashes of inner-party conflict; however, two disputed points are worthy of consideration.

The first is the role of the President. President Eisenhower is indicative of American political paradoxes. The President must be both the national leader and the head of his political party. I personally believe that Dwight D. Eisenhower has done both tasks well, under the difficult circumstances of the past 6 years.

The job has been made more difficult by the opposition party control of the Congress. As a national leader, the President conscientiously could do nothing else but work with this opposition for the good of America. I am happy he did not choose, as did his predecessor, to sacrifice the national interest to partisan vindictiveness. Does any Republican or any American want to return to the Trumantics of a decade ago?

The second point is the repeated cry for principle in the Republican Party. I cannot take these outbursts too seriously. I believe the Republican Party is the party of principle. Too often, those who cry principle are merely disguising personal stubbornness and prejudice under the syllables of a high-sounding word.

One principle of American politics is that the parties have never been stifled by uncompromising dogmas. The American political system has been one of creative political compromise rather than blind partisanship. The very endurance of our political system—its flexibility—rests on this tacit recognition of the danger of dogma, the virtue of compromise. Those who falsely cry principle would do well to remember this historical fact.

At Des Moines, Chairman Alcorn outlined for all Republicans "A Road to Victory." This outline included both general points and specific proposals. His first general point is that we must convey to the electorate a true image of the Republican Party. I personally feel this to be most important; in order to attract and utilize the many workers needed in a great political party, that party must have a meaning for these people.

Today, the image of both parties seems blurred and obscure. Some people maintain that they cannot distinguish between them. To some extent, party lines are not as distinct as people once thought they were. And to a greater extent, it is easier to see party lines in retrospect than in the battles of a campaign.

This century has been one of unusually rapid change. The last two decades have altered the nature and aims of our political parties. The emphasis of American politics, perhaps due simply to the pressure of our world position, has shifted both in domestic and foreign affairs.

The image and meaning of political parties is now changing; they have always been changing. In its birth, the Republican Party was the party of the common man, the oppressed, and the enslaved. It was the party of the Union.

President Lincoln molded the young party in his own image. In his blood and bones he carried a living meaning for people. The breath of his speeches and the phrases of his writing carried the notion of popular government and Republican institutions. No voter experienced difficulty in recognizing the true image of Mr. Lincoln's party.

Only in the last 25 years have the labels "big business" and "vested interests" been tacked on the Republican Party, not out of conviction but out of political opportunity.

To present a true picture of itself, the Republican Party must shake off these stereotypes. Objectively, they are not true. In reality, big business has no party. In politics, business has been more of a pressure

group than a political ideology. Most business has contributed to both parties in the silent hope that it might benefit from whichever was the victor. To be blunt, businessmen have lost political influence because they have been apathetic and too engrossed in their own affairs to understand and appreciate the changing political world about them.

Nor is the Republican Party the party of vested interests. On the contrary, it is our opposition which is in the grip of a powerful pressure group. The Democrat Party and a labor hierarchy—a financially and politically wealthy minority group—campaign hand in hand.

I do not see this alinement as a threat to free enterprise. I believe that those who do are missing the more dangerous point. Over 50 years ago, American labor cast its aims within the free economic system; its aims then and since have been to get a bigger share of the profits of the system. The greater danger lies in their threat to subjugate national good to the selfish interests of this pressure group. "What's good for Jimmy Hoffa is not good for the country."

I do not think business and labor are basically in conflict, like all of us, they simply want a little more pay, a little bigger share of our economic wealth. This is not an unexpected or despicable aim. But it should be recognized for what it is.

In fact, I doubt if today business and labor form the bulk of America's social strata. We are witnessing the rise of a new force, the vast white collar and professional man. This politically potent group too shall soon demand its fair share of the national wealth.

Generally, these people earn a certain salary working for some other person, selling their talents and in some instances their personalities. They function daily in a system of bureaucracy whether in government, business, education, medicine, industry, or elsewhere. Today we are faced increasingly with a new and complex social organization of specialists, professionalists, and technologists.

The members of this new group have certain mutual problems which we must understand if we are ever to reach them politically. Difficult to delineate, this group is not homogenous and sometimes not even conscious of its potential influence. Perhaps the single common factor is indeed the white collar.

Politically, these citizens are unorganized and generally apathetic. They are attracted more by political personalities than by parties. Even in their apathy, they exercise tremendous influence. At neither extreme do their interests correspond with those of our major political groups, business, and labor.

Not bound to any pressure group and not beholden to powerful labor bosses, the Republican Party has a great opportunity in this area of modern America.

The stereotyped, false images of the Republican Party all point to one conclusion. We are still fighting battles over issues which no longer exist. Politically, this may have some merit, but nationally, it is foolish and dangerous. America is in a too sensitive and too powerful position to dissipate her energies in such fashion.

Our opponents are guilty of this in their stock response to every crisis. Waving the banner of 1932, these aging, but still naive, wonders of bureaucracy march again up the hill of Government spending, control, and expansion. Clinging desperately to a once politically potent weapon, these modern quixotes could tilt us into national disaster.

But the Republican Party is not innocent of this archaic activity. We have our shibboleths and old war clubs which we also wave at every battle, until the incessant din sounds like a freshman course in American history.

It is our obligation to present a true image of the Republican Party, an image which will be consistent with the problems we now face. Let me emphasize now. To do this, we must understand the meaning of the American experience. This is even more urgent in the face of international competition with a powerful enemy.

Our national experience, for all our traditional simplicity and emphasis on the common man and common ideals, has been a sophisticated experience. We were founded by a group of brilliant, cultured men, and the ideals with which they created America have governed her ever since.

The essence of the American experience has been the individual. Our Government was not founded for Government's sake, but to complement and guarantee the freedom and opportunity of the individual. Through history, this has meant a varying role for Government.

Freedom is inseparable from opportunity and security. To turn a man lose with no chance except for poverty and death is not freedom. Freedom is positive opportunity as well as freedom from restraint.

I cannot—I would not—tonight sketch such an image for you. It is one which we together must create, which will result from long study and much effort. Let me only emphasize the necessity for such a meaningful image.

The Republican Party must have emotional and intellectual content for its many workers. Practically speaking, a party will stand or fall on the work of the precinct level.

And it is work that must be implemented on the State level. A famous professor advanced the obvious thesis that we have national politics but State parties in America. Party organization can be most effective on the State level. The national level can best advise and coordinate.

Much of the party work requires the talents and energies of young people. Fortunately, the Republican Party is a young party, with fresh ideas and great opportunity.

I am confident of our response to this challenge. I am optimistic for the future of our party. From the ashes of 1958 will rise the victory of 1960.

## Amazing Paradox

EXTENSION OF REMARKS
OF
## HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column written by Mr. Brooks Atkinson which appeared in the New York Times on Sunday, March 8, 1959:

AMAZING PARADOX—AMERICA IS STEEPED IN THE ART OF THE NATION THAT GIVES US ANXIETY

(By Brooks Atkinson)

While watching a delightful production of Turgenev's "A Month in the Country" at Arena Stage in Washington a few days ago, one member of the audience had a rueful thought: The nation that gives us the most anxiety has made a rich contribution to our culture.

The nation that hopes to supersede free society has given us plays, novels, music, and ballets that have profoundly affected our art and thinking. There is hardly a day when some Russian work of art does not impinge on our consciousness. Tolstoy's "War and Peace" (1865–68) is still the world's epic novel, not merely in length but in abundance of mind and spirit. Dostoevski's "The Brothers Karamazov" (1880), which was twice adapted on local stages last season, represents a psychological penetration into the mind that is still illuminating in a period obsessed with psychoanalysis.

Tchaikovsky and Rimsky-Korsakoff are more familiar to us than our own composers. In 1915 the Diaghileff ballet, with Bakst, Fokine and Nijinsky, introduced us to the wild splendor of an unfamiliar art form. Pasternak's "Doctor Zhivago" is a major literary and political event today. While we as a nation are at logger-heads with the Russian nation, we draw daily sustenance from the granaries of Russian art.

Although Russia's national history is six or seven hundred years older than ours, there is not so much difference in the ages of our cultures. Pushkin wrote "Ruslan and Ludmila" in 1820, and the first Russian novel, "Eugéne Onegin," in 1831 Gogol wrote "Dead Souls" in 1842. Technically our imaginative literature begins with Irving's "Knickerbocker's 'History of New York'" in 1809, Cooper's "The Last of the Mohicans" in 1826, to confine this discussion to major works.

STAGE LITERATURE

But Irving and Cooper were saturated in British literary traditions. The nearest American equivalents to the Pushkin works are Whitman's "Leaves of Grass" in 1855 and Melville's "Moby Dick" in 1851. Emerson, Dana, Parkman and Thoreau—all thoroughly American writers—range from 1836 to 1854, but they do not make the best sort of camparison with Pushkin and Gogol.

In the literature of the stage, however, Russian drama is much older. In America, serious writing for the stage did not begin until 1920, when "O'Neill's first full-length play, "Beyond the Horizon," had a Broadway production. But Griboyedov wrote "Woe to Wit," a classic still played in Russia, in 1825. Gogol wrote "The Inspector General" in 1836; Turgenev, "A Month In the Country" in 1850; Ostrovsky, "Poverty is No Disgrace" in 1854.

In 1898 Stanislavsky produced Chekhov's "The Seagull" at the Moscow Art Theater; and that event has had the most enduring influence on our theater. Chekhov's elusive, poetic style is the source of the subjective school of playwriting in America. Tennessee Williams has absorbed it into an incandescent style of his own. And Stanislavsky's principles of acting are the primer of The Method. Although Russian intransigence is frustrating our political life, straining our economy and poisoning our spirit, we are stimulated by the vitality of Russian artists.

DARING RISKS

We are stimulated by the spontaneity with which Russians plunge into the heart of their subjects. The Russian temperament is more explosive than ours. Combining the recklessness of Asia with the disciplines of Europe, it is robust and invigorating. Russian artists have a natural instinct for probing close to the heart of life; they are concerned with ultimate truths and they accept daring risks.

Turgenev and Chekhov are particularly aware of the difficulty people have in communicating with one another. "We study ourselves very closely and then we think we know about everybody," a wistful character says in "A Month in the Country." Every man is a stranger. In Russian art there is an acute awareness of the fact that life has deep, tangled, furtive roots that reach down into a somber mystery.

All these Russian influences on American drama emanate from the smoldering, aimless years before the Soviet revolution. When the political scientists seized control of the nation, the originality, audacity, and fecundity in art disappeared. It is significant that Gorky, patriarch of art under Stalin, never wrote stories or plays about postrevolution life in Russia. His creative life stopped with the success of the revolution he supported.

Since the time of the revolution, the ballet has continued to flourish (the Moiseyev ballet was the sensation of last season in America); some stirring music has been written, and a few powerful novels, like Sholokhov's "And Quiet Flows the Don." But the drama has been returned to elementary propaganda and the obsolete methods of realism.

Although the standards of acting and producing are reported to be high, the literary content of the drama has lost the color and personality it had before the revolution. For the Russian dramatist has become an organization man. It is the mentality of the organization man that we want most to escape from, not only in the drama but in the whole range of American life. In short, what fascinates us in Russian art is the precise element that the Soviets cannot tolerate.

VIGOROUS NATION

Since the Soviet Union is a huge, vigorous nation, it is logical to assume that Russians still have great artistic capacity. The Pasternak novel proves that Russia still has at least one writer who follows the great tradition. Somewhere Russian artistic genius must be in existence. For the temperament that produced Bunin and Mussorgsky is not in the political textbooks, but in the bloodstream.

It will not flourish again in our lifetime. What we are left with in the theater are the ideals of the prerevolution Stanislavsky, and some wise, sad, humorous plays that reflect mature truths about life. They stimulate the American imagination because they are outside our national experience.

## Strategic Army Corps

EXTENSION OF REMARKS
OF
## HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
*Monday, March 9, 1959*

Mr. CURTIS. Mr. President, I ask unanimous consent to have printed in the appendix of the RECORD an article on the Strategic Army Corps, written by Col. Vernon R. Rowie, U.S. Army, professor of military sciences and tactics, University of Nebraska.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STRATEGIC ARMY CORPS (STRAC)

(By Col. Vernon R. Rowie, U.S. Army, professor of military sciences and tactics, University of Nebraska)

Will Rogers stated "everybody is ignorant; only in different subjects."

It appears we Americans, too, are having trouble today understanding the need for a strong and virile U.S. Army. The conflicting views expressed in the press, radio, and TV by senior representatives of our country concerning national defense requirements and strengths has naturally caused the average citizen to ask "Who am I to believe?" For example, are we ahead, or behind, the Soviets in missilery? Are we militarily inferior to the Soviets? Do we need to train more scientists? Is it true the next war will be of such short duration that ground forces are obsolete?

Again, today, the eyes of our Nation are focused upon our Armed Forces with an intensity that is demonstrated in times of great peril. Pearl Harbor was one of the blackest days in our history—but I wonder if future history will not look back at these present hours and term them even blacker than Pearl Harbor?

I wonder if we, ourselves, do recognize these days as days of our greatest peril?

The Communist goal of world domination has been too bluntly stated, and too often reiterated by the present leaders of the Communist conspiracy, for any of us to retain illusions about the reality of our danger. Can we disregard the indisputable fact that day by day Communist military power dedicated to our destruction is growing ominously on the ground, under the sea, and in the air? No American can have the slightest doubt that we have been selected as the Communist main target. Soviet Russia, as the leader of the Communist world, has announced its intentions concerning the fate of the United States and the free world—our destruction through any means whatsoever, and the complete control of world societies.

The Communists know that if they could defeat America by either military force, or by their insidious ideology, they could end all effective resistance everywhere else to their plans to capture the world for communism. Political, economic, and cultural strife backed up by military force; and similar forms of limited aggression are all down in the Soviet's book as very practical methods by which they might achieve their aims without ever challenging our nuclear retaliatory power.

Nuclear power—our newspapers, periodicals, radio, and TV are free of comment concerning nuclear power—both ours and the Soviet's. I should like to recapitulate for you, at this point, a few thoughts on nuclear power.

With the development of atomic energy and the perfection of guided missiles, we have in our arsenal today what is popularly known as "massive deterrence." This, of course, means that with our stockpile of nuclear weapons and a swift and sure delivery system made up of the Strategic Air Command and of our intermediate range and intercontinental ballistic missiles, we have the capability to destroy any nation which attacks us.

This retaliation capability is only a portion of our total deterrence, however, against thermonuclear attack upon the United States. An appreciable deterrent force also is the capability of our States and local communities to minimize damage from nuclear attack—that is, our civil defense capability. And, of course, a third very potent deterrent is our growing Nike missile system, designed to knock down single planes or fleets of bombers long before they reach their targets.

More emphasis is needed in this area if we are to provide adequate protection to the entire Nation in time. Also, more emphasis is needed to insure that the Army's antimissile missile, Nike-ZEUS, is ready in time.

But Soviet Russia, the leader of the international Communist conspiracy, also has comparable weapons and a delivery system comparable to SAC. At first glance, we both have the capability of destroying each other, the result should deter the Communist world from aggression against the free world.

As a soldier, I heartily endorse the concept of massive deterrence. Without it, we would be sitting ducks. But has this deterrent power of ours really prevented the march of communism? You need but to glance at your daily newspapers or tune in to your favorite radio or TV news programs to realize that it has not.

The pattern of Soviet aggression has been too well demonstrated and should impress Americans that something more is required if we are to avoid piecemeal defeat time after time. At the conclusion of World War II in 1945, America had every right to assume the Soviets would continue to be our allies. An American citizen could visit any part of the world and his reception was met with friendliness and prestige. Can you do this today—only 13 years later? No, you cannot. The Soviet strategy is spelled out for us. All we have to do is read it. In 1948, after a few years of peace to lull Americans asleep, the Soviets applied political and economic force backed up by military threat by blockading Berlin. Many futile diplomatic attempts were made but finally we had to respond with countermilitary force. This was followed by another short period of peace and light and in 1950 the Korean war was thrust upon us. The Geneva conference followed and again we believed we could honestly deal with the Kremlin leaders. And then in 1955 the bubble brcke once more with the ruthless subjugation of Hungary. In 1956 and 1957 it was peaceful coexistence and competitive coexistence; and once more many Americans could not understand why our leaders did not sit down at a conference table with the Soviets. This masquerade was terminated with the shocking execution of Imre Nagy, the troubled Middle East and the Formosan situations. In all the post World War II years the Soviets have used the same strategy over and over—a period of peace and light—long enough to lull Americans into complacency—followed by political, economic, and psychological thrusts backed by military might—followed by another period of peace to lull us asleep once more.

Also, we of the free world do not intend to use our nuclear weapons and positive delivery systems in an unthinking and foolhardy manner, I need but to remind you of Korea, Hungary, and Lebanon.

In short, indiscriminate use of nuclear weapons will not make the job of war any easier. In getting an enemy sniper out of a church steeple, we do not intend to blow up the bishop and the entire diocese.

With the advent of nuclear weapons, the types of warfare which could now occur have undergone a philosophical reshuffling. This is, our concept of total or unlimited war is now quite different from what it was during World Wars I and II, from both a military and an economic viewpoint. For example, while poison gas was available to both sides during those wars, it was not used except on rare occasions. Also, the delivery systems available were not capable of bringing this destructive weapon to all human and animal beings in Midwest America or central Europe. And poison gas, while it could contaminate installations, could not destroy them. Also, the entire economic machinery of neither side was totally affected.

Consider, then, what the effect would be today if both the United States, representing the free world, and the Soviet Union, leader of the Red bloc, were to unleash nuclear warfare upon each other. Entire cities and vast segments of human and animal population would be wiped out, and it is possible that both countries would be contaminated for years to come if dirty atomic, H, and cobalt bombs were indiscriminately used. This would be total war today, a general all-out war.

But the West realizes—and we most certainly hope that the Reds realize, also—that a general all-out war could not possibly result in a victory for either side. Total war today would have only two losers. With this pretty much of an obvious fact, even to men who desire to control the world, it does not

appear that total or unlimited war will be the method chosen to conquer the world.

In view of this logic, what is the position of the Soviet Union? In all the writings and policies of communism, especially since that disease conquered Russia from the Tsar, complete conquest of the world has been the guiding light for communism—unlimited political objectives.

Political objectives have always determined the amount of military force which would be applied. In World War II, the Allies had the unlimited political objective of beating Germany to her knees—that we did through unlimited military force, with the exception of such horror weapons as poison gas, germ warfare, and the like.

Today, however, is another era in the history of mankind, and in view of the almost certain destruction of both the West and communism in the event of an unlimited general war, total war does not appear to be the most likely threat, although it presents the gravest danger.

Although communism today is making great gains through indirect aggression, especially in the Middle East, it is only normal to assume that one day the free world shall say: "Stop. Beyond this point you will not transgress." And if we are firm in our resolve, and are prepared to fight if need be, what recourse will be left to communism if it cannot pursue its unlimited political objectives through cold war activities and realizes the utter folly of a general nuclear war?

Will Soviet Russia throw her unlimited political objectives out the window, and settle for something much less? No, she will not—her very existence is based upon complete subjugation of the entire world.

Between the two extremes of cold war and total war there is only one other way a nation can apply force to gain political objectives—the employment of measured firepower under conditions which are manageable and which permit negotiation, retreat, termination, or armistice—in short, limited war.

This is the most likely manner by which communism, led by Soviet Russia, will attempt to gain its unlimited political goal, world conquest—through a series of limited objectives, gained by force applied in a series of limited wars.

It would be complete folly for us to feel secure because we have the ability to deter the Soviets from a general nuclear war, if at the same time we left them free to pursue a policy of piecemeal conquest. The idea we can safely concentrate our efforts solely upon weapons, equipment, and strategy suited primarily for fighting the big war is completely unsound.

The recent Rockefeller report says: "It is, therefore, crucial to develop a notion of adequacy for each military mission so that we do not drain resources from some vital task by maintaining an excessive capacity in others."

David Lawrence, in an editorial entitled "Illusions of 1922 and 1956," published in the U.S. News & World Report, noted the similarity in arguments in both those years that war was a thing of the past, because gas was the deterrent in 1922 (or so ran the argument), while nuclear weapons are supposedly the deterrent of today. He then asked the questions:

"Will history repeat itself? We are being told that there will be no war because neither side will venture to use H-bombs. But if war breaks out and no superbombs are used, who will win that war?"

Well, the H-bomb is certainly not deterring Soviet Russia's war plans. In this day of nominal peace, Russia itself has 175 ground divisions in an active status. Add to this force, the divisions of other members of the Communist bloc, and the Red armies total more than 400 ground divisions. Communist aircraft number more than 25,000, and she is building her submarine fleet to where it now numbers more than 500. Communism's armed forces today, ground forces only, total more than the forces of Germany, Austria, and Italy at their peak during World War II.

The United States Army today has fewer than 19 divisions in being.

It is not my wish to be accused of interservice rivalry, but I state the simple fact that by air or sea, whatever is done forward of the leading ground elements, will only soften or ultimately paralyze enemy resistance, but it carries no permanent extension of sovereign power with it, any more than does artillery fire or an ICBM. The will of the people of the United States can only be expressed, administered, and policed as far from Washington as the furthest foxhole has been dug and held. No land is conquered until the ground soldier plants his muddy GI boot upon the enemy homeland and holds it. That the Communists are developing and improving their ground forces today verifies that they hold the same ideas.

Of the divisions we have in an active status today, five divisions and four regiments are in Europe, two divisions are in the Far East; one division is in the Pacific, two infantry battle groups are in Alaska; and one infantry battle group is in the Caribbean area. The bulk of our remaining Army forces are in the United States.

Our overseas divisions are in their present locations because our strategy needs them there. It is not our intention to pull out our European divisions in the event of hostilities in Bongo-Bongo land; we have no assurance that the Soviets and East German armies would not move in immediately into the areas of West Germany that we had vacated. The same holds true for Korea—you can well imagine would happen in that unhappy land if we were to remove our divisions from there. The presence of our ground soldiers in these areas in the front line of defense of the United States, where the U.S. soldier is presented as the first barrier to aggression, is proof in an unmistakable manner that we mean business, and that we will not tolerate aggression in those areas.

Because of such situations, and because we cannot hope to match the overwhelming Communist ground forces manpower, we have decided upon a strategy that is divided generally into two major concepts: One, is to develop the armies of the free world through our military assistance program. We furnish money, military guidance and equipment to those nations which request our aid. For example, Turkey. We furnish that brave nation with certain arms, with technological assistance in the forms of advice and schooling, with money to help her feed her troops and build military installations.

Turkey, for her part, furnishes the free world with some of the best fighting men the world has ever known—men who will fight for freedom, men who have fought for freedom many times, men who have licked the Russians every time.

The second part of our strategy in the face of communisms' human seas of manpower and equipment has been to create a mobile reserve in this Nation—a Strategic Army Corps, called STRAC—which can move on a few hours notice to trouble spots anywhere in the world. This STRAC of ours is composed of four famous Army divisions, all organized in the pentomic concept. They are: the 101st and 82d Airborne Divisions, stationed at Fort Campbell, Ky., and Fort Bragg, N.C., and the 1st and 4th Infantry Divisions, at Fort Riley, Kans., and Fort Lewis, Wash.

They have tremendous striking power, ranging from the bayonet to Honest John missiles, which, of course, have atomic capability. STRAC headquarters organization is provided by Headquarters, XVIII Airborne Corps, Fort Bragg. The slogan of STRAC is: "Skilled, tough, ready around the clock."

This slogan contains more than appears at first glance: These divisions are skilled in all crafts of war, including the most modern weapons; they are tough, trained to use bayonet, rifle, and atomic missiles—the initial elements are continually on the alert; these famous divisions are ready to move in a matter of hours with guns, vehicles and missiles, to a departure airfield or port of embarkation. The men are ready to strike anywhere around the globe. And when the clock of destiny turns, it will find battle-ready ground forces capable of turning the tide of battle in a limited war operation, or blunting a massive general attack, should the situation require it.

When and if STRAC moves out, it is backed up by the STRAC reinforcement, the National Guard and Reserve divisions. But it is STRAC itself of which I wish to speak.

This Strategic Army Corps of ours, and yours, is the fire brigade of the Army. It is a balanced force, with supporting units which give it staying power; it has the ability, as do all Army forces, to sustain itself in extended ground combat. And because it is armed with weapons from the bayonet to the atomic warhead, it can apply that measured, sustained degree of force appropriate to the threat—which thus can best avoid the risk of an all-out nuclear war.

But above all, STRAC is a ready force. In, these times, readiness to combat aggression is particularly vital to national security, for speed of reaction is a key factor in coping with brushfire war.

STRAC has one prime prerequisite which the Army itself cannot provide: It needs suitable transportation for strategic mobility. Under the present organization of our Armed Forces, the Army does not have organic transportation means for rapid, long-range movement of Army forces. The Army must therefore hitchhike with the other military services; in other words, the Army's fire brigade is dependent upon its sister services to get to the fire. In brief, STRAC is a tangible and positive factor which any enemy must consider seriously in the formulation of his war plans. With its mobility and tremendous striking power, it is an important element of strength in carrying out the Army's role in deterring, or if need be winning, a limited war.

Strategic mobility, as I use the phrase, means the ability to move military forces rapidly over great distances, together with their equipment, supplies and service support. Speed of military forces is a principal factor in strategic mobility. And because military forces require vast tonnages of equipment and supplies for sustained operations, the timely, efficient movement of these tonnages is another essential factor in strategic mobility.

It would appear that these two factors, speed and vast tonnages, are diametrically opposed; that no one means of transportation can accomplish both. To a degree, this is indeed the case. At the present time, and in the foreseeable future, the airplane is our most rapid means of transportation, while the ship can carry the largest load.

The Army requires a combination of airlift and sealift to attain strategic mobility. Note that I have said "airlift and sealift," instead of "long-range aircraft" and "ships." The question is not merely the number of vehicles, but rather cargo capacity and how many trips can be made and how fast these trips can be accomplished.

Based upon the study of many possible situations, the Army is convinced that strong ground forces will be needed to cope with limited aggression. The division is the smallest unit we have which is capable of the necessary self-sufficiency and staying

power in combat. If our allies are attacked, or if war breaks out again in Korea, we must reinforce these areas with our divisions. If we are faced with aggression in other areas in spite of all that can be done to prevent it short of appeasement, we must respond with suitable ground combat forces—and we must respond in hours and days, rather than months.

The Army is making great strides in streamlining its combat forces. Unit weights have been reduced while striking power has been increased. For example, the pentomic division weighs less than one-half as much as its World War II counterpart. The fighting elements of the division, with supplies and equipment, now weigh approximately 7,000 tons, with no lessening of firepower.

In active combat operations, divisions consume vast quantities of supplies—a unit may expend more than its own weight in supplies in a month of fighting. In the event the Army should be moved to fight in Korean, no supplies from America would be needed during the first weeks of operation. But if the Army were to fight in most other areas of the world, the supplies and logistic elements must accompany the combat units. Thus, it can be seen that the lift requirements for a force vary widely.

The airborne division is designed for tactical airborne assault operations, but it is also ideally suited for strategic or long-distance air movement. An airborne division might well be the initial combat element committed in a limited war.

The flying time from Fort Campbell, Ky., the home of the 101st Airborne Division, varies from 13 hours to Alaska to 45 hours to Indochina. A ready-to-go division can have combat-ready soldiers at a departure field in a few hours' time.

Allowing for ground and air movement, a reasonable objective would be to have the first Army green uniforms appear in an objective area within 2 or 3 days and for the first unit, at least a battle group, to be in the area on the third or fourth day. The airlifted force must have supplies and logistical support and, if these are not available in the area, they must be airlifted until such time as surface communications can be established. Additional divisions may, and usually will, be required as promptly as possible. Initial elements of these divisions will also require aircraft.

Army airlift requirements for limited war can be summarized as that lift necessary to have initial combat troops in the area in a matter of hours or days, to transport a strong force which may have to be as large as one-half of the Strategic Army Corps (STRAC) to an objective area within a very few weeks and to support that force until surface ships can take over this task.

The Army is convinced that strong combat forces should at all times be ready to cope on the ground with limited aggression. The risk in not winning promptly is too great to take, for it could result in expanding operations, possibly in an all-out nuclear war. In many countries facing the Iron and Bamboo Curtains, the Army has combat forces always ready to fight alongside their local allies; but if they were attacked these forces would have to be augmented in a hurry.

Or, aggression may come in areas where there are no United States combat troops. And I repeat, if aggression comes, how long should it take us to get fighting men to the scene? A ready-to-go division in the United States can have combat soldiers at a departure airfield in a few hours. The United States should be able to airlift a decisive limited-war force to any place in the world within 4 or 5 days.

This kind of essential mobility requires adequate airlift to start with, and modern sea lift to sustain. But there is an alarming lack of modernization in our troop-and-supply-carrying airfleet. Development of modernized planes and ships is outside the Army's sphere of activity, but in view of the importance of mobility the Army thinks it necessary to have sufficient facilities for moving troops and supplies swiftly wherever aggression appears.

You will note that, when the crisis in Lebanon erupted during the middle of July, it was the troops of the Army's 24th Division in Germany which were airlifted to Lebanon—not troops from our Strategic Army Corps in America—these troops, of course, were in addition to the United States Marines who were aboard the Sixth Fleet. That our STRAC Forces in the United States were ready to go was evidenced only a few days prior to the Lebanese crisis when airborne troops were airlifted to the Caribbean during the Vice President's tour in South America. The movement of troops from one critical area to reinforce another critical area is not in keeping with our Nation's strategy. The Army's STRAC Force is ready to go, but where we fall short is in the matter of transportation. To summarize:

1. We now have and certainly need three deterrents to unlimited war—the Nike system (not yet completely installed), our civil defense capability, and our Strategic Air Command. While these are obviously working, since we have not had a nuclear attack on the United States, more emphasis is needed on the first two—Nike system and civil defense.

2. We must be capable of deterring limited war, or winning it if deterrence fails, else the free world is nibbled away until we stand alone.

3. We have STRAC Army divisions ready to go, but the conveyances are not at hand nor in sight. Modern sea and airlift must be provided as a matter of urgency.

In closing, I should like to quote from Mr. Robert Endicott Osgood's book "Limited War: The Challenge to American Strategy":

"Preparation for limited war is as vital to American security as preparation for total war. It is a matter for thorough and systematic planning, not for improvisation. After all, in developing our capacity for total war, we are preparing for the least likely contingency; its principal justification lies in the fact that it may never be used. But in developing a capacity for limited war, we would be preparing to meet the most likely contingency; we would be maintaining the only credible deterrent to Communist advances in the most vulnerable areas of the world."

## Mrs. Harlan P. Bosworth, Jr., Oregon's Mother of the Year for 1959

EXTENSION OF REMARKS

OF

### HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

*Monday, March 9, 1959*

Mr. NEUBERGER. Mr. President, quite a few of us become weary of the selections, for publicity purposes, of so-called cotton queens, corn queens, fish queens, citrus queens, and the like in order to promote various commercial products. These selections usually are of dubious value.

However, by contrast, I think all of us are gratified that each of the 49 States now selects a Mother of the Year. This award goes annually to some mother who has contributed outstandingly to community and civic life, to the raising of children of character and integrity, and to the general welfare of the State in which she lives. These selections in my own State have been notably distinguished, and the choice for 1959 follows in such a pattern.

Mrs. Harlan P. Bosworth, Jr., of Medford, has been named Oregon's Mother of the Year. She is the mother of three sons and a daughter, and an illustrious person in her own right. She has been active in such intellectual activities as the Great Decisions Group, in such political functions as the Democratic Party, in such religious undertakings as those of the St. Mark's Episcopal Church. She and her husband, who is a vice president of the California-Oregon Power Co., have been leaders in Jackson County in the United Nations Association, a group with which my own wife is actively affiliated, I am happy to report.

In tribute to Mrs. Harlan P. Bosworth, Jr., Oregon's Mother of the Year for 1959, I ask unanimous consent that a sketch of her noteworthy career, as written for the Oregonian of Portland of March 3, 1959, by Mr. Dick Jewett, of Medford, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Oregonian, Mar. 3, 1959]

OREGON MOTHER'S CONCERN FOR HUMANS PROMPTS EFFORTS TO MAKE WORLD BETTER

(By Dick Jewett)

MEDFORD (Special).—"I couldn't wish for anything nicer, but I feel there are so many mothers who have worked harder than I have."

That was the response Tuesday of Mrs. Harlan P. Bosworth, Jr., Medford, named Monday as Oregon Mother of 1959. Selection was announced in Portland by the Oregon Mothers Committee.

Mrs. Bosworth's varied activities and interests in community, State, national and international matters, stemming from a deep concern for human beings, were prime factors in her selection. But her family has been her major interest for 30 years. She and her husband, a vice president and assistant general manager of California-Oregon Power Co., are the parents of a daughter and 3 sons and grandparents of 7 youngsters.

'PERMISSIVE' PLAN USED

The Bosworths have adhered to a permissive plan in rearing their children. "Our children are all individualistic," Mrs. Bosworth stated. "I highly approve, but sometimes have found it rough going."

A parent has to be very allowing, she said, in guiding a youngster to develop his own urges and talents. Such guidance, the mother of the year feels, has given her daughter and sons great tolerance and a spirit of cooperation, allowing her to carry on her activities outside the family. "I think it has given them a great interest and active concern in community life."

The children have assisted in many of her civic activities.

The Centennial Mother's work with Medford Council of Church Women, the Oregon United Nations Association, St. Mark's Episcopal Church Sunday school, Medford League of Women Voters, the Jackson County Democratic Party organization, the YMCA, and Parent-Teacher Association, her interest in Indian affairs and her hobbies of sketching, painting and gardening have influenced the lives of her children.

DAUGHTER SOCIAL WORKER

Her daughter, Mrs. William Hughes, Salem, has been a social worker and is active in church and civic work. Son Harlan P., IV., Oakland, Calif., has attended divinity school and plans to return in time to complete his ministerial studies. Son Robert is an architect at San Anselmo, Calif., and son David, a student at Southern Oregon College, is interested in politics. David once organized the small fry of the neighborhood to campaign for his mother when she sought a seat in the legislature.

The Bosworths did many things as a family, the Oregon Mother of 1959 said, such as swimming, skiing, skating, reading Shakespeare, and Christmas tree burning on 12th night.

Her life in community affairs and as a parent has not all been "peaches and cream," Mrs. Bosworth said. She admitted mistakes, but maintained that rectifying them and gaining understanding has helped her as a parent.

UNITED NATIONS HOLDS INTEREST

Since World War II, Mr. and Mrs. Bosworth have collaborated in their interest in the United Nations. She has been a board member of the Oregon association. The Bosworths have been hosts in their home to students and speakers from foreign lands. Her interest in the United Nations and as a great decisions group leader has been to bring information and to study the problems of crisis areas in the world, she reported.

Since their first cottage was built, the Bosworths have had a family garden, providing wholesome and healthful food. Products from the winter garden and fruits and frozen vegetables, provision the Bosworth table all winter long. Mrs. Bosworth enjoys making her own butter and bread.

NATURAL FOODS PREFERRED

Mrs. Bosworth joined the American Nutrition Society and Natural Foods Associates about 10 years ago when she began to see about her "too much failing health." Her activities led to the reactivation of an old stone burr flour mill at Eagle Point, establishment of a health food store in Medford and sale of raw milk by a local dairy.

"I hate to give over the fundamental homemaking things to the food industry," Mrs. Bosworth said. "I deplore the fact that the American family wants hamburger more than anything else." This trend, she maintained, has "reduced our consumption to antique cows and poorer meat and poorer portions."

Mrs. Bosworth is now looking toward purchase of a farm on which to produce the highest type of food employing organic-methods. No chemicals, sprays or pesticides would be used. The farm would grow every item of food it needed, including grain for livestock. Demonstration of the maximum health to the children would be the aim.

The Mother of the Year is serving as temporary chairman of the Jackson County Water Pollution Board, a watchdog organization. Air pollution has become recently her personal concern and she hopes to see that the board will extend its services to abatement of this problem.

CLEAN AIR SOUGHT

She has been residing much of the time in recent weeks in a trailer house in the Applegate Valley because of a lung ailment attributed to pollution of the air in the Medford vicinity.

Mrs. Bosworth voiced opposition to putting the Rogue River to industry. "We haven't begun to touch our potential in agriculture," she said. "With clear air and water, animal, plant life, and human life improve," she said.

A Sunday school teacher of 3-year-olds, Mrs. Bosworth said that her deep love of God and nature keep her in contact with little children and that they need to have that love and awe of God and nature. "It's a wonderful world and most of our problems have been caused by man," she remarked.

SWEET HOME BIRTHPLACE

Appropriately, the Centennial Mother of the Year is a native Oregonian. She was born at Sweet Home, coming to Medford with her parents in 1906. She resided from 1929 until wartime at Klamath Falls.

Mrs. Bosworth considers her work with the United Nations now her most important activity outside of church and home. A main interest for the last 5 years has been as chairman of the Medford Council of Church Women's project of cooperation with American Friends Service Committee to support a social worker for the Klamath Indians.

## Unity, Precision, Firmness

EXTENSION OF REMARKS
OF
## HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of Sunday, March 8, 1959:

UNITY, PRECISION, FIRMNESS

The crisis over Berlin, which Mr. Khrushchev has brought about, to quote the words of Adlai Stevenson, with "no compassion for the feelings and the fears in so many human hearts," has made it necessary for the Western nations not only to stand their ground but to define it; not only to be united on general principles but to have a positive unified program; not only to take a position but to testify that they will maintain it at all risks.

When Prime Minister Macmillan arrives in this country next week he should have no difficulty in reaching an understanding with President Eisenhower. There should be an equally explicit understanding with President de Gaulle and Chancellor Adenauer. If there is any division among the Western allies it is probably due to an uncertainty in the minds of our allies as to how far this country will go to defend Berlin.

Our allies must be reassured, and Mr. Khrushchev must be made to understand, that we will hold that ground and the principle for which it stands rather than attempt later to hold worse positions and to support weakened principles.

In an article published today in the New York Times Magazine, Henry A. Kissinger contends that "the Western alliance is in serious danger, partly because of confusion about our purposes." He fears that we lack "a tone of urgency" and "a sense of direction." Nevertheless, the President and Mr. Stevenson now certainly agree that "under no circumstances will we forsake the people of free Berlin or compromise on the principle of free access." Mr. Eisenhower has received assurances from both parties in Congress that in the words of Speaker RAYBURN "we are united."

This sort of language cannot be lightly used. We stand in this generation in the shadow of a conflict little resembling what was called war as late as the spring of 1945. The front-line trenches are no longer held by soldiers alone. The blood of helpless unarmed millions would now be written with letters of fire in any declaration of war. There might also be written the lasting division of all the peoples of the world into two classes only—the ragged masters and the naked slaves.

When we stand unitedly, precisely and firmly for the security of West Berlin, we do this because we believe that otherwise there would be no security anywhere in the world. We must not, however, take heroic poses for their dramatic value. We must also offer to the peoples of the satellite states, and to the Russian people themselves, relief from the fear of aggression. We have no doubt they do feel such fear. It has been one purpose of Moscow propaganda to make them feel it. The propaganda of peace, which we can honestly put forth, will do more to undermine the power of Mr. Khrushchev than any barrack-room defiances. We must be armed with weapons for our self-preservation, but we must also put on the armor of compassion and truth.

If we follow this course, we run no risk of becoming what President Eisenhower the other day called "a garrison state." Let us act like reasonable men. If Mr. Khrushchev will do likewise there need be no crisis over Berlin and no obstacle to the peaceful coexistence of different kinds of governments and systems.

## National Security

EXTENSION OF REMARKS
OF
## HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a very fine letter which I have received from John W. Mahan, commander in chief of the Veterans of Foreign Wars together with a copy of my reply to Commander in Chief Mahan:

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
*Kansas City, Mo., March 3, 1959.*

The Honorable JOHN W. McCORMACK,
*U.S. House of Representatives, Washington, D.C.*

MY DEAR CONGRESSMAN: As commander in chief of the Veterans of Foreign Wars, I recently had an opportunity to meet with leaders from your State during our annual legislative conference in Washington, D.C. Since talking with your constituents, I thought it advisable to write you on a matter that concerns all of us—national security.

The VFW, by resolution and by unanimity of opinion, feels that our country is losing basic military strength through proposed plans to reduce our Defense Establishment. We believe, and we are on record, that our country should have a balanced defense which is ready to move at a moment's notice whether on the ground, on the seas, or in the air. We further believe that a reduction in our ground forces in the face of the Khrushchev challenge over Berlin is unthinkable. Even though the Berlin situation might be settled peaceably, there are still many trouble spots in the world where American support has already been committed.

It is our understanding that unless plans to reduce forces are halted, the Army will lose one division and the Marine Corps will suffer drastic cuts in its combat strength. Our military strength must be great enough to insure peace.

We are told that Russia has 25 divisions on the borders of Western Europe alone. Instead of a reduction of forces, the VFW knows that the American people are willing to pay more for defense, if necessary, and

we should keep our ground forces at least at the level recommended by the Congress which was 900,000 in the Army and 200,000 in the Marine Corps.

We would appreciate hearing from you on this matter and if you agree with us, I sincerely hope that you will lend your influence and support toward maintaining our military and naval forces at the above strength.

Sincerely yours,

JOHN W. MAHAN,
*Commander in Chief.*

---

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
*Washington, D.C., March 6, 1959.*

JOHN W. MAHAN,
*Commander in Chief, Veterans of Foreign Wars of the United States, VFW Building, Kansas City, Mo.*

DEAR COMMANDER IN CHIEF MAHAN: I am in receipt of your letter of March 3 which I have read with special interest and pleasure. Your views, as expressed in your letter, are completely consistent with my views on the question of national security. I am sure that you have read in the papers recently my statement that I would be happier if the President would recommend more taxes for greater national defense. It would be good leadership for our people to make that sacrifice rather than holding up a reduction in taxes, which is leadership along the lines of complacency. I think that if you will examine my record in Congress, you will find that while there are other Members who are just as strong as I am for a powerful military force, there is no Member who has a stronger feeling on this question than I do. I have repeatedly said, "the only thing that those in the Kremlin respect is what they fear" and that is military strength and power greater than they possess themselves.

I know that you are aware of the fact that Congress last year appropriated money to maintain an Army of 900,000 officers and men; and the Marine Corps, 200,000 officers and men but the President did not maintain this force. The Army has been reduced, as you know, to about 870,000 or it is in the process of being reduced. The Marine Corps is now down to about 184,000 with the objective to reduce it to 175,000. The money has been appropriated but the President has frozen same. We also appropriated money for greater defense in other directions and most of the money that Congress appropriated last year under the President's budget estimates has been put in a deep freeze.

With kind regards, I am,

Sincerely yours,

JOHN W. MCCORMACK,
*Member of Congress.*

P.S.—The only one who can stop the reduction of the Army and Marine Corps is President Eisenhower. In fact he could increase the Army and Marine Corps to 900,000 and 200,000 respectively. The money has been appropriated and is available until June 30 of this year.

---

## Russian Inconsistency

EXTENSION OF REMARKS
OF
### HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
*Monday, March 9, 1959*

Mr. JAVITS. Mr. President, the inconsistencies of Soviet propaganda and than when that Nation's Government complains of the supposedly undemocratic actions of the free nations of the world, in the very areas where its own Soviet actions are never more apparent totalitarian oppression is most apparent.

On the subject of free elections, Soviet actions have been typically erratic—with propaganda in the underdeveloped nations of the world contrasted with the brutal suppression of Hungarian freedom, the refusal to permit free elections in all Germany, and the use of only a single slate of candidates in the Soviet Union itself and in the satellites.

One of my constituents has pointed out the latest Soviet inconsistency in this area in a letter to the New York Times of Sunday, March 8, 1959, which I ask to have printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SOVIET VIEW ON ELECTIONS

To the Editor of the New York Times:
In the United Nations Russia has demanded elections in the French Cameroons before that territory becomes an independent state. It is rather strange to see this demand coming from the country which violently opposes free elections in Germany as the basis for reunification, and where so-called elections are a farce, since there is only a single list of candidates.

PAUL M. KAUFMAN.

---

## Record of Secretary of the Navy Thomas S. Gates, Jr.

EXTENSION OF REMARKS
OF
### HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
*Monday, March 9, 1959*

Mr. SALTONSTALL. Mr. President, recently a letter to the editor appeared in the Washington Post and Times Herald which pays tribute to retiring Secretary of the Navy, Tom Gates. He fully deserves this hearty well-done which I would like to bring to the attention of the Senate. I should like to add my own congratulations to Mr. Gates for his admirable service over the years, for his great contributions to our Nation's security, and for his friendship, which I have greatly enjoyed. I know we all want to wish him well as he returns to private life.

I ask this letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MR. GATES' RECORD

It is a pleasure to congratulate you on your February 5 editorial on Navy Secretary Thomas S. Gates, Jr., summing up his accomplishments as he relinquishes his duties in June.

You have shown keen discernment and understanding of naval matters in the Pentagon and you have pointed out Mr. Gates' interest, competence, and balance on defense needs in the Pentagon.

Mr. Gates has accomplished much in the Navy Department. He will be remembered as a great Secretary of the Navy, ranking with the late James V. Forrestal and President Taft's Navy Secretary, George von L. Meyer.

He has done his work efficiently, silently, and with the least quarterdeck manner. He has had the public interest constantly in mind and he has had the wholehearted support of the Navy.

We wish the new Secretary of the Navy, William Franke, a fair breeze and good luck.

DONALD H. DALTON.

## In Support of S. 57, the Housing Bill

EXTENSION OF REMARKS
OF
### HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an excellent and convincing letter received from George Meany, president of the American Federation of Labor and Congress of Industrial Organizations, in support of S. 57, the housing bill. This letter of Mr. Meany's presents sound and convincing reasons why this bill should pass and become enacted into law:

AMERICAN FEDERATION OF LABOR
AND CONGRESS OF INDUSTRIAL
ORGANIZATIONS,
*Washington, D.C., March 4, 1959.*

Hon. JOHN W. MCCORMACK,
*House Office Building,*
*Washington, D.C.*

DEAR MR. MCCORMACK: I understand that S. 57, the housing bill reported out by the House Committee on Banking and Currency, will soon be considered by the House of Representatives. On behalf of the American Federation of Labor and Congress of Industrial Organizations, I am writing to urge you to support this bill.

Although S. 57 does not contain all of the features we would have liked to see enacted this year, it is a forward-looking bill which would provide a good foundation for attacking the most urgent housing and redevelopment needs of the Nation. Its authorization of $500 million a year for 3 years for urban redevelopment is the minimum needed to permit metropolitan areas to carry out their highest priority slum clearance and city rebuilding projects. Its provision of 35,000 low-rent public housing units a year is absolutely essential to rehouse at least some of the low-income families who will be displaced by already scheduled urban renewal, highway, and other public projects.

In addition to its constructive public housing and urban redevelopment provisions, S. 57 would also authorize an imaginative new program of low-cost housing for the elderly and would enhance the effectiveness of the already successful cooperative housing program.

Opponents of this bill have falsely charged that it would authorize excessive expenditures which would unbalance the budget and that it is an inflationary bill. Let me assure you that neither I personally nor the AFL–CIO as an organization would advocate excessive expenditures or support any proposal which would stimulate unnecessary price increases. The fact is that S. 57 authorizes only a moderate amount of nonreimbursable Federal outlays, and even these

involve no immediate Federal expenditures. With plenty of skilled workers and building materials available to build the houses S. 57 would make possible, there is not the slightest evidence that its enactment would have inflationary results.

The housing bill, S. 57, is the first major piece of economic legislation to be considered in this session of Congress. By enacting S. 57, the Congress will demonstrate that it is prepared to take effective action to help restore full employment and to assure economic prosperity. I therefore respectfully request that you vote for S. 57 and vote down any crippling amendments that may be offered.

Sincerely yours,

GEORGE MEANY, *President.*

## Civil War Centennial Award

EXTENSION OF REMARKS

OF

### HON. JOE HOLT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 4, 1959*

Mr. HOLT. Mr. Speaker, with the presentation by Gen. Ulysses S. Grant, III, of certificates of commendation to film stars John Wayne and William Holden and motion picture director John Ford for their efforts in producing the new multi-million dollar historical spectacle "The Horse Soldiers," another step was marked today in the Civil War Centennial Commission's official 6-year nationwide program to commemorate the 100th anniversary of the epochal conflict.

The presentation ceremony took place at the Washington headquarters of the Civil War Centennial Commission, of which General Grant is Chairman. It was followed by a reception in honor of Messrs. Wayne, Holden, and Ford, held at the exclusive Army and Navy Club, and attended by members of the Commission, including high-ranking military, naval, and Government officials, and other distinguished guests.

In presenting the commendations, prepared in the form of scrolls, General Grant welcomed the United Artists film as one of the first contributions to the Commission program, "the avowed aims of which are to pay tribute to the memories of our forefathers who took part in the bitter conflict and to provide Americans with a new understanding of the way in which we built from sacrifice and suffering an enduring Nation and a lasting peace."

"The Horse Soldiers," which cost $5½ million to produce and was filmed on location in Louisiana, Mississippi, and in Hollywood, is a recreation of the famous Grierson raid of 1863, a commando-type operation in which several hundred Union calvalry invaded and rode across the State of Mississippi in order to cut the railroad lines of supply and district the enemy's attention from General Grant's maneuver to take Vicksburg. It was characterized by General Sherman as "the most brilliant expedition of the war." The first General Grant acclaimed it as "one of the most brilliant cavalry exploits of the war."

Today his grandson, the present general, described this horse soldiers' raid as "one of the most strategically important, colorful, and fascinating stories to come out of the Civil War." Of the film he said, speaking for the Commission, "We expect it will prove of great interest and significance to all Americans."

After accepting the commendations for themselves and Mr. Ford, Wayne, and Holden in turn presented to General Grant, for the Centennial Commission collection, an assortment of Civil War memorabilia used in the motion picture, including a McClellan saddle, carbines and carbine holders, and authentic reproductions of gabions (portable wicker cylinders filled with earth to give protection to men digging approach trenches) and guidons (banners mounted on standard poles).

While at Commission headquarters, Messrs. Wayne and Holden arranged with General Grant and the Commission's executive director, Karl S. Betts, for a special showing of "The Horse Soldiers" to the Commission Council as soon as the first technicolor print has been processed. The picture is scheduled for public viewing in motion theaters across the country, beginning on July 4 of this year.

## Mechanized Post Office

EXTENSION OF REMARKS

OF

### HON. AUGUST E. JOHANSEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 3, 1959*

Mr. JOHANSEN. Mr. Speaker, on Tuesday evening, March 3, the noted radio commentator, Ray Henle, broadcast an excellent report on the dedication of the new mechanized Washington, D.C., Post Office and its significance to the American people.

I believe Mr. Henle's comments deserve wide circulation, and under unanimous consent I include his remarks:

President Eisenhower pushed a button in the White House today, and in the U.S. Post Office for the city of Washington some blocks away, $12 million worth of machinery began to move, beginning the Nation's first pilot post office almost completely mechanized.

An amazing assortment of machines, conveyor belts, electric eyes, push button sorters and what not began to function a postal show case for modern handling of the mails. In due course, some 60 other leading post offices through the Nation will have this equipment.

It was a banner day for Postmaster General Arthur Summerfield who, as an automobile businessman in Michigan, understands the value of the assembly line. He began to work on the new day in postal service 6 years ago, and hopes to see it completely finished before his term ends 2 years hence.

In addition to the machines put into operation today, there's a laboratory on one floor where they're testing even more advanced machines which, some day, will even more drastically improve postal service.

The point is, Mr. Summerfield said, he is trying to keep up with the great strides in the amount of mail that is handled by getting machines to do the work. Otherwise, he said, you wouldn't be able to get a building big enough, or find room enough for the number of persons that would be required to handle the mail in the old ways.

Most amazing to this onlooker were the machines where operators pushed three buttons in combination and the machines then automatically separated the mail in accordance with its destination by electric brain.

Then there's an automatic stamping machine that will properly cancel the stamp on a letter regardless in what position (upside down, right side up, forward or reverse) the letter happens to come into the stamping trough.

But in the future there's even more to come. We saw an experimental machine sorting mail by electric eye. The eye can read a printed name of a city or State, and automatically sorts that mail to the proper bag for dispatch to its destination.

Postmaster General Summerfield complimented the President and members of Congress and postal employees for the tremendous work necessary to put this revolutionary mechanized post office into operation. These in turn applauded the Postmaster General for his vision in making the biggest improvements in postal service since the pony express was gone with the wind.

## McElroy's Attack View Discounted by Some

EXTENSION OF REMARKS

OF

### HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Mr. L. Edgar Prina, which appeared in the Washington Star on Sunday, March 8, 1959:

MCELROY'S ATTACK VIEW DISCOUNTED BY SOME

(By L. Edgar Prina)

Defense Secretary McElroy's assertion that it would be almost impossible for the Soviet Union to launch a surprise air or missile attack against the United States has been received with some misgivings in military circles.

That this is the case is all the more noteworthy to military observers because the McElroy thesis has drawn surprisingly few immediate challenges from the press or Congress.

The Defense chief told a news conference last Thursday, in effect, that the United States would have advance warning of an impending attack because it would be virtually impossible for the Russians to make the necessary massive preparations for an all-out assault without being observed.

Mr. McElroy mentioned the tremendous amount of interchange of communications and just plain motions that would be involved in coordinating strikes against thousands of targets, each of which, he said, might take an expenditure of from 4 to 10 missiles if certainty of destruction was to be achieved.

These are the views of the Joint Chiefs of Staff and he shares them, the Secretary said.

ANOTHER VIEW

But a high-ranking officer, familiar with top-level operations, plans, and intelligence told an interviewer that a sounder way of putting it is to say it would be "difficult" for the Soviet to mount an all-out attack secretly and that "we hope" to have advance warning of any such action.

This he pointed out, is somewhat different than saying it would be almost impossible to avoid giving advance, or strategic warning to the defender.

The officer said that it would be more difficult to mount a surprise bomber attack, which is the greater fear today, than it would be for a missile assault, the capability of which the Russians may have in the next few years.

He said that it would not be prudent to suppose that the Russians, the most security-conscious people in the world, would be conveniently bumbling about it if they planned to attack us. Certainly, he added, a dictatorship finds it easier to be secretive than does a free nation.

RADIO MESSAGES

Asked about Mr. McElroy's stress on the great interchange of communications the Russians would have to carry on in preparing an all-out attack, the officer said he assumed the Secretary referred to radio messages. He then agreed that radio is not absolutely vital to coordinating the assault.

Couldn't the Russians screen the movement of their forces by announcing large-scale maneuvers or by other devices? Yes, they could do this, was the reply.

Couldn't a master plan be set up for execution at a certain hour and day unless a last-minute negative were given? Again, the reply was in the affirmative.

Other military observers, meanwhile, are asking these questions in the wake of the official optimism that we would have advance warning of a surprise attack:

1. Why is it necessary to keep a substantial percentage of the Strategic Air Command's bombers on a 15-minute ground alert at all times? (The Air Force hopes soon to have one-third of its medium and long-range bombers on the runways, armed and fueled for instant takeoff in the event of imminent attack. Later, when the Russians have a sizable missile capability, the Air Force expects to inaugurate a very expensive and complicated air alert, wherein a certain number of bombers and fuel-tanker planes would be flying at all times).

2. Why are the United States, our allies and even the Russians concerned enough about the possibilities of surprise attack to hold special diplomatic negotiations to find ways to decrease the possibilities of such assaults?

3. Does our optimism take consideration of the expected capability of the huge Soviet submarine fleet to launch nuclear missiles at our cities from the secrecy of the ocean depths?

4. The United States had both strategic and tactical warning of a Japanese surprise attack on Pearl Harbor but did little about it. Is there any guarantee against another such debacle?

Some observers believe Mr. McElroy's statement indicates the United States is placing a heavy bet on electronic and radio intelligence to gather evidence of any Russian preparation for an all-out attack.

They point to the achievement registered when we obtained tape recordings of the conversations of the three Soviet flyers who shot down an unarmed American transport plane over the Turkish-Soviet border last year.

And they point, too, to President Eisenhower's recent reference to our very great and expensive intelligence forces.

## Robert Valeur, French Patriot, Minister Plenipotentiary

EXTENSION OF REMARKS
OF
## HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I include an article written by Elizabeth Maguire about the Honorable Robert Valeur, Minister Plenipotentiary of the French Embassy, and appearing in the January 29, 1959, issue of the Georgetowner, which article was called to my attention by my valued friend (Father) Joseph F. Thorning, Ph.D., D.D., who strongly feels that the election of General de Gaulle as President of France can be a turning point in European history:

ROBERT VALEUR, FRENCH PATRIOT, MINISTER PLENIPOTENTIARY

(By Elizabeth Maguire)

President of the European Council for Nuclear Research, President of the Committee of Cultural Experts of the Council of Europe, an officer of the French Legion of Honor, author of several books, lecturer and professor of distinction, a founder of France Forever, De Gaulle man from the start, Minister Plenipotentiary at the French Embassy—in short, Robert Valeur of Georgetown.

France is his first love, but Georgetown runs a close second. For nearly 5 years he and his American born wife have lived happily in a Georgetown house, picket fence and cobblestones without, and modern art and furnishings within. The Valeurs are fond of all their neighbors and friends, and as a consequence entertain for them on many occasions. Besides, Monsieur likes to cook. "Salmi de Canard" is his favorite dish, which, translated means duck with puree of duck liver and sherry sauce.

Expert though he is at cooking and collecting art, these are minor sidelines in a life busy with teaching, talking, toil and travel. He has a massive forehead which indicates intelligence, a massive frame which indicates energy, and good coloring which indicates health. Having these advantages, he grapples well with problems of state, and explains them to the layman with a talented, facile tongue.

"The diplomat's job at the present time is not a plush job," he comments wryly, "Since the first of October I've made between 70 and 75 speeches, all the way from Seattle to Boston." Since we have been in Georgetown all the time he has been traveling, we asked him to comment on current crises. He complied and replied, many of his remarks going over our head, but nevertheless clear enough to copy down.

First of all we asked about Gen. Charles de Gaulle, President of the Fifth Republic. Knowing that M. Valeur had offered his services to the general immediately after the armistice of June 1940, and knowing, too, that De Gaulle entrusted M. Valeur with the task of organizing and directing the Free French Press and information service in the United States during the war, we asked him if he had foreseen the greatness of De Gaulle's present stature.

"I was always convinced," he said, "that France would have to call De Gaulle back one day. I was convinced of this in view of the deficiencies of the constitution of 1946, which could lead only to such situations as Algeria because of the weakness of the executive branch as against the legislative branch. No government under that constitution was strong enough to face up squarely to such vital issues as Indochina and Algeria—we were bound to face a tragic crisis—and when this came, De Gaulle was the only possibility. He is the hope of the free world. France is in a strategic position, and De Gaulle has given France stability and leadership."

Referring to the many treaties between France and Germany today, we asked M. Valeur if friendship with Germany was considered a key policy of De Gaulle and we asked whether the Franco-German policy surprised him. "Not at all," he replied, "as De Gaulle has an extraordinary continuity of thought. The Franco-German friendship is most certainly a key policy, and as a matter of fact, when Time magazine recently put together material for their Man of the Year issue, I gave them, among other things, the following quote from a De Gaulle speech to a German audience, dated 1945: 'The world changes, and I firmly believe that henceforth there is every reason why you should be closer rather than farther from us. You will not that I have spoken only of the future and the present. This is not unintentional.'" (See Time, Jan. 5, 1959.)

We next asked M. Valeur for comments on the Common Market, which went into effect January 1, 1959. "Will it work out? Of course it will work out," he said, "in fact it is the greatest idea that has been founded in Western Europe, I would say, for centuries." Then he went on to say that although the British are worried by the Common Market, in the end it will help the British, as the purchasing power of the Common Market countries (Benelux, France, Germany and Italy) will increase and thereby benefit the British as well.

Next, we asked M. Valeur for comment on the new taxes in France, called President de Gaulle's Verite and Severite program, eliminating certain benefits and increasing certain taxes. M. Valeur said, "The French people of course grumble—they like to grumble, especially when they feel the pinch of any taxation, but I would like to say here, in regard to those new taxes in France, that the French people, who have a reputation in this country for not paying taxes, somehow pay more taxes relatively than either the British or Americans. At the present time the French are grim, but more in the spirit of resignation, because they know they have to do it."

Next we asked him if he approved of his Government's choice of bolstering housing more than education, and he replied, "Yes, the housing problem is more urgent than schooling. However, schooling has not been neglected—about 3 years ago an extensive schooling program was launched., But housing is urgent now—young people just married have no place to live. For over a century France had a low birth rate, the lowest in Western Europe, but since the war, France has had the highest birth rate in Western Europe, with the exception of the Netherlands and Portugal. In the year 1958, the population increased by 435,000, which means new blood and new vitality in France—it is one of the most hopeful developments."

Then M. Valeur said that while France has made industrial, agricultural, scientific, and technical progress, she has not made this progress at the cost of declining effort in the field of art and letters. He pointed to such names as Malraux and Camus. "Do you consider Malraux a great man?" we asked. "Yes, of course he is a great man—he is one of the greatest men in the whole world. Malraux, more than any other writer, defends fundamental values of man—freedom, independence, individualism—which values are being challenged by forces of communism and bolshevism. Malraux has redefined the

fundamental values of man, extolling him as against everything which crushes man, which crushes freedom, man's sense of dignity and his individualism."

There were many things to ask M. Valeur, but time was getting short, and there were many things to listen to, too many to write. There were praises for President de Gaulle, comments on the general's pleasant family—"He's very much of a family man," said M. Valeur with a fond smile. And there were praises for the new Prime Minister, brilliant and eloquent Michel Debre.

Our last question asked for comments on Algeria. "The situation in Algeria has improved greatly. De Gaulle has launched a 5-year program in Algeria for the development of industry and raising the standard of living. The results will greatly contribute to satisfactory settlement of the Algerian problem—essentially one of harmonious cooperation between the Moslem community of some 9 million and the French community of 1,200,000. I would like here to stress an aspect of the problem which often surprises our American friends, and that is that those Frenchmen in Algeria have been there for generations (since 1830 it was agreed), longer than most Americans who now live beyond the Mississippi have been on their land. The French people in Algeria look upon their farms and industries just in the same way a Colorado farmer or Idaho farmer looks upon his land."

"Do you know," we ventured, "we've heard that by holding Algeria, France is doing the free world a great service." M. Valeur looked hard at the top of his desk. "The situation is very well understood in certain circles," he said, "but the American people as a whole do not understand." Leaving a lot on Algeria unsaid, we asked for a thumbnail sketch of M. Valeur's busy, brilliant life. "I've lived a long time, so there's a lot to say," he laughed, but he condensed decades into a few salient facts:

He was born in 1903 in Lons-le-Saunier, near the Swiss border; he is a doctor of laws of the University of Lyon; he was awarded a fellowship by the Rockefeller Foundation; he came to the United States for the first time in 1926 to do research at Chicago, Columbia, and Harvard Universities; he had an interval in Oxford and London, and he returned to the United States to teach political science at Columbia University, with which he continued to be associated until 1945. After the war, M. Valeur went to Sao Paulo, Brazil, where he was consul general; he was named permanent delegate of France to UNESCO in January 1952, and he became chief of the Division of Cultural Exchanges in the Ministry of Foreign Affairs in Paris in 1953.

Additional salient facts: While teaching at Columbia before the war, he took 1 day a week to teach a course in economics at Briarcliffe Junior College; his best student in economics was blonde and pretty; they were married.

"Did you ever teach at Smith?" we asked, bringing in our alma mater. M. Valeur brightened, "Smith is the favorite college of France," he said, "because Smith College initiated the junior year abroad." And that was why, he went on to say, the members of the Smith College Club were entertained at tea this year by the Ambassador and Madame Alphand. We had to admit to M. Valeur that Smith girls had been puzzled by the favored-college treatment and had (foolishly) thought the Alphands had made a mistake. But to tea they nevertheless came to be greeted by almost the entire embassy staff.

## Attack on the FBI—III

EXTENSION OF REMARKS
OF

## HON. AUGUST E. JOHANSEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 3, 1959*

Mr. JOHANSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the third in the series of articles by Pulitzer Prize winning reporter, Edward J. Mowery. This series deals with the campaign to discredit the Federal Bureau of Investigation, and the following article appeared in the Newark Star-Ledger of February 3, 1959:

FBI WARNED THE ARMY ABOUT ROSENBERG

(By Edward J. Mowery)

WASHINGTON.—One of the oldest gimmicks in the leftist repertory is to build up a straw man, then tear him down.

The straw man as applied to the present crusade against the Federal Bureau of Investigation, goes like this:

For years the Bureau has cultivated the myth that the agency is infallible. So how can Soviet espionage rings periodically explode if the FBI is errorproof?

The reason is obvious, say critics of J. Edgar Hoover. His agency, primarily responsible for internal security, is simply watchdog.

Smarting under this line of attack on both the agents' efficiency and integrity, an FBI official declared today that the overall record of his agency will conclusively prove that the FBI has been constantly alert to the Nation's security and, at the same time, has scrupulously observed the rights of the individual citizen.

Charge: If the FBI were efficient in guarding our internal security, the Rosenbergs wouldn't have been able to steal the A-bomb secret for the U.S.S.R.

The facts: On February 9, 1942, heads of naval and military intelligence and the FBI signed the Delimitations Agreement which provided that the War Department would be responsible for investigating civilian employees under military control or on military reservations.

The Manhattan Engineer project was under War Department jurisdiction. At an April 5, 1943, conference between representatives of the FBI and G–2 (Army Intelligence), G–2 took complete responsibility for protective activities. This agreement was effective until January 1, 1947, when the Atomic Energy Commission took over the project (under provisions of the 1946 Atomic Energy Act).

The FBI's first information on Julius Rosenberg developed in February 1944 when a highly confidential source revealed that Rosenberg was a member of the Communist Party. Further investigation disclosed that Rosenberg was a civilian employee of the U.S. Signal Corps.

This information, in accordance with the Delimitations Agreement, was promptly furnished to the Army and the FBI case was closed. The Army, after its own investigation, terminated Rosenberg's employment in March 1945. The FBI took no further action because it had received no information that Rosenberg was engaged in espionage.

In 1944, when the Communist Party had an estimated membership of 80,000, it was physically impossible to maintain a day-by-day surveillance of every member.

Charge: FBI inefficiency in protecting security enabled Klaus Fuchs, Harry Gold and David Greenglass to successfully steal A-bomb secrets.

The facts: Fuchs, a British subject, was employed on the Manhattan project. Under terms of the 1943 Quebec Conference, the United States, Britain, and Canada agreed to collaborate as partners in the Atomic field with each being responsible for the security of its own personnel.

Responsibility for Fuch's actions was divided between the British and the U.S. Army.

David Greenglass was a member of the armed forces employed on the Manhattan project. His actions were the responsibility of the Army.

The FBI first heard of Harry Gold in 1947 when his name came directly into the investigation of information supplied by Elizabeth T. Bentley.

Bentley said Abraham Brothman and Jacob Golos had been involved with her in Soviet espionage. On May 29, 1947, Brothman said Harry Gold had contacted him in 1940 as a representative of Golos (whom Brothman knew only as "John"). Interviewed the same day, Gold said he received unclassified blueprints from Brothman approximately every 3 weeks for a 6-month month period, and gave them to Golos.

Both Gold and Brothman appeared before a New York Federal grand jury in July 1947. The jury returned a "no bill." In 1950, Gold admitted that both he and Brothman lied when interviewed in 1947 by the FBI. It was determined that Gold didn't know Golos at all. His real superior in the conspiracy was Semen Semenov, a Russian diplomat assigned to New York.

Since Gold was a civilian, his actions were the responsibility of the FBI. However, a grand jury failed to indict him or Brothman. And their stories could not be verified since Golos died in 1943.

Gold was prosecuted when, after an extensive investigation, he was identified as the courier of Klaus Fuchs. Brothman was convicted for obstructing justice, after Gold told the truth.

Charge: FBI files are supposedly inviolate but files have been leaked to the late Senator Joseph R. McCarthy, Roy Cohn, the late Senator Pat McCarran, and so forth.

The facts: As Senate Judiciary Committee chairman, Senator McCarran was authorized to receive specified types of information gathered by the FBI. Investigations of committee staff members are conducted by the FBI on the Attorney General's orders. This information is made available to the chairman.

Investigative reports of prospective Federal judges, U.S. attorneys, etc., are also made available in digest form to the committee by the Department of Justice. The FBI has never permitted any member of the committee to have access to raw files, nor have any FBI files been leaked to the committee.

With respect to Roy Cohn, he was an assistant U.S. attorney in New York and a confidential assistant, from 1947 to 1952, when he became a special assistant to the U.S. Attorney General. As a Department of Justice attorney, Roy Cohn had access to reports and other data supplied to the Justice Department by the FBI.

On May 28, 1954, Cohn testified under oath during the Army-McCarthy Senate hearings that, aside from the period of his employment in the Justice Department, he has not had access to FBI reports. Cohn's testimony:

"Since I have come with this committee (as chief counsel), I have not had access to FBI files, and I have never seen an FBI file. And I would like to make that very clear under oath to end any statement by anybody that I, while with this committee * * * have seen FBI files or have had them. That is not true."

Charge: On May 4, 1954, Senator McCarthy produced an FBI confidential document at an open Senate hearing.

The facts: Senator McCarthy, committee chairman, had a document slightly more than 2 pages in length which purported to be a copy of a January 26, 1951, letter from J. Edgar Hoover to Maj. Gen. A. R. Bolling (of G–2).

Actually, the document was not a copy of the Hoover letter and merely contained information taken from the much longer communication to General Bolling. Referring to this document on May 5, 1954, Senator McCarthy stated:

"Mr. JACKSON just made a completely false statement."

(Senator McCarthy referred to Senator HENRY M. JACKSON, Democrat of Washington, who subsequently voted to censure the Wisconsin Senator.)

"He said that I represented yesterday [May 4] that this [document] came from Mr. Hoover. I made it very clear that I have never received anything from J. Edgar Hoover * * * that this was not received from Mr. Hoover."

## Thomas G. Masaryk: Democracy's Advocate

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. FLOOD. Mr. Speaker, on Saturday, March 7, we honored Thomas G. Masaryk, the founder of the Czechoslovak Republic, and its first President. It was 109 years ago that this great Democrat and friend of the United States was born. Yet today the people Thomas Masaryk inspired just over four decades ago are banned from joining us in paying tribute to this great man.

The reason for this is quite simple. Those who rule Czechoslovakia today represent the negation of everything Thomas G. Masaryk stood for. He stood for truth; they stand for falsehood. He stood for liberty; they stand for oppression. He stood for a religious, moral way of life; they stand for atheistic materialism. Masaryk was a man of principles. The dignity of the individual, protection of minority rights, and sincerity in politics were among his basic convictions. The acceptance of even one of these beliefs would undermine the foundation upon which the Soviet empire, under whose domination Czechoslovakia has been chained, is based.

Thomas Masaryk was a friend of America. In America, he saw much to be copied in the field of technology. More important, however, he saw deeper into the workings of the American civilization than just technological innovations. Thomas Masaryk realized that at the heart of America lie the seeds of democracy that bud into the flowers of independence, justice, and freedom.

In America—He said—

We can and should learn * * * love of freedom and individual independence.

On this 109th anniversary of the birth of Thomas G. Masaryk it is, therefore, fitting that all America should join with the friends of this great Czechoslovak patriot in commemorating this historic occasion. Let us rededicate ourselves to those higher democratic ideals which are exemplified so much by the spirit of Thomas G. Masaryk.

## The Great Proposal: Studies and Recommendations Concerning Strategy in the Cold War

EXTENSION OF REMARKS
OF
### HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
*Monday, March 9, 1959*

Mr. JAVITS. Mr. President, Dr. Paul Shipman Andrews, the distinguished scholar and Dean Emeritus of the Syracuse University School of Law, Syracuse, N.Y., has developed certain important studies and recommendations in the area of strategy in the cold war. Dr. Andrews' proposal is thought provoking and has elicited widespread attention throughout the world. I append hereto an outline of Dr. Andrews' thesis which merits full consideration.

There being no objection, the proposal was ordered to be printed in the RECORD, as follows:

THE GREAT PROPOSAL—OUTLINE OF POSITION

On the Kremlin's plan, the fifth cold war, and the great proposal:

The Kremlin does not plan a third world war, at least until convinced it can neutralize Western power of retaliatory destruction to what Russia could accept. It is doubtless also aware of the risk that a great war might be touched off by accident, miscalculation or misjudgment even of a subordinate, a risk which would be far greater as more and more countries, some of them perhaps irresponsible to dictatorships, get nuclear weapons.

As informed men agree, Russia genuinely fears Western attack from the ring of Western bases surrounding Russia.

Informed men of many countries, however, even neutrals, more and more believe that Russia's military buildup and their policies toward other nations, are not purely defensive but suggest a vast ambition to expand her influence and domination. China's rapid population growth, industrialization, and military buildup, moreover, spell a threat to the Kremlin's leadership of the Communist world and to Russia's sparsely settled adjacent Siberian lands. Russia is under heavy pressure here to strengthen itself by controlling the manpower and resources of more and more countries, and by denying China's own ambition to expand, particularly in Southeast Asia. Witness the Kremlin's refusal of nuclear weapons to China, and its radical cutback of aid for China's industrialization program. The Kremlin wants a China dependent on it for heavy weapons and for the development of heavy industry for as long a time as possible, at least until the Kremlin's expansion program has made it, if possible, invulnerable as against the powerful, industrialized China of the not too distant future.

What seems rather clearly, then, to be the Russian master plan could be called the fifth cold war.

The first cold war is the arms race for mutual retaliatory power of destruction; the second involves using and limiting or preventing and containing the small wars which might erupt into the great one; the third is the contest to educate more and more scientists, engineers, technicians, to make more and more murderous weapons, to produce achievements of propaganda and military value, to export into underdeveloped countries for use there, in addition to financial and economic assistance, for infiltration, etc.; under the fourth cold war may be included basic science and research, exploration of outer space, and the like. The Kremlin seems to concentrate on those weapons, industries, policies, and expansionist devices which will strengthen it most, both in military power and in expansion, as against the United States, and later on China and any neutrals which might choose to resist. To these programs it devotes a far higher percentage of its national income than does the United States, and it pays for them by depriving its people, willing or not, tough, industrious, and disciplined, of that early and great rise in living standards which the fast-growing Russian economy could otherwise provide. This is a ruthless dictatorship, already the most powerful in history, coldly determined to dominate.

But the fifth cold war seems to be the master plan. It is quite different from the first four.

The fifth cold war consists of the following elements:

A great buildup of Russia's power of shattering retaliation, to deter the Western allies and the United States from military action on any provocation short of direct attack which the Kremlin does not plan. Her power is great today. It is growing. It can or soon can reach all cities of our European allies, European, north African, and certain other bases, naval and commercial port facilities with short range Russian bombers and missiles; all or most American cities and installations with long range bombers with nuclear bombs on a no-return, sacrifice mission (if out of the thousands such a low 10 percent got through the American economic system, its communications, air bases and the like, we would be in flaming chaos, its naval and commercial port facilities destroyed, and perhaps some tens of millions of people incinerated); also, missile-launching submarines now or probably soon available, and hardly detectable at sea could reach all ports, naval and submarine bases and cities within some 1,500 miles inland.

With an adequate stockpile of intercontinental ballistic missiles—a House committee predicted this within 18 months—the Russian power of retaliation (to deter the United States and its allies from attacking Russia) would be rather terribly increased.

The question here is not American and Allied power to inflict damage on Russia in retaliation for any attack by it; the point here is Russia's power to deter military action against it which might interfere with its entirely nonmilitary plan for the fifth cold war.

Overwhelming Russian land armies could move after its bombers and missiles had done their work, and the Kremlin would hope to stop troop reenforcements and supplies from America by using its 450 to 600 submarines (Hitler had 57 in 1939, and with their help nearly won the war).

If Russian intelligence, wrongly or not, positively reported an impending Allied attack, Russia would doubtless strike first.

Even if we struck first, there seems to be no claim of any capability effectively and sufficiently to neutralize the Kremlin's power to spread devastation and death in Europe and the United States.

Let it be reemphasized that Allied power of retaliation is so unimportant to this fifth cold war as to be largely irrelevant; the Kremlin does not plan to start a war; simply to possess such terrible retaliatory capabilities as would prevent the United States and its allies from starting a war against Russia to interfere with the Kremlin's plan.

The Kremlin will continue to soften up key countries and others by blandishments, assurances, promises, infiltration, subversion, capitalizing on or fomenting disorders, offers of assistance, veiled threats—the carrot and the stick.

Russia has certain advantages in this battle for men's minds, of which she is taking advantage. Every newspaper reader should know that she can and does make certain appeals not open to the western nations, and is to some extent free from certain obstacles and prejudices which they face.

Russia is using local Communist parties and will continue to do so, for infiltration and subversion, and for fostering and capitalizing on local disorders.

The Kremlin's plan, rather clearly, is to capture the strategically critical Middle East and gain full control of the area and its oil—oil without which Europe slowly dies. What the Kremlin has done to this end and is trying to do should be familiar to all. But if it can find or manufacture a plausible excuse of protecting Middle East countries against Western aggression, doubtless it will pour volunteers (trained and equipped armies) into the area. This, it would almost certainly do if the Western Allies went to war in the area to restore Europe's oil sources. It should follow that the Kremlin would try to throw out a too-independent Nasser.

Moreover, there are time pressures. Surely the Kremlin wants to achieve all this if possible at the moment of its maximum lead in destructive power, for world blackmail would then be easier. Since, however, what alone counts in this plan is Russia's capability to deter, this time limit may not be decisive.

But the Kremlin must achieve this before Europe's energy requirements can be supplied by substitute means such as atomic energy reactors, and preferably before substitute oil supplies and tankers to carry them to Europe are available; also, long enough before China attains economic, industrial and military independence of Russia so that China could not risk interfering.

If seaborne oil promised to meet Europe's requirements enough to take off the pressure Khrushchev's submarines very probably would sink them beginning with those under other than the American flag, on the gamble that neither Europe nor the United States, whatever efforts they made to escort and protect the tankers, would face destruction by going to war for Europe's oil. And again, if war seemed imminent, Russia would try to strike first.

The Western attack on the Middle East might almost equally serve the Kremlin's purposes. For it tends to push all the uncommitted nations of the world into the hands of Russia.

The Kremlin's final objective, whether to be attained by blackmailing Europe as above and then by cajoling, luring, and threatening the uncommitted nations or by drawing the Western Allies into attacking the Middle East, with its probable consequences as suggested and in addition with the probable destruction there of pipe lines, oil wells, refineries, and port facilities, would be to swing Europe under Russian influence, to force out American troops, air bases, port facilities and the like, to break up NATO and to bring European nations economically into the Russian orbit, squeezing out the United States; to subjugate and control the uncommitted nations, at first key ones, and then others, with their unlimited potential of military manpower and their great resources; to confront China with a power she could not challenge; to confront the United States and anything left of NATO both with this manpower and the power to cut off foreign trade and to cut off the imports both of strategic materials necessary for war and of essential industrial raw material.

If this analysis is at all correct—and unhappily it has been accepted by wise and informed men from many countries both in and out of high public office—the Kremlin plans nothing less than to win the world by means less costly than allout war by peaceable strangulation.

It must not be forgotten that biology and chemistry can furnish additional means of retaliation. Dr. Brock Chisholm, lately head of the World Health Organization of the U.N. recently confirmed to the writer that he had earlier printed: that some 7 ounces of a preparation of botulinum toxin, if it could be finely and widely enough distributed could destroy the population of the world. And there are other biologicals, according to the scientific adviser at an Army Germ Warfare Research Center against which there is no method of immunization.

Obviously there is no answer to the fifth cold war in our thousands of millions of dollars for weapons of destructive retaliation, for means to prevent or contain small wars, for education, for research and exploration of space. Our billions are unavoidably necessary for the first four cold wars; in the fifth they are largely irrelevant, except perhaps to handle small wars which might be part of the Kremlin's plan.

An answer to the fifth cold war should meet among others, the following specifications: (a) It must recognize that open, naked aggression would not suit the Kremlin since it would antagonize the uncommitted world; (b) It should deny the Kremlin, if possible, any pretext for using volunteers; (c) It should lend itself to a world publicity campaign informing all nations and particularly the Middle East of the dangers of going with Russia, of becoming a battleground, and of the threat to all nations including the neutrals of the fifth cold war; (d) It should make clear the hostility to China concealed in the fifth cold war; (e) Through worldwide sustained education and publicity, it must hold out to all nations alike the hope of very great benefits—of things men burningly desire everywhere for themselves and their children, and seek to demonstrate to mankind that these benefits would be denied if the fifth cold war succeeded; (f) It must appeal to self-interest and to men's deepest desires and, being right and good, to the great religions; (g) It must be an idea to be for—not against, and simple to understand; (h) It must seek no special advantage for any nation; (i) In resolving the fifth cold war it must resolve the other four as well. It must be a great and heartwarming proposal, capable of capturing the imagination of mankind.

Peace, freedom, and our lives stand at the mercy of miscalculation, misjudgment even by one of thousands of subordinates on either side, of sheer accident, or the recklessness or fanaticism of some small dictator, and of the fifth cold war as well. An answer must be found before it is too late. The world needs, and waits for a proposal great enough to meet the problem, to offer hope to mankind, and to rouse millions of angry men and women everywhere with no uncertain voice crying to the world's governments, leaders, and statesmen, their wrathful insistence that their hopes for themselves and their children no longer be denied.

Such a plan exists. It is the only plan which the writer knows which would create inducements, incentives and pressures, and strong ones, upon the great powers and other nations, Western, Communist or neutral.

The plan, known to a considerable number of eminent and informed men from five continents as the great proposal has two objectives and a method: (a) World law covering war-prevention, with gradual, simultaneous and ultimately complete disarmament down to forces for internal order, under a United Nations invested with the additional powers needed effectively to prevent war and to provide all nations better security against war and aggression than the little any nation now possesses through the precarious balance of terror. That this could be both feasible and workable is, the writer believes, demonstrated by world peace through world law, the great book of Clark and Sohn (Harvard University Press 1958). (b) World mutual development fund, also a U.N. agency, financed by an adequate but still minor percentage of the savings from disarmament, for investment in necessary intrastructure and on fruitful projects in underdeveloped areas. (c) Equally important to create a demand and pressure for this package, would be intensive, sustained, world-wide educational publicity, tailored for each area, to make every family aware of the benefits it might obtain and the hopes it might realize from the twin, interdependent goals of disarmament under world law and the fund. Clark and Sohn set forth their plan for disarmament under world law, with an adequate fund for aid to underdeveloped areas. The great proposal recognizing these two goals are inseparably interdependent, would provide pressures tending to persuade the governments and leaders to achieve and accept them, through such charter revision as is envisaged by Clark and Sohn.

Certainly there are serious obstacles. But certainly also the persuaslve pressures would be strong. And it can be shown, the writer believes, that the disadvantage of rejecting the proposal in the face of such a strong demand as might be created by worldwide educational publicity, and the advantages of accepting it, would be very substantial.

---

## Address by Alexander Purdon, Executive Director, Committee of American Steamship Lines, Before Controllers Institute of America Southern Conference Meeting, New Orleans, La., March 6, 1959

---

EXTENSION OF REMARKS

OF

## HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

ADDRESS BY ALEXANDER PURDON, EXECUTIVE DIRECTOR, COMMITTEE OF AMERICAN STEAMSHIP LINES, BEFORE CONTROLLERS INSTITUTE OF AMERICA SOUTHERN CONFERENCE MEETING, NEW ORLEANS, LA., MARCH 6, 1959

It's a privilege to speak to you today. And it is fitting that in your crowded program you pause to consider the importance of the merchant marine. It is especially fitting for a group meeting here in New Orleans. The evidence of the contribution that ships make to this city is all around—in shipping offices, wharves, terminals, ship chandlers, banks, insurance firms, and all

the kindred business and industry, including yours, that prosper from the sea.

Beyond New Orleans itself the fabulous growth and development of the entire gulf region and the great Mississippi Valley have been fostered by the steamship services initiated and maintained by American-flag steamship operators.

You are especially trained to evaluate. Economics is not a theoretical abstraction to financial men. I hope in these remarks to give you some facts on which you can evaluate the contribution made by the American merchant marine to you, your companies, the gulf, and the Nation.

The maritime industry is a vast complex of ships and seamen, shipyards, and shipbuilders, wharves, and warehouses and many allied businesses. It involves all of the mechanics of doing business with which you are so familiar but with ramifications and complications peculiarly its own.

As businesses go it isn't so big but it does a big and important job. Last Sunday I appeared on a television panel with Admiral Weakly, chief of our antisubmarine forces. He quoted a Navy study which showed that during 1957 1,120,150 million short-ton miles of cargo moved in and out of the United States. Less than one-fifth of 1 percent moved by air. Of course, if we had used long tons the figures would have been lower, but hardly less impressive in measuring the dependence of the United States on shipping.

Not all of the ocean-borne portion of this moved in American ships. Foreign ships actually got the lion's share and American ships got the short end. That's been the pattern most of the time—not enough of our own commerce moves on our own ships—the percentage is declining—and is currently at the lowest level in 37 years. This situation calls for correction and I hope that when I conclude you will echo my sentiments in this regard.

Statistically we have the world's largest merchant fleet but the figures are loaded for they include the Reserve fleet of 2,074 World War II ships tied up in numerous bayous and backwaters.

The active, privately owned and operated U.S. merchant fleet now comprises 927 vessels. This divides into 253 ships in coastwise service, 51 ships in intercoastal trade, and 74 ships in noncontiguous service—for a total of 378 ships in domestic trade. The number of American-flag vessels in foreign trade includes 452 dry cargo ships, 33 passenger-cargo vessels, and 50 tankers, totaling 535 ships.

The 313 ships owned by 15 lines having operating contracts with the Government to service 31 trade routes are the hardcore of our dry cargo fleet. They sail about 1,800 voyages a year and carry about 70 percent of U.S. dry cargo exports and 83 percent of dry cargo imports moved by American liners.

As the backbone of the American merchant marine these vessels must be kept modern and efficient to serve our foreign trade. They will be—for during the next 10 to 15 years the older ships will be gradually replaced in a program estimated to cost about $4 billion. Allowing for Government participation through shipyard subsidies which reduce the total private investment to about $2 billion we still have a staggering capital expenditure for a group of companies with a combined net worth of about $650 million in 1957.

These are the dimensions of our merchant fleet, but why do we need it anyway—what does it cost—and what does it contribute?

Shipping is not only a vital cog in our economic machinery but shipping policy is a vital element in our foreign economic policy. Thus it should be evaluated by the part it plays in our daily lives and the contribtuion made to building the kind of life that the peoples of the free world want and need.

There are some things I want to tell you about its economic contributions but before doing so let me point out that economic strength and military strength are inseparable. We can't have one without the other. Allen Dulles said that, "The fateful battles of the cold war will in the foreseeable future be fought in the economic and subversive areas."

The sword and the plowshare are now synonymous. We need to build ourselves economically to support an adequate Military Establishment. In addition we need to project and share our economic strength so that the accomplishments of dynamic capitalism and the moral, spiritual, and economic benefits of democracy will act as a beacon of hope to millions who seek a better way of life.

It is impossible to do so without an American merchant marine adequate to our domestic needs and international responsibilities.

Without realizing it we have become a have-not Nation. We are no longer self-sufficient.

Imports make up the material muscle that regulates the heartbeat of the economy. We can and we do use foreign ships to bring essential imports to us but we can only count on American ships to do so, come fair weather or foul.

With less than 10 percent of the free world population and 8 percent of the land area we use over 50 percent of the world supply of many raw materials either not available or in insufficient supply in our country. Without these our giant industrial machine would grind to a halt.

On the other side of the coin are exports. Everyone knows that we export much of our production but few realize how much. Fewer still realize how important exports are not only to the national economy but to local communities and individuals far removed from the sea.

For example, we export over 32 percent of our civilian aircraft, 19 percent of our trucks, and 13 percent of our agricultural machinery.

We are now exporting about 9 percent of the total production of our farms, mines, and factories.

And roughly, 1 acre in every 6 raises agricultural products for export. This agricultural market is of particular importance to the South for during the past 10 years we have exported over one-half of our entire cotton crop and one-quarter of our tobacco and peanut oil and soybean crops—all mainstays of the southern agricultural economy.

Put facts like these together and it is not surprising to find that 4½ million people in our country depend on foreign trade for their livelihood and indirectly everyone is affected. This applies even to the housewife who little realizes that her tea and coffee and the tin coating on the cans in her pantry were brought here by ship.

Roughly every 9 minutes a ship loaded with foreign trade cargo enters or leaves a U.S. port. About one in four sails under the U.S. flag.

Their cargoes are the foundation for the employment of the 4½ million American workers who are employed in foreign trade—not to mention other millions whose jobs are affected by foreign trade.

Our merchant marine supplies essential transportation on the sealanes of the world but here at home it is also a customer of many of the same industries it serves—purchasing food, fuel, supplies and services that in one recent 10-year period aggregated a billion dollars for my group of lines alone. This does not include the construction value of the new ships on order or under construction under our ship replacement program which was estimated at year's end to be worth $239 million for our 14 companies.

Surely the workers across the land—in all States—who service, supply or build American ships are aware that in addition to the service rendered to the overall economy the American merchant marine makes a very specific economic contribution to them.

Although it remains essentially a private enterprise industry our merchant marine requires Government support for two basic reasons: First, foreign operators can build ships at one-half the American cost; and second, can operate them for as little as one-quarter of our costs.

In order to maintain an essential hard core of ocean transportation under our own flag the Government agrees to make operating differential payments to those steamship lines willing to undertake the onerous requirements of contractual service on our essential trade routes.

These operating differentials are actually a form of casualty insurance. Without them our high standard of living and high costs of doing business would drive our merchant marine off the seas. Their aim is to achieve parity on certain specified costs in which the American operator is at a substantial disadvantage. The wage differential alone accounts for 80 percent of the operating differential.

The operating differentials do not guarantee success—eliminate risks or guarantee a profit. In some measure they are merely compensation for increased costs resulting from requirements imposed by our national policy or inherent in our economic system.

America's crown—a high standard of living for all—is also a cross which, in a growingly competitive world market has required many industries to adopt new tactics to meet foreign competition.

Historically we have met this problem by increased productivity through mass production and our superb production technology. While responsible for much of America's economic success this solution, unfortunately, is not adaptable to all industries and in others is still not enough to retain a competitive advantage in oveasea markets. Industries in this latter category have increasingly been forced to open foreign production and distribution facilities employing low-cost local labor or to make licensing arrangements providing for foreign use of American patents, trademarks, and processes. These solutions are not available to that segment of our merchant marine which operates under contracts with the Federal Government. These lines must build their ships, purchase their goods, and hire their crews in the United States. In effect they are an all-American team—that must play on a foreign field—under foreign rules.

To put yourselves in our position you might imagine the results if an American-built factory, employing all American workers, buying all American services, was to operate in a foreign country and try to sell its products in that country in competition with a native-built plant employing local workers, paying local wages, and buying local services.

The ship operator gets no direct advantage from construction differential payments, but the Nation and our shipbuilding industry do. This aid is given directly to the shipyards so that the American operator—who is required to build in American yards—can buy his ships at approximately the price he would pay if he were free as his foreign competitors are to build in low-cost foreign yards.

Building one freighter is roughly equivalent to building a Roosevelt Hotel. It costs approximately $11 million. Perhaps an even better comparison with this hotel is in passenger ships. The cost of these presently runs from $25 million to upward of $130 million.

In addition to the 19 ships presently under construction the subsidized lines are required by contract to replace approximately 257 vessels between now and 1970.

As I mentioned earlier this is a $4-billion program—the largest peacetime shipbuilding effort in our history and obviously quite a financial obligation to undertake, although the operators' cost after construction subsidy is paid to the yards will be roughly one-half or about $2 billion. Contract steamship lines are required by law to maintain capital and special reserve funds.

At the present time these statutory reserves aggregate about $324 million which will, of course, be increased in future years through deposits or depreciation, earnings and proceeds on the disposition of the present fleet. However, after giving effect to these equity payments it appears that the subsidized lines will have to obtain capital in excess of $1 billion to be raised through outside financing.

The Government has adopted a policy of encouraging private financing in lieu of Government financing previously available. In part, this was a desire to get the Government out of the banking business. In part also it was to reduce the effect of this program on the Federal budget. Under legislation adopted a few years ago, the United States is authorized to insure 100 percent of the unpaid principal of and interest on ship construction loans and mortgages which meet specific Government requirements.

During 1958, contracts of insurance aggregating $58,449,500 and mortgage loans aggregating $133,328,465 were made by the Maritime Administration. Since this became available, over $235 million of privately placed loans and mortgages have been so insured.

One line has very successfully financed through mortgage bonds secured by the Government mortgage insurance. These merchant marine bonds are not only a promising source of financing but their marketing has aroused new interest and understanding in maritime problems.

Naturally, the financial community has taken a hard look at our industry and a number of underwriting firms have published special studies. One of them makes this interesting observation: "Relationships and conversations with shipping executives would convince almost all observers that the companies and the people who run them are as efficient and aggressive as those in any other industry—even the automobile industry for example."

With rising competition and costs and faced with this gigantic replacement program American steamship lines need the assurance of reasonable stability in their rate structures. As you doubtless know international ocean freight rates are established by conferences. Maintenance of a strong steamship conference system is of vital importance not only to the shipping industry but to all American businesses engaged in foreign trade.

Stability of ocean shipping rates and equity of treatment between shippers are increasingly essential to American companies in meeting the mounting competition for foreign trade markets.

Steamship rate conferences are the only practicable means by which the ocean carrier can assure the shipper of regular service at stable nondiscriminatory rates in all world markets. They are the voluntary counterpart in international commerce of governmental rate regulation in domestic transportation of such industries as trucking, railroads, airlines, and the like.

Obviously, international ocean freight rates cannot be determined or established by any single nation. But steamship conferences must be strengthened by permitting them to make contract arrangements with shippers if they are to be effective in assuring the stability which only a strong conference system can provide. The alternative to the self-regulation of the conference system would be chaos in international ocean freight rates.

As you may know Congress is currently reviewing the conference system. The steamship industry has welcomed this study and is cooperating with it in every way.

Personally I am confident that the congressional studies will demonstrate that the alternative to a strong conference system would be ruinous rate wars which would be disastrous to shipping companies and shippers alike.

We have a strong merchant marine today. With increasing public understanding of the contributions it makes to our economy and defense, it can and will grow in service to the Nation.

Ships have supported and shielded Western civilization from time immemorial. But their task is not yet done. As the chairman of the Joint Chiefs of Staff—and a distinguished aviator—Gen. Nathan F. Twining recently said.

"In case of surprise and devastating nuclear attack that might knock out land transportation, the merchant marine's availability to ply the great highway of the seas with strategic materials and foodstuffs might well be the one source of free world strength to pluck victory from chaos."

We cannot place all our bets on one weapon—one type of war philosophy. The Soviet bloc has in clear terms declared a new form of warfare whose goals are the hearts, souls and stomachs of mankind.

Our American merchant marine is not a touchstone of victory but it is a cheap form of insurance—insurance that provides economic dividends plus protection from military catastrophe.

The Soviet Union is now employing economic blandishments on an increasing scale. They employ foreign trade as an economic weapon combining subversion with money and weapons. They capitalize on poverty and political instability in the underdeveloped nations. We cannot be indifferent or complacent to their economic offensive.

We know that in war our merchant marine is a vital element of national security—a fourth arm of defense but in this new type of war in which we are immediately engaged it acquires a new stature—a new importance. It becomes in a sense the shafting by which we can transmit and project to the free peoples the social, economic and moral advantages of dynamic capitalism.

Two-thirds of the free world's people live in areas that, as a whole, have a per capita production only one-twentieth as large as the United States.

This is the new battleground in the struggle for the minds and hearts of men. Our American merchant marine is a vital element in an economic offensive which we have the capacity and the will to win.

## Statement by Preston J. Moore, National Commander, the American Legion, Before the House Veterans' Affairs Committee

EXTENSION OF REMARKS

OF

### HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. ALBERT. Mr. Speaker, on Tuesday, March 3, 1959, the honorable Preston J. Moore of Stillwater, Okla., national commander of the American Legion, appeared before the House Veterans' Affairs Committee. It was my privilege and honor to present him to that distinguished group.

Through the years, the American Legion has always sent dynamic and able national commanders to appear before that committee. But never in its 40-year history has this great veterans' organization of nearly 3 million members had a more capable or a more personable leader than Mr. Moore. As a decorated World War II Army and Air Force veteran of combat campaigns in the southwest Pacific, he understands the problems and needs of our Nation's disabled veterans. He saw military service both as an enlisted man and an officer. In American Legion matters, he has time and again demonstrated his capacity for leadership. He has been commander of two American Legion posts, was the first World War II commander of the Oklahoma department and prior to his election as national commander was one of the most able and respected members of the national executive committee. He also is a successful business and professional man. He is a senior partner in the law firm of Moore & Murphy in Stillwater, Okla., and vice president and general counsel of the American Life Insurance Co. He is a man of good judgment, common sense and loyalty to his country.

Mr. Moore is to be congratulated for his excellent statement to the Committee on Veterans' Affairs:

Mr. Chairman and members of the committee, in my experience as national commander of the American Legion, I believe this occasion ranks at the top in importance. There is no other service in which our organization is engaged which affects the lives of so many war veterans and their dependents than that which comes within the jurisdiction of this committee.

As a result of the election you have some new members on your committee. I am sure they will join with you in maintaining the high degree of nonpartisanship which has ever been identified with your work. We congratulate you new Members on your election to a position of high honor in the House of Representatives. We hope you will maintain your interest in veterans affairs.

And to those of you who have been engaged in the activities of this committee for a longer period of time, we express our pleasure in the knowledge that the voters have put their stamp of approval on your activities in Congress.

This week our organization is conducting the 36th annual National Rehabilitation Conference here in Washington. The schedule for our meeting has been arranged so that many of our conferees may join with me and the members of our staff who are present, in expressing our interest in veterans' affairs. It is our hope that our conferees will find it possible to visit with Members of Congress in both Houses during this week. It will be obvious to you that they have many things to discuss.

OUR LEGISLATIVE PROPOSALS

The American Legion legislative program is not new to your committee. Miles D. Kennedy, our national legislative director, has already furnished you with a copy of our National Legislative Bulletin No. 18 which contains a list of all resolutions adopted at the 1958 national convention and at the October 1958 meeting of our national executive committee, calling for legislative

action during the current session of Congress. In addition, Mr. Kennedy has complied with that provision of our congressional charter which calls upon us to submit an annual report to the Congress.

Incidentally, in addition to Mr. Kennedy I have with me other members of our national staff to answer questions on any technical matters which may arise.

THE HIGHLIGHTS

Our 1958 national convention adopted 22 resolutions calling for legislation in the field of veterans' affairs. Our national executive committee at its fall 1958 meeting adopted 10 additional resolutions requiring new legislation. There is one other resolution on which your committee has already taken favorable action. That is in the field of the home loan guarantee program. I should like to take this opportunity to express the thanks of our organization for the speedy manner in which this action was accomplished. The CONGRESSIONAL RECORD for February 4, 1959, shows that in the floor handling of H.R. 2256 your chairman performed a magnificent job. We are hopeful that, because of the great interest of the individual members of your committee, you will do all that is proper to secure final congressional approval on this matter.

Many deal with legislation which asks for correction of technical details in existing law. Some of these resolutions call for action to give specific names to certain selected Veterans' Administration hospitals. In future sessions, our staff will be conferring with your committee when you have these bills before you for consideration. Each of the technical changes requested vitally affects the operation of existing law. Our recommendations in regard to such bills are based upon the experience of our practicing service officers, as such experience has been reported to our national convention rehabilitation committee.

For the purpose of this appearance before your committee I think you would be interested in the proposals which we think are being discussed more prominently.

DISABILITY PENSIONS; DEATH PENSIONS

There has been no increase in the monthly awards for disability pensions since 1954. The situation with regard to pensions awardsd widows and orphans is similar.

All of you will recognize the fact that there have been substantial increases in income for many large segments of the population since 1954. The cost of living index has continued its upward curve since that year.

Our request is that the rates be increased from $66.15, $78.75 and $135.45 to $75, $90 and $150 for those entitled to disability pension awards. The monthly increases in these rates amount to $8.85, $11.25 and $14.55. If you reduce those amounts to weekly increases and then do a mental arithmetic problems in seeing for yourself how much the increases would buy in the supermarket, then you will, we think, agree there is nothing drastic about our requests.

For the widows of war veterans, and for their dependent children, we ask a similarly modest increase.

INCREASE IN INCOME LIMITATION

Eligibility for disability pensions is established through length of service, type of discharge, degree of disability, and lack of employability. In the case of World War I veterans, death pension for widows and orphans are granted on the basis of the veterans' service and the financial need of the claimants. For widows and orphans of veterans of World War II and the Korean conflict, there is an added test of eligibility, i.e., that the veteran must have had a service connected disability.

Since 1952 the income limitation for war veterans and widows has been $1,400 for those without dependents, and $2,700 for those with dependents. The American Legion proposals request that these income limits be increased to $1,800 for those without dependents, and $3,000 for those with dependents. This would recognize the situation created by periodic increases in social security payments.

Some background history may be pertinent to this question. For modern wars, disability pensions were inaugurated by Mr. Herbert Hoover when he was President of the United States. There was no veterans organization requesting such legislation. The proposal was one wholly and completely attributable to the thinking of former President Hoover and those he consulted. This ability allowance legislation, as pension was then termed, became law in July 1930.

And what were the income limitations laid down for the disabled war veterans to be eligible for this benefit? The criterion was exemption from payment of a Federal income tax for the year preceding the application for the pension. Therefore, the limitations were $1,500 for those without dependents, $3,500 for those with a wife, and $400 additional for each child.

At the time, the early 1930's, $1,500 for those with no dependents would buy a fairly comfortable standard of living. With the addition of the pension the disabled war veteran could live comfortably.

And a married disabled war veteran with a wife and two children could get along very well on the $4,300 income limitation plus the pension.

The income limitations initially invoked maintained the concept that pensions and particularly disability pensions, were provided for those having a record of war service. The institution of the disability pension was considered a dignified means of aiding the war veteran to a point avowedly a good degree above the status of the person who found it necessary to seek private or public charity.

That this was no accidental development in the Hoover plan for a disability pension for war veterans is attested to in the message that the then President Hoover delivered to the Congress in December 1932, more than 2 years after the passage of the disability allowance law. In his message Mr. Hoover said:

"The Nation should not ask for a reduction in allowances to men and dependents whose disabilities rise out of war service nor to those veterans with substantial service who have become totally disabled from non-service-connected causes and who are at the same time without other means of support.

"These latter veterans are a charge on the community at some point, and I feely that in view of thefr service to the Nation as a whole, the responsibility should fall upon the Federal Government."

It takes two 1958 dollars to purchase what one 1940 dollar would have bought in the year 1940. And the 1940 dollar wouldn't buy nearly as much as the 1930 dollar. So the modest effort of our organization to secure an increase in the income limitation is to keep pace to a small degree with the increase in the cost of living and in the devaluation of the dollar.

PRESUMPTION OF UNEMPLOYABILITY AT AGE 65

Under the present law the Veterans' Administration must determine that the veteran's unemployability is due to disability. Even though only a 10 percent disability is required at age 65, the VA must find that it is that disability which prevents the veteran from following a substantial gainful occupation. This means that the present law does not provide pensions for veterans who actually have little income and little hope of ever earning more if it happens to be their age rather than some disability that denies them employment.

Age 65 is the customary age at which American employers will terminate the jobs of even their able-bodied personnel. So the American Legion again is asking the Congress to eliminate the disability requirement as a pension eligibility for veterans 65 or over. Actually, attainment of age 65 does constitute an economic disability.

PARITY FOR WIDOWS AND CHILDREN

At the present time death pensions are granted the widows and dependent children of veterans of World War I on one standard of eligibility requirements. The widows and dependent children of veterans of World War II and the Korean conflict are granted death pensions on a different, more restrictive, set of eligibility requirements.

It is obvious that the widows and children of veterans of all three of our modern wars are similarly affected by the lack of an income to maintain them in the absence of the husband and father.

For more than 10 years we have been coming to the Congress and have asked that the widows and children of veterans of the three modern wars in which our country has engaged be placed upon the same standard of eligibility. Thus far we have been unsuccessful in this endeavor. We hope you are agreed that now is the time to act upon this simple request for justice and equity in dealing with the problems of women and children.

THE RIGHT TO CONTRACT FOR INSURANCE

Our 1958 national convention adopted a resolution which directs us to continue to seek legislation providing limited opportunity to secure participating national service life insurance for veterans of World War II, and nonparticipating national service life insurance for veterans of the Korean conflict. Such limited authority to purchase contracts of these types of insurance would exist for 1 year following date of approval of the legislation. The contracts would be issued only if the veteran were insurable or, as to Korean veterans, if he had a Veterans Administration rating for a service-incurred disability.

There are more than 10 million who would have the opportunity to secure Government insurance under such a proposal. The modest administrative cost would be borne by the policyholders if the bill the American Legion supports is approved.

It is believed that simple justice would be served in reopening the right to secure these types of Government insurance for a limited period. It is obvious that, at the time the right was taken from the war veteran, there were many veterans who, for one reason or another, had delayed making application to continue such insurance in force.

COST OF VETERANS AFFAIRS

The American Legion believes that every responsible individual should be deeply concerned with the cost of operating the Federal Government. The responsibility and the duty to consider such costs include the necessity of relating such costs to other factors.

Our organization starts with the prémise that the cost of war is always extravagant in terms of the dollars spent. In terms of the maintenance of our principles of government, the dollars expended are justified.

In this vein of thinking we believe it is correct to consider the dollar cost of veterans affairs a part of the cost of war. Though this is delayed cost, it appears to us that just as night follows day so will there always be a program of veterans affairs following any war in which our Nation engages.

From that point it is our belief that the cost of veterans affairs should be not considered solely in terms of the dollar expended. There should be relation to the income of the Nation, to the number of those who either volunteered or were called to service in time of war, and to such factors as the cost of living and the value of the dollar.

Since 1890, using the gross national product as the standard of comparison, the cost of veterans benefit programs has been the most consistently stable of any assistance program in the government. According to the Social Security Bulletin for October 1957, the cost of veterans benefit programs has hovered around 1 percent of the gross national product for most of the years since 1890. This statistics has been in this relationship despite the fact that our 3 modern wars have increased the war veteran population from about 2 percent to about 12 percent of the general population in the intervening years.

Members of your committee probably have noted that the Director of the Budget Bureau, in a message to the Joint Committee on Economics, dated January 29, stated that "with 2 exceptions, payments for every function of Government will be higher in 1960 than in 1948. These exceptions are international affairs and veterans benefits, for which special post-World War II conditions led to higher expenditures in 1948."

PROJECTIONS OF FUTURE COSTS

Obviously it is a good thing for those in control of any Government program to be fully informed of the cost of operations. To the extent that such studies indicate trends and provide guidelines for the future they have an important place in administration.

Too often it has been our experience that those who use the statistical projections of future costs as estimates are conducting futile arithmetic exercises.

Such projections are filled with assumptions. But those who want to defeat a project which is presently being considered disregard the assumptions and convey to the public estimates which, if the assumptions were removed from them, would fall of their own weight.

Since World War II, for example, those who are opposed to veterans benefit programs speak of the veteran population being one-half that of the Nation when their families are included. Such statements do not define what is meant by the veteran population, take no account of the fact that the war veteran population is declining, nor relate the statistics to the growth of the general population, now or in the future.

Further, there is a fallacy in using the total population of war veterans plus their families. To begin with, those veterans who benefit from Federal programs are only a small percentage of the war veteran population (for example, the number of war veterans hospitalized in Veterans' Administration hospitals in a calendar year is currently about 2.2 percent of the war veteran population, and only 0.0028 percent of the general population). In addition to that fact, one must remember that generally the wives of veterans will not draw benefits until the veterans are deceased, and that the same circumstance obtains for children, with the added limitation that children's benefits terminate, with rare exceptions, at age 18 or 21. Further, wives and children are never eligible to certain benefits, such as hospitalization. Thus, to suggest that at any given time one-half the general population may be entitled to Federal veteran benefits is grossly misleading.

So far as our organization knows, no projection embracing distance future years has proved out. For example, in 1943 the Administrator of Veterans' Affairs said 300,000 hospital and domiciliary beds would be required for war veterans. That estimate obviously did not include the need for hospital facilities arising out of the Korean conflict. In 1952 another Administrator said 255,000 beds would be required in 1975. In 1958 a third Administrator said 155,000 beds would be required in 1975.

Examples of other projections in different fields are readily available. Spanish-American War veterans are now about 82 years old. Yet approximately 5 percent of those living apparently have not sought the pensions which are available to them.

The Veterans' Administration never has been able to distribute all of the dividends accruing to those who carried national service life insurance in World War II.

The National Economy League said, in the early 1930's, that it would bankrupt the Nation to prepay the adjusted service certificates. It didn't. Further, not only is there a record that all of those eligible did not apply for such certificates, but the VA still has a couple of million dollars on hand which are held as a reserve for those who have not sought payment on the certificates issued.

Such fallacies in projections of future estimates lead us to the conclusion that the real purpose served in making such projections may well be to defeat the legislation which otherwise might be considered to have compelling virtues in the present.

THE PRESIDENT'S MESSAGE ON THE BUDGET

In general terms it may be said that the President's message of January 19, 1959, in the field of veterans benefits is slightly more liberal than messages in similar documents in the years 1950–58, inclusive.

Individual Members of Congress have indicated they did not approve the recommendations of the President's Commission on Pensions. It appears from the paragraph in the President's message relating to pension legislation that the administration still clings to a goal laid down by the report of the Commission submitted in 1956. The effort to shift, where possible, the cost of veterans pensions to the field of social legislation is still there. Then it no longer would remain a war veterans pension program. It is to be hoped the President is not being less considerate than was Mr. Hoover in 1930.

HOSPITALIZATION OF DISABLED WAR VETERANS

In the summer of 1958 your committee devoted a great deal of time and effort to the matter of getting information about the operation of the Veterans' Administration Department of Medicine and Surgery.

After the close of your hearings your committee approved H.R. 10028, a bill having as one of its purposes a congressional statement of intent to maintain a VA hospital system with a minimum of 125,000 operating beds.

In January, VA's Department of Medicine and Surgery supplied information showing the number of hospitals and beds in relation to the war veteran population for the fiscal years 1940 through 1958.

The table started with a veteran population of 4,286,000 in 1940 when there were 13.7 VA operating beds for each 1,000 veterans. This included 1.2 tuberculosis beds, 8.1 neuropsychiatric beds, and 4.4 general medicine and surgery beds.

As of June 30, 1958, when the war veteran population was estimated at 22,727,000, the ratio of operating beds for each 1,000 war veterans had dwindled to 5.3. This included 0.5 tuberculosis bed, 2.8 neuropsychiatric beds, and 2 general medicine and surgery beds.

Parenthetically, it may be said that in the general population, in 1957, in continental United States, there were approximately 9 beds for each 1,000 of population.

Again, the information showed that VA had, June 30, 1958, a rated bed capacity of 127,832; 121,201 operating beds; and an average daily patient load of 111,599.

The peak of the rated capacity for VA had been reached in 1956 when the system had a rated capacity of 129,704 beds in 173 hospitals.

Now, the administration has done more whittling on VA bed capacity. At the end of January the rated bed capacity was reduced to 123,667. This indicates a reduction of 4,170 in the rated bed capacity. The explanation is that that these were phantom beds.

From the base of 123,667 rated beds the administration then proceeds to add hospitals under construction, authorized, or approved for future dates at the following places (number of beds supplied):

| | |
|---|---|
| Palo Alto | 1,000 |
| Brecksville | 1,000 |
| Bay Pines | 350 |
| Miami | 350 |
| Jackson | 500 |
| Oakland | 500 |
| Cleveland | 800 |
| Washington | 500 |
| Nashville | 500 |
| Total | 5,500 |

Many of the beds in the hospitals listed in this group will be replacements for beds in existing hospitals. That would explain, in part, the possible confusion with regard to the manner in which the goal of 125,000 authorized beds is to be reached.

When and if these hospitals are constructed and placed in the VA system and added to the January 31 base of 123,667, that would provide a total of 129,167 beds. Apparently from that total another 4,167 beds would be administratively wiped out to produce the present goal of 125,000 rated capacity for the VA's hospitals, which presently number 168.

Reaching a goal of 125,000 rated capacity in beds under such an arbitrary system is a long way from the goal authorized by Congress under the 1948 appropriation bill, i.e., 152,000 beds.

It would appear that those who believe the program providing for Federal hospitalization of war veterans is a prime target for economy have been remarkably successful.

You will recall that VA supplied information regarding the waiting list for those applying for VA hospitalization, during the course of the hearings conducted during July and August 1958. At that time, VA reported that as of the end of May 1958 there were 26,807 war veterans certified as eligible for hospitalization, but not yet scheduled for admission. An additional number (not supplied in detail) had been scheduled for hospitalization but not yet admitted, and still a third group of applicants had not been certified as eligible to be put on the waiting list. The point of this is, that while there has been a steady decline, since 1948, in the number of existing and authorized beds, the VA reported that the number of applicants for general medical and mental hospitalization was on the increase. Only in the field of tuberculosis has there been a decline in the number applying for hospitalization.

We urge your committee to proceed to the support of a bill such as H.R. 10028 establishing a minimum goal of 125,000 operating beds in the VA system.

A LOOK AT THE RECORD

Let me be the first to give recognition to the fact that yours is a hard-working committee. Consistently it operates with a minimum of partisanship in its objectives and methods. Your long-term Members on the committee have devoted an extraordinary amount of time and effort to the field of veterans' affairs. Your committee deserves far more recognition and appreciation than it gets.

A review of the record for the decade 1948–58 establishes that it has been a period in which some beneficial legislation and adjustments have been accomplished. But liberalizations and necessary adjustments were effected in the face of strong opposition. In the field of pensions, the broadest liberalization was an administrative one and came at the start of that decade with the issuance of extension 5 to the rating schedule.

Our veterans programs suffered some losses during the last decade. War veterans lost their right to contract for new Government life insurance. In Public Law 881, 84th Congress, along with the higher awards went the partial marriage of veterans benefits with those administered by the Department of Health, Education, and Welfare. Under certain circumstances, the Veterans' Administration was for the first time not the agency obligated to pay death compensation to a child of a veteran whose death was service-incurred.

In the field of compensation, discriminatory rates have been established for the service disabled, in considering those with less than 50 percent ratings as compared with those above 50 percent.

The VA hospital system has been reduced from a congressionally authorized base of 152,000 rated or constructed beds, to 125,000 authorized. Your committee has given a great deal of attention to the maintenance of the VA physical plant. You have seen the need for a long-range program of modernization and repair. The Budget Bureau policy in such matters has not included recommendations to provide funds necessary to do the things your group approved. Further, the Budget Bureau has not recommended funds for the construction of new replacement hospitals authorized by Congress even prior to the start of the 1948–58 decade.

The Budget Bureau recommendations for appropriations have been cut so fine that hospital managers in the Western area publicly stated that without increased funds they cannot maintain the quality of medical care that once was the pride of the VA. The Chief Medical Director appeared before your committee and, as an illustration of the urgency of the fiscal situation, conceded that the quality and quantity of food were being decreased.

Since 1948 another war has been fought, one of the same magnitude in terms of men involved as World War I. To the veterans of that war a lesser standard of benefits was granted than had been provided for those who came out of World War I.

FORTIETH ANNIVERSARY OF THE AMERICAN LEGION

The American Legion is observing its 40th anniversary this month. In the field of veterans affairs it is possible that the four greatest achievements of The American Legion have been:

1. The work in establishing the Veterans' Bureau in 1921, and the Veterans' Administration in 1930.

2. The successful effort to overcome the wholly unjust and unfair havoc wrought by the Economy Act of March 20, 1933.

3. The move to modernize and update the practice of medicine resulting from Resolution 523 of the 1941 national convention, which led to the approval of Public 293, 79th Congress, establishing the present Department of Medicine and Surgery.

4. The work done in accomplishing the passage of Public 346, 78th Congress, the popularly termed GI bill of rights.

For the 10 years of the decade since 1948, the greatest controversy reaching the floor of our national conventions has revolved around the question of committing our organization to a program for general or service pensions. Each year it has taken hours of discussion among the delegates to resolve the debate. And this debate was preceded by lengthy consideration of the question in committee. Thus far the American Legion has voted for a conservative program, usually by an overwhelming majority.

Each year we have come to the Congress with that conservative program. Up to now our requests in the pension field have been denied. Along with the denial of our conservative requests there has been insistent demand from other areas for far more drastic liberalization of the pension program.

This year we believe there is a more receptive attitude toward the proposals for liberalizing the rates of disability and death pensions, toward equalizing the eligibility accorded widows and orphans of World War I, World War II and the Korean conflict. This is heartening. We think it is time that the war veteran, widow or child, who is reduced to the physical and economic status where he or she must seek the benefits of a disability or death pension to assist in meeting the problems of living, should receive more consideration.

During the past decade, because criticism of the war veteran program is inherent in the activities of agencies such as the Budget Bureau, the President's Commission on Veterans Pensions, the American Medical Association, and the two Hoover Commissions, a great deal of time has been occupied with the attention given to those who are questioned about their eligibility to a disability pension, or to entrance to a VA hospital for treatment.

Ladies and gentlemen of the committee, it seems to me that some manner of resolving all these details should be found. The American Legion recognizes that it is a bad plan which admits of no modification. At the same time we urge that amendments be based upon principle and not to appease critics who are philosophically and fundamentally opposed to our program and who use isolated examples and sore-thumb cases to give to their argument the color of sincerity. The American Legion is always anxious to cooperate with this committee in its endeavor to propose legislation aimed at the ultimate benefit of all veterans. Indeed, through forums such as our annual rehabilitation conference, through the experience of our service officers throughout the country, and through the studies performed by our national staff, we are constantly reexamining the great body of laws governing veterans benefits. We must oppose any proposal which would not be based upon sound principle, which would not maintain the dignity and respectable status of pension as a form of income, and which would not be in the best interests of the veterans and the Nation.

I thank you for the privilege of appearing before you today, and for the opportunity of presenting these remarks on the American Legion's legislative program.

---

## Hugh Alfred Butler

EXTENSION OF REMARKS
OF
## HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
*Monday, March 9, 1959*

Mr. CURTIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article on the life of the late Senator Hugh Alfred Butler, written by an eighth grade pupil, Gretchen Trimble, of McCook, Nebr.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HUGH ALFRED BUTLER

(By Gretchen Trimble of McCook, Nebr.)

Hugh Alfred Butler was born on a farm near Missouri Valley, Harrison County, Iowa, on February 28, 1878. When he was 6 years old, he was headed with his father, his mother, and his brother, Guy to Cambridge in a covered wagon to settle a homestead (about which he had visions of scalp hunting Indians).

Unable to find land tillable in the northwest they had to live in the southwest where there was no doctor in time of sickness or childbirth.

At the age of 12, Hugh began to earn his money. He once dared to drop in on Mr. William H. Faling, who was president at the bank.

He got a job from Mr. Faling, trimming his lawn, milking the cow, and feeding, cleaning, and hitching the handsomest horse he'd yet laid eyes on. Sometimes Mr. Faling would let him ride the white-nosed gray mare, and this favor firmly cemented the friendship between the boy and man. After 4 weeks of effort had passed Mr. Faling handed him eight of the highest polished silver dollars in his drawer.

One day Hugh carried on his coat lapel the blue ribbon Mr. Faling had given him for becoming a member of the Boys Try Company. The gold motto on it read: "Try to be good; Try to do good." He had not failed Mr. Faling.

Hugh's mother while reading a few pages of a book began complaining of being tired. Sometimes her tone faltered and her face was ashen. Hugh was gradually becoming aware that her lips were losing their color. Late on a November night, his mother died, at the age of 32.

While in Cambridge High School Hugh won a scholarship worth $100 to Doane College in Crete, Nebr.

When he arrived in Crete on the train he met Old Frank, who owned a horsedrawn hack. Old Frank took Hugh to the Reverend Dean's where he was going to work for his room and board.

Later he began selling nursery products for which he earned $200 during the first summer.

Tacked up at Merrill Hall, a part of Doane, was a bulletin: Doane was looking for someone who'd take 10 cents an hour for mowing lawns and sweeping rooms. Hugh took it.

In his second year at Doane, he placed second in the Dawes oratory contest.

Also attending Doane was a girl, Fay Johnson, whom he hoped was noticing him as much as he was noticing her. One day he got up enough courage to take her for a boat ride up the Blue River. That was the beginning of a beautiful friendship.

Hugh went out for sports. When track season began, he became a champion track star.

When football season came, he went out as a candidate. Football that year resulted in a letdown for him and disaster for Doane. Making second-string halfback, Hugh squirmed on the bench, wondering if Fay were in the stands at all. Then the tragic blow came that rocked the foundation of all Doane sports. One of the squadmen failed to rise off the field after a routine line play. Opposing benches emptied, rushing to midfield.

"Give him air," someone yelled.

He needed none, the boy was dead. Football had decreased. In a year or two it might be considered concluded the report in apparent attempt to satisfy the male student body. This death made a great impression on Hugh.

After graduation from Doane, in June 1900, Hugh boarded the train that would take him to Tecumseh, Nebr., where he was to take a summertime job with the Burlington Lines. He was planning to enter the University of Nebraska Law School, the next fall, and he felt certain that his plans for the coming months lacked no serious gaps. Miles

on, he realized that one gap was open to admit loneliness. He'd left Fay Johnson behind in Crete, with no real commitments or understanding with her. In their flight over the rails, the wheels were repeatedly singing, "Fay—Fay."

Hugh's role in the railroad project was reducing grades and making cutoffs to shorten lines between its service points. The pay was good—$35 monthly.

The job was OK except for one detail which made Hugh sad. If extended trips headed him still further away from Crete, his chances of seeing Fay would be fewer.

Soon he was to go along with a location party to Wyoming. With the location party he received a promotion to rear chainman, which helped him to minimize the job's threat to his social enterprise. The adventure of the party was beginning to be spelled in a different way for Hugh: Education. Also the word "Free."

One day when he was in the field with his supervisor, he was asked to take a reading on a surveying instrument. He surprised and pleased his boss by the accuracy of his reading.

"Right on the nose, Butler. Nice work," commented his boss.

When Hugh required something definite in his future, he had to decide whether it would be law school or continuation of Burlington. And Fay, where would she fit, in either case?

"Trying can do some impossible things," was the remark that always stuck in Butler's mind.

On February 5, 1903. Hugh and Fay were married and took a second-floor flat in St. Louis.

Soon after, he was made a division engineer at $125 a month. But it meant they would have to move from town to town. Hugh was willing if Fay was and she was willing.

In June 1908 after a long while in the railroad business, Hugh decided he would quit the railroad and take another kind of scenery—grain elevators. He invested $3,000 in the Curtis Mills at Curtis, Nebr. They (Hugh and Fay) lived across the street from the Congregational Church, where she headed the choir and he was superintendent of the Sunday School.

He was so interested in the community and its problems, he was encouraged to accept a city office, thus the start of his lifetime of public service.

During this time, however, Mrs. Butler told him of her approaching motherhood, and he was extremely happy.

Lawrence Hugh was born. A beautiful child, whom they both adored with the full passion of their rich natures. The father devoted himself with new zeal to both the mill and his new avocation. Election-eve further brightened the horizon for he was well aware that the word "Butler" was on the tip of everyone's tongue. But then the shadow which was to bear relentlessly on Hugh Butler's happiness, revealed its first grim outlines on the horizon of his life. A few weeks later, Fay and the baby became ill almost simultaneously. Distraught, Hugh refused to leave the house, waiting anxiously on his loved ones, prodding both himself and the doctor, seeking some word of hope. The doctor was glum. He could offer little for either patient. There was only an outside chance that as the fateful hour of crises came closer, one might survive.

The tiny coffin was buried.

The University of Nebraska was planning on locating an agricultural school at one of several locations—Holdrege, McCook, or Cambridge. Cambridge had the best chances, since they had $50,000 to put up. But Butler felt such a school would be good for Curtis, and prepared to fight for it.

The state decision was made on July 1, 1911. On the 33rd ballot, Curtis had won itself a school. In celebrattion, a bonfire was started, and as a sacrifice someone suggested Hugh's new hat. "But it cost me five dollars," he protested. In it went.

The townsfolk had added reasons for suspecting that Mr. Butler had borrowed a page of Scripture which asserted the approbation of providence to the cheerful giver. Curtis Mills further prospered. Butler choosing to live outside of himself as a giver of hope to the needy, regardless of whether they were intimate friends, mere acquaintances, or persons whose name only was known to him.

One of these, a man who left Lafe's depot to study veterinary medicine had sold his house to pay for two years of schooling but was stuck for funds in the third. Only the bank was aware that it was Hugh who signed a note to cover the student's expenses in full.

They were aware of at least two town enterprises launched and periodically restimulated by a secret source of dollars. A bricklayer opened a brickyard. A hog caller became a buyer and shipper of the porkers. As a conveyor of many other miscellaneous gifts from the unpublished giver, Lafe kept mental tabulation of a succession of similar accounts. Full-hearted as the gratitude of the recipients was, Hugh could match it with gratitude of his aim for an abundant son, Robert Johnson, blessed their home.

In 1913 Hugh learned he was to be manager of the parent mill at Crete. His activities grew so rapidly, soon he was exporting flour to European countries. After 5 years, Crete Flour Mills planned a 10-story building. Then he decided to resign.

He became a partner of the Dawson Grain Co. in Omaha, where he learned grain buying and shipping.

After 6 months, he decided he wanted to be in business for himself, so with $20,000 borrowed, $8,000 of his own, and $2,000 from J. L. Welsh, the Butler-Welsh Grain Co. was organized. As reward for his efforts, Pillsbury selected the Butler-Welsh Co. as its Omaha buying representative, which meant almost $25,000 a year to the little company.

They expanded to Nebraska City, then to Council Bluffs.

During this time, Butler's personal scripture theory continued. His constant donation to charity and the public welfare were running into the thousands of dollars. He was charitable at home, too, and provided his brother, Frank, with a law education.

Then began Hugh's interest in Doane. He became President and enough financial assistance poured in to expand the school. He served as trustee from 1914 to 1954.

Death, however, lurked in the winter of 1925 to claim his own dearest possession. On March 12, his second son died of pneumonia. In their agony, Fay and Hugh decided to take a trip to get away from the awful loneliness.

Working hard in Rotary, he became district governor in 1933.

In 1936 he was elected as a Republican national committeeman.

In 1939, some of his friends were urging him to run for Governor of Nebraska. Others were trying to steer him toward the U.S. Senate, with Val Peterson as his campaign manager.

Preparing Butler for the strenuous days ahead, his friend, Dr. W. H. Thompson, gave him tips on public speaking and handshaking.

On the post-balloting day, Peterson came to Butler with "Hugh, the people want you." He had won over A. J. Weaver of the Norris entourage, to represent the Republicans. This would place his name against that of Roy L. Cochran, the Democratic candidate for the Senate.

Tired from the strenuous campaign, Senator-elect Butler and his wife decided to spend the Thanksgiving holidays with their parents in Cambridge.

They were near Atlanta when it happened. Holiday traffic had slushed the snow, sinking temperatures glazing the roads. At a junction he wheeled the car cautiously but it refused to come out of a stubborn skid. All control lost, he had but amoment left in which to grit his teeth before the horrible impact.

A special train carried Fay to Omaha, and during her almost 3 months of gallant struggle for life, Hugh clung close to her in the flower-filled room, wringing every syllable of hope and encouragement out of himself. On February 5 the Omaha Rotary Club sent a large floral bouquet, its ribbon congratulating the Butlers on their 38th wedding anniversary. 10 days later there were other flowers and wreaths.

Hugh Butler went to the Senate alone.

Upon taking his seat in the Senate he presented to Doane College a trust fund, in memory of his wife, in the amount of $250,000. That fund is known as the Fay Johnson Butler Scholarship Fund. It constitutes high evidence of his interest and faith in the youth of the country. Each year 30 young men and women receive the benefits of this fund.

Washington was a city of raging debate when Hugh Butler took his seat in the Senate on January 3, 1941. The Nation was inching closer and closer toward war.

In Europe, the Nazi war machine had swept unchecked through country after country. Adolf Hitler, its evil genius, had imposed his barbaric rule.

"This is a terrible war, Bob," Butler told a Senate colleague, "but it is our duty to our country to keep out of it if we can. If we are attacked—well, then we will fight with everything we have."

In the months ahead, heated debate echoed in the Halls of Congress. Step by step the Nation seemed to be moving from the status of a neutral to that of a belligerent.

Right down the line, the new Senator cast his vote against any bill which he believed would be a step closer to war.

Perhaps Butler did not possess the dramatic flair nor the forensic skill that were trademarks of certain Senate veterans' but something else stood out: his simple honesty.

He was a rugged man and his intense interest in farming and reclamation and in fiscal matters resulted in his assignment to the Finance Committee and the Interior and Insular Affairs Committee in the Senate. He became chairman of the latter committee in the 80th Congress, and regained the chairmanship in the 83d Congress.

Butler had fought hard against this country's involvement in war, but once we were committed he worked just as hard to bring it to a successful conclusion. He was disturbed, too, when he thought about the plight of millions of young American boys, torn from their classrooms and sent overseas to fight. With Senator Edwin C. Johnson, of Colorado, he worked on legislation which would assure veterans of an education and other rights when they returned from the war.

Hugh Butler breathed a prayer of thanks with the rest of his fellow Americans when September of 1945 brought peace to the world.

So much had happened, and now Hugh Butler would be up for reelection next year.

Butler had kept in close touch with his people back home. No problem from a Nebraskan was too small for his personal attention. No doubt about it: the people of Nebraska wanted to keep Hugh Butler in the Senate.

Butler became known as Nebraska's own "Mr. Republican." Yet his best friend in the Senate was a Democrat. He was never too busy to talk about local problems and welcomed all who came to his office.

His hobby was collecting elephant statuettes. Friends from all over the world would contribute to his collection. The picture on the next page is a view of the fireplaces in his office.

Gov. Dwight P. Griswold, of Nebraska, announced that he would be a candidate for Butler's seat in the Senate in 1946. Butler won the primary race, and was easily reelected in the general election that followed.

In the 80th Congress, Senator Butler introduced and sponsored in the Senate legislation to permit Puerto Rico for the first time to elect its own Governor. In the 81st Congress Senator Butler was an active sponsor of what became Public Law 600 which authorized the organization of a constitutional government by the people of Puerto Rico, and in the 82d Congress he helped obtain Senate approval of the constitution of the Commonwealth of Puerto Rico which resulted in the creation of the Commonwealth.

He was a strong advocate, consistent and firm. He never conceded an inch to anything but facts. Typical was one of his last decisions on a national matter—the admission of Hawaii as a State.

One of his recommendations which has reaped dividends is the General Accounting Office. He recognized a need for a check on Government spending. Just as he was a frugal man, he felt the Federal Government should be frugal.

He liked to dwell on the possibilities of irrigation and reclamation in the Midwest and Far West. He once pointed out that geologists had stated that enough unused water existed to irrigate an additional 20 million acres of land in the 17 reclamation States. This would mean 200,000 more farms in America, producing increasing quantities of food for the Nation.

The girls in his office sometimes wished he would leave the typing to them. When he would go to his office on a Sunday, he would sift through his mail, and often answer some of the letters.

Still recalled is one letter sent by the Senator in connection with an important event in Nebraska. As a typist, Hugh Butler was not a perfectionist. This letter had margins askew and words struck over. The Senator's letter, along with others, was reproduced in a special pamphlet.

"Oh, you've disgraced us," said his secretary in dismay.

"I didn't know they wanted to print it," murmured the Senator unhappily.

Hugh was going to attend the Republican convention in Chicago in July with his brother Frank. It would be good to see Frank again. They were the last of the family. Parents, brothers, sister, wife, children gone; only Frank remained.

On June 16, 1952, word came that Hugh's brother Frank had died suddenly of a heart attack in Cambridge.

He stepped into his office and closed the door. He was alone with God. He stayed in his office an hour. When he emerged, his eyes were dry and acceptance was written on his face.

Butler underwent a serious operation in May 1953 at the Naval Hospital in Bethesda, Md. A kidney was removed. President Eisenhower wrote, expressing the hope that he would be back in the Senate soon. The party and the country needed men like Hugh Butler, declared the President.

Butler staged a remarkable recovery. He was cheered by a resolution adopted by the Republican Policy Committee of the Senate, containing affectionate well wishes from his colleagues.

There came the shocking news on Thursday, July 1, 1954, that Senator Hugh Butler had suffered a severe cerebral hemorrhage and was critically ill.

Thursday, countless friends in his home State of Nebraska and in the National Capital as well as throughout the Nation prayed for him, but late that night, at 11:15 p.m., there came the sad news that death had taken this courageous fighter, at the Bethesda Naval Hospital, writing finis to this story of a great man who had devoted his life of 76 years to the welfare of others.

Two memorial services were held for him, the first in Washington on Saturday, July 3, and the second in Omaha, Nebr., on Tuesday, July 6.

Under a 103° sun in midafternoon, they gathered around the grave at Forest Lawn Cemetery to hear Dr. Harold Jones, a pastor of the First Congregational Church, give the final prayer.

Hugh Butler will live on in the thoughts of his countless friends throughout Nebraska for the good he has done and the encouragement he has given during his lifetime and 14 years in the U.S. Senate.

---

## Wisconsin Ports—Gateway to the Upper Midwest

EXTENSION OF REMARKS
OF
## HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

*Monday, March 9, 1959*

Mr. WILEY. Mr. President, we recognize that development and progress in this great country depends on action by local, State, and Federal Governments, as well as constructive programs by private enterprise and individual citizens, to meet the challenges in the years ahead.

Today, I should like to call particular attention to the efforts by the State of Wisconsin, its citizens, civic, commercial, and other organizations, and the initiative of individuals aimed at paving the way for a brighter future for our Badger State. The program to which I am referring is the well-planned, forward looking, constructive effort for development and utilization of Wisconsin ports.

This program promises great things for the future of our State. Through these open doors to our inland areas will flow ever greater volumes of trade and commerce to improve our economy and benefit our people.

From these portals, also, will flow the products of the farms and factories, not only of Wisconsin, but of a great many other States in the upper Midwest.

The completion of the St. Lawrence Seaway—scheduled for next month—is also expected to increase and expand the benefits to be received from utilization of our ports.

As we plan for the future, however, the attainment of maximum benefits from the port and seaway development projects will depend, not only on the development projects themselves, but also upon constructive promotion programs.

Recently, I received from the State of Wisconsin Division of Industrial and Port Development a splendid brochure entitled "Wisconsin Ports—Gateway to the Upper Midwest." In this outstanding brochure, there is presented a description of our terminal facilities; industrial sites; links between water, air, rail, and road transportation systems; and other data of port capability and potential relating to the development of trade and commerce.

To give my colleagues the benefit of ideas so well presented in this promotion program, as well as a better picture of the advantages of utilizing Wisconsin ports, I request unanimous consent to have excerpts from this booklet printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

WISCONSIN PORTS—GATEWAYS TO PROFITS IN THE UPPER MIDWEST

For shippers and manufacturers, Wisconsin's 14 ports and harbors are important and promising new gateways to the heartland of North America.

Wisconsin's ports lie at the western end of the Great Lakes waterway system, now being opened to deep-draft world shipping by the St. Lawrence Seaway project. Ocean-going ships, carrying cargo to and from all parts of the world, bring all the advantages of water transportation to Wisconsin ports 2,000 miles inland from the Atlantic Ocean.

These ports serve as convenient transfer points for a vast and rapidly developing region extending a thousand miles to the west. This region includes all or part of 15 of the United States and 3 Provinces of Canada.

* * * * *

RAILROADS SERVING WISCONSIN PORTS

Twelve railroads, operating a total of almost 39,000 miles of right-of-way, connect the 14 Wisconsin port cities with railroad lines which fan out to the west. Altogether, trunkline railroads operate about 6,200 miles of right-of-way within the State.

Three other railroad companies cross Lake Michigan with their car ferries. These large vessels carry whole trains of freight cars from the Wisconsin ports of Kewaunee, Manitowoc, Marinette and Milwaukee to terminals on the eastern shore of the lake. These roads connect, in turn, with lines serving the east and south. Because these car ferry services are available, many Wisconsin industries find themselves in an excellent position to take advantage of savings offered by "fabrication in transit" privileges.

Many Wisconsin railroads have been developing "piggyback" services, an operation by which highway trailers are carried on railroad flatcars. The use of this new concept in transportation has in many instances proven economical, especially for long distance hauls.

For ratemaking purposes, Wisconsin railroads lie within the western trunkline territory. The car ferry terminals, however, are extensions of the official or eastern territory. Growth of Great Lakes overseas trade is resulting in the establishment of special export-import rail rates which benefit the competitive shipping position of Wisconsin port cities.

HIGHWAYS SERVING WISCONSIN PORTS

A well-engineered and maintained State arterial highway system connects Wisconsin's 14 port cities with the network of truck routes serving the upper Midwest. The 2,100-mile arterial system of most-used highways includes 482 miles on the National Interstate and Defense Highway System, shown by heavy lines on the map.

Nearly 100 common carrier trunklines carry freight to and from Wisconsin port cities. In addition, many more contract car-

riers and local cartage companies have highway cargo equipment available at these cities.

Some of the Wisconsin ports also serve tourists driving their own cars. Several of the Lake Michigan railroad car ferries which call at Wisconsin ports have space for automobiles and eating and berthing accommodations for passengers.

To keep the Wisconsin highway system in top condition, the Wisconsin State Highway Commission spends approximately $100 million a year in State funds raised entirely by road user fees and taxes. In addition, as much as $65 million in Federal highway aids goes into Wisconsin highways annually.

Wisconsin's county trunk highway system is one of the best in the Nation, nearly all hard surfaced for dependable, year around service to farms and factories throughout the State.

AIRLINES SERVING WISCONSIN PORTS

Wisconsin's lakefront cities are situated on the perimeter of the principal airline routes which serve the upper Midwest. Five of the 14 Wisconsin port cities have regularly scheduled airline passenger service. The others are about an hour's drive from scheduled service airports. Milwaukee is served by six airlines which provide fast and frequent connecting service to principal cities of the world.

Wisconsin now has 71 public airports throughout the State. The number is expected to reach 100 by 1965. Users of these airports include more than 200 Wisconsin businesses which operate their own executive aircraft.

The excellent airports and commercial air service put businessmen within easy reach of their customers, suppliers, and financial institutions. In addition, air cargo service assures fast shipment of valuable and perishable items and of repair parts for industrial machinery. Five airlines fly cargo to and from Milwaukee. One airline has established an air-truck freight operation with pickup and delivery service at most Wisconsin cities.

Wisconsin airport development and airline service have been encouraged and aided for more than a decade by a comprehensive State program, administered by the State aeronautics commission. Under this program the State and local communities join forces to match Federal funds for airport improvement projects.

SEAWAY HELPS INDUSTRIES GROW IN WISCONSIN

*Port cities are ready*

Wisconsin's 14 port cities are ready to serve users of the new St. Lawrence Seaway. Government and business leaders throughout the State are helping industries to take advantage of seaway opportunities.

All the Wisconsin ports have harbors already deep enough to accommodate moderate size ocean-going ships. Wisconsin has 381 miles of shoreline on Lake Michigan and 150 miles on Lake Superior.

For many years Milwaukee and Green Bay have nurtured the infant general cargo services established with many foreign nations via the existing St. Lawrence River route. Superior is recognized as the largest iron ore shipping port in the world.

Since construction on the seaway began a few years ago, several Wisconsin ports have improved their terminal facilities. Milwaukee is adding a new five-berth general cargo pier and a passenger and auto ferry terminal to existing excellent facilities. Green Bay and Kenosha have completed new general cargo pier sheds. Private interests at Superior have substantially enlarged their grain storage elevators.

All Wisconsin ports have many necessary harbor installations, including protective breakwaters, navigation lighthouses and buoys, moveable bridges, bulkheads and open storage spaces, bunkering facilities, railroad and highway connections, and marine repair facilities.

Many harbors have dockside warehouses, grain storage elevators, heavy lift cranes, shipyards and drydocks, customs offices and Coast Guard stations.

Looking ahead, Wisconsin port cities have adopted sound and practical industrial zoning ordinances and have spacious waterfront sites available for erection of industrial plants.

*Channels to be deepened*

Completion of the St. Lawrence Seaway and the Great Lakes connecting channels to the authorized 27-foot depth will open the Great Lakes to vessels with drafts of about 25½ feet. Plans have been made to deepen many Wisconsin harbors to the 27-foot standard. Other harbors will be dredged nearly that deep.

Channel depths of 20 to 25 feet have been adequate for safe navigation of lake vessels, which often carry iron ore loads of nearly 20,000 tons. To carry equal loads, ocean-going vessels must have deeper drafts to withstand greater stresses than lake ships encounter. Deepening of Great Lakes connecting channels and harbors will permit use of even larger and more economical lake vessels than at present.

United States and Canadian steamship lines operate about 700 vessels on the 5 Great Lakes and upper St. Lawrence River. Great Lakes and commerce is principally of bulk nature and is carried by fleets of vessels of special design. With few exceptions, these carriers contract directly with the shippers, in the same manner as ocean-going tramp steamers, to haul full shiploads on single voyages of for enure seasons.

Specific information about Great Lakes steamship lines can be obtained from the Lake Carriers' Association, Cleveland, Ohio, Dominion Marine Association of Montreal, Quebec, Canada; Division of Industrial and Port Development, Governor's Office, Madison 2, Wis.; or from individual port officials.

*Industrial development programs*

Wisconsin's State government port development program is supervised by the Governor. The 1955 legislature created the division of industrial development within the Governor's Office and the 1957 legislature added port development to the division's responsibilities.

The division is headed by a director appointed by the Governor. An advisory committee to the division consists of four legislators and 13 citizen members representing segments of business, industry, labor, agriculture, education, and ports. The division has a full time professional staff of five, including a port specialist.

The division promotes industrial development in Wisconsin in many ways. It assists manufacturers in the State and those indicating an interest in establishing plants in Wisconsin. It helps communities carry out their own long range industrial development programs. And it assists with legislative studies of laws affecting industry.

The State legislature has given preliminary approval to a constitutional amendment to permit use of State funds for port improvement programs. A program to consolidate and revise State laws relating to ports and waterways has been established.

Local industrial development corporations have been organized in more than 180 communities to attract and encourage industrial firms. Many of these groups sell stock locally to make loans to industries and to finance industrial sites and buildings which are leased or sold to manufacturers. Broad local programs include recruiting physicians and improving schools and public utilities to make the areas attractive to industries.

The Wisconsin Bankers' Association has organized the Wisconsin Development Credit Corporation. Through member banks, insurance companies, chambers of commerce and individuals, the credit corporation helps provide loans to promising manufacturing and commercial enterprises which need intermediate and long term working capital.

## The Public Hazard of Nuclear Blasting in Oil Shale

EXTENSION OF REMARKS

OF

### HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. FLOOD. Mr. Speaker, the whole realm of nuclear energy is one of great interest and vital importance to our country, as well as to the world.

Several weeks ago in an extended talk on this subject I said "As goes the atom so goes the world."

In my pursuit of this arresting subject, I have become increasingly concerned with the proposed nuclear blasting of oil shales in the Rocky Mountains.

I feel it is a fortunate development for the United States that among the scientific fraternity there is one man who took a second look at this proposed nuclear blasting of oil shale and entered a strong dissent. I refer to Morgan G. Huntington, Salt Lake City engineer, former engineer of the U.S. Bureau of Mines, and a specialist in the construction of nuclear reactors.

Thanks to Mr. Huntington, the American public is becoming acquainted with the hazards to public safety of the proposed nuclear blasting of oil shales. It has been my privilege to have championed Mr. Huntington's lone dissent and although the odds were very heavy against us, it appears we have been successful in making the Atomic Energy Commission stop, look, and listen. I now make so bold as to venture the prediction that the nuclear blasting of oil shales will never be made. This phase of "Operation Plowshare," I am certain will be scratched. Already we have had the admission from Chairman McCone of the AEC that the blast will produce no oil for the commercial market, although original publicity for the project was cast in terms of 25 million barrels of oil from a single nuclear blast.

Today, I am privileged to bring before you a specially prepared hazards report on the proposed nuclear oil shale blast. I urge each and every one of you to read it and carefully consider its import. Mr. Huntington shows his complete mastery of the subject, and his analysis of the problem at hand constitutes a distinguished public service which places his countrymen in his debt.

If the AEC should by any chance set off the nuclear explosion of a 10-kiloton device in the oil shales, Mr. Huntington describes the following results:

Within 6 hours following the nuclear blast in oil shale (described in the January 1959, AEC-distributed brochure entitled "Application of Nuclear Explosions to Oil Shale

Utilization") borne by the prevailing westerly winds, a huge dust cloud will settle out on Denver and its environs and how long the city will remain a scene of desolation during decontamination is speculative. To subject a population to such a risk is certainly foolish if not downright criminal.

Huntington also shows scientifically that a huge crater will be formed by the blast, millions of tons of rock, much of it radioactive, will be flung far and wide, and that after all of this, no oil will be forthcoming.

Mr. Speaker, I am equally concerned with another aspect of this whole project. It has been given intensive and fanciful publicity. The whole thing smacks of a well-conceived promotional campaign. All of this could have been done unwittingly out of an overabundance of enthusiasm, but nevertheless, we can readily see how such dramatic presentation could well cause lively speculation in oil leases and oil stocks. These are matters that are the concern of government, for the public interest, I submit, is paramount. We are all for progress, sound substantial progress, but we don't want the American investing public taken for a sleigh ride. I would suggest that certain agencies of Government, the Department of Justice and the Securities and Exchange Commission give this matter their attention.

I now submit for the RECORD at this point, Mr. Huntington's carefully prepared and persuasive findings on the hazards report of proposed nuclear oil shale blast along with Mr. John A. McCone's letter to me of February 11 and my reply of February 14.

UNITED STATES
U.S. ATOMIC ENERGY COMMISSION,
*Washington, D.C., February 11, 1959.*

DEAR MR. FLOOD: I am pleased to reply to your letter of January 17, 1959, asking for information concerning the Commission's plowshare program and raising certain questions concerning the proposed oil-shale experiment.

The Commission's plowshare program is an attempt to encourage the development and utilization of nuclear explosives for peaceful purposes. The Commission and its staff have considered a number of experiments to utilize the phenomena associated with nuclear explosions to open the way for greater public benefits from our natural resources. Our present knowledge indicates that nuclear explosives might be used in large civil engineering projects, power production, isotope production, and in basic research studies, as well as natural resource development.

As a specific part of the plowshare program the Commission, in cooperation with the U.S. Bureau of Mines, for some time has been studying the feasibility of using nuclear explosives in recovering oil from oil shale. It is our expectation that the shock and rock crushing effects of an underground nuclear explosion would provide a means for breaking up the shale so that oil can be extracted with an in-place recovery process. The proposed oil-shale experiment is a research project to determine the possibility of developing thereby a process for economic extraction of oil.

This plowshare project has progressed to the point where a meeting was conducted on January 6–7 by the Bureau of Mines with representatives of industry to review proposals for an experiment. The Commission and its contractor, University of California Livermore Radiation Laboratory, presented data on Commission experience with underground nuclear detonations and results theoretically to be expected from a 10 kiloton, or smaller, detonation in the Green River shale. Copies of technical papers presented are attached for your information.

At the Dallas meeting the Government offered to consider the experimental detonation of a device, providing conditions of health and safety could be guaranteed, and providing industry would arrange for emplacement and the making available to the public of important technical information resulting from the experiment. As yet the Commission has not given firm authorization for such an experiment, nor has a site been selected. The next step will depend largely on how industry reacts to the proposal and this phase of the matter is being investigated by the Bureau of Mines.

So far as the public health and safety of such a project is concerned, the Commission will not approve any action that would endanger human or animal life, vegetation, water systems, or property. If there should be enough industrial interest to warrant concluding feasibility studies which are now in their initial phases, complete data on public health and safety would be compiled with the assistance of independent experts before the Commission would authorize a project.

In your letter you raise the following specific possibilities which were suggested to you by Mr. Morgan G. Huntington. I would like to comment on each in some detail.

1. A conical crater will be blasted about as wide as the explosion is deep.

Comment: The AEC is advised by its best technical experts that no such crater would be formed. On the basis of six nuclear underground shots that have been fired in Nevada and on the basis of experience in underground high explosive detonations, it is believed that the cratering effect of nuclear shots can be predicted with reasonable accuracy by our staff. The direct evidence from nuclear shots relate to tuff only and not to oil shale but the HE high explosive experiments relate to many kinds of materials including Green River oil shale. Mr. Huntington argues that the rock heaving gases formed in an explosion in oil shale will have more serious effects than hitherto encountered. Actually, the detonation of high explosive produces by its own combustion more rock heaving gas than can be obtained from an equivalent nuclear explosion in oil shale. Therefore, existing experimental results are sufficiently conclusive to assure us of the necessary safety of a particular nuclear detonation in oil shale with respect to cratering.

2. Millions of tons of rock will be thrown over the countryside, much of it radioactive.

Comment: As has been mentioned already, it is the intent of the Commission to insure that, before authority to proceed is granted, safety is guaranteed. Under such conditions this eventuality would not occur.

3. The huge dust cloud so formed will consist largely of carbon black from the destruction of shale oil.

Comment: Here the answer is similar to that of 2 above.

4. No oil whatever will enter commerce as the result of such a blast.

Comment: This is probably true in fact. This particular nuclear explosion and consequent technical investigation is planned as an experiment. Our hope is that it will show whether or not such extraction is technically and economically feasible.

5. The direct cost of this proposed nuclear blast will be in the order of $10 or $15 million, aside from the liability incurred from damages.

Comment: According to preliminary estimates the experiment over all would cost about $3 million. This sum will be spent partly on the nuclear detonation and partly on investigation by the Bureau of Mines of an oil extraction process. During the meeting on January 6–7, it was proposed that the petroleum industry share in the costs of this experiment.

Attached to your letter to me was a letter from Mr. Huntington setting forth certain more technical questions bearing on the above matters. I am attaching, as enclosure 1, detailed answers to his questions.

Your letter mentions that Mr. Huntington has not received an answer to his January 9, 1959 letter to Dr. Potts. This letter is being answered simultaneously by Dr. Potts.

I trust we have adequately replied to the questions you and Mr. Huntington have presented. If you should want further information I shall be pleased to send it to you or should you desire to discuss this matter with the technical experts, we will be pleased to arrange for them to meet with you during their next visit to Washington, or if you wish Commissioner Libby will be glad to discuss this matter with you. In addition, should Mr. Huntington desire to visit the University of California E. O. Lawrence Radiation Laboratory, Livermore to explain his ideas we will arrange for the proper people to discuss the matter with him.

I assure you that the Commission will undertake PLOWSHARE projects only after determining that they can be carried out without endangering public health and safety and that the project is justifiable from the standpoint of opening the way to greater public benefits.

Sincerely yours,

JOHN A. MCCONE, *Chairman.*

---

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
*Washington, D.C., February 14, 1959.*

Mr. JOHN A. MCCONE,
*Chairman, Atomic Energy Commission,*
*Washington, D.C.*

DEAR MR. MCCONE: Your letter of February 11 replying to mine of January 17 has been read with interest.

I have seen your January 31 announcement to the public press that you would detonate the first of a series of nuclear devices in Rocky Mountain oil shale sometime during the fiscal year beginning July 1. Now, less than 2 weeks later, you tell me that you won't explode any such weapons in oil shale unless industry asks you to do so.

I am greatly surprised and alarmed by your letter to me in which you state that you have not yet investigated the public hazard of nuclear blasting in oil shale.

It appears that your many press releases have lead a great number of people to believe that large scale nuclear blasting is the solution to the winning of oil from oil shale. Yet, you tell me in your February 11 letter that probably no oil would enter commerce as the result of your proposed 10-kiloton oil shale blast.

The data presented by Mr. Morgan Huntington, president of the RNB Corp. of Salt Lake City, Utah, clearly shows that no sizeable nuclear blast in oil shale can be contained beneath the surface because the great amount and pressure of the gases generated will inevitably blast a crater. Isn't this exactly what caused your small (100-ton) Neptune blast to heave out thousands of tons of rock October 14, 1958?

Because of the probably great public hazard involved and the apparent carelessness of your staff, I feel it my duty to ask several specific questions:

1. Why do you permit to be published under your name articles carrying the specific size, placement and geographical location of a nuclear blast in oil shale without

first preparing the usual hazard report, i.e., your best estimate of the maximum credible accident?

2. Do you yourself consider the nuclear blasting of oil shales a safe and reasonable experiment when you consider that each ton of TNT equivalent could instantly liberate some 50,000 cubic feet of hydrogen at 25 tons per square inch pressure? Didn't your October 8 1958 Tamalpais 50-ton blast produce about half this amount of highly explosive hydrogen with only a small amount of pariffin present? In the words of your own A.E.C. report, "the explosives gases were in such concentrations and amounts as to create a hazardous situation."

3. Since you tell me in your letter that the Atomic Energy Commission will not undertake the nuclear blasting of oil shale unless the oil industry requests it, I am compelled to ask: Can you name any major oil company executive who considers the nuclear blasting of oil shales an entirely safe and reasonable experiment?

4. Please identify the individual proponents of oil shale nuclear blasting in Government as well as in industry.

Because you have not yet compiled your usual "nuclear hazards report" on the blasting of oil shale, I have requested that Mr. Huntington prepare for publication a "maximum credible accident" report on the nuclear blasting of oil shales.

I shall appreciate an early answer to the questions posed in this letter as well as to my letter of February 11.

Sincerely yours,

DANIEL J. FLOOD,
*Member of Congress.*

---

RNB CORP.,
*Salt Lake City, Utah, March 3, 1959.*

Re The public hazard of nuclear blasting in oil shale as proposed by the AEC.

HON. DANIEL J. FLOOD,
*Committee on Appropriations,*
*House of Representatives,*
*Washington, D.C.*

DEAR MR. FLOOD: At your request, I have prepared the following estimate of the maximum credible explosion which could be expected from the detonation of a 10,000 ton TNT equivalent nuclear weapon 900 feet deep in oil shale.

The conditions, placement and size of the device are specified in the January 1959 unsigned, unidentified brochure currently circulated by the Atomic Energy Commission entitled "Application of Nuclear Explosions to Oil Shale Utilization." Although this AEC-circulated brochure is widely accepted as an official Bureau of Mines publication because "Bureau of Mines Laramie Petroleum Research Center" appears on the cover, its authorship remains uncertain.

To summarize my estimate of the hazard of nuclear blasting in oil shale or other rich hydrocarbon impregnations, I find that not even 1/10 of the AEC's proposed 10-kiloton device could safely be detonated in such hydrogen rich rocks 900 feet beneath the surface. Whether this 10,000-ton TNT thermal equivalent explosive is in the form of conventional dynamite or whether the heat is released from a nuclear device, a crater would surely result. However, it is true that a conventional explosive would probably be very much less hazardous than the nuclear device for three reasons:

The conventional explosive cannot produce the tremendously devastating subsequent aerial explosion; and secondly, the power of conventional explosives can be precisely predicted while the energy of nuclear devices cannot be estimated nearly so accurately; also, the conventional explosives are completely free of the virulently poisonous radioactive isotopes generated by all nuclear blasts.

The 300,000 ton weapon described as containable in oil shales by Dr. Herbst of the AEC at the January 1959 Dallas oil shale meeting could completely pulverize the material blown from its crater. The power of such a weapon exploding in oil shale is so fantastic that I am reluctant to believe such a proposal could have been seriously made, particularly to such a gathering.

Given certain conditions of geological structure, somewhat less than a 1-kiloton nuclear explosive could very likely break the surface and heave a considerable tonnage of rock and dust into the air. From any nuclear blast in oil shale which should erupt through the surface, a highly spectacular aerial explosion of the hydrogen generated by the thermal destruction of hydrocarbons could be expected. The energy generated by this subsequent aerial explosion of hydrogen could yield more than double the heat of the initial nuclear blast.

Quite definitely, no sizeable (10 kiloton or greater) nuclear device could safely be detonated anywhere in the Rocky Mountain oil shales because at no point could the depth of burial afford sufficient weight of overburden to contain the great volume of high pressure gases inevitably produced. Even a single kiloton weapon in oil shale would probably disrupt the surface at a depth of 900 feet. Certainly, the hydrogen generated from even this modest device could produce a devasating aerial explosion.

On page 2 of Chairman McCone's February 11 letter to you, he contests my prediction that, should a 10,000-ton-TNT-equivalent nuclear device be detonated 900 feet beneath the surface in Rocky Mountain oil shale, "a conical crater will be blasted about as wide as the explosion is deep." Mr. McCone comments as follows: "The AEC is advised by its best technical experts that no such crater would be formed. On the basis of six nuclear underground shots that have been fired in Nevada and on the basis of underground high explosive detonations, it is believed that the cratering effect of nuclear shots can be predicted with reasonable accuracy by our staff. The direct evidence from nuclear shots relate to tuff only and not to oil shale, but the high explosive experiments relate to many kinds of materials including Green River oil shale."

Apparently, Mr. McCone's best technical experts hold that 10,000 tons (two miles of fully loaded freight cars) of conventional explosive 900 feet deep in oil shale would not blast a crater.

It is respectfully suggested that AEC Chairman McCone consult with the experienced staffs of such explosive manufacturers as Du Pont, Monsanto, Atlas, or others who do have extensive background in explosive engineering. It is further suggested that Mr. McCone specifically ask what size crater would probably result from the thermal equivalent of 10,000 tons of TNT in the form of, say, 60 percent ammonium dynamite exploding 900 feet deep in oil shale. (This is an explosive ratio of only 100 to 300 tons of rock per ton of dynamite.)

I must also refute the contention of Mr. McCone that "the detonation of high explosive produces by its own combustion more rock-heaving gas than can be obtained from an equivalent nuclear blast in oil shale."

The facts are that 4 million B.t.u. (AEC's arbitrary thermal equivalent of a ton of TNT) transferred to nearly pure hydrocarbon can instantly generate at least twice the rock-heaving gas produced from TNT. (Parts of the oil shale are 40 percent pure kerogen.)

It is abundantly evident that the Atomic Energy Commission's technical staff have considered carefully neither the public hazard nor the feasibility of this highly publicized project. Atomic Energy Commission Chairman McCone has freely admitted these facts to you in his letter to you February 11.

The scanty amount of time and thought so far devoted by the staff of the AEC to this widely discussed phase of "Operation Plowshare" is apparent throughout the voluminous press releases and other literature on the subject. The purpose of the Atomic Energy Commission in widely advertising this very unlikely oil shale blast is open to speculation.

For instance, opposite page 16 in the January 1959 AEC-circulated brochure is a graphic summary of the assumptions presented in that text. Specifically shown, 900 feet of rock capping exerting a maximum rock pressure of 900 pounds per square inch contains in equilibrium 10 million standard cubic feet of gas at a pressure more than six times as great, or approximately 6,000 pounds per square inch. It should be obvious even to the layman that there is no restraining force sufficient to prevent such high pressure gas from expanding to rock pressure with explosive force.

It is impossible for me to agree with Dr. Libby and with his assistant, Dr. John Potts, that even in this relatively mild, unrealistic case (10 million cubic feet of gas is but one-fifth to one-twentieth of the volume of hydrogen which would probably be produced under the conditions described by the AEC) that the surface of the earth would remain undisturbed and all fission products would be contained.

In Chairman McCone's February letter to you, he states that public hazards of nuclear blasting would be evaluated only after feasibility studies were affirmatively completed. One cannot help but wonder why public safety is considered by the A.E.C. to be of secondary importance in this completely unexplored, highly dangerous concept of exploding nuclear weapons within hydrocarbon impregnations. (The building of even the smallest research reactor is always preceded by a full-dress public hearing on all conceivable credible accidents and a detailed hazards report is published.)

In projecting "Operation Plowshare", of which oil shale blasting is a part, the Atomic Energy Commission leans very heavily upon the results of the six underground nuclear explosion tests conducted in Nevada in September, 1957 and in October, 1958. These are described in a report to the Atomic Energy Commission by the University of California Radiation Laboratory Report, UCRL—No. 5124, Rev. 1, dated December, 1958.

It is clearly apparent to me that the A.E.C.'s staff has grossly misinterpreted the results of these underground tests in a number of respects and that the erroneous conclusions so drawn lead directly to the questionable assumptions that nuclear blasting of hydrocarbon impregnations is feasible and safe and that the commercial production of petroleum can be achieved thereby.

I shall now explain why the effects of nuclear explosions in the porous, permeable, weakly-consolidated volcanic ash of Neveda are radically different from what can be expected of nuclear blasting in the dense, completely impervious oil shales of the Rocky Mountains:

First let me say, that in my 20 years of experience as a mining engineer, I have found very "fast" [1] high explosives to be relatively ineffective in breaking spongy rock, such as volcanic tuffs. On the other hand, a comparatively small amount of such explosive is fairly effective in shattering, heaving and breaking the dense hard rocks, such as granite, limestone and tightly laminated shales.

Volcanic ash of high porosity does readily absorb, without heaving, considerable kinetic energy imparted by high explosives.

---

[1] Very fast explosives are considered to be those with a propagation rate above 20,000 feet a second.

Dense, nonporous, noncompactible rocks such as oil shale can absorb relatively little kinetic energy without shattering and erupting.

Volcanic tuff is readily compactible to the extent of 20 or 30 percent while high grade oil shale is not at all compactible beyond about 1 percent.

In the Rainier blast in volcanic tuff (September 1957), a 110-foot spherical chamber was formed as a result of the compaction of the surrounding porous rocks. To provide the volume of the 110-foot cavity, 120,000 tons of the volcanic ash must necessarily be compacted to the extent of 25 percent. However, to produce such a cavity in oil shales, more than three million tons of rock surrounding the blast must be totally compacted. Moreover, the crushing strength of the Rainier volcanic tuff is only about 5,000 pounds per square inch while the compression strength of oil shale in test specimens is generally about 25,000 pounds per square inch. En masse, this compacting strength of oil shale is probably somewhat greater.

It is, therefore, patently impossible to spring[2] any comparable cavity in oil shale 900 feet deep without violently disturbing the surface.

Before examining in detail the relative differences of nuclear blast effects in volcanic tuff and oil shales, let me briefly criticize the AEC's claim of feasibility and appraise the possibility of producing any oil from oil shales through nuclear blasting:

The total heat generated by an AEC rated 10-kiloton device would pyrolize[3] no more than 40,000 tons of oil shale and free (if no violent explosion were to occur and if the 2,000,000° fireball somehow failed to destroy any hydrocarbon) no more than 30,000 barrels of shale oil, and the direct cost therefor would amount to $100 a barrel. (Oil shale is worth about $2 a barrel.)

The heating effect of nuclear devices is evidently unimportant in this particular application, except for the explosive effect of the hydrogen instantly produced at high pressure.

In the Rainier experiment, no rock was shattered nor fragmented save the 50,000 tons which caved of its own weight above the 110-foot cavity.

In the much-quoted Rainier experiment, the surrounding rock which was originally permeable and highly porous to the extent of 30 percent of its original volume, was compacted by the blast to practically zero permeability.

In blasting oil shale, because of its almost complete incompactibility, no sizable chamber can be sprung without heaving the surface and because of its strength, very little oil shale could be expected to cave. How, then, do the proponents of such a project expect to make large tonnages of impermeable oil shale freely pervious, and yet contain all fission products within the ground and not disturb the surface of the earth?

When solid rock in place is fragmented by blasting, it normally occupies at least 125 percent of its original volume. If this completely nonporous, entirely impermeable oil shale is to be shattered by nuclear blasting and to become freely pervious, from where is this extra space to come if the surface is to remain undisturbed? This I cannot explain nor has anyone been able to explain it to me.

[2] Fast explosives are commonly used in small amounts to spring or chamber the bottoms of small diameter blast holes in order to accommodate sufficient amounts of slower explosives with more suitable rock breaking and heaving characteristics.

[3] The pyrolysis of oil shale begins about 400° F. To effect complete destructive distillation, the oil shale must be heated to above 800° F.

Please refer to the appended "Comparison of the More Obvious Physical and Chemical Properties of the Rainier Volcanic Ash With Rocky Mountain Oil Shales and Tabulation of the Relative Effects of Thermally Equivalent Nuclear Blasts in the Two Different Rocks."

From this tabulated comparison of the corresponding characteristics of the spongy volcanic ash with those of the incompactible, impervious oil shale, a number of paramount differences become immediately apparent. Among these are:

1. In the nuclear blasting of volcanic tuff, because it contains 10 to 20 percent of water, steam is the principal gas produced and this can exert a maximum pressure of about 3,000 pounds per square inch at 700° F. (Compare this with the maximum pressure of hydrogen at this temperature. There is, of course, some disassociation of the water molecule to hydrogen and oxygen, and no doubt, some monatomic gases exist in the first instant of detonation. However, beyond the initial shock, the effects of gases other than steam are minor.)

2. So long as the surrounding rock temperature is below the boiling point of water, steam is instantly condensed upon passing into the porous cold rock and no effective amount of expanding gases remains to crack and heave the rock. Thus, the total destructive force of a nuclear blast in such saturated, spongy volcanic tuff is very much less than an equivalent nuclear blast in air.

3. Because hydrogen is the principal gas produced by the blasting of hydrocarbon impregnated rocks such as oil shales, the rock heaving capacity is enormous. Should pure hydrocarbons (containing from 10 to 15 percent of hydrogen) be exposed to the thermal radiation from the nuclear fireball, some 40,000 standard cubic feet of hydrogen would be instantly liberated at an initial pressure in the order of 25 tons per square inch. In this case, evidently (because hydrogen occupies about 14 times the volume of air per unit weight) the explosive force (pressure times volume of the gases) of a nuclear device is very substantially greater than an equivalent nuclear blast in air.

In order to calculate this maximum possible explosive effect, the following criteria are employed:

1. Per ton of TNT equivalent the heat radiated to the surroundings is 4 million B.t.u.

2. What the AEC rates as a 10 kiloton device may yield as little as 3,000 tons of TNT equivalent, or under completely favorable conditions of detonation, as much as 30,000 tons of TNT equivalent.

3. All the heat radiated is immediately absorbed by kerogen, the hydrocarbon in oil shale.

4. Some 40,000 standard cubic feet of gas is instantly generated at a pressure in the order of 25 tons per square inch.

5. More than 1 billion cubic feet of hydrogen at 25 tons per square inch would be instantly generated in a lateral area 100 feet square.

6. Vertical joint cracks occur in the oil shale with reasonable frequency, say on a hundred foot grid. Thus, the shearing strength of the rock is no factor.

From these several criteria, the following results appear credible:

1. A plug of about 600,000 tons could be ejected straight up at high velocity.

2. At least 3 million additional tons would be heaved and broken and a large portion of this would be scattered laterally over the surrounding area.

3. Instantly following the ejection of the central plug an aerial explosion of more than a billion cubic feet of hydrogen would generate more heat energy than the initial nuclear blast.

In conclusion, I must state that no sizable nuclear blast in Rocky Mountain oil shale can be considered completely and absolutely free from any likelihood of jeopardizing the public safety.

Yours very truly,

MORGAN G. HUNTINGTON,
*President, RNB Corp.*

ENGINEERING ANALYSIS OF THE EFFECTS OF NUCLEAR BLASTING IN TUFF AND IN OIL SHALE

*Comparison of the more obvious physical and chemical properties of Rainier volcanic ash with Rocky Mountain oil shale, and tabulations of the relative effects of thermally equivalent nuclear blasts in the 2 materials*

| | Rainier volcanic ash | Mahogany bed, Rocky Mountain oil shale |
|---|---|---|
| Crushing strength | About 5,000 pounds per square inch | Greater than 25,000 pounds per square inch absolute (en masse). |
| Attainable compaction | At least 25 percent | Nil. |
| Porosity | 30 percent | Do. |
| Moisture | 20 percent | 0.5 percent. |
| Gas per ton evolved at 2,000° F. | 8,000 standard cubic feet of steam plus small amount of $H_2$-$O_2$. | Pure kerogen yields some 40,000 standard cubic feet of hydrogen when destroyed by heat of 1 ton TNT equivalent. |
| Rock-heaving gas pressure at rock temperature. | Nil (atmospheric), at 200° F. Volume, nil; some $H_2$-$O_2$ probably remains unrecombined. | Above 15,000 pounds per square inch at 200° F. Standard volume unchanged. |
| Effect of nuclear blast | Highly compactible; absorbs large amounts of kinetic energy. Spherical chamber results from the compaction of the surrounding porous rock. | Not appreciably compactible; absorbs relatively little kinetic energy. Horizontal splitting along bedding planes followed by vertical cracking normal to bedding planes. |

## Nelson Poynter, Man of the South

EXTENSION OF REMARKS
OF
## HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
*Monday, March 9, 1959*

Mr. SMATHERS. Mr. President, it was most gratifying to learn that Nelson Poynter, editor and president of the St. Petersburg Times and an outstanding citizen of the State of Florida, is 1 of 14 individuals nominated to the South's Hall of Fame for the Living.

Nelson Poynter is well known throughout our State as a man of integrity, courage, and conviction. Since 1923 he has built an outstanding career in journalism as a reporter, editor, and publisher, and has earned the esteem of the public and his fellow newsmen.

His unselfish efforts in behalf of his community, his state, and the Nation have brought him well-deserved tribute. Mr. Poynter's nomination to the South's

Hall of Fame for the Living is another reward justly bestowed.

We in Florida are particularly proud of this signal honor conferred upon Nelson Poynter.

I ask unanimous consent to have printed in the Appendix of the RECORD the article which appeared in the February 13 issue of the St. Petersburg Times pointing up this outstanding achievement of one of Florida's great sons.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POYNTER IS NOMINATED FOR MAN OF THE SOUTH

ATLANTA.—Nelson Poynter, editor and president of the St. Petersburg Times, is one of 14 southern leaders recently added to the South's Hall of Fame for the Living, from which the Man of the South is elected each year.

Hubert F. Lee, editor of Dixie Business magazine, which sponsors the honor group, said Poynter was nominated to the Hall of Fame by former Senator Wilton E. Hall, publisher of the Anderson Independent and Daily Mail in South Carolina. Hall was Man of the South for 1955 and strongly recommended Poynter for that honor this year.

Lee said nominations to the Hall of Fame are made on the basis of the life records of service and achievements of the nominees. The group is limited to 200 living southerners and replacements are made only when a member dies.

WHO MAY VOTE

The Man of the South is elected by ballot, which Dixie Business publishes and sends out by mail. Anyone may vote. Voting may also be done by letter. Lee said the ballots each year run as high as 5,000 to 6,000.

The editor of Dixie Business decides who will be selected to the Hall of Fame.

Hall, in nominating Poynter, called him "one of the most brilliant publishers of America" and said "many honors have been heaped on him for courageous editorial leadership."

He listed a number of awards Poynter has received, including ones from the University of Florida Blue Key fraternity for his contributions to the university; an American Bar Association award for the Times' articles on law and the courts; and the public service award presented by the Florida Associated Press Association and the Florida Daily Newspaper Association.

NEW MEMBERS

The 14 new members of the Hall of Fame are Poynter; Dr. O. C. Aderhold, president, University of Georgia, Athens; Harlee Branch, Jr., Atlanta, president, the Southern Co.; David Tennant Bryan, Richmond, Va., publisher, Richmond Times-Dispatch and News-Leader, and president of the American Newspaper Publishers Association.

Norman Cocke, Charlotte, N.C., chairman, board of trustees, Duke University; H. McKinley Conway, Jr., Atlanta, publisher, Manufacturers Record; Dr. Ralph Draughon, president, Alabama Polytechnic Institute, Auburn, Ala.; Ben S. Gilmer, Atlanta, president, Southern Bell Telephone Co.; Clarence Haverty, Atlanta, chairman, Haverty Furniture Cos.

George Ivey, Sr., Charlotte, N.C., president, J. B. Ivey & Co.; Dr. James A. Jones, Richmond, Va., president, Union Theological Seminary; Ben M. McKelway, Washington, D.C., editor, the Washington Star and president of the Associated Press; Dr. John L. Plyler, president, Furman University, Greenville, S.C.; Dr. Clarence Poe, Raleigh, N.C., editor, the Progressive Farmer.

## Unveiling of Bust of the Late Charles Curtis, Former Vice President of the United States

EXTENSION OF REMARKS

OF

## HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

*Monday, March 9, 1959*

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent speech made by Patrick J. Hurley, former Secretary of War, former Ambassador to China, Minister to New Zealand, a distinguished Oklahoman, who has enjoyed the distinction of serving in the military field from buck private to general, of advancing from trial lawyer in Oklahoma to become an Ambassador, a man whose activities over a period of 50 years have been outstanding to our State.

The excellent speech was delivered by the Honorable Patrick J. Hurley on March 4, 1959, in the old Supreme Court Chamber in the Capitol, on the occasion of the dedication of the bust honoring the late Vice President Charles Curtis.

The bust, incidentally, will be placed in the Indian Hall of Fame, located in Oklahoma, which is the site of a display of monuments to, and busts of, distinguished American Indians who have won great recognition in all forms of American life.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CHARLES CURTIS, OF KANSAS

(An address delivered by Patrick J. Hurley on March 4, 1959, in the Supreme Court Room, the Capitol, Washington, D.C.)

We are assembled on this occasion to unveil a bust of the late Charles Curtis, Vice President of the United States, for the Indian Hall of Fame in Oklahoma.

BACKGROUND, EDUCATION, POLITICAL CAREER

Though he was a member of the Kaw (or Kansas) Tribe of Indians, and his allotment of land was in the Kaw Reservation in Oklahoma, there was also Osage blood in the veins of Charles Curtis. Part blood Indian that he was, those of us who knew him well found that Curtis had the appearance, and more of the traits of the Indian than he did of his European ancestry.

At the time of his birth, in 1860, the Kaw Tribe was restricted to a reservation. The Indians, thereby deprived of their traditional hunting grounds and their ability to move with the seasons to the places where game could be found, were on the verge of starvation. The restrictions and poverty imposed on his people by reservation life made a deep impression on the mind and character of young Curtis. Through all of his adult life, he fought to free his fellow Indians from the restrictive laws and customs that worked to keep them isolated from society and in physical want.

Charles Curtis was, for the most part, a self-educated man. He had received only an elementary school education before he embarked on the study of law, but at the age of 21 he was practicing law in Topeka, Kans. In 1884, he was elected county attorney and served in that capacity until 1888. He was elected to Congress, as a Republican, in 1893 and continuously reelected until 1907 when he was chosen to fill the U.S. senatorial term which expired in 1913. Three times more he was elected U.S. Senator from Kansas—in 1915, 1921, and 1927. In 1928, at the Republican National Convention, Charles Curtis was nominated for the Vice Presidency of the United States as the running mate of Herbert Hoover. On November 6, 1928, the Republican ticket was elected by the overwhelming majority of 444 to 87 electoral votes. Thirty years ago today, Charles Curtis of the Kaw Tribe was inaugurated as Vice President of these United States. He died at Washington on February 8, 1936.

President Hoover, after his inauguration, instituted a new practice by inviting Vice President Curtis to meet with, and participate in the deliberations of, the Cabinet. Curtis immediately accepted this invitation; and, though he had himself been a candidate for the Presidential nomination and consequently opposed the nomination of Herbert Hoover, Curtis nevertheless supported the Hoover administration loyally and efficiently through the difficult and trying years of the depression.

HIGH TIDE OF INDIAN IN POLITICS

This remarkable record of service to his State and Nation achieved by Charles Curtis marks the high tide of the American Indian in national politics. Even if it is true, as William Allen White relates in his book "A Puritan in Babylon," that President Calvin Coolidge had "picked up a drop of Indian blood" through his mother's family, Coolidge—unlike Curtis—had not been reared in an Indian environment and did not participate in Indian affairs.

REMOVAL OF THE FIVE CIVILIZED TRIBES—TRIBAL PROPERTY

As a result of his experience and good judgment, Curtis was fundamentally opposed to the segregation and isolation of Indians on reservations. Indian estates were communal or tribally owned; title to the reservation land was vested in the Indian nation or tribe, and not in the individual members of the tribe. It is true that before the removal of the Five Civilized Tribes (or Nations) from their homes in the Southeastern States to Indian Territory, there had been some allotments in severalty—but in Indian Territory to which the Five Civilized Tribes were removed over the tragic "Trail of Tears" the new land was all held by the tribe. The land described as Indian territory, now the State of Oklahoma, was a part of the Louisiana Purchase, acquired by the United States in 1803. It was during the period from 1820 to 1835, roughly, that the Five Civilized Tribes (Cherokees, Creeks, Choctaws, Chickasaws, and Seminoles) were induced or compelled to enter into treaties exchanging their homeland in the Southeastern States and move to land assigned to them in Indian Territory.

EARLY CONDITIONS IN INDIAN TERRITORY

Chaotic conditions, poverty and hardship awaited the Indians in Indian territory, and such conditions prevailed for years. Unquestionably, also, great and unpardonable injustices were committed against the Indians, not only by white citizens but by the Government itself.

Then, when the Five Civilized Tribes had become well settled in Indian territory, there came the Mexican War and the gold rush to California—conditions which brought great hordes of white people across Indian territory, emigrating to the West or traveling down the great Texas road across the land of the Five Civilized Tribes into Texas.

Legally, all white persons in Indian territory were intruders, and could be removed; actually, however, many of them intermarried with the Indians and remained.

INDIAN TERRITORY WAS TO BE PERMANENT HOME

The various treaties between the Five Civilized Nations and the United States, exchanging land in the Southeastern States for the new tribal land in Indian territory, were all intended to provide the Indians with permanent homelands free from intrusion by white men. One of the treaties, for instance, provided that the United States would protect the Indians in their communal possession of their land in Indian territory "as long as the grass grows and water runs"—treaties with other tribes contained like provisions.

TREATIES OF 1866 AND OKLAHOMA TERRITORY

Scarcely had life for the Five Civilized Tribes returned to normal, after the removal and the period of white migration, when the Civil War broke out. Many of the Indians, particularly among the Cherokees and Creeks, were Federalists; but the overwhelming majority of the Five Civilized Tribes supported the cause of the Confederacy. Because they had lent their support to the South, the Five Civilized Tribes, in the treaties of 1866, were required to cede (and in some instances to sell) to the United States the western portion of Indian territory. This land, returned to the United States in 1866, became Oklahoma Territory.

(NOTE.—The name Oklahoma was suggested by Allen Wright, Chief of the Choctaws—the word "Oklahoma" being composed of two Choctaw words meaning "people red.")

It was here in Oklahoma Territory that the so-called wild Indians were given homes and reservations. Here the great chief of the Comanches, Quanah Parker, and perhaps the greatest chief of the Apaches, Geronimo, were held prisoners at Fort Sill in what was then known as the big pasture country.

THE PROBLEM OF THE OUTLAWS

Under the reservation system, especially in the Five Civilized Tribes, the Indians lived under their own laws and their own constitutions. Following the Civil War, as the white emigration continued to flow across the territories, law enforcement by the Indians and in Indian courts became very lax; Indian territory became a haven for outlaws and a region of lawlessness. So strong did the outlaws become that one Indian, Tom Starr (husband of the notorious woman outlaw Belle Starr) forced the government of the Cherokee Nation to make a treaty with him.

Most of the white emigrants who had stopped to settle in Indian territory were decent, God-fearing citizens. They were vigorously opposed to the rampant violence and the reign of lawlessness. Many of them had intermarried with the Indians, and were hard-working, productive citizens who not only opposed the disregard of law, but also opposed the communal ownership of the land.

THE PROBLEM OF THE FREEDMEN

During the period of the leadership of Charles Curtis, another problem had grown to perplex the people of Indian territory. Some of the Indians, and particularly the part-Indian, were educated and economically successful people. Numbers of them had brought Negro slaves with them into Indian territory at the time of removal from the Southeastern States. It was in the enchanted land of the Choctaws and Chickasaws, on the Colbert plantation in the beautiful Red River Valley, that Negro slaves originated that inspiring spiritual "Swing Low, Sweet Chariot."

At the close of the Civil War, under the Emancipation Proclamation, these Negro slaves were freed. They became citizens of the tribe, or nation, in which they were freed—and, among the Five Civilized Tribes, were known as Indian freedmen. In addition to granting these Indian freedmen citizenship in the tribes, however, the U.S. Government in some instances purchased head rights within the tribes for them. Because of their association with the educated and successful Indians, and the exacting frontier environment in which they lived, these freedmen were of a high degree of intelligence and of resolute character, and the protection of their rights by law added another serious problem to the many land-title problems in Indian territory.

PROBLEMS OF PREPARING TERRITORIES FOR STATEHOOD

All of the problems had to be solved; but paramount among them was that of preparing Indian territory and Oklahoma Territory for statehood. Tribal title to the land had been acquired by the Five Civilized Tribes through treaties with the U.S. Government, and it was properly assumed that these rights could be relinquished, and the distributive share of the tribal estate vested in each individual Indian, only by new treaties—whereby the tribes would agree to the necessary changes for allotment in severalty. Without such new treaties, it seemed impossible to bring about the changes needed to prepare the Territories for statehood. In the meantime, under great public pressure, Congress had opened large tracts of land in Oklahoma Territory to white settlement. Great rushes for these free homes were made by people from nearly every State in the Union. In 1893, Congress authorized the Dawes Commission to induce the tribes to consent by treaty to individual allotments of Indian land, and to Government administration from Washington.

CURTIS DETERMINED TO SOLVE PROBLEMS

These were the problems that faced Indian territory and Oklahoma Territory when Charles Curtis officially entered the scene. It was his great love for the Indians, and for law and justice, that caused him to determine to stop the lawlessness that ruled the land; to abolish the reservation system which segregated the Indian from society; to extinguish the communal ownership of land that prevented admission to the United States; to resolve the problems pertaining to white intruders; and to give protection by law to the rights of all the citizens—Indian, white, and freedmen.

THE CURTIS ACT

Under the leadership of the Dawes Commission, new treaties were made with all of the Five Civilized Tribes—and were in each instance approved by the Indian electorate. But it was the Curtis Act of June 30, 1898, that presented the first answer to all of the basic problems which involved titles in Indian and Oklahoma Territories. It is beyond the scope of this address to recite the 16 fundamental changes brought about in Indian titles and relations, and the Indian way of life, by the Curtis Act. It should suffice for our purpose to say that the first of these provided for the enlargement and extension of the jurisdiction of the U.S. Courts for Indian Territory, so as to include causes of action irrespective of parties, and to give the U.S. Courts jurisdiction to try suits by or against the several tribes. It also conferred additional jurisdiction over crimes and other causes of action. Charles Curtis was devoted to ending the terror and lawlessness in Indian territory.

In this period one may read of the impress made by U.S. Judge Isaac Parker of Fort Smith, Ark., who with great courage conducted an unswerving program which went far toward resolving the reign of lawlessness by executing criminals and clearing the outlaws from Indian territory.

CRAZY SNAKE AND THE PIN INDIANS

Not all of the Indians, however, were in agreement with Charles Curtis' irrevocable commitments to the proposition that the future welfare of the Indians would not be served by segregating and confining them on reservations. Not all of the Indians upheld his determined advocacy of the policy to allot to each Indian his or her distributive share of the tribal lands and the conferring upon each Indian of unlimited citizenship. In fact, one of the most interesting movements among the Indians was organized to resist the distribution in severalty of the tribal properties.

As is usual in a period when a society is being transformed, there were those who were determined to preserve the old traditions, the communal way of life, the self-government. A segment of the Cherokee Indians organized into what they called a Keetoowah Society. They were known as Pin Indians because of the custom of wearing two pins crossed visibly upon their clothing as a symbol of membership in the Keetoowah Society. They were led by an Indian known as Red Bird Smith.

An organization among the Creeks known as Snake Indians was led by a Navajo, popularly known as Crazy Snake. Your speaker today remembers the immobile, sensitive, handsome Indian features. His group included not only Creeks but some members of the Choctaw, Chickasaw and Seminole Tribes. Though he and his organization were ultimately subdued and overthrown at every turn, he will be remembered as a great Indian leader who fought to the last for the preservation of the Indian way of life, the gallant leader of a lost cause.

ADMISSION TO STATEHOOD

The Curtis Act resolved every major problem in both Indian territory and Oklahoma territory, and completely altered the nature of all land titles, thus bringing about those changes which were necessary to prepare the territories for admission as a State. An enabling act was passed by Congress and, in a convention held at Guthrie, a constitution was prepared. On September 17, 1907, this constitution was adopted by the electorate of both territories; on November 16, 1907 the State of Oklahoma was admitted to the Union.

THIRTY THOUSAND LAND SUITS AND THE MAC MURRAY CONTRACTS

The old problems were resolved; now new problems arose. Some of the lands allotted to the Indians were unrestricted and could be sold by the Indians; other portions were restricted and nontaxable. These complex Indian titles gave rise to a period of land swindlers and grafters in the new State of Oklahoma. Crimes were committed; children were murdered so that their lands could be inherited unrestricted. The new rush to Oklahoma caused by the discovery of oil heightened the desire of the grafters to acquire Indian titles. A wave of protest and indignation against the conduct of the grafters arose, originated this time among the people of Oklahoma. Public conscience required that action be taken to protect Indian titles. Thirty thousand suits were filed to quiet title, alleging that the Indian in each instance had been defrauded. These suits were brought by the U.S. Government.

(NOTE.—Your speaker of today was appointed Assistant to the Attorney General of the United States to help bring the suits, and was also the attorney for the Choctaw Nation during the controversy which resulted in the cancellation of the MacMurray contracts.)

CURTIS "CLEAN AS A HOUND'S TOOTH"

During this period, nearly everyone connected with Indian affairs was charged with

some form of graft or corruption. The so-called higher-ups did not escape. There were those who even attempted to smear Senator Curtis, of Kansas, because of his prominent leadership in Indian affairs. Hardly anyone escaped some form of condemnation—but it was in this turbulant time that the character of Charles Curtis appeared in its true light.

Curtis was never a rich man, but with all the opportunities for graft available to him because of his prominence and power pertaining to Indian titles, people assumed that he would profit thereby. But, through all the charges and counter-charges of the period, the character of Charles Curtis stood out, to use an old frontier expression, "as clean as a hound's tooth." That is one of the reasons why the Indian people are conferring the great honor which Charles Curtis' memory is receiving today, and one of the reasons American citizens elected him to the second highest office in National Government.

PROGRESS OF INDIANS SINCE CURTIS ACT

As a result of the work of Charles Curtis, the Indians entered a new situation on terms of equality with their white fellow citizens. In the State of Oklahoma, the Indians were entitled to attend (and did attend) all of the schools in the great Oklahoma school system—all of the way from the primary grades through the preparatory schools to the colleges and the University of Oklahoma.

Now, after 50 years of statehood, Oklahoma Indians are competing not only in the schools, but also in every department of science and literature, of commerce and politics. The possession of Indian blood in Oklahoma is an honorable heritage. In all walks of life, Indians have distinguished themselves among the citizens of Oklahoma. They have been elected to represent the State in the U.S. Senate and in Congress; they have been elected to administer the State's affairs as Governor and as members of the judiciary—including justices and chief justices of the Supreme Court of Oklahoma. The blood of the original American flows in the veins of the present beautiful and talented First Lady of Oklahoma, and she is not the first woman of Indian blood who has enjoyed that distinction.

The Indians of the Southwest have distinguished themselves in peace and war—remember, there was an Indian hand on the staff of Old Glory when it was raised over Iwo Jima. More than that, the Indians have distinguished themselves as religious and educational leaders. The Indians have accepted in full measure the principles of the Sermon on the Mount, and especially the Golden Rule; they have accepted the American heritage, and have adopted as their own the truths that are self-evident in the Declaration of Independence and the rights of man enumerated in the Constitution. The Indians are fully committed to the proposition that to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed.

The Indians have accepted the white American heritage, and the white people, to a great extent, have accepted the Indian heritage. The result is that under the spiritual leadership of Charles Curtits, the Indian and the white citizen of Oklahoma have become one people. Together, they uphold the principles of individual liberty, regulated free enterprise, self-government, and justice. These are the principles which have made America great, and they are the same principles for which oppressed humanity has struggled through the ages. We might add that these principles have been defended, and upheld, by the sacrifice and suffering and courage of American soldiers and sailors in battle all the way from Bunker Hill to Heartbreak Ridge.

Today the Indians of the United States are honoring Charles Curtis for his great work in solving the problems that imperiled the growth and development of Indian territory; in helping to bring the Indians the rights and benefits, as well as the responsibilities, of American cittizenship; and for the constructive leadership he gave to all Americans.

On behalf of the National Hall of Fame for Famous American Indians, I accept the bust of Charles Curtis of Kansas for a place in the Indian Hall of Fame.

---

## The End of Empire

EXTENSION OF REMARKS
OF

### HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mrs. BOLTON. Mr. Speaker, in the November 29, 1958, issue of the Saturday Evening Post is an article by Dennis William Brogan, professor of political science in Peterhouse, Cambridge University, England, titled "The End of Empire." An Irishman born in Scotland, he was educated at Glasgow University, Oxford, and Harvard. Author of some 17 books of political and historical interpretation, several of which treat the American scene with friendly warmth and understanding, Reinhold Niebuhr has praised his extraordinary gift for understanding and illuminating the woof of constitutional principles and the ways of political tactics in the fabric of democratic history.

World changes are taking place so rapidly these days, adjustment to new ways, new ideas, new horizons has become so imperative that an article such as "The End of Empire" makes a very real contribution to all who are endeavoring to keep a balanced view. To the end that others may find in Professor Bogan's presentation material that will be helpful, I am asking to insert it with these remarks.

THE END OF EMPIRE

(By D. W. Brogan)

More than one foreign observer has noted, admired, and envied the unconditional loyalty of the average American to the American political tradition. And as a source of internal, of external strength, the loyalty that sends boys and girls on pious pilgrimage to the National Archives to revere the Declaration of Independence and the Constitution is wholly admirable. But when the good American transfers his gaze to the outer world, when he innocently looks for equivalent institutions in that less fortunate part of the globe, when he takes as having the same meaning as he gives them inside America such common words as "freedom," "good government," "progress," he asks for trouble. And with the promptitude of superservice, he is given it. His plate is filled with problems, and he is driven to realize that he is the victim of the old Chinese curse. He "is living in interesting time."

The good American is confronted all over the world today with two linked phenomena, the decline of empires and the rise of nations. He can, as a good American, have no doubts as to the sentiments he must feel at the news and noise of those phenomena. He must rejoice that empires are falling (did not America give the first push in 1776?) and rejoice that new nations devoted to freedom are arising (did not America set the example in the same fateful and admirable year?).

But having paid this respect to the national tradition, the American notes with bewilderment and often with downright annoyance that peace, progress, good will, order, and liberty don't seem to be in any greater supply than in the bad old days. He hears doubts expressed as to whether some free nations (Indonesia, Burma) are as well off as they were in the days of imperialist tyranny. He notices that there are two nations on very bad terms with each other in that land called India that was united under British rule, and that their creation was the signal for massacre, rape, and exile on a colossal scale. He has to face in his morning paper news of bloody rioting in Ceylon, led, with a high degree of inconsistency, by Buddhist monks. New nations in Africa such as Ghana threaten to suppress internal opposition by methods very reminiscent of the bad old days. Even after paying during an American visit, homage to Washington, Jefferson, and Lincoln, Dr. Sukarno, of Indonesia, returns home via Moscow much more impressed by the relevance of Soviet experience than of American. Newly enfranchised nations such as Egypt gladly dicker for arms with the Soviet Union. An Indian state elects a Communist government, and each area, liberated from imperial slavery, seems to develop odd ways of attaining those unalienable rights proclaimed in 1776. Indeed, some of them seem very easily alienable under the pressures of freedom.

Nothing can be done to make the world easily and automatically safe for democracy (as Chesterton pointed out in 1918, "The world will never be made safe for democracy, it is a dangerous trade"). The good American will have to get used to seeing his principles parroted and parodied. But he will suffer less and be less tempted to angry and foolish reactions if he can bring himself to think that maybe the decline of empires, at the speed at which it has taken place, is not an unmitigated benefit, and if he also can bring himself to accept the fact that a nation which gets its freedom—that is, is freed from foreign rule—gains that and nothing more. What it gains may have little or no relevance to its real economic or social problems, except to make them worse, and even if it is evident that the gains are well worth the price, the price may yet be very high. And if the price includes poverty, disorder, and division, the United States in its own interest may be forced to pick up the tab.

The United States may have to step in to fill the gap in common defense made by the withdrawal of the imperial power. It may have to spend men, money and patience (patience will be the hardest to come by) to prop up a new, free, but rickety governmental structure. It may even, as a last aggravation of its sad state, have to receive, with what self-control it can, charges of exploitation and imperialism made by peoples in complete control, as far as the American goes, of their own destiny. Bewildered and bothered, the American in the street—or in the White House—will be less bewildered, if no less annoyed, if he accepts the fact that the end of empires is the end of an epoch that suited the United States pretty well, and that the wicked, grasping imperial powers were doing a job (possibly from the worst of motives) that somebody had to do—a job that now must be done mainly by the United States, the reluctant legatee of the old firms now in liquidation.

For the decline of empire means that passing of a crude form of solution to a real problem. All nations are equal, but some are more equal than others. Since this cynical view happens to be true, it means that nations have very different resources, degrees of competence, are at very different

stages in historical development (but want to be at the same stage) and, in defiance of all objective assessments, are ready to assert that this stage of real equality has been reached—that Liberia is a Republic in the sense that the United States is; that Ceylon is a state in the sense that Holland is. The old, condemned imperial order denied this. It asserted that nations were unequal, that they were at different stages of development and that the advanced nations had the right, the opportunity and the duty to bring the backward areas, forcibly, if need be, up to scratch—a laborious and expensive process for which it was only reasonable to charge a fee.

I am well aware that this appears to contradict the formal doctrines of the Declaration of Independence and that such doctrines would be shocking if developed inside the United States. California and Mississippi are equal and are at the same stage of progress; the peoples of the two States are equal, if not identical, and law and custom make no difference between one group of inhabitants and another. Such is the theory; I beg to be excused from comment on the fact. But outside the United States, until very modern times, this was neither theory nor fact. No one thought that Egypt (legally then a Turkish possession) should be allowed a free hand in controlling the way from Europe to Asia simply because it owned the Isthmus of Suez. (The United States, nonimperialist as she was, took much the same line about Colombia's claim to own Panama.)

There was a practical justification for this high and mighty attitude. All the new techniques that transformed the world in the last 150 years originated in Europe or North America. The owners of the new machines and the new weapons faced a world that lay lapped in immemorial slumber. Briskly, like the proprietor of a health farm, the white world insisted on wakening the sleepers, by ruling them directly, as in India; by insisting on a highly privileged position, as in China; or by frightening the more alert into imitating the white man before he took over, as in Japan. Conquest, empire was an old as human society. What was new was the expanding technical superiority of the conquerors that ate into the "cake of custom," prodded the sleepers wide awake and bred, in reaction, the force that has undone the empires—nationalism.

It is desirable at this point to proclaim that I am too much disposed to accept the unavoidable to protest against this state of affairs. As the wise Bishop Butler put it, "Things and actions are what they are, and the consequences of them will be what they will be; why then should be seek to be deceived?" Why indeed? But it is a part of deception not to notice what follows from things and actions being what they are, and there is some danger of such error being committed.

The first error in which it is tempting to fall is to assume that the end of imperialism, the arrival on the stage of nationalism, is necessarily accompanied by material or even by moral progress. For it is too often forgotten that the basic article of the nationalist creed it that progress, good government, liberty and civilization have no meaning except in nationalist terms. It is true that nationalist propaganda usually promises lots of goodies as well as national "freedom," but they are not of the essence of the contract, and the promise is often not kept. For example, material progress may be accelerated, usually is accelerated when the economic area of a state is large. The size of the United States is one reason for its wealth. But nationalism usually breaks up existing economic units (usually, not always), for, to the nationalist, progress in material well-being is empty if it does not mean progress in national well-being. A man can be emotionally well off only in a nation state to which he belongs, even if he could be materially better off in his mere material command of goods in a vaster nonnational or antinational area.

Thus, although not a perfect economic unit, the old Austro-Hungarian Empire was a more satisfactory one than that created by the "succession" states. Yet it is now—and was in 1918—useless to point out this fact to the emergent nationalities. What they wanted was not well-being, but national well-being. It was a choice that the peoples of the old empire were free to make as a result of the Allied victory in the First World War. They made it, and no wisdom from above the battle, from Woodrow Wilson or Herbert Hoover, could have altered that fact.

After all, no such decision is as irrational as the decision to wage and endure war, and we are all conditioned to make that decision. "Give me liberty or give me death" is not only Patrick Henry's slogan. The same uneconomic choice can be seen nearer to the United States. What rational justification is there for the frontiers of Central America? The little republics round the waist of the Americas are obviously designed to be united or even to be united under Mexico. But suggest that to them. I am quite prepared to believe that even Panama, invented for the convenience of the United States, has bred in the past 50 years a genuine national feeling that will last—and may become a real nuisance to the United States, at any rate from a propaganda point of view. Why should Panama not imitate Egypt? And, from the nationalist point of view, there is no easy answer to that one.

The greatest single gift of British rule to India, perhaps the only one, was the creation of India. For it did not exist before the East India Co. and then the British Indian Government by war, by road, by railway, by law made a united government and a united economy for a subcontinent never before united in history under an effective central Indian Government. But the first result of freedom for the India thus created was suicide. We now have India and Pakistan, the latter state a nation that did not exist. even as a name, 50 years ago. The one great good thing imperialism did was undone. The unity the French imposed on Indochina has not survived their defeat, and it is not certain that the unity of Indonesia (another artificial, imported name) will survive Dutch rule for long. All of these breakdowns in unity may have been worthwhile; they were certainly nearly, if not quite, inevitable, but they had a high price.

Nor is that all. The division of the imperial units suggests something about nationalism that is novel and ominous. Nationalism often, too often, breeds nationalism. Peoples who have got along more or less with each other under foreign rule suddenly develop violent antagonism when foreign rule is withdrawn or is threatened with collapse. For under the foreign tyrant some kind of neutrality could be imposed from above. If neither group ruled itself, it had not to worry about being ruled by its neighbors. But if those neighbors were on the way to becoming the ruling class, then the prospect of local foreign rule became intolerable. So the Indian Moslems revolted against the prospect of Hindu rule: Turkish turned on Greek Cypriots; and in once peaceful Ceylon, Singhalese turned on Tamils as self-government, freedom, got more complete. Nationalism, that is to say, is often the result of a reaction. If a government claims to embody a national tradition, a way of life, a language, a religion, or all of them, people have got to ask themselves is it really their way of life, language, religion? Often the answer given in blood and rapine is "No, a thousand times no." Freedom is these situations—and they are common enough—brings not peace, but a sword.

And this leads to the invention of nationalities, to the creation of new human groups cut off from, the mass of mankind by new feuds, new and carefully fostered differences. It is, of course, too easy to be critical and cynical about the history manufactured for new nations or old nations making new claims. Popular history in all countries is full of comforting legend. It is largely because they have their nationalist growing pains far behind them that western European and North American nations can afford to be scholarly, critical; can debunk national heroes and legends, remember that Washington swore, and doubt the cherry tree. Some Americans in the South may even doubt whether Lee made the right choice in going with his State in 1861 instead of sticking with the United States, and some Germans may believe that Bismarck's temporary triumph was a long run catastrophe for Germany and for Europe.

We cannot expect this kind of critical history from new nations. We should be more struck with admiration than we are when we get an approach to it as we do in India in the educated classes, or when we think of Thomas Masaryk exposing the Dvur and Hora forgeries of the country's literary past, despite the fact that they flattered Czech national vanity. But we must be prepared today for a high degree of fiction in all or almost all nationalist propaganda, and the American people, full of kindness and credulity, must not be shocked when they discover that some interesting spokesmen for some interesting countries are prone to the use of what Huck Finn called "stretchers."

What is more important is the not infrequent case where historical fiction conceals from a long-suppressed and now renascent nation that its misfortunes are also largely its own fault. Except where the preponderance of power is overwhelmingly on the imperial side, and possibly not always then, the fact of subjection is a fact about the oppressed nation. It suggests weaknesses that mere freedom will not necessarily cure. Freedom may be (I think today it almost always is) the necessary preliminary to curing the weakness, but the weakness of resources, traditions, social habits is there to be cured. Waving a new flag makes you feel good, but that is about all.

It is difficult for Americans to realize that for a great part of the world, the views of poets and philosophers, of orators and legend makers are more important than the views of businessmen or scientists or economists. The Arabs are dazzled by their own past, seen in a golden haze. For two generations they have been asking the question why they, who once ruled the Mediterranean and brought civilization to the Christian barbarians, have been kicked around and subjected to foreign rule in their homelands. And the answer they expect must be encouraging. It must exaggerate the unity of the Arabs and suggest that only Western tyranny or local corruption prevents the creation of a great Arab nation stretching from the Atlantic to the Persian Gulf. It must ignore permanent and desperate problems of inadequate resources (as in Egypt and Algeria); of undoubtedly Arab but totally anachronistic social structures (as in Yemen and Saudi Arabia). It must find in hatred of Israel a substitute for difficult problems of social and religious readjustment. It must be uncritical of the social results of Islam. And it must give a great place to treason. For all suppressed nations have a deep conviction of betrayal.

Let Erin remember the days of old
Ere her faithless sons betrayed her,
When Malachi wore the collar of gold
That he won from the proud invader.

What the Irish sang the new nationalities still sing, and so every national leader has to look over his shoulder to keep an eye on

his countrymen, who may see in the possibly inevitable failures and limited successes of freedom not a result of the nature of things, but treachery. So Nuri-as-Said is butchered, so Gandhi is assassinated.

And the leaders who have to be watchful often become leaders by negation rather than by affirmation; they are against something (foreign rule) rather than for something, for basic changes in the internal structure of the nation, eradication of the very weaknesses that helped to produce foreign rule in the beginning. Of course, this is not always so. Nationalist leaders are sometimes preachers, as was Gandhi, of self-reform as well as of the expulsion of the foreigner. The Gaelic League, the chief begetter of modern Ireland, had as one of its slogans: "And as we are shall Banba (Ireland) be." But it is easier to damn the imperialists than to go in for fundamental self-criticism, and when the imperialist has been heaved out or has left under his own steam, the basic problems remain.

So the world is faced with the new states with inadequate economic resources, with erratic frontiers, with dissident minorities, with delusions of grandeur and, what is worse, of goodness. And all this is in a world where the new nations are almost all arising in poor regions where, even with the best and most rational government, the headaches would be frightful, where the problem of keeping abreast of the birth rate and of not actually going backward in well-being is serious enough to daunt the bravest. It is not being offensive or aggressive to assert that half the nations whose delegates give parties in New York round the United Nations building are too poor and too backward to give their peoples in the next generation even as good a government and as adequate a standard of life as the most backward European nation (let us say Portugal) or the most backward American State (let us say Mississippi) possesses.

Freedom from imperial yoke may even be a luxury some of them (which could be named) can hardly afford. There are areas in the dwindling British and French Empires that are a dead loss to the imperial power; regions that cannot afford freedom, although only the most prudent of their leaders know this. For there is nothing in the law of nature and of nature's God that provides that an area with the linguistic and cultural unity that demands nationhood and will not be denied will have any of the other resources for even frugal well-being.

The great problem of the concentration of most of the world's wealth and technical competence in a small area of the globe has many nonpolitical aspects. It is to be noted that there is no first-class industrial power outside the temperate zones. But the political problem of the replacement of the empires by the nations is one of the governing conditions of any attempt to redress the imbalance that is so deeply and dangerously dividing the world. And it is the beginning of wisdom for Americans, conditioned as they are by their own largely irrelevant history of nationmaking, to recognize that national freedom may be an obstacle to a quick redressing of the balance, both by creating doubtfully viable national units and by transferring authority to leaders whose competence has lain in the exploiting (all right, the heroic undoing) of a national grievance.

But if this is the beginning, it is not the end of wisdom. For it is not only a fact, if not a totally welcome fact, that the days of empire are over; it is a fact that the nation state offers possibilities of improvement that the empires either never did (which I doubt) or have ceased to do (which I admit). There is another fact. If one political truth is established today, it is that once the nationalist bug bites a group of human beings they cannot be cured except by national freedom, with all the possible social and economic disadvantages it may bring. Once an Algerian, for instance, decides that he is not a Frenchman and doesn't want to be one, rational economic argument is wasted. Bernard Shaw usually talked nonsense of political questions, but he occasionally talked sense, and his Irish origin illuminated much of this question for him. So, he wrote sense in his preface to "John Bull's Other Island", the only play he ever devoted to his native land. "A conquered nation is like a man with a cancer: he can think of nothing else, and is forced to place himself, to the exclusion of all better company, in the hands of quacks who profess to treat or cure cancer." This is true, and the first great gain of freedom is that thought and effort can be devoted to something more immediately relevant than freedom.

It does not follow, of course, that it will be. There are few greater emotional losses than a grievance that explains why things have gone wrong in terms of another's fault. Any father of a family can testify to that (and his children can testify, too, in another sense). To get freedom is to lose a grievance, and some nations have firmly refused to give up their darling excuse. Thus, if the people of the Argentine Republic devoted a tenth as much rational thought to the causes of their serious, but quite curable troubles that they have wasted on irrelevant and unjust spleen about "Yanqui" imperialism, they would be a great deal better off. If a patriotic Cuban put to himself the question, "Would we not have been materially better off if we had had more Yanqui imperialism?" and then admitted that some, if not all, of the troubles of Cuba are homemade, freedom would be an unmitigated good. Can any candid observer, looking at Haiti and the Domincian Republic, pretend that freedom is always an unmitigated good?

The beneficial effects of freedom can be seen in two such different former jewels of the English crown as Ireland and India. For more than a generation of freedom has taught most of the inhabitants of the Irish Republic that their troubles are no longer of England's making, that the border is neither here nor there in the bookkeeping of a declining nation, that the Gaelic League was right: "And as we are shall Banba be." Even an act which, seen from the outside, seems one of the most foolish ever perpetrated by a rational community—the exit from the Commonwealth in 1948—may have been worth the price in making plain to the Irish people that a republic left them where they were, with the basic problem of why the Irish won't, if they can help it, live in Ireland.

The problems of India are so gigantic that courage fails the spectator (but not the Indians). But one great gain is the creation of a government that does not hesitate to face Indian abuses such as the caste system. The government of Nehru makes many mistakes, but it can, through the mouth of the Prime Minister, preach to the Indians the lesson that it is now up to them. No British Government could do that. It can risk appearing antireligious as no British Government dared risk appearing. It has not succeeded in abolishing untouchability or in winning over all the primitive tribes of India. It has not undone many centuries of limitations on the role of women. It has not succeeded in giving India what India needs badly, a competent and enlightened business class. But it has made beginnings in all these fields. It has kept India from becoming a mere Hindustan. And it has made it possible for Indians to borrow from the West with no feeling of humiliation.

There is nothing that the new Indian Government did that enlightened British officials didn't see as desirable. But, in this century, the British Government in India had lost the power to innovate. An imperial power that begins to doubt its mission is rightly doomed. The old, confident, authoritarian British rulers stamped out the burning of widows, the religious murders of the Thugs, abolished backward kingdoms like Oudh and introduced in a fine philistine fashion the English language as the lingua franca of all India. These things, with the Indian Army (obedient to civilian authority) and civil service (uniquely honest and competent in Asia), were great British legacies, but it was time for the British to go. Talk to an Indian who is now liberated from the need to think, all the time, in terms of national freedom, and you see the gain. He may even think that Macaulay, imposing English, had something to be said for him as he contemplates the bloody riots over languages that freedom has brought and the danger that an "Indian" national language such as Hindi may be a source of disunion and breed a new Pakistan in the south.

If this is the first, it is not the only gain. Indian nationalism may be simply the fruit of anti-British feeling, but it is a fact and gives India a new unity most necessary in a land divided by language, race, caste. It gives the Indian a new feeling of not being looked down on, and so a new freedom in his attitude to the outer world into which India has been dragged. True, the kind of dignity that nationalism breeds may be touchy, offensive, unrealistic, but there is no substitute for it. As the American Negro is no longer content to be grateful for concessions made from above, all over the world hundreds of millions of men are finding a new meaning in life, a new loyalty to something bigger than the village, the caste, the tribe.

It is not in solving immediate technical problems of well-being that the nations score over the empires. They often handle them, for quite a long time, worse than the imperial rulers did. It is in creating a new type of human being, who may not, is it true, adjust himself adequately to the new world, but at least is not doomed to fail in that adjustment as the empires finally became doomed to fail.

If the American abandons the fallacious parallel with the facts of the American Revolution (as apart from the spirit of '76) and contemplates the new world that is coming into being, he will be forced to avoid snap and easily systematic judgments (especially the judgment that assesses the worth and prospects of a new nation by its willingness to be noisily anti-Communist). He will see many nations running before they can walk—and so falling; demanding steel mills when what they need is more wells and better seed; aspiring after the heights of atomic cannon when they need to learn how to maintain a truck; above all, pouring out endless floods of what it may be too unkind to call mendacity, but can justly be called nonobjective information.

He will find few nations willing—or able—to imitate all or most of the American way of life, social, political, economic. If he wishes to help the world (as many do), he will have to learn to help it in un-American ways, to learn un-American qualities such as patience and the willingness to wait a long time for results. If what he wants is allies against communism, he will find in nationalism the most, perhaps the only effective force against international communism, even when that nationalism is unwilling to stand up and be counted. For the great battles will probably be fought in the hearts of men, not on material beaches where marines can land, but in a world now effectually united for the first time in history by material means and divided by passion and envy. One may regret the old imperial days, but the awkward and often unprogressive nationalist world is that in which we all must now live.

## Establishment of a U.S. Foreign Service Academy

EXTENSION OF REMARKS
OF
### HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. CELLER. Mr. Speaker, on March 2, 1959, I introduced a bill in the House of Representatives, for the establishment of a U.S. Foreign Service Academy. This school will provide the corps of well-trained, devoted foreign service officers required by America's position in world affairs.

For 10 years, the United States has been engaged in an uneasy peace—really a war with different weapons. This means, simply and fortunately, that the shots are not yet being called by the generals, but rather by our diplomats and policymakers. Important and far-reaching policy decisions are being made, based upon the assessment of local situations by our official representatives abroad. Their conduct, attitudes, and knowledge strongly influence the opinion which foreign nations hold of us. Frequently, the difference between a stunning diplomatic success and abject failure turns upon the effectiveness of our diplomatic representation. Yet, in this day and age, the Government of the United States still does not maintain any school, adequate for training our career Foreign Service officers.

Let us look at only one aspect of the need for such training. Fifty percent of the entire Foreign Service officers do not have even a speaking knowledge of any foreign language. Seventy percent of the new recruits coming into the service suffer the same deficit. Many of our Ambassadors cannot speak the language of the country to which they are at present accredited. In nine Arab Nations only two of our Ministers speak Arabic. In Japan, Korea, Burma, Thailand, Vietnam, and Indonesia, our Ambassadors must speak through interpreters.

Effective representation abroad requires proficiency not only in foreign languages, but a thorough knowledge of the history and culture of foreign lands, an understanding of international and local economics, a thorough familiarity with diplomatic practices and procedures, and a working knowledge of the political systems of other nations. Yet, many of these essential subjects are giving way to sciences and mathematics in our universities. In the interest of world peace, we must have a balance between emphasis on general education and emphasis on science. Scientists do not make policy and policy is what we sadly lack today. Good policy is born out of knowledge and training.

Training for our Foreign Service should be maintained by a Foreign Service Academy administered with the discipline present in our military service academies. Such an Academy would attract capable young people into the diplomatic service, who might otherwise go into other professions. Thus, the education of our future ambassadors would be begun at the receptive age of college freshmen and this would provide sufficient time for broad background studies and special training. Academy training would also generate the esprit de corps which every first-rate organization must have.

Under the provisions of my bill, students would be selected for the Academy upon competitive entrance examinations as prescribed by the Secretary of State. Each diplomatic cadet will be expected to sign an agreement signifying his willingness to accept an appointment and serve as an officer in the Foreign Service for at least 3 years following his graduation.

The establishment of a Foreign Service Academy will be a significant step forward in vitalizing the diplomatic service of the United States. This should not be the end, but rather the beginning. Congress must also consider granting realistic and adequate funds for the maintenance of our Foreign Service, so that capable Foreign Service officers will not be impoverished in the performance of their duties.

The text of the bill follows:

A bill to provide for the establishment of a United States Foreign Service Academy

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That this Act may be cited as the "United States Foreign Service Academy Act".

SEC. 2. The Secretary of State is authorized and directed to establish and maintain, in or near the District of Columbia, a United States Foreign Service Academy (hereinafter referred to as the "Academy") for the instruction and training of diplomatic cadets in preparation for service as officers in the Foreign Service of the United States.

SEC. 3. (a) The Academy shall be under the general supervision of the Director General of the Foreign Service Institute and under such regulations as the Secretary of State may prescribe.

(b) The course of instruction and training for diplomatic cadets at the Academy shall be prescribed by the Secretary of State and shall be the equivalent of the curriculum prescribed by accredited colleges and universities as a prerequisite to the granting of a master's degree. Upon satisfactory completion of the prescribed course of instruction and training, diplomatic cadets shall be granted a master's degree.

(c) The Secretary of State may appoint or assign such officers and civilian instructors as the needs of the Academy require.

SEC. 4 (a) The corps of diplomatic cadets shall consist of such individuals as may be selected and admitted to the Academy upon competitive entrance examinations as prescribed by the Secretary of State.

(b) Diplomatic cadets while in attendance at the Academy shall be entitled to quarters and subsistence.

SEC. 5. There shall be appointed each year a Board of Visitors to the Academy which shall consist of five members from the Committee on Foreign Relations of the Senate and five members from the Committee on Foreign Affairs of the House of Representatives, to be appointed by the respective chairmen of such committees. The Board of Visitors shall exercise the same functions and be entitled to the same expense allowance as is provided in the case of the Board of Visitors to the United States Military Academy.

SEC. 6. Each diplomatic cadet selected for admission to the Academy shall sign an agreement that, unless sooner separated, he will—

(1) complete the course of instruction at the Academy; and

(2) accept an appointment and service, as an officer in the Foreign Service for at least the three years immediately following the granting of his degree from the Academy.

SEC. 7. There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

## The Growing Intrusion of the National Government in the Field of Education

EXTENSION OF REMARKS
OF
### HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

*Monday, March 9, 1959*

Mr. CURTIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Growing Intrusion of the National Government in the Field of Education," written by Allen P. Burkhardt, superintendent of schools, and president of the Junior College, Norfolk, Nebr.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A SCHOOL SUPERINTENDENT'S VIEW ON THE GROWING INTRUSION OF THE NATIONAL GOVERNMENT IN THE FIELD OF EDUCATION

I would like to talk about the growing intrusion of the National Government in the field of education.

Let me put the case to you squarely—without prejudice—and with a full realization that time never stands still.

In recent years, the Congress has entertained legislation which called for National Treasury appropriations for school construction and for teacher salaries. These bills did not pass, but they are certain to be reintroduced. There is heavy pressure behind them.

Their passage would represent a basic change in the traditional philosophy of education in this country which dates back about 170 years.

Throughout our history, the American people have strongly adhered to the philosophy of popular education for all our citizens. During colonial times and during the early days of our Republic our schools were maintained by religious bodies, voluntary secular groups, and families who clubbed together to board a teacher around the neighborhood for the benefit of their children.

It was very early, however, that a public responsibility for education came to be recognized. We find the first evidence in New England where the free school was alined with the free church and the town meeting to form the third leg of what might be called a tripod of freedom.

The principle of education as a public responsibility spread from the New England colonies to others. In the second quarter of the 19th century, the movement for universal primary and secondary education led to a tremendous growth of public schools throughout the country.

State governments began to give financial support to education and to establish minimum education standards. The role of the States in education has steadily expanded ever since, although the immediate control and support of the primary and secondary school system still lies with the local school district.

The National Government stayed out of the educational picture insofar as control

was concerned; but it helped education. As early as 1785 and on later occasions, the National Government made grants of public lands to help States and Territories establish school systems. These grants were valuable assets to public education; but they did not initiate or imply a continuing national program of action for the support of education. They were in the category of single transactions. They were not in the category of continuing subsidies.

FEDERAL GOVERNMENT CONTROLS THAT WHICH IT SUBSIDIZES

The proponents of National Government intervention in public education today will tell us that times have changed, and that only a dinosaur mind would resist the appropriation of Federal funds for school construction, teachers' salaries, and other costs of schooling. They ignore or at least scoff at a Supreme Court decision which declares that the National Government may control that which it subsidizes. Those of us who say that Federal subsidy of education will lead to centralized control of education—with textbooks written by Washington bureaucrats—are brushed off as calamity howlers and croaking ravens of despair.

They will point to the fact that the National Government is already contributing to public education but is not attempting to control its direction. They raise the point that if a little Federal aid is a good thing, why not more of it?

They argue that Treasury funds help support agricultural extension programs and agricultural research at many colleges and universities; that the Reserve Officers Training Corps is federally supported. So are defense research contracts with colleges and veterans' education programs. And as for building schools—why—the argument is that the National Government built a lot of them in the 1930's and has built others since in areas especially affected by Federal activities. And what about the school lunch program?

In the end, they sum up their case by triumphantly challenging anyone who opposes Federal intervention in education by asking where the element of control comes in.

It all sounds plausible to those who have not taken the trouble to examine the facts. Those of us who work in the field of education know full well that control always accompanies gifts or loans of money. It is right that this is the case. No Government agency should "give away" the taxpayers' money without knowing what happens to it. Dr. Ward G. Reeder, professor of education at Ohio State University, an eminent authority in the field of school administration, in his book "The Fundamentals of School Administration," says: "For anyone to advocate Federal aid without Federal control is to advocate nonsense; a certain amount of Federal control has always followed Federal aid and, as the present writer believes, a certain amount of it should."

Let us take a brief look at these existing programs of so-called Federal aids to education and at the U.S. Office of Education.

U.S. OFFICE OF EDUCATION: A CLEARINGHOUSE FOR IDEAS

The U.S. Office of Education conducts research, provides information and service to school authorities and to Government agencies in the United States and abroad, compiles and publishes statistics and bulletins and performs varied service activities. It exercises little or no control over the schools because it has no general aid funds to distribute.

It administers the temporary programs of financial assistance for school construction in federally affected areas. It also administers grants to States in support of resident instruction at land-grant colleges and the program of aid to vocational education. As of today, vocational education is tied to general education more closely than it used to be, but the Federal program grew largely from a national concern about the shortage of trained labor in 1917—the year we entered World War I. As a result, the National Government provided grants-in-aid to the States for the salaries and training of teachers of agricultural, trade and industrial and home economics subjects in public schools.

VOCATIONAL EDUCATION FINANCED MOSTLY WITH STATE AND LOCAL FUNDS

Subsequent laws have broadened the scope of vocational aid. Total annual grants now amount to around $37 million, distributed among several categories.

In the fiscal year 1957, Federal grants accounted for only 19.4 percent of total public expenditures for vocational education. The States contributed 35.4 percent and local governments 45.2 percent. For every dollar the Federal Government is spending, the States are spending $1.62 and local government $2.32.

Compared with their Federal grants, 10 States spend over 5 times as much State and local funds, and 21 States spend more than 4 times as much. The two lowest spending States, Maine and New Hampshire, pay $1.90 of State and local funds for every $1 grant received from the Federal Government. Many of the States with low per capita income are spending heavily for vocational education.

It is apparent the States and localities have already assumed the major responsibility for supporting vocational education.

Most of the existing federally aided programs have matured, and might well benefit from closer integration with the general educational programs in the States and localities.

The Joint Federal-State Action Committee of Governors and Federal Officials, appointed by President Eisenhower last fall unanimously agreed that this vocational function of education should be returned to the States along with tax sources to support it. The administration has concurred in this viewpoint.

The key point is that the Federal vocational education program was designed to promote certain skills and not education generally. That is important to keep in mind. It is also important to note that the need for Federal aid in the fields of vocational homemaking and vocational agriculture has long since disappeared but the aid, with its accompanying control, continues to come. The control comes through the State, but it stems from Washington. The control is definite and in detail, regulating the course of study, length of class periods, qualifications and activities of the teachers, etc. It is also significant to note that the per student cost figures in vocational agriculture and vocational homemaking are among the highest, and in many schools the highest, of any subject in the curriculum.

FEDERALLY AFFECTED AREAS CONSTITUTE A SPECIAL CASE

It is also important to keep in mind that Treasury funds for schools in federally affected areas constitute a special case and have nothing to do with education generally. The program dates back to 1941 when Federal activity in the interest of national defense began to alter the character of various communities. Quiet communities suddenly found themselves the center of roaring activity as defense plants moved in.

The program, as it presently exists, recognizes the obligation of the National Government to support education in areas where increased school enrollment arising from activities of the National Government places a substantial and continuing burden on local school districts.

Business and civic groups which resist general Federal aid have endorsed this assistance to federally impacted areas as a necessary part of our defense effort. They know that many such areas cannot meet the sudden demands for school expansion and that the problem is often aggravated by the tax-exempt status of Federal property.

Conditions of eligibility for Federal funds and allotment criteria are provided by law. Grants are made directly to eligible school districts, and matching is not required.

In some of these schools, however, Federal support would be unnecessary and in others could be substantially curtailed if legislation providing payments in lieu of taxes were to replace the present law. There will, however, be some districts which should have continuing support from the National Government to insure adequate education for the children of Federal defense personnel—both military and civilian.

Again, the point is that the Federal aid to schools in federally affected areas is a special case. Any argument that this program is a worthy precedent for Federal intervention generally is a thing of sound and fury, signifying nothing.

SURPLUS COMMODITY DONATIONS SHOULD CONTINUE

Now we come to the school lunch program which is often cited as an example of how benevolent a centralized government can be while at the same time keeping its hands off the control of the schools by local authorities.

Irregular emergency grants for school lunches date back to 1933. Annual donations of agricultural commodities began in 1935, and annual cash grants for balanced lunches in 1943. The primary authorization for the present program is the National School Lunch Act of 1946, under which the Department of Agriculture distributes cash and commodities to States for nonprofit school lunches, and makes cash payments directly to nonprofit private schools in the 27 States which prohibit State payments to private schools.

Let us take note that the school lunch program is administered by the Department of Agriculture—not the Office of Education. This comes to pass because the program assists in cutting down agricultural surpluses. This is the primary purpose.

I think we can all agree that surplus commodity donations should continue, but I would like to see a reduction and eventual elimination of cash grants after a reasonable period of time and let the States, localities, and parents assume the full responsibility for the cash financing required.

The school lunch program has the definite merit of promoting child health, but here again, we have a case of a specialized Federal activity which can in no way be construed as a precedent for an expansion of appropriations from the National Treasury for education in general.

FEDERAL INTERVENTION IN EDUCATION IS A NEW PHILOSOPHY

The fact is that none of the long-standing education activities of the National Government have anything to do with general education. The ROTC was established in the interests of national defense. Research allotments to institutions of higher education are for the same purpose. Schools constructed in the 1930's with National Treasury funds were built to provide employment under an emergency public works program.

When closely examined, the case of the would-be interventionists in education falls flat on its face. Their alleged precedents have no real exhibit value.

THEY HAVE THEIR FOOT IN THE DOOR

Nevertheless, they have their foot in the door, and they are a force with which to be reckoned. They made definite gains in 1958. The last Congress was in a mood of intense concern about the sudden advent of the space age. It considered a variety of emergency programs to balance off the challenge of the Soviet sputniks.

In a sort of panic atmosphere the administration proposed scholarships and loans to high-ability youth and grants-in-aid to the States—which the States were to match—to improve the quality of instruction in science, mathematics, and foreign languages and to encourage statewide setups for testing, counseling, and the guidance of all teenagers.

Other proposals to accelerate the training of needed manpower included programs in foreign language training, with special language centers for the teaching of the more rare languages. They also included Federal fellowships to encourage the establishment and expansion of graduate schools and institutes at selected colleges for the further training of language teachers and guidance counselors.

Still other programs proposed as emergency defense measures were those to explore the possible uses of radio, television and other media to improve instruction, a system of area vocational technical schools, a new science information service and a better system of collecting statistics about education from the several States.

Altogether, the National Defense Education Act authorized 12 different programs, all presumed to meet the stated purpose of "insuring trained manpower of sufficient quality and quantity to meet the national defense needs of the United States." In signing the act, the President said it "is an emergency undertaking to be terminated after 4 years."

There are grave suspicions that it will not be terminated after 4 years or after 14 years. This sort of thing has an unfortunate way of becoming engraved in national policy, and the powers of the National Government under the National Defense Education Act are tremendous, even if uncertain at this date. That is why the close observers of National Government policies opposed it during its consideration by the Congress. There is suspicion about this new law, if for no other reason than it advocates of permanent Federal intervention see it as a step in their direction.

LOCAL CONTROL OF EDUCATION HAS SUCCEEDED

The best argument against such permanent Federal assumption of responsibility for education is the faith in and success of local-State government in this field. And local control of education has succeeded. In fact, we Americans have evolved the best system of education ever developed through the diverse approaches of the 48 States.

I have nothing against change, if change will actually mean progress. But there is no evidence that a change to Federal responsibility in education would represent anything but deterioration—deterioration in local effort and determination to have good schools.

The strength of this country springs from the fact that America is a Republic. The Constitution guarantees to each State the right of a republican form of government.

The phenomenal growth and development of this continent was achieved without the benevolent direction of centralized government.

Our per capita income is greater than that of any other nation. Our educational system is the admiration of the world. Only recently Britain has been examining our junior and senior high-school system with a view to adapting it to its own needs.

STATE AND LOCAL CONTROL OF EDUCATION, ONE OF OUR MOST PRIZED TRADITIONS

The trend throughout the world is toward centralized decision making—toward collectivism—and we ourselves have been edging in that direction for several decades. But collectivism breeds servility and stagnation. It has never worked anywhere, any place, in all recorded time of men.

What shall we do? Trade in a proven pattern of success for a pattern of acknowledged failure?

That is what we are being asked to do. National Treasury support for public schools would be a critical step in that direction.

The American people can take pride in the accomplishments of State and local governments in the continued extension of educational opportunities. Financial support has, on the whole, been generously provided and standards have steadily risen, even in the less wealthy States. There is ample reason to regard State and local control of education as one of our most prized traditions.

It is beside the point and completely unnecessary to justify a national interest in education solely upon considerations of national defense or population mobility.

There is nothing incompatible between the national interest in an educated citizenry and our tradition of leaving responsibility for general public education to the States. The national interest in education, like many other national objectives, is best served by State and local administration and control. National action related to general public education is best confined to research, advisory, and clearing-house functions.

It remains to apply these general considerations to existing Federal programs and to any present or anticipated shortages in elementary- and secondary-school facilities.

MORE STUDENTS, MORE TEACHERS, MORE NEW CLASSROOMS

Rapidly expanding communities have necessarily experienced some lag in getting schools built for their increasing enrollment, but the overall story of progress in education by local means is indicative of energetic leadership and widespread support.

I do not wish to clutter up this presentation with too many figures, but I would like to point out that school enrollments increased from 25.1 million in 1950 to 32.8 million in 1957. This was an increase of more than 30 percent. Nevertheless, the pupil-teacher ratio declined from 27.5 to 26.2. In other words, the teachers employed increased from some 917,000 to 1,254,000—or almost 37 percent.

This remarkable expansion of the teaching corps was achieved at the same time that the average salary of teachers was raised from $3,010 in 1949–1950 to $4,650 in 1957–58.

We expanded the Nation's teaching force by more than one-third, while at the same time increasing the average teacher salary by more than 50 percent—and during this period built almost half a million new classrooms. This is an amazing achievement. It has not been duplicated either in the world of business or in other fields of government.

Who did it? People did it. Localities did it. States did it. The National Government did not do it.

This achievement most certainly does not suggest any lack of will or ability on the part of the States and their communities to maintain good school systems.

On the contrary, it reveals a degree of leadership and a willingness to employ local and State resources for school purposes, that denies any justification for "a massive infusion of Federal funds to be used by the States and localities for teachers' salaries and to build classrooms" as recommended in September 1958 by the National Education Association.

POPULATION INCREASE CAUSES SOME GROWING PAINS

Educational facilities vary widely from State to State, from community to community. This situation intensifies the problems, found in some States, that stem from marked disparities in the size and resources of local school districts.

A number of States have reorganized their school systems to eliminate districts too small and too poor to do an adequate job. The consolidation of uneconomical school districts needs to be speeded in the interests of economy and the improvement of educational standards.

Consolidation should be supplemented by effective equalization procedures or other devices under which the State enables poorer districts to carry on an adequate school program. In addition, the State should help finance both current operations and capital outlays for buildings when the locality clearly lacks enough resources to provide them. Many States are now doing this.

Some States have severely restricted the taxing and borrowing powers of their subdivisions. Many of these restrictions, and some of the limits the States have imposed on their own taxing and borrowing powers, will, if not modified, deprive school systems of the increased capital outlays and operating revenues required during the next decade. The States should modify these constitutional and statutory limitations that impede effective State and local action.

The proper course for State and local governments is quite clear. Good schools are essential to the national welfare: The most important resource of the United States is not its soil, minerals, climate, or extent of territory, but its citizens.

STATES HAVE CAPACITY TO MEET EDUCATIONAL NEEDS

The States do have the capacity to meet their educational requirements. This is a proven fact. Every State in the Union, and probably every school district in the United States is in better financial condition than is our Federal Government. Federal aid to the schools of America would either increase deficit spending or Federal taxation and speed the inflationary trend. With financial aid would eventually come Federal control. Any degree of Federal control over education would be disastrous to our tradition of local authority and State responsibility.

If adequate educational opportunities were possible only through a program of Federal financial assistance, the decision would be clear. But it does not follow that Federal aid is the way to get good schools. Under any moderate program of aid, the amount going to individual States would not be large enough to count effectively. And Federal aid in an amount sufficient to mitigate the problem significantly would result in such undermining of State and local responsibility as to endanger seriously the kind of educational system that has served America so well.

Our lawmakers in Washington can serve us best by putting Federal participation in education and other fields which can best be honored by the States and local communities. They might better devote their energies toward the balancing of the budget and the saving of our economic system through halting the inflationary trend.

Local and State governments can, should, and, in my opinion, will make the wisest decisions—and adequate provision—for the best development of education.

## The Birthday of Amerigo Vespucci, 1959

EXTENSION OF REMARKS

OF

### HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. BOLAND. Mr. Speaker, today we celebrate the birthday of Amerigo Vespucci, though it is not quite certain that he was born on March 9, and even the year of his birth, thought to be 1652, does not go without question by the historians. But these doubts are quiet,

peaceful matters compared to the controversies that have raged as to what discovering the famous explorer ever actually did, and whether discrepancies that appear in his accounts of his voyages are due to falsification, faulty memory, or several slips of Vespucci's pen, or whether transcribers and editors of Vespucci's letters, the originals of which no longer remain for our inspection, may have mistranscribed his figures so as to make him seem to sail right through the Isthmus of Panama into the Pacific, without benefit of canal, and southward well into the Continent of Antarctica. But for all that, we honor the one whom we may call our national and continental godfather, the navigator and explorer, who, like Columbus, was of Italian birth and sailed in the service of Spain—except for one voyage for Don Manuel of Portugal. If, like Captain John Smith after him, he constructed a magnificent myth with himself as its hero, let us still gladly recognize the magnificence of the myth, and the narrative skill and geographic grasp of the writer. For it was surely Amerigo Vespucci who, by his writings as popularized by Martin Waldseemüller, brought home the new world to the hearts and minds and imaginations of the people of Europe, and roused the young ambitions of the boys who became the explorers and colonists of the next generation.

---

## Address by Hon. James C. Davis of Georgia at the Virginia Democratic Jefferson-Jackson Day Dinner, Richmond, March 7, 1959

EXTENSION OF REMARKS
OF
## HON. HOWARD W. SMITH
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. SMITH of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I present a speech delivered by Representative JAMES C. DAVIS of Georgia at the Virginia Democratic Jefferson-Jackson Day dinner in Richmond on March 7, 1959.

Today our Government and the Constitution upon which it is founded are under heavy attack. It comes in a form which was anticipated by one of your greatest fellow citizens, the Father of our Country, General and President George Washington. In his farewell address on September 17, 1796, he said:

"If, in the opinion of the people, the distribution or modification of the constitutional powers be, in any particular wrong, let it be corrected by an amendment, in the way in which the Constitution designates—but let there be no change by usurpation; for though this, in one instance, may be the instrument of good, it is the customary weapon by which free governments are destroyed."

The threat to our Constitution comes from activities of the Federal Supreme Court. The trend of the Supreme Court, as presently constituted, has been to flaunt the law and the Constitution; to regard the whole body of the law as an uncharted sea; to arrogate unto themselves complete authority to make law as they think it should be made. These would-be reformers want to write the law to conform with their own perverted ideas of what law should be instead of what it is. They want to read into the Constitution alleged meanings which no lawyer or judge or layman ever read into that document in the history of the country before.

In the 17-year period beginning with 1929, that Court rendered 28 favorable decisions to defendants who were either Communists or charged with subversive activities. This is the Court which struck one of the hardest blows at our Constitution in the school segregation decision of May 17, 1954. I want to talk some tonight about this case, where all pretense at following the law was dropped; where its decision was in effect that changing times and conditions required a changed interpretation of the 14th amendment, and, they said we therefore change it. The people of my State, and I believe the people of your State, do not intend to see our constitutional rights struck down by judicial dictatorship. We shall resist it by every legal means.

I have not come tonight to talk about what cannot be done. I have come to speak of what can be done—what is being done—and to repeat the age-old truism that where there's a will, there's a way. I know of no better philosophy than the motto of David Crockett: "Be sure you are right, and then go ahead." I am convinced that when right is challenged by arrogant authority, a bold defense of that right will rally to its cause the support of the people. I well remember the occasion in Georgia when a President of the United States declared himself against the reelection of our senior Senator who had refused the demand of that President to pack the Supreme Court. In ringing words, the Senator said: "Mr. President, I accept the challenge." The people of Georgia rallied to his side and returned him to the Senate with a tremendous majority.

The arrogant brutality of Mr. Eisenhower in running roughshod over the citizens of Little Rock with his paratroopers so crystalized sentiment in Arkansas that they did the almost unheard of thing to re-elect a Governor of the State for a third term, and to defeat an eight-term Member of the United States Congress with a write-in candidate. For the first time in the State's history the gubernatorial candidate carried all its 75 counties.

The answer to the threat which you people face in Virginia, and which my people in Georgia face, is first, to satisfy ourselves that we are in the right; second, to firmly resolve that we will support and defend that right; and third, to organize with all who believe as we do and then work together with all the energy and determination we possess to win the battle.

The most effective method, I think, of protecting ourselves against the fraudulent destruction of our constitutional rights is for the great mass of American people who believe in constitutional government to organize for the purpose of preserving it, to alert and convince our people of the need for active, continuous, cooperative effort to stop this encroachment upon our liberties. It is of the utmost importance that we all realize this need for organized, unending, cooperative effort, and that we make it our number one goal and objective until we have brought a stop to this Federal encroachment upon our States' rights and local control of our own affairs.

I can tell you, and I do tell you, that our people in Georgia have resolved that we will never surrender the control of our schools to a judicial dictatorship operating in Washington. When the fraudulent and outrageous school desegregation decision was foisted upon us in 1954, Georgia's people said—there will be no integration in Georgia schools. To this good day there has not been the first instance of integration in Georgia schools. The determination to resist is as strong in the hearts of Georgians today as it was when they resisted the carpetbaggers of the reconstruction era, and again when they declared their determination to resist modern carpetbaggers and modern reconstruction in 1954.

You Virginians do not have to look to Georgia, however, or to Arkansas, to point you the way. Within the borders of your own State, the determined people of Front Royal, Va., have shown you and the country one solution to the problem. The Communists, the NAACP with its multitude of Red front officers and members, that queer aggregation known as the ADA, aided and abetted by the local quislings and traitors, have all been loudly proclaiming that Front Royal children must go to integrated schools. But the good people of that community are going right along day by day operating their own schools in the way they have chosen to do. It is to their everlasting credit that, when the day came upon which the judicial dictatorship said Negro children would mix and mingle with white children in their high school, not one white child entered the schoolhouse door. The pickaninnies found themselves still as far from association with the whites as they were before the Supreme Court undertook to amend the Constitution in 1954.

The Front Royal people have simply accepted a fact which we all will realize when we look it in the face. It is this: that in the long run, whether public or private, the cost of operating schools is going to have to be paid by the white people of the country.

If the worst comes to worst, and the public schools are closed, white people will adjust themselves to the situation and educate their children in private schools, and bear the cost of operating them. There may be some Negro private schools set up. I am confident that good white people will help the Negroes whose aim is an education for their children and not social equality. I am confident also that Negroes of the NAACP persuasion, whose aim is not education, but social equality, will have to go someplace like Philadelphia, Chicago, New York City, or Washington. And when they get there, they will still find that the same feelings of race pride exist, that white people will move out rather than accept race mixing, and that they have been following a will-o-the-wisp and have been led astray by the false doctrine first expounded by the Communist Party when it proclaimed its platform at its national convention on May 26, 1928.

You will recall that just 8 days after the Supreme Court's constitutional amendment on May 17, 1954, the District of Columbia School Board ordered the schools to be opened the following September as integrated schools. President Eisenhower, eager to pander to those he thought controlled the Negro bloc vote, announced that Washington integrated schools would be a model for the Nation, a showcase for the country. The schools were integrated as ordered. But that which was advertised to be a model for the Nation to follow when and if it knuckled under to the judicial dictators turned out to be a monumental failure, a horrible nightmare.

Appalled by the tragic possibilities which they knew awaited their boys and girls under this rotten social experiment, white fathers and mothers of school-age children began a mass exodus out of the District of Columbia. They began to flee into the white suburbs in 1953 when the leftwing sociological Supreme Court turned the Negroes into the Washington restaurants and hotels in the Thompson Restaurant case. The handwriting on the wall was clear. The school cases were pending, and the first year 20,000

white people moved out. The next year the mass exodus increased to 33,000; the following year the outmigration had swelled to 42,000. In 1957, only 6,000 fled but by July 1, 1958, another 22,000 moved out, making a total loss to the District of Columbia of 123,000 white residents in 5-year period following the Supreme Court-Eisenhower forced integration program in Washington. In the same 5-year period, while Washington's white population was decreasing 123,000, its Negro population was increasing by 98,000. The Board of Commissioners of the District of Columbia finally got around to the point of facing facts, and on Monday of this week they issued a statement acknowledging that 53 percent of the population of the Nation's Capital are Negroes. Washington is rapidly becoming a second Harlem.

It was evident from the first that this sociological experiment was a miserable failure.

One of the immediate and obvious results of mixing the schools in Washington was that white children were held back in the schools because the Negro children showed they could not keep the educational pace. As early as June 10, 1955, the U.S. News & World Report announced that white people were moving out of Washington to nearby Virginia in great numbers; the exodus of white people from Washington had resulted in a public school system in June 1955, of 61 percent Negro pupils and 39 percent white. The same magazine, 6 months later on November 25, 1955, reported that Negroes were pouring into Washington and white families leaving in droves, with the result that at that time 64 percent of the students were Negroes and only 36 percent white.

In 1956, 2 years after the schools were mixed, the House District of Columbia Committee set up a subcommittee and charged it with the duty of investigating the District of Columbia integrated public school system. I was chairman of that subcommittee. The tragic facts of the school situation had been concealed behind an iron curtain in Washington. The radical NAACP and other sponsors of integrated schools, including the notoriously radical newspaper, the Washington Post, wanted desperately to keep the facts concealed. They made frantic efforts to prevent our subcommittee from functioning. The NAACP sent telegrams of protest to the President, to the Democratic candidate for President, to the Speaker of the House, to the Democratic and Republican floor leaders in the House, to each member of the House District of Columbia Committee and others. The NAACP held protest meetings in Negro churches in Washington. Never have I seen such desperate and frantic efforts made to prevent a duly constituted committee of Congress from performing its function.

We let nothing stop us, however, and when the facts were uncovered, it was easy to see why proponents of mixed schools wanted to keep the facts secret. We brought before us witnesses best qualified to give the facts.

Our witnesses consisted solely of members of the school board, officials such as the superintendent of the school system, assistant superintendents, principals, and teachers. We had white witnesses and Negro witnesses. We had witnesses in favor of integration and witnesses opposed to integration. The testimony showed that, from the standpoint of mentality, the Negro pupils were not able to keep pace with the white children in the schools. That resulted in lowering the education standards.

We learned from accurate comparisons based upon recognized achievement tests, known as the Iowa Achievement Test, Standard Achievement Test, and IQ tests, that there was a very wide difference in scholastic achievement and mental ability between white and Negro pupils. To illustrate, we found that in Cardozo school, with 6 white and 1,694 colored pupils, there were 512 pupils in the tenth grade; 230 of that 512 were able to read only from fourth grade to seventh grade level; more than 300 were able to work arithemetic only at seventh grade level or below; and 283 of the 512, which is 55 percent, were classified as being in a category which would never be able to achieve beyond the sixth grade level.

One teacher in Roosevelt High School, with a class about 75 percent colored, said she had more failures in 1 year of integrated teaching than she had in 10 years of teaching in a segregated school.

The assistant superintendent in charge of all high schools testified that in 4 high schools, with a total of 8 white students and 5,011 colored students, these 4 colored high schools tested under the Iowa Achievement Test rated or scored in the lowest 5 percent of schools taking this test across the entire Nation.

Time does not permit me to give you the detailed results of these achievement and IQ tests. They are set forth in detail in the committee report, and it will be my pleasure to send a copy of that report to anyone furnishing me his name and address.

Testimony of many of the teachers showed that the Negro pupils, because of low achievement and mental ability, required so much time and attention that the white pupils had to be neglected, and failed to receive the time and attention they would have had otherwise.

I have given you just a few examples of testimony concerning scholastic achievement and mental ability of Negro pupils in the Washington schools. This testimony is typical of the bulk of testimony we took for 9 days from school officials, principals, and teachers.

Such conditions, of course, retard able pupils. They have a disastrous effect upon children from an educational standpoint. Yet, there is far more involved in this matter than just the educational problem. There is a human side and a moral side. This means even more in shaping and influencing the lives, the character, and the future of our children, which furnishes additional and imperative reasons for our insisting upon segregation in schools.

Among other objections to this close association with Negro children are the important matter of health, the Negroes' high crime rate and disrespect for law, the lower mentality level, and the high rate of illegitimacy among Negroes. It is well known that the crime rate among Negroes far exceeds that of whites. Washington, D.C., is noted for the great number of serious crimes committed within its limits. Its crimes of violence are more than twice the number committed in Boston, a city of comparable size; more than twice of those committed in Milwaukee; and, nearly twice those in New Orleans, La.

Negroes are responsible for this high crime rate. Over the years, they have averaged committing 82 percent of the major crimes in Washington, and during some periods the percentage has gone as high as 88 percent. The current rate of Negro illegitimacy in Washington is that more than one out of four births is illegitimate; Negroes constitute 87.1 percent of the names on the relief rolls, and the current reports of venereal disease in the District of Columbia show that, of total cases reported during the past year, 220 were white and 9,126 were colored.

These are repulsive statistics, but they show some of the impelling reasons for segregated schools. They show what an unspeakable tragedy it is for white children to have integration forced upon them.

We asked about personal relations between white and colored pupils, both as to pupils of the same sex and pupils of the opposite sex.

Practically without exception, the testimony was that dances, plays, senior proms, picnics, and similar social functions were discontinued when the schools were integrated.

At Roosevelt High School, where white and colored were about equally divided, it was necessary to discontinue girl cheer leaders and use only male cheer leaders because of remarks and incidents which occurred at the basketball games.

The testimony was that Negro girls were antagonistic to white girls, and did such things as stepping on their heels in the halls, sticking pins in them; a Negro girl would stand in the aisle and dare a white girl to pass her. A group of Negro girls attacked a white girl on the way home from school and inflicted personal injury upon her.

They testified that similar personal antagonism existed between Negro boys and white boys. At McKinley High School a group of Negro boys attacked two white boys who had been circulating a petition opposing an integrated prom. They beat them horribly and left one of the boys unconscious on the sidewalk. Fourteen stitches were required to sew the wounds inflicted inside this boy's mouth. His father brought him to the Capitol so that I could see the serious injuries he received.

There were numerous fights, beatings, stabbings, etc. The principal of McFarland Junior High School testified that, although it was never necessary to call for police assistance when operating segregated schools, in the last school year in his integrated school, he had to call for police assistance approximately 50 times to prevent fights and keep order.

Many of the witnesses testified as to obscene remarks, obscene literature, indecent proposals, indecent handling, and indecent approaches of Negro boys to white girls.

The principal of Roosevelt High School testified that she had two cases of Negro boys approaching white girls in her school the same week she was testifying as a witness. She said she had this trouble the preceding year, and the year before that, which was the entire period of integrated schools at the time of her testimony.

The former principal of Eastern High School swore that he retired the preceding year because of ill health brought on by conditions resulting from integrating the schools. He testified that it was necessary to require that all teachers leave their desks when the bell rang to keep order in the corridors. He said he heard colored girls at times use language that was far worse than any he had ever heard, even in the Marine Corps.

He said that fighting, including several knifings, went on continuously—that such incidents became more or less commonplace following integration; that there were more thefts in his school in 2 years of integration than he had known in all his 30-odd years of experience before; that there were many sex problems following integration; that colored boys wrote notes to white girls giving their telephone numbers and asking for the girls' telephone numbers; that colored boys touched white girls in a suggestive manner when passing them in the halls and made obscene remarks about them.

He stated that one white girl was surrounded by a group of colored students after leaving school one afternoon; that a colored boy put a knife to her back, forced her down an alley and against a wall, and while they were debating making her take her clothes off, she broke away and ran home. The principal stated that a dozen or more colored girl students became pregnant at his school during his last school year.

The principal of Jefferson Junior High School testified to 27 pregnancies in his school during the preceding year, 2 white and 25 colored.

The number of pregnancies among the colored girl pupils has created a serious problem in the high schools and the junior high schools.

The official report of the doctor at Southwest Health Center Clinic in Washington of illegitimate pregnancies during the 1956–57 school year in the junior high schools of the city of Washington is a shocking thing. Among other things that report stated that there was a rise of over 1,000 percent in the number of junior high school pregnancies in comparison with 1948–49 school year figures.

The report further states: "In the early part of the 1956–57 school year one school in Southwest reported over half of the 240 children enrolled were illegitimate." The report and exhibits attached to it tell a story of almost unbelievable and shocking conditions of health, illegitimacy, venereal disease, and assembly-line production of illegitimate children who promptly go on the relief rolls at the expense of the taxpayers.

These reports are made annually, and the last one available is almost a repetition of the report made available to the school investigating committee in 1956.

Mr. Howard West of the District of Columbia Department of Public Health stated that in the year preceding the school investigation there were 996 illegitimate babies born to girls of school age in Washington; further that it was a close estimate to say that one out of every four colored schoolchildren in the District of Columbia public schools was an illegitimate child. He furthere stated from the records of the District of Columbia Department of Health that in the year in question the total number of cases of venereal disease reported to the Department by persons of school age was 854. To bring the figures down to date, the records of that Department for 1957 show that of Negro birth more than one out of four was illegitimate.

For a long time the NAACP veiled their aims with the pretext that they wanted integrated schools for purposes of better education. They have now become so bold as to cast that pretext aside and boldly state that their objective is complete social equality. One of the Negroes who claims to represent the views of the NAACP stated in a magazine article as long ago as 1952, that the aim of the Negro is intermarriage with white people. It is a blind person indeed who is not now aware of that purpose.

School conditions in Washington for white children and white parents are pathetic today. They are worse than in 1954 and 1956. Some 10 days ago I heard a rumor that a Negro teacher in one of the Washington elementary schools had staged a play in the school in which two of the characters were husband and wife. The Negro teacher cast a little white girl in the role of the wife and a Negro boy in the role of the husband. I investigated the rumor and found it to be true. I obtained a copy of the fourth grade reading book which contained the play. This is it.

A few weeks ago, a worried father told me that a Negro boy tried to kiss his daughter; that she was able to fight him off, but he did succeed in kissing her girl companion.

One parent of a daughter in one of the Washington schools brought me this valentine from a Negro boy to his daughter, and this valentine from another Negro boy to another white girl in the same school.

It is distasteful to speak of such repulsive happenings, but you should know that if you permit this integration program to get a foothold in your State, you are opening your doors to a revolting systematic, progressive, disgusting campaign of race amalgamation.

By 1957 the mass exodus of white children out of Washington schools had become so great, the promoters of forced integration saw the need for desperate measures to stem the tide. Carl F. Hansen, then assistant superintendent of the District of Columbia school system, permitted a pamphlet to be issued in his name by the Anti-Defamation League. It was entitled "Miracle of Social Adjustment: Desegregation in the Washington, D.C., Schools, by Carl F. Hansen." It consisted of 70 pages of drivel and slanted propaganda in a labored effort to present the miserable District of Columbia integrated public school system as a system where everyone was happy and integration a huge success.

When we had our school investigation in 1956, it was obvious then to anyone with a thimbleful of brans that the parents of white children would move out of Washington as soon as they were able to, and that public schools would soon be segregated again because the pupils would all be Negroes. I so stated at the time of the investigation.

On Thursday of this week, the same Carl F. Hansen, the alleged author of "Miracle of Social Adjustment," said in a speech in Nashville, Tenn., that the Washington school system, pressured by powerful social and economic forces, is drifting back to a form of segregation.

He is quoted as saying among other things that "83 percent of the elementary schools are predominantly white or Negro, indicating clearly that if a numerical balance in enrollments does occur, it does not remain for long."

Even the notoriously radical newspaper, the Washington Post, one of the most zealous and fanatical promoters of integration in all phases of life in Washington has been forced to acknowledge, although most reluctantly, that the result is being attained which sensible people saw and tried to prevent, namely, that integrated Washington is slipping into the gutter. On Wednesday of this week, that pink newspaper, in a long editorial headed "New Form of Segregation," made this statement:

"The present problem arises because the District proper is moving very rapidly toward becoming largely a Negro city. We do not think that this sort of imbalance is good for either the white or the colored race. Certainly it is not good for the National Capital or for the District as a civic community."

Further along in the editorial, they say:

"Fortunately, there are many steps that can be taken to curb the trend toward an all-Negro District and an all-white suburbs."

They then suggest that the suburban communities share the blessings of integration by building a lot of Negro houses for Washington Negroes to move into, and to provide mass transportation to carry them to and fro.

It is unfortunate, but also true, that the integrationists' chickens are coming home to roost on the doorsteps of the radical zealots who disregarded all warnings, and who resisted all efforts to prevent the disastrous consequences of integration, which they now recognize with wails of anguish, and for which they seek to blame everyone else but themselves.

I warn you tonight that we must not accept this integrated school plan. We must defeat this fraudulent, strong-arm attempt to cram this integrated school plan down our throats. Unless we reject this school decision in toto, as certain as night follows the day, this sociological Supreme Court is going to hand down another decision holding that our marriage laws violate the 14th amendment. That decision will be the final step to mongrelize this country. The groundwork has already been laid for that decision, and it was laid in Virginia. Your State law prohibits interracial marriages. This was the case I believe in 28 of the States in this Union until Tuesday of this week, March 3, when the State of Idaho repealed its law banning interracial marriages in that State. In the Virginia case of *Naim* v. *Naim*, 87 S.E. 2d, 749, 350 U.S. 891, the Virginia Supreme Court, pursuant to Virginia law, declared invalid a marriage between a Chinese seaman and a white woman and annulled the marriage. The case was appealed to the U.S. Supreme Court, and appellant asked that Virginia's marriage law be declared unconstitutional in violation of the 14th amendment.

I do not think the Federal Supreme Court would hesitate a moment to strike down the marriage laws of Virginia and the other States now, if these sociological experts felt that public opinion would accept such a shocking decision now. They know that public opinion will not accept it now, but they saw in this case an opportunity to kick the question back and forth for a while between Washington and Richmond, to give the Communist Daily Worker, the so-called liberal press, the NAACP, the Americans for Democratic Action, the American Civil Liberties Union, and other integrationists and mongrelizers some time in which to condition the public mind for a judicial decision striking down the last legal barrier which stands in the path of mongrelization. The Federal Supreme Court entered an order vacating the State court judgment of annulment, and sent the case back to the State court for further action, saying that it wanted additional evidence as to whether Virginia's court had jurisdiction in the case.

In rejecting this further attempt of the Federal Supreme Court to meddle in affairs belonging exclusively to the State, the supreme court of Virginia joined the supreme court of Georgia in refusing to recognize the right of the Federal tribunal to remand cases to State courts for further action where no ground for reversal was shown in the record. The Virginia supreme court on January 18, 1956, notified the Federal Supreme Court that it refused to take further action and closed the case.

But you may be sure that if the school integration question is finally settled against us, there will quickly come a Supreme Court decision declaring our marriage laws invalid.

There are some faint-hearted souls among us who say "Let's accept token integration. Let's keep our schools by admitting a few Negro children to white schools."

Do not be lulled into a sense of security by any statement we can have token integration and continue with segregated public schools. There will be no such thing as token integration. Token integration will not be approved by the Supreme Court. It will not be accepted by the NAACP. If you have any doubts on that score, settle them quickly. You are familiar with the fact that North Carolina 2 years ago inaugurated a token integration plan by admitting 11 Negro children to white schools in Charlotte, Greensboro and Winston-Salem.

On February 11 the Associated Press sent out a story headed "NAACP Trained Guns on Token Integration." It began with this paragraph:

"Negroes launched new attacks on North Carolina School laws Tuesday, filing integration suits in Federal courts at Charlotte and Greensboro, and promising more suits."

The news story further states:

"The presence of Thurgood Marshall, NAACP general counsel in both suits, hints that North Carolina—despite its token integration—may be the NAACP's next school segregation battleground."

The lengthy article concludes with this statement:

"The suits assert that the North Carolina Pupil Assignment Act, is designed to impede, rather than carry out Supreme Court integration edicts and therefore is unconstitutional."

The Richmond News Leader of February 17, 1959, carried a news item headed "Limited Integration Held Mistakened Motion."

It reported a speech by the executive secretary of the NAACP to a Negro audience of more than 2,000 in Portsmouth, Va. He urged Negro children in Virginia to apply for transfer to white schools by the hundreds. The news item stated:

"He called on them to proceed under pupil assignment laws not by twos and threes, but by hundreds. The laws can stop only so many, else they will be declared unconstitutional; so the more who apply, the more who will have to be transferred."

The notoriously radical Washington Post carried a story on February 28 headed "Wilkins Scorns Token Integration." The article stated:

"Roy Wilkins, executive secretary of the National Association for the Advancement of Colored People, declared last night that the admission of 4, or 12 or 20 Negro students can be regarded only as a beginning of school desegregation in Virginia.

"Speaking at the annual dinner at All Souls Unitarian Church, Wilkins said that it is not reasonable to expect Negro citizens to accept a few Negro students as full satisfaction of the Supreme Court ruling."

Let us not delude ourselves with any mistaken notion that this problem will be settled by token integration. Make no mistake about it; we will either have segregated schools with white students and white teachers, or we will have mixed schools with mixed students and mixed faculties. It is a decision which cannot be dodged. It must be made. When it is made, it must be carried out.

Egypt was once the center of the world. Its pyramids, the Sphinx, the tombs of its monarchs marked the grandeur of that once great nation which existed until their people became a mongrel race. The greatness of Egypt is gone forever.

Egypt will never again have the opportunity to make the choice which we have in America today. Throughout Virginia today are memorials to the courage and bravery of American patriots who struck the blow which brought freedom to the land. Almost within the sound of my voice is historic St. John's Church where Patrick Henry, speaking to men who were smarting under tyranny and oppression, with his eloquence fanned the spark of resentment smouldering in their breasts into revolution against the strongest world power of that date. In Virginia are Mount Vernon, Gunston Hall, Kenmore, Monticello, Stratford, Williamsburg, and many monuments to remind us of the architects of this Republic who, down to this day, have given us as great a degree of human liberty as mankind has ever known.

I am confident that the Virginians of today will make no decision which will stamp them as being unworthy descendants of their forebears. I am confident that we of this generation will no more accept oppression or dictatorship than they did. This principle which has come down through the ages rings as loudly in our ears as it did in theirs, that resistance to tyranny is obedience to God.

Let me say to you again that the fight is ahead of us, not behind us.

---

## Remarks by Gov. Leroy Collins to Democratic National Committee Victory Dinner, Washington, D.C., February 28, 1959

EXTENSION OF REMARKS

OF

### HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. McCORMACK. Mr. Speaker, one of our oustanding leaders in American public life, a man of outstanding ability and great moral courage, and with an understanding mind, is the distinguished Governor of Florida, Hon. LeRoy Collins.

In my extension of remarks, I am pleased to include an excellent address that he made in Washington, D.C., the evening of February 28, 1959, on the occasion of the Democratic National Committee victory dinner.

Governor Collins well said:

While, in a legislative sense, ours is a nation of laws and not of men, it is men who make, interpret, and execute the laws. It is men who supply the character, competence, courage, and leadership to make government a vital, living force.

With the courage he displays, Governor Collins is one who could well make that statement.

REMARKS BY GOV. LEROY COLLINS

We are here tonight, Democrats from all across America, especially to honor the new Democratic Governors and Senators and Congressmen who were elected in that grand landslide of 1958.

I have found that the greatest single reason for the success of any candidate for any office is the inherent ability of the candidate, himself.

So, to all of these new Democratic officials I would like to say: "Congratulations. You deserve praise for your own success."

I also subscribe to the old-fashioned idea that at every Democratic meeting there should be a profession of faith in the principles under which our party has succeeded down through the years.

So, let us here reaffirm first the basic proposition that the Democratic Party trusts the people. This is the heart of our democracy and the impelling force within a sound, liberal approach to Government.

One cannot understand and trust people without also becoming sympathetic to their needs and aspirations.

If a government, if a political party is truly sympathetic to popular needs, it must possess the ability constantly to think in new terms.

The Democratic Party over the years has shown a willingness and an ability to move forward, to change with changing conditions, to stay abreast of the people and their needs.

This is what welds our Democratic Party so closely with the broad masses of the American people. This is why the Democratic Party historically has been the people's advocate rather than their referee, their partisan rather than their patron.

We know that to succeed we must speak for the public interest rather than for the largest possible collection of special interests.

On the other hand, the Republican Party, with its face turned in concern toward the past and its thoughts preoccupied with where the Nation has been, rather than opportunities which are at hand, has failed to put itself in tune with the aspirations of a growing and maturing people.

The uneasiness which stirs Americans these days is the feeling that our national administration, at a crucial time in history, is not measuring up to changing responsibilities.

To the average American, our National Government seems committed to a course which assumes that the cold war is a permanent state of affairs, to be fretted over and heavily financed with high taxes, but beyond power of solution.

And, clearly, they want leadership to get us on another course—not merely one which offers hope for survival, but one which gives assurance of triumph for mankind.

The people call not only for new missiles but, more loudly, for new ideas.

They realize that the current world conflict ultimately will be won or lost in the school classroom, that our first line of defense requires brilliant minds not just to forge new weapons but to fashion new ways to avoid war.

In our domestic affairs this one nation indivisible, to which we pledge so much allegiance, is in truth badly divided.

In the civil rights controversy, for example, we seem to be stuck behind entrenched positions, quaking in our political boots, with our long-range artillery trained on each other, fearful even to seek honorable, sensible adjustments through political processes, which have always been our shield against civil deterioration and self-destruction.

Today, the American people just cannot see and feel executive leadership which is competent to find proper answers—leadership all the people can follow with hope and faith.

Few occupants of the White House have so profoundly understood that office as Franklin Roosevelt, who said:

"The presidency is not merely an administrative office. It is preeminently a place of moral leadership.

"All our great Presidents were leaders of thought at times when certain historic ideas in the life of the Nation had to be clarified."

Now is, indeed, such a time.

While, in a legalistic sense, ours is a Nation of laws and not of men, it is men who make, interpret and execute the laws. It is men who supply the character, competence, courage and leadership to make government a vital, living force.

So, it will not be enough for us to enter the 1960 campaign with a set of national goals shaped by our Democratic philosophy. We also must have a candidate who can convey what we stand for to the American people and satisfy them he can carry out that program.

He must be a man who has attained in his own right a solid record of achievement, for the American people will be in no mood to experiment with untried leadership.

He must be a man of impelling sincerity, for the American people will have no part of phonies in the presidency.

He must be a man of progressive outlook, for the American people will insist upon moving forward.

He must be a man of courage, vigor and stamina, for the American people will look to the White House for strength and stability.

He must be a man whose allegiance to the national interest and welfare is forceful, absolute and unquestioned; for while his roots may grow in any region, they must nourish a man whose viewpoint, whose ambitions and whose vision reach into every corner of the land and embrace all our people.

He must be an uncommon man with a common touch—a real standup man who recognizes his responsibility to all the people, all the time; whose solemn commitment to the national interest and welfare he places above self, above friendship, above section, above State, yes, above all, save his God.

He must know progress not because he has looked at the low ground left behind, but because he has been a part of the struggle for the high ground ahead.

He must know injustice not because he can place the blame for wrong, but because he has righted it.

He must know truth not because he has heard it, but because he has spoken it.

In 1960, our Nation will sorely need such a President.

Our mission, as Democrats, is to provide leadership with old ideals and new ideas and a program of progress that will thrill Americans everywhere and hearten the world.

The tasks which lie ahead, if we are to fulfill the American dream, are staggering. The responsibilities are monumental, and the consequences if we fail are appalling.

But what an exciting challenge it all is.

What a magnificent period of history in which to be Americans.

What a thrill it is to be Democrats.

## Congratulations, Tad

EXTENSION OF REMARKS
OF
## HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a newsstory and an editorial from the Stroudsburg (Pa.) Daily Record of Wednesday, March 4, 1959, upon the occasion of Congressman FRANCIS E. WALTER beginning his 14th consecutive term in the House of Representatives. No Pennsylvanian in history has served in either the U.S. Senate or the House longer than Congressman WALTER.

REPRESENTATIVE FRANCIS WALTER PASSES 26 YEARS IN CONGRESS

Twenty-six years ago today Representative FRANCIS E. WALTER, Easton Democrat, went to Congress for the first time as Representative of Pennsylvania's 15th District. Like the man who came to dinner, he's still there.

WALTER is currently ninth in individual Democratic seniority and seventh in group seniority in the House. Among both Democrats and Republicans, he ranks 12th in House seniority.

No other Pennsylvanian in history has served in either House or Senate for as long as WALTER.

The 15th District includes Monroe, Carbon, and Northampton Counties. Its 1950 population of 276,574 persons has increased considerably since the last census.

WALTER, who will be 65 in May, seriously considered not running for reelection last year because of his health. His friends persuaded him to return to Congress.

That he ranks high among his fellow legislators is indicated by the fact he heads the important House Committee on Un-American Activities as chairman.

He is also a member of the House Judiciary Committee and the Joint Senate-House Committee on Immigration and Nationality Policy.

A long-time fighter against communism, he has been frequently criticized—and praised—for the actions of the Un-American Activities Committee.

He was not always so alert to the dangers of Communist expansion, however. Speaking at the annual dinner of the Four-County Firemen's Association in East Stroudsburg last summer, WALTER recalled that he once voted against funds for the very committee he now heads.

WALTER is a native of Easton. He received his bachelor of arts and bachelor of law degrees from Georgetown University.

During his college career, he was a member of Phi Delta Theta, Phi Alpha Delta and Pi Gamma Mu.

He served as Northampton County solicitor from 1928 to 1933 and is a veteran of World Wars I and II. He has decorations from several foreign governments.

WALTER still maintains a law office in Easton. In addition, he is a director of the Easton National Bank and vice president and director of the Broad Street Trust Co. of Philadelphia.

Since he has been in Congress, he has served as chairman of the Democratic caucus; chairman of the subcommittee on immigration and naturalization; chairman of the House patronage committee and member of the Government security commission in addition to his present committee assignments.

He was elected Speaker pro tempore of the 81st Congress and has served on the postwar economic policy and planning and select European aid committees, the latter of which did the ground work for the Marshall plan.

He also served as representative of the United States and spokesman for the Provisional Intergovernmental Committee for the Movement of Migrants From Europe, designed to relieve overpopulation of European countries by migration to countries needing population.

Walter is a member of the Loyal Order of Moose, Patriotic Order of Sons of America, Elks, Sons of the American Revolution, American Legion, Veterans of Foreign Wars, American and Pennsylvania Bar Associations and is a member and past commander of the Amvets.

Among his awards are:

Americanism Award, Catholic War Veterans, Department of Maryland, 1957; American Bar Association award for outstanding services, 1946; Patriotic Order of Sons of America award for worthy patriotic services; life membership, American Legion, for noteworthy service to all veterans.

Outstanding citizen award, Sons of American Revolution; John Carroll Award for 1952, presented by Georgetown University Alumni Association; award, Japanese Government, 1956; Distinguished Service Medal, Pennsylvania Department, Amvets, 1957.

Golden Deeds Award, Exchange Club of Easton, 1953; award from Young Jeffersonians Democratic Club, Summit Hill, 1957, honoring him for 25 years' service in the House; Order of Orange-Nassau by the Netherlands Government for distinguished service to international migration, 1957; and certificate from the Americanism Commission of the American Legion at the 40th annual convention last year.

CONGRATULATIONS, TAD

The fact that no Pennsylvanian in history has served in either the U.S. Senate or the House longer than Congressman FRANCIS E. WALTER, Democrat of Easton, is a magnificent tribute both to the man and to the intelligence of the voters who have steadfastly returned him to office term after term.

Mr. WALTER begins his 14th consecutive 2-year term in office today, a record exceeded by only 11 other Members of the entire House of Representatives which now consists of 436 members. He ranks 9th in seniority among the Democrats who control the Congress.

His record is even more remarkable when viewed from a geographical standpoint. Six of the Democrats who rank above him in seniority come from the South where the Democratic candidates nominally meet only token opposition from the Republicans.

Mr. WALTER, meanwhile, was up against much stiffer competition throughout his political career. He met and defeated all comers and increased in stature with every succeeding election, dating from his first bid for a House seat in 1932.

Numerous awards and other honors have come to the veteran representative during his 26 years in office. He is chairman of the potent antisubversive House Committee on Un-American Activities, ranking member of the Judiciary Committee, chairman of the House Patronage Committee, chairman of the Subcommittee on Immigration and Naturalization and was elected chairman of House Democratic caucus by the membership.

Mr. WALTER has represented this country on various governmental missions abroad and received awards for distinguished service from both Japan and the Netherlands.

Among the many groups who have honored him nationally are the American Bar Association, Catholic War Veterans, POS of A, American Legion, Georgetown University Alumni, AMVETS, Sons of the American Revolution, Legion Americanism Commission, and others.

Congressman FRANCIS E. WALTER has served his beloved 15th district well throughout his long tenure in Washington. More important, however, is the fact that he has also served his country exceedingly well. May he continue in good health so that he may add many more deeds to his long list of fine accomplishments.

## Address by Speaker of the House Sam Rayburn at Democratic National Victory Dinner, February 28, at Sheraton Park Hotel, Washington, D.C.

EXTENSION OF REMARKS
OF
## HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include an address of Democratic accomplishments made by the great American, and Mr. Democrat, our beloved Speaker, the gentleman from Texas, Mr. RAYBURN.

The Speaker's address, made at the Democratic national victory dinner, the evening of February 28, 1959, in Washington, D.C., clearly shows the Democratic Party is the "party of the people."

As Speaker RAYBURN well said: "It was our party that wrote into law the great reforms of the 20th century, beginning with Woodrow Wilson's "new freedom" and going forward under the New Deal and the Fair Deal.

"It was our party which successfully piloted this Nation through the dark days of the depression and the fateful struggle of World War II and its aftermath.

"And let us never forget that it was the Democratic Party, under Woodrow Wilson, Franklin D. Roosevelt, and Harry S. Truman, which moved this great Nation from isolation to the leadership of the free world."

There is no Member of Congress whose views carry greater weight with the people than those of Speaker RAYBURN.

ADDRESS BY SPEAKER OF THE HOUSE SAM RAYBURN

I'm mighty happy to be here tonight.

I'm always happy to break bread with Democrats of all shades of opinion and beliefs—but Democrats with a single, guiding purpose—the safety and well-being of the American people.

I never come to one of these great gatherings without a feeling of humility and gratitude for your friendship and your support through the more than half a century that I have labored as a loyal Democrat and an American lawmaker.

And I might add that the longer I serve under the Republicans, the prouder I am to be a Democrat.

I am proud to be a Democrat for many reason.

Let me list a few:

First, our party is a party with a heart.

It was our party—the Democratic Party—that created the ideal of humane government on this continent way back in the days of Thomas Jefferson and Andrew Jackson.

It was our party that wrote into law the great reforms of the 20th century, beginning with Woodrow Wilson's new freedom and going forward under the New Deal and the Fair Deal.

It was our party which successfully piloted this Nation through the dark days of the depression and the fateful struggle of World War II and its aftermath.

And let us never forget that it was the Democratic Party, under Woodrow Wilson, Franklin D. Roosevelt, and Harry S. Truman, which moved this great Nation from isolation to the leadership of the free world.

There is another reason I am proud of the Democratic Party.

It has always been—it is today—and it will continue to be—the party of responsibility. It acts and works responsibly when it is in power, and when it is in the minority, it still works responsibly for the good of the American people.

Regardless of party advantage, regardless of who is in the White House, the Democratic Party puts its responsibility to the American people first. We do not dislike the Republicans; we do not dislike Republicans who happen to be President. When we think they are acting for the good of our country, we help them; when we think they are wrong or unwise, we try to correct them.

The Republicans could profit by our example.

Today, under a Republican president, the Democratic majorities in the House of Representatives and in the U.S. Senate are still working as always as the party of responsibility.

We are charged by the American people with a heavy, and sometimes we feel, a terrible responsibility for their safety and their welfare.

We gladly accept this burden.

We are ready to meet the challenge of our times.

We welcome the opportunity to write sane, financially sound legislation to meet the needs of a rapidly growing population which has a rising productivity, requiring more homes, more highways, more schools, more factories, and more food.

We have taken, and we will continue to take, the responsibility for building the framework of laws under which we develop the atomic age and the space age.

The Democratic Party is ready to act responsibly to help our young families, our veterans, our elder citizens, and our poor to have decent homes that they can afford. We know that good homes make good citizens.

We accept the task of saving the independent farmer, of conserving our soil and water and natural resources, of bringing the blessings of electricity and good roads to those who till the soil which feeds our Nation and many underprivileged peoples in other lands.

We accept the responsibility to help the aged, the disabled, the sick, and the unemployed.

We gladly undertake the task of helping our cities to clear their slums, unsnarl their traffic, and modernize their facilities.

We have always made the promotion of trade with other nations a cardinal tenet of our democratic faith.

And let all the world know this—both inside and outside the Iron Curtain—the responsible Democratic Party is going to give the Republican President such sinews of defense that, if wisely used, this Nation cannot be driven from position to position by any power on earth, however strong. Our military posture will be made so mighty that troublemakers everywhere will decide that peace, not aggression, is the path of wisdom.

And let me make something else crystal clear.

The Democratic Party has been, and will continue to be, the party of financial responsibility. The air is full of deliberate political propaganda about reckless spending and liberal spendthrifts.

Let's look at the record:

In the Democratic 85th Congress, we appropriated $5,600,000,000 less than the Republican President asked us for.

And in the Democratic 84th Congress, we appropriated $2,300 million less than the Republican budget requested.

In the last 4 years of Democratic Congresses, we have cut $8 billion out of the Republican President's budget.

And the Washington Post on February 9 carried a news item that the President's director of the budget admitted to the House Appropriations Committee that President Eisenhower actually has asked Congress for more money than it has been willing to give him.

Now, I ask you, which party has been the party of financial responsibility?

As usual, it has been—it will continue to be—the Democratic Party.

Now let me say this: The rate of progress which we make in meeting all the Nation's problems never satisfies everybody. A lot of people say that we are going too slow; a lot of other people think we are going much too fast.

But I think the American people have proved, by their vote at the polls in three successive elections, that they like the rate of forward progress which the Democratic Congress has been making.

After only 2 years of a Republican-controlled Congress—the 83d—the American voters in 1954 elected the Democratic 84th Congress.

When it had written its record of responsible, forward-looking legislation the people voted for a Democratic 85th Congress in spite of the fact that they at the same time selected a Republican military hero as President.

Two more years we worked hard, responsibly, effectively, and submitted our record of legislation to the people. Last November they overwhelmingly elected the Democratic 86th Congress.

I think these election results prove that the American people like to have the responsible party—the Democratic Party—to make their laws, and they like the rate of speed at which we have been moving forward to meet the needs of a growing, sound and strong America.

At the polls the American voters have voiced their enthusiastic approval of the Democratic congressional program planned and put through by the splendid House leaders—JOHN MCCORMACK, of Massachusetts, CARL ALBERT, of Oklahoma, and the great committee chairmen, and by the brilliant leadership of LYNDON JOHNSON of Texas, MIKE MONRONEY, of Montana, and the great committee chairmen.

You know, this new Republican line about reckless spending reminds me of their old propaganda line which has fallen flat. They went up and down the land in 1952 crying alarm about all the socialistic laws enacted under the New Deal and the Fair Deal. Well, they have been in the White House for 7 years now and, my friends, they have not even tried to repeal a single one of those laws that they made such a commotion about. If the Democrats were socialistic for putting them on the statute books—then the Republicans are just as socialistic for leaving them there.

I want to say something else.

Ours is the only national party, strong and active in every State, embracing people of every type of economic and political interest. All shades of opinion and belief are represented and considered in our party councils.

Being responsible men and women dedicated to our Nation's welfare, we cannot be expected to agree on everything, but we do agree on the basic fundamentals that have been the tenets of the Democratic Party from its earliest days.

So I have no patience with people who claim to be Democrats who say they want to run other people who claim to be Democrats out of the party. Let us differ; let us debate; let us struggle to have our views prevail in the party's councils.

But after that is done, and the will of the majority of Democrats is freely expressed, we will do—we must do—as we have always done. We will be good soldiers, and we will live up to the meaning of the word "democracy" by accepting the will of the majority.

I want to give you an example of how we can work together. In 1952 and again in 1956 after full discussion and arguments, the Democratic Party under wise management was able to write a platform on which all good Democrats could stand. If all of us are wise enough and generous enough, we can write such a platform in 1960, and I want to make the prediction that when we do this and when the 86th Democratic Congress writes its record of sane, financially sound legislation, the American people in 1960 will overwhelmingly elect a Democratic President and a Democratic Congress.

The responsibility of leadership of a great republic is a fearful thing anytime. Particularly is it an awesome task today, when, in my opinion, there are more forces of evil and destruction stalking the earth than at any time in 20 centuries.

But I am an optimist; if I were not, I could not have carried my burdens all these years.

I want to close on this note of faith:

We accept the responsibility for guiding this great land and its friends into the wonderful world of tomorrow.

Inspired by the memory of Jefferson, Jackson, Woodrow Wilson, Franklin D. Roosevelt, and Harry S. Truman, we Democrats gladly face the challenge of leading a prosperous, strong, solvent America—and with it free men everywhere—into what Woodrow Wilson foresaw long ago—"pastures of quietness and peace such as the world never dreamed of before."

United as good soldiers, we cannot fail.

---

## The Missing Rudder

EXTENSION OF REMARKS

OF

### HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of Saturday, March 7, 1959:

THE MISSING RUDDER

It is time, we think, for the Democratic majority in Congress to assert the leadership that has been lacking from the administration in the looming crisis with the Soviet Union. This country and its Allies may very shortly face an extremely touchy and demanding military problem over Berlin. It will take far more than vague reassurances of bipartisanship, such as emerged from congressional leaders after their meeting with the President yesterday, to convince the Allies and the Russians that American inten-

tions are backed with carefully conceived plans. Generalizations about standing firm and rallying around the flag really do not mean very much.

Perhaps the administration is doing much more than it acknowledges publicly. If American policy were to zig every time Mr. Khrushchev zagged, the country soon would become seasick. It is easy to be too impatient and too critical. Nevertheless, the administration's public position has seemed to alternate between optimism about negotiations and the ill-considered assertion of Secretary McElroy that any war over Berlin would be of the all-out variety. With Mr. Dulles ailing, the administration gives the impression that it is operating without any consistent and thought-out guidance in this crucial area of foreign affairs. And appearances can be terribly important.

What can be done? One would think that the first thing the administration would do would be to halt the scheduled reductions in Army and Marine Corps manpower. Such moves as the prospective cut in the Strategic Army Corps from four to three divisions have a devastating psychological effect at this time. They seem to say that this country deliberately prefers all-out nuclear war to limited war, in the unhappy event that a clash should come, and is constituting its forces accordingly.

Beyond this, Adlai Stevenson has suggested in a speech in Boston that a resolute stand against interference in Berlin be coupled with exploration of a possible settlement in Europe "less unstable and explosive than the present situation," and that Democratic leaders in Congress attempt to focus public opinion. Former Secretary of State Dean Acheson in an article written several weeks ago advocated the strengthening of conventional NATO forces in Europe. Senator JACKSON has called for the mobilization of four or five additional Army divisions to undergird diplomacy.

Some or all of these things may be necessary. Of course Congress cannot itself frame foreign policy or conduct negotiations, for the responsibility still rests with the administration. What it can do is urge detailed military planning for defense of land access to Berlin and any clash with the Russians, and encourage western counterproposals on the larger differences with the Soviet Union.

But the underlying need is not so much partial mobilization, however important that may become in the present siuation. It is, rather, the achievement and continuation of military parity with the Soviet Union. This is a long-range rather than a short-range problem. Ever since the first sputnik Soviet leaders have thrown their weight around. The administration has compounded its miscalculation on the significance of the earth satellite with a willingness to accept numerical inferiority in missiles and an unwillingness to prepare adequately to cope with limited war.

It is this, more than anything else, that is undercutting American diplomacy; and it is here that leadership is most necessary. Far beyond the particular crisis over Berlin, if we are to avert war and reach any sort of eventual settlement with the Russians, this will have to stem from military equality. The most important thing that Democratic leaders such as Senators JOHNSON and FULBRIGHT could do to strengthen confidence in the country's position, in this newspaper's judgment, would be to serve notice of their intention to increase the military budget so as to overcome the missile gap and provide for more adequate limited war preparedness.

## The So-Called Equal Time Section of the Federal Communications Act

EXTENSION OF REMARKS
OF
## HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. CUNNINGHAM. Mr. Speaker, section 315(a) of the Federal Communications Act has been termed "impossible" and "broadcasting's biggest headache." This is the so-called equal time section, which reads:

If any licensee shall permit any person who is a legally qualified candidate for any public office to use a broadcasting station, he shall afford equal opportunities to all other such candidates for that office in the use of such broadcasting station: *Provided*, That such licensee shall have no power of censorship over the material broadcast under the provisions of this section. No obligation is imposed upon any licensee to allow the use of its station by any such candidate.

I am introducing a bill today which will add the following sentence and exempt regular newscasts and news commentaries from this provision:

Appearance by legally qualified candidates on any news program, including news reports and news commentaries, where the format and production of the program are determined by the broadcasting station, or by the network in the case of a network program, and the candidate in no way initiated the recording or the broadcast, shall not be deemed to be use of a broadcasting station within the meaning of this subsection.

In my mind there are good and bad things about section 315(a) as it now stands. It is good to have the equal time requirement for programs or announcements purchased by a candidate. The provision is also fair as it pertains to major candidates who appear on forum or debate programs.

The section is poor because it does not differentiate between a major party and a very minor party whose candidate or candidates have no possible chance of victory. It is poor because a station cannot delete libelous material but can be held liable. It is poor because it has been interpreted to apply to pure news reports.

My bill does not attack the problem of minor party candidates, because Congress refused several years ago to try to define this question, and it is a knotty one. My bill does not change any of the provisions pertaining to purchased programs or spot announcements nor to panel, interview or town meeting type programs. Nor does it change the "no censorship" provision.

My bill would merely ease the requirement as it pertains to legitimate news reports and news commentary. These two types of programs are the types that the Federal Communications Commission considers news programs, as defined in the report to be made by licensees to the FCC.

Many of my colleagues are aware of the recent interpretation given section 315(a) by the FCC. The Commission ruled that a Chicago television station must provide time to a mayoralty candidate in Chicago equal to the time provided the incumbent mayor—a candidate for reelection—when the mayor was shown on regular television news programs opening a charity drive and welcoming the visiting President of Argentina at the airport.

Strangely enough, this is a reversal of the FCC policy in a similar situation, in which the Commission refused to order equal time and held that—

The facts clearly showed that the candidate had in no way, directly or indirectly, initiated either filming or presentation of the event, and that the broadcast was nothing more than a routine newscast by the station in the exercise of its judgment as to newsworthy events.

It has been suggested that the Commission's recent ruling is an effort on the part of the Commissioners to force Congress to clarify this section. I have no proof of such a motive, but I do believe Congress should act to clarify the situation.

## California Veteran Problem

EXTENSION OF REMARKS
OF
## HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. McDONOUGH. Mr. Speaker, on March 2 the California congressional delegation met with the American Legion, Department of California, Rehabilitation Commission and Department Service officers to discuss the problem of adequate hospital facilities to take care of the ever increasing veteran population in California.

The following statement was delivered by Lewis S. Sloneker, director of the rehabilitation commission, following his introduction by John J. Flynn, department of California commander. Also present were Elvin R. Morgan, chairman of the California Rehabilitation Commission, and Charles R. Farrington and J. Earl Merifield, department service officers.

Mr. Sloneker's statement follows:

STATEMENT TO THE CALIFORNIA CONGRESSIONAL DELEGATION, WASHINGTON, D.C., MARCH 2, 1959

Mr. Chairman and members of the California congressional delegation, we appreciate being given this opportunity to again meet with you and we bring you greetings from the American Legion, Department of California.

This is our 13th annual meeting with you. Later in the year, after our meeting with you in 1946, both the legislative and the executive branches of the Government approved for construction, a 1,000-bed neuropsychiatric hospital for the San Francisco area and one for the Los Angeles area,

a 250-bed general medical and surgical hospital for Fresno and a 200-bed general medical and surgical hospital for San Diego.

Construction of the hospital approved for the San Francisco area has been underway for approximately 1 year. Its location is on a part of the ground obtained from the Stanford University at Palo Alto. Construction of the hospital approved for the Los Angeles area was completed in April 1955 at Sepulveda, Calif. (San Fernando Valley). Construction of the hospital approved for Fresno was completed in March 1950. The hospital approved for construction at San Diego was cancelled very suddenly in January 1949 by Executive order after the site had been obtained, all plans and designs completed and the low bidder to construct the hospital had been announced.

At the time the two 1,000-bed neuropsychiatric hospitals were approved for construction in California on October 9, 1946, they were needed then. There were at that time approximately 3,000 war veterans in our State mental hospitals. In 1946, 16 percent of all male patients admitted to State mental hospitals were veterans. In 1952, 36 percent of all male patients admitted were veterans, and in 1958, 43 percent of all male patients admitted were veterans, and the veteran patient load today in our State mental hospitals is over 5,500. Approximately 45 percent of them came in to California from other States. For the most part, these veteran patients are having to be cared for by the taxpayers of California. This cost for their care should be the responsibility of all the taxpayers in the Nation.

At the time the two general medical and surgical hospitals were approved for construction in California they were needed then. We are thankful the one approved for Fresno was completed. It was most unfortunate, and we think unjustified that the one approved for San Diego was canceled.

WHY ARE MORE HOSPITAL BEDS NEEDED FOR VETERANS IN CALIFORNIA?

The major reasons for the need of more beds are:

1. The continuous heavy influx of veterans to California from every other State in the Nation. Literally thousands among those who formerly applied to Veterans Administration hospitals and medical clinics, in other States, now apply for such care to the Veterans' Administration in California.

3. The cancellation of 1,750 contract beds for general medical and surgical care that the Veterans' Administration formerly had with other Federal hospitals in California.

4. Failure on the part of the Federal Government to recognize and/or provide hospital and medical care facilities for veterans in California on a basis equal to what is provided for them in other States, to say nothing of its failure to provide such facilities in accordance with the need.

Disabled veterans in California who are broke, sick, and in need of hospitalization, except for tuberculosis, find it more difficult today to find an available bed anywhere than they have at any time since the close of World War II. There are 3,483 disabled war veterans in California who have been declared legally and medically eligible for hospitalization or domiciliary care on the waiting lists. The situation is so bad that private physicians are quite frequently unable to obtain a bed in a Veterans' Administration hospital for cases determined by them to be emergencies.

REPLACEMENT FOR OAKLAND VA HOSPITAL SHOULD BE 1,000 BEDS

It is quite evident that the executive branch of the Government does not intend to change its plans to eventually replace the old 712-bed (former Oakland hotel) Veterans' Administration hospital, at Oakland, Calif., with a new 500-bed hospital. This is deplorable. It should be replaced with a 1,000-bed hospital and it is very apparent that if justice is done, it will have to be by action of the Congress. It is our understanding that the President failed to request funds to construct this badly needed replacement hospital in his budget that is now being considered by the House Appropriations Committee. We understand the money for the plans and design for this hospital is all that has been requested. We urge each of you to do everything in your power to have the necessary funds appropriated for planning, design, and construction for a 1,000-bed hospital to replace the hospital at Oakland, and that the Congress direct the Veterans' Administration to get on with its construction without further delay.

NO ECONOMY IN ALLOWING VA HOSPITALS AND OFFICES TO DETERIORATE

We hope each of you will agree with us that there is no economy by continuing to allow Veterans' Administration hospitals and offices to deteriorate to where they create hazardous conditions, making them more expensive to operate, and next to impossible to keep clean and sanitary. Some of the Veterans' Administration hospitals and offices in California have been so badly neglected for so many years they need complete major overhauling or replacement.

LET'S NAME THE VA HOSPITAL AT FRESNO, THE B. W. GEARHART HOSPITAL

We wish to thank Congressman Sisk for introducing a bill, H.R. 1170, to name the hospital the B. W. Gearhart Hospital. We sincerely trust that all of you will use your best efforts in support of this bill. We believe you will agree with the American Legion that it is fitting and proper that this hospital be named in memory of one of your former members who worked so hard, with the support of you who are senior members, to obtain this hospital for the care of his fellow disabled war veterans. B. W. "Bud" Gearhart was a native son of Fresno, Calif., and Fresno was always his home. By profession, he was a lawyer, and was serving his county as district attorney when he entered military service in August 1917. He served overseas in France, was one of the founders of the American Legion, and was our department commander in 1930–31. He was a descendent of Capt. Jacob Gearhart who fought with Gen. George Washington throughout the Revolutionary War. While in Congress he was the author of the act establishing Armistice Day as a national holiday. He was loved and respected by all, whose privilege it was to know him. The citizens of Fresno and all of San Joaquin Valley will be pleased to have the Veterans' Administration Hospital at Fresno bear his name.

VETERANS' ADMINISTRATION REGIONAL OFFICE, LOS ANGELES

On several of our past appearances before you, we have given you some facts and figures as to why a new building of permanent type construction should be built on Veterans' Administration property in West Los Angeles to house the entire regional office. The divided operation of the regional office is expensive, difficult to manage, and most unsatisfactory from every standpoint. The added cost of this type of operation over the 13-year period it has been allowed to exist would pay for the entire cost for constructing a permanent type building on this property, large enough to house the entire office. Added to the cost of operation and lack of efficiency is the huge turnover of personnel because of the unsatisfactory working conditions in the present building, which is known as the Douglas Building. The noise, dirt, dust, poor ventilation, and inconveniences make it an undesirable place in which to work. It is next to a disgrace to think that employees are required to work in this unsightly building under such conditions.

The General Services Administration has recommended that a new Federal building of permanent construction with space for a post office, other Federal offices, and for the entire regional office of the Veterans' Administration be constructed on Veterans' Administration land adjoining the old quonset hut now being used for a portion of the Veterans' Administration regional office. The Veterans' Administration is in complete agreement with the General Services Administration's recommendation. We wish at this time to thank Congressman DONALD L. JACKSON for his support of this recommendation and his firm stand against this property being sold or turned over to sources outside the Federal Government. We hope each of you will do your part in seeing that the Congress approves the General Services and Veterans' Administrations' recommendations and cause the necessary funds to construct this badly needed building for economy and efficiency be appropriated without further delay.

VETERANS HOME OF CALIFORNIA

In accordance with our national mandate we wish again to request your help for legislation, granting Federal aid for capital outlay on a matching basis with State funds for State veterans' homes. A majority of the States do operate veterans' homes for domiciliary and/or hospital care for disabled veterans. The Federal Government recognizes this assistance from the States by granting Federal aid subsidies in part payment for operating expense, but have failed to financially assist with capital outlay.

Our State government has been very generous in maintaining and modernizing our California Veterans Home. It is considered the finest State veterans home in the land. There are over 2,000 members, both male and female, being given domiciliary, chronic, and hospital care. The present Federal aid subsidy is $700 a year per member or patient. The Congress has recognized the added expense for such operations due to higher costs, inflation, etc., by increasing the amount of Federal aid subsidy from time to time, starting with $300 per annum per member. At present the amount of Federal aid subsidy is $700 per annum per member. It is past time when the Congress should again act by increasing the amount from $700 per annum per member to $1,000, with the proviso, of course, that Federal subsidy will not exceed 50 percent of the operating cost as has been the policy in the past. Refer to bills H.R. 1173 and H.R. 4230, SISK, of California.

All veterans admitted to State veterans homes are eligible for Veterans' Administration care. The Federal Government pays for a portion of their care. However, when a veteran dies in a Veterans' Administration hospital or domiciliary, the Federal Government, through the Veterans' Administration, will pay for the cost of transporting the body to any place within the continental limits of the United States for burial. The American Legion requests the Congress to make similar provisions for paying the transportation cost of the bodies of veterans who die in State veterans homes.

NEED FOR NATIONAL CEMETERY IN THE LOS ANGELES AREA

Again we appeal to you to use your best efforts in having the Federal Government provide a national cemetery in the Los Angeles area. There are over a million veterans residing in the area. The number increases by the hour. We do not know of any place in the United States with anywhere near the veteran population that is so far removed from a national cemetery. The Veterans' Administration Cemetery in West Los Angeles, where approximately 40,000 deceased veterans are buried, has very little space for future burials. Veterans who die outside of a Veterans' Administration hospital or domiciliary, unless their hospital care is being paid for by the Veterans' Administration in a hospital within the Los Angeles regional office territory, or their

bodies are unclaimed, are not eligible for burial in the Veterans' Administration Cemetery. Many next of kin from this area cannot afford transportation to Golden Gate Cemetery at San Bruno, near San Francisco, Calif., or Fort Rosecrans, at San Diego, Calif.

IN CONCLUSION

Tomorrow morning, Preston J. Moore, national commander of the American Legion, and Robert M. McCurdy, chairman, National Rehabilitation Commission, will appear before the House Veterans' Affairs Committee and present our proposals within the jurisdiction of the committee. We sincerely hope and request that each of you obtain copies of their statements and support the American Legion's very fair and justified request.

## Recognize the Facts

EXTENSION OF REMARKS
OF
## HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. JONES of Missouri. Mr. Speaker, at a time when a great number of people, particularly those living in metropolitan and industrial areas, after having read the statements of, and listened to speeches by the Secretary of Agriculture, have gotten the mistaken idea that the farmer is responsible for and has been the recipient of billions of dollars from which he received absolutely no benefit, it is indeed refreshing to come upon a statement which attempts to put the agricultural program expenditures in a true perspective.

Such a statement came to my desk over the weekend. It takes issue with the vicious attack which has been made on agricultural programs by the urban press. It labels these attacks for what they are—gross exaggerations. The statement classifies the various expenditures which have been made, and shows that the farmer has received a comparatively small amount of the appropriations made for fiscal 1959.

Finally, this statement shows that the real cost of farmers to the taxpayers stands at about $1 billion, and more important the statement concludes with the statement that "the public should recognize the true facts concerning the farmers and realize that the prosperity of the farmer is the backbone of the Nation."

The statement referred to above, and which is set out below, has been made by Daniel F. Rice & Co., 141 West Jackson Boulevard, Chicago, Ill., members of the New York Stock Exchange and other principal exchanges, in their commodity letter, under date of March 6, 1959:

COMMODITY LETTER OF MARCH 6, 1959

The urban press of the United States has unleashed a vicious attack on agricultural programs by repeatedly talking about the high cost to the taxpayer. The Congress and the general public appear to be taken in by this. The Department of Agriculture has taken hold of this tool to help push through its policy of liquidating price support programs and with them the liquidation of the American farmer.

Truly astronomical figures are bandied about. The lowest estimate of agriculture costs one hears these days is on the general order of $7 billion. It is not unusual to hear $12 or $13 billion mentioned. Another look needs to be taken. These are gross exaggerations and not much of it goes to farmers.

Agricultural appropriations for fiscal 1959 (millions of dollars) were:

| | | | |
|---|---|---|---|
| Regular activities: | | | |
| Agricultural Research Service | $160.6 | C | |
| Extension Service | 63.2 | C | |
| Farmer Cooperative Service | .6 | C | |
| Soil Conservation Service | 128.6 | C | |
| Agricultural conservation program | 235.0 | C | |
| Agricultural Marketing Service | 146.0 | C | |
| (Includes school lunch) | 110.0 | C | |
| Foreign Agricultural Service | 4.0 | S | |
| Commodity Exchange Authority | .8 | P | |
| Soil bank programs | 809.5 | F | |
| Commodity Stabilization Service | 115.7 | P | |
| Federal crop insurance programs | 6.4 | F | |
| Rural Electrification Administration | 9.0 | C | |
| Farmers' Home Administration | 29.1 | F | |
| Forest Service | 130.3 | C | |
| General overhead | 7.9 | C | |
| Subtotal | | | $1,846.7 |
| Restoration of CCC capital | 1,760.4 | P | 1,760.4 |
| CCC administrative expense | 35.4 | P | 35.4 |
| Permanent appropriations: | | | |
| Removal of surplus agricultural commodities (30 percent of customs receipts.) | 235.9 | T | |
| Other | 61.9 | T | |
| Subtotal | | | 297.8 |
| Loan authorizations | 594.0 | L | 594.0 |
| Special activities: | | | |
| Agricultural Research and Marketing Service Activities | 20.1 | C | |
| Emergency Relief | 125.8 | S | |
| Public Law 480 and Barter | 1,509.7 | S | |
| Soil Bank Programs | 567.5 | F | |
| Subtotal | | | 2,313.1 |
| Grand total | | | 6,847.4 |

All of these costs in fiscal 1959 are keyed with a letter showing who really benefited. C—Consuming public; F—Farmers; S—State Department, as part of our foreign policy; L—Loans, repayable and bearing interest; P—Price programs; and T—Transfer of funds. Under the C there is $892.3 million. This went for research, teaching, disease eradication, monopoly control, school lunch, etc. Some of these programs are as old as the Land Grant College Act of 1862. These activities have enabled farmers to make the production increases that have enabled food production to keep up with population. Under the S there is $1,639.5 million that went to feed hungry people throughout the free world and advance our interests against communism. Under the L there is $594 million, sound and repayable and shouldn't be changed. Under the T is $297.8 million that is mainly customs and forest lands receipts, not costing taxpayers a dime. Under the P there is a $1,796.6 million. This went to support a vast bureaucracy, pay storage to nonfarmers on a mountainous inventory, and to take losses on commodities sold. A well run program would cost only a fraction of this amount. By no stretch of the imagination can over $850 million be considered as benefiting farmers. This leaves $1,412.5 million under the F. At the outside high, programs for the benefit of farmers cost $2.3 billion dollars. Of this, $1,377 million was for the soil bank, most of which has now been discontinued. The real cost of farmers to the taxpayers stands at about $1 billion.

Farmers got about a billion, and the consuming public got about a billion. Where did the rest go? We believe that at this time, Congress, the press, and the public should recognize the true facts concerning the farmer and realize that the prosperity of the farmer is the backbone of the Nation.

## New York Bank Bill Fosters Monopoly

EXTENSION OF REMARKS
OF
## HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. CELLER. Mr. Speaker, the bank bill recommended by the New York Joint Legislative Committee would lead to monopolization of the State's banking resources by a handful of giant banks which, for years, have sought to achieve domination over the banking system of the State and for years have been pressing for such legislation.

It is deplorable that the joint committee reported out this bank monopoly bill without public hearings or without opportunity for its opponents to present their views. It is curious, indeed, that the New York superintendent of banks, G. Russell Clark, gave his enthusiastic endorsement to this measure after having been in office for but 1 day. The unseemly haste of the New York superintendent of banks in rubber-stamping this monopoly bill bodes ill for independent banking in New York State and for future vigorous, effective banking competition.

The bill recommended by the joint committee has two main provisions. First, it would obliterate the bank branch district line between New York City and the outlying suburban areas of Nassau, Suffolk, and Westchester Counties. Second, it would establish two bank holding districts in the State, the first consisting of New York City, Long Island and Westchester and Rockland Counties, the second, of the balance of the State. The bill would allow a bank holding company to acquire banks anywhere within the district. Beyond that, a holding company formed by a bank in the second district could acquire banks in the first district if these first district banks constituted 45 percent or less of the holding company's total assets. Thus, the bill would end the present legislative freeze on bank holding company expansion which was enacted principally to prevent First National City's proposed acquisition, via the holding company device, of the County Trust Co. of Westchester County.

The banking system of New York State traditionally has relied for its vitality on vigorous competition by a multitude of independent banks, locally organized, locally financed, and locally managed. Nevertheless, there has been in recent years a discernible trend in New York State toward concentration of the banking business into fewer and larger hands. Indeed, in New York City, the four largest banks now control over 60 percent of all commercial bank assets. What is more, the two largest—Chase Manhattan and First National City—control almost 42 percent of the city's banking assets.

Present statutory branch bank district lines were drawn 20 years ago in the shadow of the bank holiday in order to arrest undue concentration of banking facilities. The single most important reason for such geographical restrictions was to prevent banks with head offices

in New York City from establishing branches in the suburban counties of Westchester, Nassau, and Suffolk and thus to protect independent unit banks outside of New York City from the encroachment of the giant money-market institutions located in the city.

Owing to the increase in concentration among the city's banking institutions in the past 20 years, it is even more important now to guard against the encroachment that would be permitted by the bill. There seems to be little doubt that if giant banks in New York City are allowed to penetrate into the suburban areas, the small unit banks there would be placed in far greater jeopardy. For one thing, their means of competing would be hardly comparable to those available to their huge city rivals. Indeed, to suppose that entry by the giant financial institutions of New York City into the suburban areas might have no adverse competitive effect on the independent banks located in these areas is to suppose that a chicken could dance with an elephant and come out unharmed. With the present district line obliterated, the suburban banking communities would soon be transformed into an area overwhelmingly dominated by a few large city institutions.

As to the second provision dealing with formation of two new bank holding company districts, certainly its most immediate effect would be to place New York State legislative imprimatur of approval on plans like that of the First National City Bank which unsuccessfully sought to form a bank holding company in order to acquire the County Trust Co., of White Plains, N.Y., the dominant bank in Westchester County. It will be recalled that the Federal Reserve Board, after hearing exhaustive testimony on this proposal, concluded that approval of such transaction would be detrimental to competition and contrary to the public interest. Should the State legislature ratify the bill recommended by the joint committee, there would be ignited, as Governor Harriman observed on November 20, 1956, what may be the greatest chain reaction in recent banking history the effects of which will go to the very roots of the entire banking structure of New York State with the distinct possibility of concentration of banking assets in the hands of a few institutions.

Commenting on a holding company proposal similar to the one now contemplated, Mr. George A. Mooney, the former superintendent of banks of the State of New York, had this to say on December 12, 1956:

> The very existence of a number of large bank holding companies would create competition amongst them for future expansion in other communities. If the many unit banks found it impossible to resist the holding company movement, we could expect in short order a heavy concentration of banking assets, facilities, and credit in a handful of giant statewide bank holding company systems.

It is crystal clear that adoption of either provision of this bank monopoly bill would amount to capitulation to a few powerful banking institutions in New York City. If the New York State Legislature desires competition rather than monopoly in banking, it should reject this measure out-of-hand.

## Reexamination of Our Bolivian Policy

EXTENSION OF REMARKS
OF
### HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. DADDARIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which was published in the Hartford Courant, on Wednesday, March 4, 1959, calling for a reexamination of our Bolivian policy in light of the recent anti-American demonstrations.

I am a firm believer in providing technical assistance and aid to the underdeveloped areas. I believe that such aid should be supervised so that it offers effective assistance to a stable form of government to improve the living conditions of its people. It should have the utmost help and sympathetic consideration that it is possible for us to give.

In this instance, there is strong evidence that the money of American taxpayers is being wasted. I recognize that this appraisal is controversial and that, as the New York Times has said, the incident should not lead to destruction of the good and useful relationship between the two countries. On the other hand, the Hartford Courant is not given to irresponsible journalism and I believe its objective and thought-provoking views should be brought to the attention of this body.

The editorial is as follows:

TIME TO REEXAMINE OUR BOLIVIAN POLICY

It is very unlikely, indeed, that that was any spontaneous group of patriotic Bolivian citizens who, Monday, in La Paz, burned an American flag and stoned the U.S. Embassy and the U.S. Information Office. The left-wing radical government that controls Bolivia can produce a destructive street mob, almost as quickly as some of the Arab countries of the Middle East. One example of this occurred a few years ago in Cochabamba, Bolivia, when a mob destroyed the newspaper plant of Demetrio Canelas, a moderate critite of government policies, while the police stood by doing absolutely nothing to halt the mob's vandalism. Senor Canelas, himself, has said publicly on several occasions that he owes his life only to the intervention of the Inter American Press Association.

Members of the mob that burned the U.S. flag are alleged to have shouted: "We don't want to be colonized by the Yankees." There is nothing on record to indicate that the Yankees want to colonize Bolivia, but there is altogether too much on record to indicate that the United States has poured millions of dollars into Bolivia in a wasteful, fruitless, futile effort to support the economy of the Bolivian regime. During the past 5 years, the United States has poured more than $100 million into Bolivia, all of this in addition to loans from the Export-Import Bank and the Development Loan Fund.

What has this accomplished? Well, just the other day the Antofagasta & Boliva Railway Co., Bolivia's principal transportation agency, announced that it was discontinuing operations. Traffic had fallen by 40 percent, freight and passenger rates had been frozen by official decree and, as the company announced, unbridled and direct interference of the railway labor unions had made it impossible to fire superfluous workers and to effect other economies. Probably nowhere in the world is inflation so rampant as in Bolivia, where the boliviano has dropped from 200 to the American dollar in 1952, to 11,900 to the American dollar in January of this year. Upon assuming power, the left-wing government nationalized the tin mines, paying the owners nothing. And since that time output of tin has steadily dropped while costs have continued to go up. Among the reasons for increased costs is that labor gets a fixed weekly overtime whether or not any overtime is actually worked, full pay while striking, and a variety of other subsidies and bonuses too numerous to mention.

If a Latin American government is making a sincere and conscientious effort to straighten out its economy, as President Frondizi is trying to do in Argentina, then it should have the utmost help and sympathetic consideration that it is possible for us to give. But when a government is pursuing such a senseless and ruinous economic policy as the present Bolivian regime, then the millions of dollars contributed by the American taxpayers are just so much money poured down into a rathole.

Monday's demonstration should persuade the State Department to reexamine our whole Bolivian policy. Such an examination, and it doesn't have to be too thorough an examination either, should convince the State Department that these wasteful and futile grants to Bolivia should stop at once. This is obviously the time for us to prove to the Bolivan regime that we have no desire to colonize their country, and there is no better way to convince them of this fact than by shutting off the flow of American dollars.

## Telephone Tax

EXTENSION OF REMARKS
OF
### HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Rock Hill Herald, Rock Hill, S.C., of March 5, 1959:

TELEPHONE TAX

American telephone users have learned first-hand how easy it is for a temporary tax to become a permanent levy. And in the hope that they'll put pressure on the 86th Congress to remove one the utility that must do the bookkeeping for Uncle Sam's collection is reminding these people of what has happened to them.

By booklet and by bill, Southwestern Bell points out that the Federal Government, through the excise tax, classes the telephone as a luxury and adds 10 percent to the amount that must be paid each month by the user.

The first excise tax in history on local telephone service was passed as a wartime measure in 1941, it is recalled, with two reasons having been given for imposing it.

First, a war was going on and the revenue was badly needed.

Second, there was a critical shortage of telephone equipment, which resulted in the effort to discourage the use of essential communications—especially long distance—which could not be expanded to meet civilian demand.

But, as Southwestern Bell and the other telephone companies are pointing out, times have changed. The war ended in 1945 and there no longer is a shortage of equipment.

They ask: Why an excise tax on your telephone today? (Beaumont Enterprise.)

## The Disabled American Veterans' Perpetual Rehabilitation Fund

EXTENSION OF REMARKS
OF
## HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. CURTIS of Massachusetts. Mr. Speaker, the Disabled American Veterans fortunately cannot compete in numbers with some other veteran groups. I say fortunately, because each member must have a service-connected disability.

But this organization has built up and trained a corps of salaried national service officers who have made an enviable record in serving and advising veterans with war-incurred disabilities.

The organization could not support this constructive work without outside help. A perpetual rehabilitation fund has now been established, the income of which will be devoted to this work. I include as part of my remarks an article about that fund from the Disabled American Veterans' Monthly of February 20, 1959:

PERPETUAL REHABILITATION FUND IDEA CONTINUES TO SPREAD—SEVENTY-THREE BENEFACTORS NOW LISTED ON MEMORIAL HONOR ROLL

WASHINGTON, D.C.—A total of $3,300,000 has been turned over to the DAV, by the DAV Service Foundation, during the last 10 years for national service officer salaries.

Twenty-five States are now represented among the 73 benefactors of perpetual rehabilitation funds (ranging from $100 to $1,200 so far), established with the service foundation. Under its master declaration of memorial trust, only the interest earnings (4 percent per annum), from such permanent memorial trust funds, become available for appropriation to the DAV national headquarters for its use in the maintenance of its excellent rehabilitation service activities in the respective States of origin of such donations.

Among the first 73 benefactors, 26 are DAV units, including 3 State departments, 2 auxiliary units, and the National Order of Trench Rats. Three other organizations have each donated from $300 to $1,000. Among the 47 individuals who have created such special trusts, 30 are DAV members, including two Congressmen (Hon. LEE METCALF, of Montana, and Hon. LAURENCE CURTIS of Massachusetts, both of whom are life members), and 8 who have served as DAV national commanders; 11 other non-DAV donors have so far donated such special trust funds.

DONATIONS IN MEMORIAM

Several of these special donations are specified as memorials to deceased persons. A $1,200 special fund—mostly as the result of individual donations—was presented by St. Louis Chapter No. 1, as a memorial to William E. Leach, Sr., who had long effectively served as a DAV national service officer. Chapter and department funds have been appropriated to establish memorial funds in the name of deceased former officers.

Such a memorial trust may be donated by a widow in memoriam to a deceased husband, by a widower in memoriam to a deceased wife, by parents in honor of a deceased son, by a son in honor of deceased parents, and so forth.

Many different kinds of such memorials are possible, as to deceased and living persons. Such a memorial fund to be credited to "Anonymous" is entirely possible.

SIX FUNDS INCREASED

Six perpetual rehabilitation funds have been increased, over their original amounts, by three DAV units and three individuals. Having started with $100, one benefactor has so far built up his perpetual rehabilitation fund to $860 and has voluntarily pledged himself to add $110 more each month during the rest of 1959. Several other benefactors have declared their intentions to increase their totals.

INSTALLMENT PAYMENTS

Although the master declaration of memorial trust provides that a perpetual rehabilitation funds must be a donation of $100 or more the board of trustees has authorized the executive secretary to accept installment payments, in multiples of $5, which are to be placed into a permanent reserve fund, until $100 has accumulated. Several DAV chapters and members have remitted such installment payments, with the declared intention of thus building their contributions up to at least $100 and then having same transferred into a perpetual rehabilitation fund.

MONTANA LEADS FIELD

Montana is the first State in which all of the DAV chapters, plus its State department and two auxiliary units, one law firm, a past department commander and Congressman LEE METCALF, have established memorial funds, in amounts now ranging from $100 to $1,100 and equivalent to nearly $5 per DAV member in the State. Since their original donations were sent in, two chapters in Montana have increased same by another $100 and $200.

M'CLERNAN AUTHORS IDEA

This excellent record was attained under the leadership of the Montana Department Perpetual Rehabilitation Fund chairman, Judge John B. McClernan, who was the author of this grass-roots idea. His own Butte Chapter No. 6 sent in the first check to the foundation, $1,000, with a resolution which established the principles of this new method of creating special memorial trust funds. If every State were to do as well as has Montana, proportionately to its total membership, then about $1 million would have accumulated into such special memorial funds—as pointed out by National Commander David B. Williams in his January 13 bulletin to DAV national officers.

PLAN GROWING RAPIDLY

This unique idea has gradually spread to others. Only 11 such funds were established during 1956, 15 more in 1957 and 44 more during 1958, with 3 more having been received so far during 1959 "If the same upward curve continues, then several hundred will have become enrolled on the memorial honor roll by the end of 1959, and several thousand by the end of 1960, and so on," according to John L. Golob, chairman of the DAV Service Foundation.

All enrolled benefactors up to June 30, 1959, will appear in the July 1959 issue of the Disabled American Veterans Monthly, and will subsequently also appear in the 1959 annual report of the DAV to the U.S. Congress, which is then printed by the U.S. Government Printing Office as a public document.

## John Edelman: A Good Salesman

EXTENSION OF REMARKS
OF
## HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. BOLAND. Mr. Speaker, all of the Members of the House have met John Edelman, the Washington representative of the Textile Workers Union, and some of us know him intimately. He has been a familiar and well-respected personality in the Halls of Congress for a quarter of a century. He certainly deserved the wonderful tribute paid to him by John Herling in his Washington Daily News column of March 5. Under leave to extend my remarks, I include Mr. Herling's column about John Edelman in the Appendix of the RECORD:

A VERY PERSUASIVE MAN

(By John Herling)

Anywhere you go on Capitol Hill, you are apt to see John Edelman, officially the Washington representative of the Textile Workers Union. Actually he is the universal business agent for any of a number of labor causes. By now, he has the longest service of any labor lobbyist here in Washington. He began haunting the marble halls of the Nation's Capital 25 years ago when the New Deal was a baby and he was 40 years old. Today he is 65, ready as ever to wet-nurse a Congressman or a bill.

Many legislators regard him as a human conveyor belt, bringing to Washington the piled-up woes and grievances of otherwise inarticulate people.

By the time he gets through telling a big wheeler and dealer on the Hill about the legislative needs of underpaid unorganized textile workers, he has made it clear that the whole thing is bigger than both of them. Mr. Edelman's powers of persuasion are awesome because they spring from an intimate knowledge of the people he meets and the people he represents. He yearns to marry power to justice—even when there is no love lost between them.

But in a real sense, Mr. Edelman's power as a labor lobbyist springs also from his talents as a hidden dissuader. More than any single man, he has been able to keep union representatives from making fools of themselves on Capitol Hill through miscalculation or overzeal.

It would be easy to call him the lobbyist's lobbyist. But there's more to his competence than technique. What gives John Edelman his remarkable staying power is his roots. These go far back into the labor movement of Britain where he was born and of the United States where he has lived since his teens.

Mr. Edelman started out as an educational director of the Hosiery Workers of Philadelphia, but he soon became a one-man labor faculty for many an American community. Generations of college men and women, of YWCA industrial secretaries, and middle-class folks were, for years, charmed by his literateness, his intensity of purpose, and his quiet physical courage. He ran a prep school for the New Deal.

Mr. Edelman began to break through into unexplored social territory a full 30 years ago—in the spring of 1929—back in Elizabethton, Tenn., when he helped bring organization for the first time to Southern

rayon textile workers. That tough fight became a notable preparation for the future labor lobbyist, but nobody then gave legislative action a thought. Instead, a group of ardent first citizens of Elizabethton used direct action against outside labor agitators. One night they broke into the hotel rooms of two labor organizers—Alfred Hoffman, of the Hosiery Workers, and Edward J. McGrady, then an A.F. of L. representative, later an Assistant Secretary of Labor—and carried them bodily out of the State. This abduction brought the story to page 1 of the Nation's newspapers and it brought John Edelman on the run.

He had been running to do labor's business ever since. What makes Johnny run in this or any session of Congress is the almost compulsive determination to get important bills through for the benefit of folks in the smaller income brackets. He has long recognized that politics is the art of the possible. But this axiom has never slowed him down. The difference between him and other political figures is his conviction that few worthwhile things are really impossible. This makes John Edelman the poor man's LYNDON JOHNSON.

## Good Citizens in the Making

EXTENSION OF REMARKS
OF
## HON. PAUL F. SCHENCK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. SCHENCK. Mr. Speaker, it has always been my policy to do all I can to encourage interest in government at all levels. Consequently, it was with particular interest that I read an article in the Ladies Home Journal for January 1959, describing a special project in operation at Middletown, Ohio, in my district. Dean Lawrence, City Manager Thompson, and all those participating are to be complimented for the guidance they are giving to these young Americans in their firsthand study of their city government. In recognition of this program I present the following article:

GOOD CITIZENS IN THE MAKING: TEENS INTERN IN CITY GOVERNMENT

The little girl seemed to be lost. Slowly she walked along the rather forbidding corridor of the city building, looking hopefully into each office, backing away again. Everyone appeared to be very busy: there was a great clatter of typewriters, a rustle of papers, a chatter of voices. She paused, confused, and spotted a pretty young girl hurrying out on a door marked "Chief of Police." Quickly she ran after her. "Lady, lady."

Seventeen-year-old Sarah Smith turned and smiled. "Why, hello. Are you looking for someone?"

The child nodded. "I want to know," she said shyly, "where you go to get the money daddies pay mommies after they're divorced."

After she had recovered from her surprise, Sarah took the little girl's hand. "I don't know," she confessed, "but we'll soon find out. You just come with me."

Recounting the incident to her parents one night last spring, Sarah said, "Honestly, until you work in city government, you can't imagine how many things city officials actually do. Who screws new street-light bulbs in after they burn out, for instance? And where do firemen's boots come from? And who decides if it's o.k. to have a parade or run a bazaar? All these things you never think about—unless"—she laughed—"you happen to be a high school intern."

Sarah, then a vivacious high-school senior in Middletown, Ohio, is one of numerous students who have learned about city government through actual experience as interns. Every afternoon from 3:30 to 5 the old yellow-brick city building is filled with 20-odd enthusiastic boys and girls engaged in every conceivable activity, from conducting traffic surveys to drafting a "welcome" pamphlet for new residents of Middletown. "Frankly, I never thought the kids would help us so much," admits City Manager Charles Thompson, who originally conceived of the program as an educational experiment. "But the boys and girls aren't content simply to learn; they want to put their learning to good use."

The city manager's office walls are lined with professional-looking maps showing all land owned by the city, all recently annexed areas, street-resurfacing work done each year. "I'd wanted maps like these for years. The teenagers dug in the files, collected the necessary information, transferred it to maps. Now I can't imagine how I got along without them. Hundreds of such jobs which would make our daily work far easier must normally be left undone, because of more immediate problems. In these jobs the interns are invaluable."

Doris Kronborg, clerk of the city commission, agrees. Sandy and Phyllis Figgins, twin sisters who "never came to the city building except to pay the water bill" before the intern program started, found themselves working out a master application form for the myriad licenses issued by Miss Kronborg and streamlining her system of filing ordinances. "When completed, the new system will speed up my work tremendously," Miss Kronborg says, happily.

In the department of inspections, Dave Danner and Russ Galloway made a careful study of signs in the downtown area, noting details of size, method of construction, state of repair, projection over the sidewalk. "All this legwork takes time," says one official, "and the kids are wonderful at it. I only wish we'd started this program years ago."

Middletown's unique plan sprang into being 3 years ago through a happy coincidence. At Middletown High, Assistant Principal and Dean of Boys Herman H. Lawrence decided to form a citizens' club to promote responsibility and intelligent citizenship in school, home, and community. Encouraged by the student response—since 1955 the club's membership has skyrocketed from 23 to almost 300—Mr. Lawrence began investigating ways to canalize the members' enthusiasm into really worthwhile activity.

At this same time, City Manager Thompson was concerned with an idea stated almost two centuries ago by Thomas Jefferson: "Democracy depends upon an educated electorate." Aware that a city's health, community spirit and social conscience are mirrored in its local government; and that, inevitably, local government reflects the interest or inerita of the people, Mr. Thompson was looking for a way to give Middletown's citizens a better understanding of their town's government. And what better ambassadors could be chosen than bright, imaginative young people?

When the two men met, ostensibly to arrange a government-class tour of the city building, both were bursting with bigger ideas. Together they planned the intern program through which juniors and seniors might volunteer to spend one or more afternoons a week actually working side by side with regular city officials. Students would have a chance to sign up for the departments which interested them most, but would get no school credit or pay for their work, and would do all their interning after school hours.

An excellent idea, both agreed—but would it work? Would students already busy with extracurricular clubs and sports be willing to sacrific precious after-school hours in the interest of good citizenship? Would city officials approve the project? When Mr. Thompson explained the idea to heads of departments, some were dubious. Members of the citizenship club, however, reacted with excited approval. Thirty signed up immediately, and others were placed on a waiting list. "It's too fast * * * too unexpected * * * we don't have room for them all," protested the city manager, pleased but rather overwhelmed. And indeed, there were quite a few problems to cope with during those first weeks. In the absence of a general orientation period, department heads had to explain their work individually to each new intern who reported for duty. The popular fire and police departments were swamped with eager volunteers, while less glamorous jobs in purchasing and finance went begging. Other questions arose: Should teenaged boys be allowed to accompany patrolmen and firemen on calls that might be dangerous? Should interns be rotated from department to department, or should they remain in one job? Is it fair to give youngsters the responsibility of typing and filing confidential reports of the municipal court and the health department?

One by one the questions were answered, gradually the necessary adjustments were made. Now in its fourth year, the intern program is a little smaller and considerably more efficient. Before starting work, students hear an introductory talk by the city manager or his assistant, Patrick O'Brien; afterward, department heads explain to the group as a whole what their offices do, and how they relate to one another. After this careful briefing, students decide which jobs appeal to them most. They may continue to work in their chosen department throughout the quarterly term, or they may be shifted after having completed a specific assignment.

This year for the first time students may report on their intern work instead of writing a research paper for their government courses. But—"I didn't even know about that part when I signed up," says Tom Tenforde, 10th-ranking tennis player in the State and top student. "I really enjoyed working in the personnel department—getting credit for it, too, was just frosting on the cake."

Mr. Lawrence, who confesses that he has to discourage some of the juniors from interning in order to make room for interested seniors, estimates that well over 100 students have taken part in the program so far. Some of these, like pretty Sarah Smith, were active as both juniors and seniors.

Sarah, literary editor of the yearbook and vice president of the debating team, completed over 300 hours of work in comparison to the 100 hours usually expected of interns. Filing accident reports, checking dog-license records, posting water bills, Sarah slowly began to realize all the things people think just mysteriously get done actually take a lot of time and work. Those city officials have to worry about broken sidewalks and jammed parking meters—to say nothing about something complicated like the sewer tax.

Tom Tenforde can tell you about that. "A lot of people didn't understand the reason for the sewer tax, and kept complaining. Mr. O'Brien gave me a lot of cut-and-dried facts about the sewage system, and it was my job to condense all that information and write a sort of brochure in terms that made sense to the public."

Tom also helped plan the highly successful student election, in which five mock commissioners were chosen to run the city for a day.

"All candidates were put on the ballot by properly notarized petitions," Tom explains, "and they made speeches at the regular know-your-candidate night after the real candidates for city offices had spoken. They even spoke on the same issues—whether to annex West Middletown, the need for an overpass at Central Avenue, whether municipal employees should be unionized."

Lynn Danner, who helped Tom plan the election, and on her own organized a student League of Women Voters, remembers what a large crowd attended the meeting, in spite of a heavy rain. Both Lynn and Tom were elected to the commission, later helped appoint various "city officers."

On the long-anticipated "city day" a "crime" was committed, the culprit brought before Chief of Police Noel LeMoyne, and tried before Judge Rosalie Maffett with Sarah Smith as prosecuting attorney.

Such enthusiasm is gratifying to Manager Thompson, who hopes that at least a few interns will decide to make city government their career. And in some cases the influence of the program is already evident. Blond Kay Clark now plans to major in government at college. Sarah Smith has decided she wants to teach government in high school. And senior Max Sample liked making traffic surveys so much that he's seriously thinking of going into police work.

Max and Noel LeMoyne, working for Chief of Police Blackmore, stood on a particularly busy street corner one afternoon and counted all the left turns. "We counted about 150 in an hour," Noel told his parents that night, "and, man, some of those cars went around on two wheels. The chief says that's a dangerous corner, and because of our survey he's going to prohibit left turns there from now on."

One of Noel's most fascinating jobs so far was taking calls for the desk sergeant. "The first time I answered the phone, expecting nothing less than a murder on a fire," he grins, "it was some guy wanting the correct time. But once I got a call about a kid hit by a car, and had to send an ambulance over; and another time there was a big oil-company robbery."

Noel isn't the only intern who comes home in the evenings full of anecdotes about "what goes on at the city building." One girl's mother confessed that, purely because of her daughter's interest, she had started listening regularly to radio broadcasts of commission meetings. Tom Tenforde's father, head of the tax department in a large steel company, was intrigued by his son's work on the sewer tax brochure. "When Russel was a junior, I warned him to save time for this particular project," says Mrs. Galloway, busy herself as a minister's wife and mother of five children. "My eldest daughter was first president of the citizens' club, but by the time the intern program got underway she was too involved with other activities to participate. I was always sorry. A chance like this—to broaden young people's outlooks, teach them the realities of life, arouse their civic consciousness—well, such opportunities shouldn't be lost."

One girl who lost no opportunities as an intern is Nancy Kincaid, who graduated from high school over 2 years ago but is still remembered for her quick wit, here dependability and her eagerness. Nancy had not been interested in many high-school activities, so when she fell in love with the intern program, her parents were delighted. After a few weeks of inspecting beauty shops and barbershops for the Health Department, Nancy started working with Doris Kronborg, clerk of the commission. Soon she began attending regular meetings of the commission, calling the roll on motions, listening attentatively to the discussions. In the summer, as a temporary employee, she handled work in Miss Kronborg's absence, wrote rough drafts of the minutes. Perhaps the highlight of her internship was the convention of city clerks in Columbus, where she made a speech explaining Middletown's new program. Now in college and planning a career in medicine, Nancy retains her interest in law and local government.

Not all interns are as deeply absorbed as Nancy Kincaid. Some of the girls, perhaps, look upon the hours they spend adding up water bills and typing purchase orders mainly as training in office skills; so far the program has produced no boys dead set on becoming city managers as fast as possible. But, as Manager Thompson wisely points out, the program is geared to reap long-range benefits. "Twenty years from now, these same boys and girls will be leaders of their communities, I like to believe that, because of the knowledge they gain as interns today, they will be better equipped to handle the problems that will confront them as citizens."

Middletown won't have to wait 20 years for some benefits, however. The solution of the red water problem, for instance, can be attributed directly to the industry of boys determined to track down the rusty brown organism which periodically caused certain faucets throughout the city to run red. Although the organism was harmless, it did stain clothes, and had been a city headache for years. By pinpointing on a map the current complaints, and checking back files for earlier complaints, the boys finally established a pattern showing which mains and valves were susceptible to the organism and needed to be periodically cleaned out. City Manager Thompson now considers the problem virtually licked.

Right now, interns in the office of Planning Director James Cox are at work on a topographical map which will show, at a glance, the most practical and inexpensive way to bring a new highway through the hills and ravines southwest of Middletown. "At first they proposed to route the highway straight along here," says pert Sue Shokey, tracing a finger along the partially completed map. "But if it goes this way, following the natural line of the valley, it will cut down on filling and grading costs."

Sue, as a brand new intern, surprised Mr. Cox by volunteering to come in extra afternoons during a week of heavy rain. "That girl's a dandy," he said. "She wanted to get the map completed while the weather was bad because I had told her we'd be outside on sunny days, making a field inventory of how city land is used. Yes, I'm highly pleased with Sue." Leaning back in his chair, Mr. Cox gazes off into space. "Now Sue Shokey could go off to college in a couple of years, take a degree in urban planning, come right back here and be a real addition to our staff."

Sue may decide to seek a career in urban planning—and she may not. But it is certain that she will learn a lot of surprising facts about her city and its government. Not six blocks from the main street, interns on a house-to-house canvass were horrified to discover neighborhoods they never knew existed—places where 20 people live in a three-room house. "Where is this?" they asked. "Is this Middletown?" Boys who had bicycled from one end of town to the other all their lives were nevertheless astounded at the complex street system revealed by a police map. "What a crazy arrangement. I never know our streets were such a hodgepodge." And girls working in the purchasing department are getting a staggering picture of the office supplies, cleaning material, boots, brushes, and tools needed to run a city. "It never occurred to me," one says, "the cities are careful about what they spend for every single item—whether it's a pencil sharpener or a hydraulic jack."

Throughout the busy departments, perhaps the most frequent remark heard from teenagers is, "I never knew * * *." And, learning as they work, Middletown's young interns are gaining a true understanding of their city and its government—sure foundation for responsible citizenship.

## Patents-in-Fee-Simple to Certain Lands on Indian Reservations

EXTENSION OF REMARKS

OF

### HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. BERRY. Mr. Speaker, I have today introduced legislation directing the Indian Department through the Secretary of Interior to issue patents in fee simple to certain lands on various Indian reservations in my district, most of which have been approved and should have been issued years ago, but because of redtape, continuous delays, and lack of decision, have never been issued.

In each instance there was an exchange of lands with Indian owners. In each instance the exchange was approved by the Indian, it was approved by the tribal land committee, it was approved by the Indian Department, and in most instances those involved in the deals expected that title would be transferred in a very short time. However, years have gone by, in many instances as many as 10 years, and nothing has been done and probably never will be done, unless and until the Congress takes action to direct action.

It is my purpcse to herein explain briefly the transaction involved in each of the land exchanges described in the bill I am today introducing.

1. ROSEBUD INDIAN RESERVATION—EARL ADRIAN

In the first case I am asking a patent to be issued to Earl Adrian on the SE¼ 27 and NW¼ 34–40–31, which was in exchange for the NW¼ 32–40–28. Application for this exchange was submitted in September 1949. The tribal committee approved the exchange November 9, 1949. Mr. Adrian conveyed his land with improvements, including a dwelling, shed, chickenhouse, and so forth, by deed in trust for the tribe at the time of making the application, September 22, 1949. The two tracts were appraised, each being appraised at $1,128, and as such determined to be of equal value. The Billings area office requested a patent to be issued to Earl Adrian by the Bureau of Land Management in Washington on August 8, 1950. No apparent reason has ever been given why such patent was not then issued, however, it dragged along year after year. Mr. Adrian feeling that his Government would protect him, did not press for patent until on March 5, 1958, the Rosebud Sioux Tribal Council adopted a resolution which would prohibit all pending land exchange applications.

Mr. Speaker, these cases would not be so serious were it not for the fact that there is more involved than just the deal between the Indian and his guardian, the Indian Department, and the non-Indian who has entered into this exchange. In this case, as in nearly every other case, the Indian Department required the applicant to transfer his land by warranty deed to the tribe, or to the Federal Government in trust for the individual, at the time of making the application for transfer. The deed was recorded which took the land off the tax list. The local governmental units have not had the benefit of taxes either from the originally patented land nor from the tribal or allotted land. Local governments have lost 10 years of taxes on this and practically all of the other land exchanges set forth in this bill. Another thing, in most instances the non-Indian rancher has been required to pay lease on the Indian land he has been using all down through the years, regardless of the fact that he has turned his land over to the Indian Department without consideration and without credit for the use of such land.

My bill simply asks that the Congress direct patents to be issued on this and other exchanges in order to straighten out some of these messes.

2. ROSEBUD INDIAN RESERVATION—JOHN FERNEN

In this case application was made in 1948, wherein Mr. Fernen agreed to exchange lands with the tribe on the basis of two acres for one acre he was receiving of tribal land. The Rosebud Land Committee approved the exchange November 17, 1948. Mr. Fernen was advised by the superintendent that everything was in order and that the land he was receiving was his and that title soon would be in his name. He has been using this land for the past 10 years and has spent thousands of dollars putting improvements on it, including a large quonset granary, a machine shed, a new well with pressure pump and tank, fences, and so forth. He has planted 30 acres to trees. In the meantime, the tribe has been leasing the land, which Mr. Fernen deeded to them in exchange, to another individual. It seems that part of the delay in this case has been occasioned by the fact that it was discovered that the tribe did not hold full title to one of the parcels involved, that the tribe finally acquired title and apparently everything was in order except that no one got around to issue the patent to Mr. Fernen, and then the Rosebud Tribal Council adopted a resolution disapproving all pending land exchanges.

If this resolution of the Rosebud Tribal Council, adopted March 5, 1958, is to serve as a complete bar to justice, Mr. Fernen stands to lose thousands and thousands of dollars, because he trusted, because he had faith that the word of the Department of Interior was good and that he would be protected if he went in and improved this land for which he was exchanging.

3. ROSEBUD INDIAN RESERVATION—ROY J. KELLEY

In this instance, Mr. Kelley returned from the military service, and being anxious to get started in the farming and ranching business, entered into an agreement with Simon Thunder, an allotted Indian, wherein Mr. Kelley was to buy a house for Mr. Thunder in exchange for his quarter of land. All negotiations were handled in the agency office. The house was appraised before Mr. Kelley bought it. The house was purchased by Kelley and moved where the Superintendent agreed it should be moved for Mr. Thunder's use. Mr. Kelley advanced $2,086 to Mr. Thunder for him to purchase his father's interest in Tribal Land Enterprise shares so that full title could be transferred to Mr. Kelley. Mr. Kelley made other advances from time to time and has a sizable investment in this property.

The application for exchange was submitted in 1951. The Rosebud Land Committee approved the exchange February 16, 1951, determining both the house and land of approximately equal value. Kelley conveyed title to the house to the United States in trust February 15, 1951. Since that time Simon Thunder has had the house, has used it without rent, has permitted it to depreciate in value. Today Mr. Kelley has nothing except a lot of promises by the Indian Department and a sad experience.

4. ROSEBUD INDIAN RESERVATION—MRS. FRANCES MULLEN

Application was submitted in February 1949 for the exchange of 8 quarters of land for 10 quarters of land belonging to the Tribe. This land was appraised at almost equal value, and in order to make up the difference, Mrs. Mullen paid the tribe $383.14. The exchange was approved by the Rosebud Land Committee March 30, 1949 and August 17, 1949. The exchange was never completed and again was blocked by the resolution of the tribal council, April 24, 1957. Again in this instance, title to the Mullen land was transferred to the tribe years ago. The tribe has title to all the land, the difference in the consideration, et cetera, and nothing is being done.

5. ROSEBUD INDIAN RESERVATION—THOMAS F. ARNOLD

In this case an exchange was worked out through the Indian office in Rosebud with the Indian landowner, Frederick White Face Woman, and $300 was paid by Mr. Arnold to balance the difference in the appraised values of the properties. This was in 1949. Mr. Arnold went into court and quieted the title in the land, and recorded the title in the United States in trust for the Rosebud Sioux Tribe on April 26, 1952. The exchange was never completed. The tribal council by resolution protested the exchange being completed under date of February 24, 1957. The tribe has Mr. Arnold's land, has the White Face land, has the cash, and no one is doing anything to correct the situation.

6. PINE RIDGE RESERVATION—DANIEL HOLCOMB

Application was submitted for land exchange in 1954. The executive committee of the tribal council approved the application August 26, 1954. The properties were appraised and it was determined that there was $500 difference in the value, which amount Mr. Holcomb deposited at the agency office in 1954. On October 29, 1957, the Aberdeen area office disapproved the exchange for the reason that it was then decided that there was more than $500 difference in value. The area office decided that the difference in value was $680 instead of $500. No action has been taken, however, although more than ample time has elapsed in which the deal could have been consummated.

## A Bill To Amend the Social Security Act

EXTENSION OF REMARKS
OF
### HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. WALLHAUSER. Mr. Speaker, on Tuesday of last week, I introduced in the House of Representatives a bill (H.R. 5219) that would amend the Social Security Act to permit those receiving social security benefits to earn up to $150 a month and $1,800 a year, rather than the present limit of $100 a month and $1,200 a year.

I have taken this step as the present earnings limitation imposes undue hardship on many retired people because of the loss of benefits that results when the $100-a-month figure is exceeded through their part-time employment.

Since my election to Congress last year, many of my retired constituents have explained to me the plight in which they find themselves because of the low earnings limitation imposed by the Social Security Act.

From the information given me, it appears evident that many of our retired people are suffering because of the $100-a-month and the $1,200-a-year earnings limitation. Many do not receive enough in social security benefits to take care of their most basic needs. When, through their own willingness and desire, they undertake part-time employment to bolster their incomes they find themselves denied benefits because they overstep the $100-a-month limitation.

The modest increase in the earnings limitation that I propose will enable many retired people to keep on with their part-time employment and thus maintain the independence they so earnestly desire and which they so justly deserve. In many instances, the $150-a-month and $1,800-a-year limitation that I propose will make the difference as to whether or not our retired people can enjoy even the most modest necessities and comforts of life. This is particularly true in the great metropolitan district that I have the honor of representing.

The raising of the earnings limitation cannot in any way be regarded as a handout for our retired citizens. Through their years of regular employment, they earned their right to social security benefits. Now, they are willingly

seeking to bolster sometimes meager benefit payments through part-time employment, but are thwarted in part by the low earnings limitation. They are more than willing to help themselves and we in the Congress should be willing to help them. Their willingness is in the tradition of true Americanism.

The statistics of the Department of Health, Education, and Welfare that I obtained this week show that the average monthly social security benefits now paid are: Retired man with wife, $119; retired single worker, $67; and eligible widows of deceased workers, $56.

Certainly, those average figures show the need for the legislation that I propose, and particularly when it is borne in mind that there was a great increase in the cost of living both during and since the days of World War II.

It is my sincere hope that this very necessary amendment to the Social Security Act will be enacted at the earliest possible date.

## How Inflation Determines What You Have Left

EXTENSION OF REMARKS
OF
### HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. McCULLOCH. Mr. Speaker, inflation is one of the most distressing problems of our time. Because of its temporary exhilarating effect, many persons, who should know better, embrace it, especially if in a position of advantage.

On the other hand, to the aged attempting to live on social security or other fixed retirement income, inflation is a fearful and frightening thing.

The Cleveland Plain Dealer, one of the really great newspapers of our country, has, in an editorial, described what inflation has been doing to the purchasing power of the dollar and what the consequences will be unless we have the courage to do something about it. The editorial follows:

HOW INFLATION DETERMINES WHAT YOU HAVE LEFT

There are some mighty shocking tables in the current Reader's Digest which show what inflation has done to your earnings. They came from an article written by T. Coleman Andrews, former U.S. Commissioner of Internal Revenue. Let's look at a few:

If (as a single man) you made $2,000 in 1939, you had $1,975 left to spend after taxes had been paid. But in 1957 you had only $863 left, since taxes had increased $215 and inflation had taken $897.

If you made $5,000 in 1939, you had $4,878 left after taxes. But in 1957 you had only $2,051 left, since taxes had increased by $696, and inflation had taken $2,131.

Or try it another way: It required an income of $4,806 in 1957 to match a 1939 income of $2,000, because the increase brought $755 additional in taxes, and inflation had already gobbled up $2,051.

It required an income of $13,004 in 1957 to match a 1939 income of $5,000, because of an additional $2,937 in taxes and an inflationary bite of $5,067.

But the really shocking thought is that the worst is yet to come—that, unless inflation can be stopped, it will take an income of $10,538 by 1975 to match a 1939 income of $2,000; an income of $92,141 to match a 1939 income of $10,000.

As Andrews pointed out, "Inflation cannot be stopped by more inflation. It can be stopped only by removing the causes"—the chief of which is wasteful spending.

A nation, Andrews observed, "cannot afford anything its people can't, and it cannot violate the rules of thrift and provident living without suffering the consequences that people do for the same offense."

As President Eisenhower has made clear, you start first by balancing the budget.

## Anniversary of the Communist Takeover of Rumania

EXTENSION OF REMARKS
OF
### HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks, I wish to call to the attention of the House the fact that last Friday, March 6, marked the 14th anniversary of the Communist takeover of Rumania. In this connection, I would like to include the following text of a letter I have received from Mr. Mihail Farcasanu, president of the League of Free Romanians:

THE LEAGUE OF FREE ROMANIANS,
*New York, N.Y., March 5, 1959.*

The Honorable ALVIN M. BENTLEY,
*U.S. Representative From Michigan.*

DEAR MR. BENTLEY: This 6th of March, 14 years will have elapsed since the subjugation of Rumania by the Soviet Union. We feel that this brutal fact of permanent Soviet aggression should once more be denounced in the face of international public opinion, especially now when Moscow tries through its latest schemes over Berlin, to at least impose a character of finality to their domination of Central and Eastern Europe. This character of finality the Russians expect to have accepted without reserve by the West as an accessory of the negotiations over the blackmail issue of Berlin.

It seems to us that the gravity of the Berlin blackmail has been made possible, or at least greatly facilitated by the unwillingness of the Western Powers, for more than a decade, to determinedly use against the Kremlin, the powerful political issue of the Soviet tyranny in Eastern Europe, maintained through direct military intervention and pressure.

As one whose interest and comprehension have so largely contributed in keeping alive this problem, you have yourself, on many occasions stressed its political value and potentiality in the effort of the United States to check the Soviet offensive.

After 14 years of despotic Soviet yoke and forced collectivization, the Romanian people are basically unyielding to the Communist alien rule and ideology. This manifests itself through a permanent interior tension, the result of uninterrupted acts of sabotage by the population and recurring waves of terror by the Soviet stooge government.

It is this spirit of resistance which constitutes one of the most irritating thorns in the Soviet flesh. The political, economic, and military integration of the whole area of Eastern Europe in the socialist camp as planned by the Russians against the West, is being seriously hampered by this deep-rooted instinct of national independence.

It is true, as the Subcommittee on Europe stated that the failure to support the Hungarian revolt—a dramatic explosion of this national instinct—was a lost opportunity. But in general, everytime the question of East Europe could be raised and is not, constitutes a lost opportunity. The Russians are using every means in order to stifle this national instinct in East Europe, as their interest demands it, but the interest of the United States is exactly the contrary, to keep by every means this instinct alive.

What the Soviets intend through their engineered Berlin crisis is to eliminate the Achilles heel of free Berlin in the status quo of their dominated belt of Europe. The obvious reply to this maneuver should be the forceful raising at the forthcoming conference table the East European independence issue. Otherwise another opportunity will have been lost.

I remain, yours respectfully,
MIHAIL FARCASANU,
*President.*

## Communism, Hawaii, Statehood

EXTENSION OF REMARKS
OF
### HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. PILLION. Mr. Speaker, I would like to insert a statement which I made before the House Rules Committee on March 5, 1959, on the subject of Hawaii statehood:

Mr. Chairman and gentlemen, in my humble opinion, the issue of statehood for the Territory of Hawaii ought to be deliberated from three broad aspects. This statement will deal with the subject in the following order:

First. The grant of statehood to Hawaii will expropriate sovereign personal political power from one segment of our population and bestow that power upon another segment of our citizens.

Second. The next phase of this discussion will attempt to refute the arguments advanced in favor of statehood. I will try to demonstrate that the reasoning for statehood is based either upon political error, or is of minor importance, or is irrelevant, or is of an emotional origin.

Third. The concluding portion of this statement will deal with communism in Hawaii and its dangerous political consequences.

THE POLITICAL POWER ASPECTS OF STATEHOOD

There is a mistaken popular notion that the people of the Territory of Hawaii are being deprived of their right of self-government. There are some differences between the powers of the governments of the 49 States and the powers of the Territorial Government of Hawaii. But, these differences are insignificant.

Essentially, under the Organic Act, the Territory of Hawaii possesses full power to enact laws relating to its property, affairs, and government. Its powers in relation to the conduct of its affairs are substantially as extensive as the powers of the State governments of the 49 States.

Although Congress has reserved the right to disapprove Territorial legislation, no law passed by the Legislature of the Territory of

Hawaii has ever been invalidated by Congress.

Although the Governor of Hawaii is appointed by the President, there has never been any substantial complaint that the administration of the Governor's office has been contrary to the best interests of the people of that Territory.

To my knowledge, there has been no complaint by the Territory of Hawaii of a lack of power in the Territorial Legislature to adequately deal with its problems on the basis of home rule.

The concern of the proponents of statehood lies not in their need or desire for power to conduct the affairs of the Territory, but rather, in their desire for power to conduct the affairs of the 49 States. They seek the power associated with the election of two U.S. Senators, two U.S. Representatives, and four electoral votes in the choice of a U.S. President.

THE TRANSFER OF POLITICAL POWER FROM THE PEOPLE OF THE 49 STATES TO THE PEOPLE OF HAWAII

As you gentlemen know, all governments, good or bad, are mere organizations of political power.

It is a fundamental principle that our constitutional representative form of government shall give every citizen an equal voice in the conduct of our Government. The right of a citizen to participate in our Government, almost exclusively, rests with his right to vote. The importance of the right to vote lies in the effectiveness of this right to vote.

Although the Russian voters are granted the equal right to vote, it is not effective political equality in our estimation.

*Senate representation*

Statehood would entitle the people of Hawaii to two U.S. Senators. It is our responsibility to decide whether this amounts to an equitable apportionment of legislative power.

The population of Hawaii, according to the census estimate as of July 1, 1957, was 613,000. Of this population, 59,000 were military personnel. An additional 25,000 people are civilian Federal employees. If we consider these 84,000 Federal civilian and military personnel to each have only 1 dependent, then the basic population figure should be reduced by 168,000. This would reduce the Hawaiian citizen population to 445,000.

With the grant of statehood, the people of Hawaii will be represented by 1 U.S. Senator for each of its 223,000 citizens.

The 2 Hawaii Senators representing 445,000 citizens would nullify the will and the representation in the U.S. Senate of: New York's 13 million people; California's 14 million people; Georgia's 4 million people; and of the voters in each of the other 49 States.

The framers of our Constitution founded a Republic, combining the features of both a federal and a national type of government.

The plan to give each State two Senators conforms to a pattern suitable to a Federal Government, with limited powers, where the bulk of the sovereign power is reserved to the States.

The plan to apportion representatives on the basis of population conforms to the framework of a National Government where all power is concentrated in a Central Government.

The grant of equal representation, that of two U.S. Senators, to each State was adopted for the protection of the sovereign powers of the States from encroachment upon their powers by the Central Government. In furtherance of this purpose, it was provided that the U.S. Senate be chosen by State legislatures.

The framers of our Constitution repeatedly stated that the U.S. Senate would represent the States in their corporate governmental capacities. The election of Senators by the legislatures was an integral part of that historic compromise under which each State became entitled to two U.S. Senators.

The 17th amendment to our Constitution was adopted on April 8, 1913. This amendment fundamentally altered the basis for the allotment of two Senators to each State. This change in the mode of the selection of our Senators to that of popular suffrage totally destroyed the justification, the rationale, for equal representation for each State in the U.S. Senate.

There have been drastic changes in our Republic. The framers of our Constitution envisioned a Central Government of limited powers, with the bulk of the residual sovereign power being reserved to the States.

There is no mathematical formula for the measurement of the division of power between the States and our Central Government. However, we can measure the exercise of power by the expenditures of our governments.

In the year 1957, our total gross national product amounted to $440 billion. Of this sum, $79 billion, or 18.1 percent, was expended by the Central Government. The State and local governments expended $34 billion, or 7.7 percent.

It is evident that there has been a continuing erosion of power out of the States and a continuing concentration of power in our Central Government. We have become a National Government wherein the States are being relegated to mere provinces. We have evolved from a Federal Republic into a national democracy.

Twenty-five States, with a population of 31 million people, constituting only 18 percent of the Nation's population, control 50 votes and have a majority power in the U.S. Senate.

This imbalance of power is a prime factor in our huge Federal bureaucracy, its wastages, and the consequent huge Federal taxes. Our bankrupt agricultural program with Federal subsidies for surplus products and Federal subsidies paid to reduce crops is an example of the inconsistency between the possession of power and the accountability for that power.

The U.S. Senate is accountable to the pressure of their constituents rather than to the preservation of State powers. Their prime interest must lie in expanding national power.

The alarming growth of Federal aid is another example of the inequitable distribution of Senate power. These programs are a practical means of socializing the wealth of the State based upon the political combinations of State powers in the U.S. Senate.

Statehood for Hawaii will reduce the effectiveness of the right of suffrage of every citizen in the 49 States. It takes away the right of representation and transfers an excessive amount of representation to the people of Hawaii.

The average representation in the U.S. Senate is one Senator for approximately 1,700,000 citizens. Hawaii will have one Senator for each 223,000 citizens.

POWER IN THE EXECUTIVE BRANCH

In the event of statehood, Hawaii will become entitled to 3 electoral votes toward the election of a President of the United States in the 1960 elections. This can be reduced to 1 electoral vote for each 145,000 of its population. The voters in the 49 States will only have 1 electoral vote for about each 320,000 citizens.

Again, the voting rights of the people of the 49 States are reduced in order to transfer excessive voting power to the people of Hawaii.

REPRESENTATION IN U.S. HOUSE OF REPRESENTATIVES

Under the present bill, Hawaii becomes entitled to one member in the House of Representatives. Actually, under the Census estimates, Hawaii would be entitled to two Representatives.

The proponents are waiving their entitlement of two Representatives on the theory of "don't raise any controversy now, we'll get two Representatives anyway, right after the 1960 Census reapportionment."

Since the membership of the House of Representatives is fixed at 435, the two U.S. Representatives from Hawaii and the one Representative from Alaska will displace three U.S. Representatives from the 48 States after the 1960 reapportionment. The voting effectiveness of the voters of the 48 States will be, thus, further reduced.

STATEHOOD FOR OTHER POSSESSIONS

Statehood for Hawaii will intensify the demands for representation in Congress for the citizens and inhabitants of all other possessions of the United States.

If Alaska is admitted with a resident population of about 100,000 people, why isn't Guam entitled to statehood with its population of 59,000 citizens.

If the psychological impact upon the Oriental countries is a valid reason for admitting Hawaii, then Guam should be admited because it is farther west and closer to the oriental cultures.

I received this invitation which is postmarked February 27, 1959, from the National Association for the Statehood of Puerto Rico. If Puerto Rico seeks admission, shall we admit her to statehood in the interest of reducing the possible enmities of South American countries.

Senator CASE recently introduced a bill to grant three delegates in the House of Representatives to the District of Columbia. Are its 900,000 citizens less entitled to two U.S. Senators than 445,000 citizens of Hawaii?

The Virgin Islands has a population of 30,000. Shall we admit the Virgin Islands on the ground that it will improve our relations with the African countries?

Before we further distort the structure of our Government, we ought to be prepared to deal with these prospective troublesome problems on the basis of a principle that is equally just and fair to all of these people and is also just and fair to the people of the 49 States.

EXTRANEOUS ISSUES

Just about any and every conceivable argument has been advanced by the proponents of statehood. The Territory of Hawaii has carried on a high-powered, soft-sell, campaign for the past 12 years. The Hawaii Statehood Commission is the official agency for the promotion of statehood. Since 1947 it has spent more than $1 million for public relations and lobbying. This sum far exceeds the spending by any other lobbying group.

I would like to comment on some of the arguments being advanced by this Commission.

They have raised the slogan of "taxation without representation." Taxation has never been the test of voting rights. The person who pays no taxes is entitled to one vote just as the citizen who pays $1 million of taxes per year. The alien resident who has no voting rights is still duty bound to pay taxes.

The taxes paid by the Hawaiian people just as the taxes paid by the residents of the 48 States was spent to protect all of us, equally, from foreign invasion. The Hawaiian people received from their taxes substantially the same benefits as the people of the 48 States. This is language of incitement.

No one has disparaged the bravery of Hawaiian troops in World War II and in the Korean conflict, except the Hawaii Statehood Commission. They have raised this issue by attributing it to the opponents of statehood. It is inflammatory, emotional lan-

guage that puts the opponents on the defensive and furnishes an emotional impact in Hawaii, coupling statehood with a defense of honor.

The loyalty of the Hawaiian people is conceded but it cannot and should not be the basis for the equitable apportionment of representation in Congress.

I might remind our fellow citizens in Hawaii that the people of the 48 States did not hesitate to bravely and completely repel the inglorious attack by Japan, not upon the U.S. mainland, but their attack upon Hawaii. The United States discharged its obligations to its fellow citizens in Hawaii in full measure.

The proponents say that denial of statehood would cause an unfavorable psychological impact upon oriental countries. This reasoning is a political mistake. It is an admission of weakness. This is a domestic problem that should not be decided by an emotional foreign opinion.

The Hawaiian Statehood Commission advances the argument that Hawaii has met every test of statehood. The Constitution provides no tests for statehood. Congress has not enacted any tests for statehood. The proponents refer to dicta emanating from the Supreme Court.

The opinion of the Supreme Court in this matter is another unwarranted intrusion upon the constitutional powers of Congress.

The height of irrelevancy was attained by a prominent proponent of Hawaiian statehood. He advanced this argument: "The delectation of visitors, the sweetness of Hawaiian music, and the rhythm of its dance." The muscular gyrations of the hula dance is certainly far afield from the crux of the statehood problem.

I received a rather strange Christmas card during this last holiday season.

It contains the words "Mele Kalikamaka." I do not know the meaning of this language nor do I care. It contains no Christian or religious sentiment.

This card is an irreligious and clever, too clever, attempt to associate, in the subconscious mind of the recipient, his regard for the Christmas holiday and his image of a feminine form wrapped in a sarong, with a favorable response to statehood. Since Mrs. William Howard III, uses her stage name of Dorothy Lamour, this card should be regarded merely as advertising fiction.

These are some of the soft-sell techniques of the Hawaiian Statehood Commission. The Madison Avenue advertisers could learn a great deal from the Hawaiian Statehood Commission about the motivation of the masses.

COMMUNISM IN HAWAII

Mr. Chairman, I have said, in and outside Congress, that in granting statehood to Hawaii, we actually invited four Soviet agents to take seats in the U.S. Congress. I repeat this statement.

Oh, yes, they will be carefully selected by Communist agents. They will bear no visible brand marks. They will not be Communist Party members. All that the Communists demand of them in return for political support is to cleverly follow the Soviet party line, although always appearing to be merely liberal.

The infiltration of communism in Hawaii continues to influence every phase of territorial activity to an alarming degree.

The Communist network is centered in two unions, the International Longshoremen's and Warehousemen's Union (ILWU) and the United Public Workers (UPW). From these centers, their influence spreads into both the Republican and Democratic Parties, into the territorial legislature, into the county and city governments, into the newspapers, the radio, the television, and into every home.

The ILWU has a membership of about 25,000 workers. The UPW has a membership of about 2,700 employees.

Both of these unions were expelled by the CIO in 1950 on the ground that "their policies follow the Communist Party" and that "Communists control these unions."

Gentlemen, the policies of these unions have not changed one iota. I quote from the report of the Territorial Commission on Subversive Activities which was submitted to the Governor this last Monday, March 2, 1959 (p. 16):

"The propaganda line disseminated by the ILWU has continued to follow and further the Russian international and domestic viewpoint."

These unions continue to be dominated by the same Communist officials as in 1950. The ILWU in Hawaii is known as local No. 142. The international president is that most dangerous and effective Communist agent, Harry Bridges.

Since last August, Harry Bridges has been actively engaged in promoting an alinement of American labor unions with foreign Communist unions. This, of course, is part of the U.S. Communist Party's and the Soviet Communist Party's present program.

Since August 1958, Harry Bridges has made overtures to: (a) The all-Japan Dock Workers Union; (b) the Waterside Workers of Australia; (c) the Madras Harbor Workers of India; (d) the Waterside Workers of Indonesia. These unions are all Communist dominated.

Since January 1, 1959, Harry Bridges has had conferences with the Communist leadership of unions in London, Paris, Hamburg, Prague, Moscow, Leningrad, and Helsinki. I quote from a newspaper article in the Buffalo Evening News dated February 13, 1959.

"Bridges lauds Democracy in Russian Unions.

"Bridges has also alined his union with the International Brotherhood of Teamsters, headed by James R. Hoffa.

"Jack Hall is regional director of the Hawaii ILWU, Local No. 142. He and six other Hawaiian Communists were convicted in 1953 for conspiracy to overthrow our Government by force and violence. These cases were reversed under the authority of the series of shocking Supreme Court pro-Communist decisions.

"The UPW's officers are Henry Epstein, Stephen Murin, Max Roffman, and Jeanette Nakama Rohrbough, all identified Communists.

"Both the ILWU and the UPW have exploited its members and continue to use the dues and the membership to further the Communist Party line.

"The UPW has 235 public employees employed by the government of the Territory of Hawaii. The city and county of Honolulu have 567 employees belonging to the UPW including 37 members of the sheriff's department.

"The county of Hawaii has 279 UPW, public employees; the county of Kauai has 233; and the county of Maui, 537.

"The ILWU and its conspiratorial Communist partner, the UPW, share the same large ILWU office building. This nonpublic building was recently exempted from public taxation by the Hawaiian Legislature.

"These two unions continue to spend upwards of $200,000 annually for propaganda and agitation.

"Although the English evening broadcasts by their chief English-speaking propagandist, Robert McElrath, have been discontinued, it is a mere tactical shift.

"The radio broadcasts in the Ilocano and Tagalog, Filipino dialects continue every weekday.

The Japanese broadcasts are continued on three stations every Sunday.

"The Commission on Subversive Activities monitored 350 ILWU radio broadcasts from Honolulu alone in 1957–58.

"The ILWU continues to operate another propaganda apparatus. It has a book lending library service that disseminates nothing but Communist literature featuring class conflict and other Communist doctrine. It has a Communist movie loan service. These Communist films are stored and checked in and out by the Public Library of the Territory of Hawaii. This Communist service is paid for by the Hawaii and the U.S. taxpayers."

Although the weekly Communist newspaper, the Honolulu Record, has discontinued publication, the ILWU has announced that it will publish a daily newspaper to take the place of the weekly Honolulu Record.

To demonstrate the growing and expanding power of the Communist ILWU, I show you two newspaper clippings.

The Honolulu Advertiser of November 26, 1958, reports the union election among the Foodland Super Market meatcutters.

The ILWU vote was 205.

The AFL–CIO vote was 14.

I show you a report of the Honolulu Advertiser of March 1, 1959, last Sunday, reporting on an election among the clerks of the Foodland Super Market: "The ILWU won with 134 votes. The AFL–CIO union received 42 votes."

This result is in spite of the fact that the Communist control and the 100 percent Communist propaganda efforts of the ILWU have been broadcast by newspapers, radio, television, hundreds of times to every citizen of Hawaii.

This certainly does not show any lessening of the influence of the Communist Party in Hawaii.

Mr. Chairman, I would like to describe just one incident to show how the Communist Party infiltrates the cultural activities of a community.

The Honolulu Community Chorus is a civic musical organization. It has planned to produce a festival of folk songs this spring in conjunction with the Honolulu Symphony Orchestra. More than 300 vocalists and musicians are to participate.

The choral chairman, Mr. John M. Kelly, Jr., is insisting that the symphony orchestra present the "Song of the Forests," by the Communist composer, Dmitri Shostakovich. This music and words were written in praise of Dictator Joseph Stalin.

Mr. Kelly also insists upon the rendition of "The Lonesome Trail." This music is by Earl Robinson and Millard Lampbell. Both of these men have Communist affiliations for 20 years.

Mr. George Barati, the director of the Honolulu Symphony as of today, still refuses to play these two numbers on the ground that they are of poor musical composition.

The wife of Mr. Kelly is the former secretary to Jack Hall, the Communist director of the ILWU. The secretary of the choral group is Mrs. An Qwon Leong McElrath, the wife of the Communist ILWU propagandist.

There has been a recent change in the Communist tactics in Hawaii. They are now using the soft velvet approach to gain respectability and complete acceptance.

Last year, Mr. Newton Miyagi, secretary of the ILWU, was appointed to the Red Cross board. Mr. Miyagi is a die-hard Communist who took the 5th amendment more than 30 times on questions relating to his Communist affiliations before the U.S. Senate Subcommittee on Internal Security. Mr. Blissard, the U.S. Federal attorney, was so outraged that he resigned as a member of the board.

Strangely, the Federal judge, there, also a member of the board, criticized Mr. Blissard and defended Mr. Miyagi's appoint-

ment. The Federal judge was seeking Presidential reappointment.

On November 8, 1956, Gov. Wilder King forced the resignation of his attorney general for attending a testimonal dinner for Jack Hall. Governor King was not reappointed.

Judge Stainback, a former Democratic Governor, vigorously opposed to the Communists, was also refused Presidential reappointment.

In the 1956 elections, Mr. William F. Quinn accepted the ILWU endorsement for the Territorial senate on the Republican ticket. He is now the Republican Presidential appointed Governor of Hawaii to replace Governor King. I show you newspaper clippings of Governor Quinn tendering a public office appointment to Jack Hall, the prominent Communist leader, as a member of the Hawaii Traffic Commission.

It is a well known political fact of life, that you can't receive the recommendation of the Department of the Interior today under a Republican administration or yesterday under a Demrocatic administration for a Presidential appointment in Hawaii without the blessing of the Communist ILWU.

Mr. Chairman, I would like to conclude my remarks by brifly reviewing the political power that is exercised by the Communist apparatus in Hawaii.

In the 1954 elections, the ILWU gave its endorsements to 71 candidates. A total of 58 of the 71 ILWU-endorsed candidates won. Of these candidates, 22 out of 28 candidates for the Hawaii Legislature won.

In the 1956 elections 21 ILWU-endorsed candidates won out of 30 representatives in the Hawaii House of Representatives.

In this last election of November 1958, there were 69 offices to be filled by election. For these offices, 57 candidates were endorsed by the ILWU. Four of these candidates rejected the ILWU endorsement. Fifty-three candidates accepted these Communist dominated ILWU endorsements.

Thirty-seven of the ILWU-endorsed candidates won their elections.

Thus the ILWU succeeded in electing 37 out of 69 elective positions in the Hawaii Territorial Legislature for a winning percentage of 55 percent out of all public elective offices.

The ILWU succeeded in electing 37 out of 53 candidates whom it endorsed and who accepted this Communist support for a winning percentage of 70 percent.

It must be remembered that four identified Communists sit on the ILWU political endorsement committee that handed out these endorsements. Their long standing Communist affiliations are well known to every person in Hawaii. These four Communists are: Thomas Yagi, Newton Miyagi, Castner Ogawa, and "Slim" Shimizu.

Mr. Newton Miyagi is the same gentleman whose recent appointment to the Red Cross board raised such a furor. During the 1956 U.S. Senate committee hearings on internal subversion, Mr. Miyagi invoked the fifth amendment 71 times and declined to answer when asked if he had been in contact with Russian military and intelligence agents.

These are the men whose political endorsements are sought for and accepted in order to attain public office. These are the same Communists who will pass upon and either reject or give political endorsement to the two U.S. Senators and the two U.S. Representatives to be elected in Hawaii and sent to our Congress. Is there any reason to believe that their self interest will be any less or any different than the 70 percent of those candidates who received, accepted, and were elected with this Communist support?

We can best judge the political power of the ILWU by comparing the results of their endorsements with the results of the endorsements of the Republican Party.

Out of the 69 offices in which the ILWU endorsed candidates, 37 won seats, the Republican-endorsed candidates won only 24 seats. In other words, the ILWU endorsement is much more valuable than the Republican Party endorsement.

Mr. Chairman, I reiterate that the power of the Communist Party continues to be so potent that it is a menace to the people of Hawaii and to the people of the 49 States. There is no evidence of the lessening of that power.

In the event of statehood, the Communist Party will, in all probability, exert a continuing tremendous influence on the election of Hawaii's two Senators and two Representatives. The probable election of ILWU-endorsed representatives to the U.S. Congress will mean that the Communist Party will exert a substantial influence upon these Members of Congress.

The Communist Party will have succeeded in infiltrating the U.S. Congress and establishing a fifth column in this last defense of the free world.

Mr. Chairman, I respectfully suggest that this committee refuse to grant a rule on this bill. There will be no harm done. The sponsors of this bill can bring this measure to the floor of the House without a rule. This committee might prefer not to lend its implied approval to this proposal by the grant of a rule.

Thank you.

---

## Layman's View of the Life Insurance Company Income Tax Act of 1959

EXTENSION OF REMARKS

OF

## HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. ALGER. Mr. Speaker, this is in response to numerous constituent requests for a plainly worded, nontechnical explanation of the Life Insurance Company Income Tax Act of 1959 (H.R. 4245) which recently passed the House. It was the year's first tax bill considered by the House of Representatives and was the first major legislation prepared by and reported from the Ways and Means Committee in which I participated as a committee member.

Background information includes the following considerations: There are approximately 1,300 insurance companies consisting of 300 mutual and 1,000 stock companies. There are big and small companies of each kind. Mutuals have 63 percent of insurance in force, hold 75 percent of the assets, pay 75 percent of the income tax, and had an estimated gain of 58 percent of all insurance business in 1958. Stock companies, therefore, are 37 percent, 25 percent, and 42 percent, respectively.

The kinds of taxation possible are based on insurance company income of two kinds: First, investment income—yield from investment of policyholders' money in 1958 was $3.25 billion—and, second, underwriting income—chiefly gain from margin in premiums charged, fewer death benefits paid than expected. Correct profit determination is complicated by the need for accumulation of various reserves to provide available assets or money to make good the promised payout later in death or retirement. Tax formulas, therefore, must include these factors and recognize analyses involving industrywide averages and/or company-by-company experience. All these considerations spell out the uniqueness of the insurance industry compared to other corporations in the context of a proper determination of taxable income.

The peculiar difficulties of taxation of insurance companies, therefore, are threefold:

First. Contracts are made with policy holders wherein profit may not be known for periods up to as much as 100 years.

Second. In investing policyholders' premiums insurance companies have a bank-like function, so intertwined with pure insurance operation, that it is difficult to determine what investment income does go to the policyholders and what part to the company.

Third. The greatest volume, approximately 75 percent, of life insurance is done by mutuals, that is, cooperative organizations and it is difficult to measure their income. It is maintained that mutuals refund profits or overcharges to policyholders while stock companies competitively at time of policy sale offer lowest possible premium charges without any overcharge refundable cushion on nonparticipating business.

A complicated three-step formula attempts to fairly spread the insurance company tax burden and in many ways is an improvement over earlier formulas.

THE PROPOSED TAX FORMULA

The regular 52-percent corporate rate—30-percent normal tax, 22-percent surtax on incomes in excess of $25,000—applies to the insurance company income tax base. The 25-percent alternative capital gains tax is applicable to capital gains.

The tax base consists of computations under a three-phase formula.

The first phase is concerned with investment income. Gross investment income consisting of interest, dividends, rents, royalties, and so forth, is aggregated and deductions are taken for such things as investment expenses, tax-free interest, a percentage of dividends received, and a special deduction to benefit small insurance companies. The net investment income is determined and further deductions are allowed with respect to reserve requirements, investment income on qualified pension plan reserves, and certain interest paid items. The deduction for net investment income required to be set aside in life insurance reserves to meet future policy obligations is determined pursuant to what is called the modified-Menge formula. This basic deduction is computed by adjusting the reserves in terms of earned interest predicated on an average industry assumed rate or an individual company's assumed rate, whichever is higher.

The second phase in the computation of the tax base is a determination of the net gain or loss from operations. Gross receipts takes into account investment income, income premium income, and other receipts. Deductions are allowed for benefit payments and expenses pertaining to investment and insurance

company operations. Deductions are also allowed for additions to reserves, certain dividends and credits to policyholders, certain group insurance premium income, and a special deduction for nonparticipating insurance equal to 10 percent of the increase in such life insurance reserves.

By deducting taxable investment income which has already been subject to tax in phase one from the aggregate determined under phase two, the underwriting gain or loss is determined. If there is an underwriting gain, one-half of that amount is added to the taxable investment income to establish a combined tax base under phases one and two. In the case of underwriting loss, such loss is offset in full against the phase one tax base.

The phase three tax base computation relates to stock companies and provides that for calendar year 1959 and subsequent years, income distributed to stockholders in excess of amounts already taxed on a current basis is to be included in the regular tax base of the company at the time of such distribution or at the time the company elects to be taxed on part or all of such previously untaxed amount.

ARGUMENTS FOR THE PROPOSED FORMULA

First. Loss would be fully deductible and could be carried forward or back.

Second. One hundred and ten percent deduction would be allowed for profit payment into reserves.

Third. Pension trust reserves investment yield would be deductible.

Fourth. Interest on tax-exempt securities would be deductible.

Fifth. The discriminatory 1942 formula would become effective if H.R. 4245 is not passed.

ARGUMENTS AGAINST THE PROPOSED FORMULA

First. Economic impact on the industry of 90 percent tax increase for 1958 over 1957 has not been sufficiently studied by the Committee or Treasury Department.

Second. State taxes of $300 million plus estimated $545 million of this bill make insurance companies the most heavily taxed thrift institution.

Third. Inflation and taxation are causing the trend to pure protection and away from savings through insurance.

Fourth. Federal Social Security program with no tax liability on investment income will be given discriminatory advantage over private efforts to provide for future security.

Fifth. There is an approximate 5 percentage point shift of tax load from mutuals to stock companies. Because of the preponderance of arguments against the bill, I could not agree to the bill in its entirety.

True, this bill is far superior to the 1942 formula, which was not intended to become effective and which we were warned would come into effect for 1958 if we failed to pass this bill. There is an alternative to the 1942 law which we could have used, namely, continuation of the 1955 Mills-Curtis formula with appropriate amendments plugging any loopholes until the full economic impact of this bill could be studied.

My objection and concern is best expressed in the Committee Report's Supplemental View—pages 87 to 88. I am a signatory to these views which state in part:

Individual economic security is now being provided the public by life insurance companies, other thrift institutions, and through the social security system. It is sound public policy to encourage everyone to provide for his own security on a voluntary basis and our tax laws should encourage, not deter, such efforts. This bill, however, makes voluntary provision for one's own economic security relatively less attractive since it increases the tax on life insurance while investment earnings under the social security system are free from either Federal or State tax. This incerases the advantage of the social security system over voluntary individual protection offered by life insurance companies, particularly if the latter must absorb taxes of the magnitude provided in the bill. Public awareness of this differential in cost will most certainly lead to incerased demand for larger social security benefits and less incentive to build security on a voluntary basis.

I feel that our haste precluded the full economic study that is still needed before evolving a permanent formula for life insurance taxation. Perhaps, my relative inexperience as a new members of the Ways and Means Committee in dealing with an extremely complex subject has made me overly cautions.

## Speaker Rayburn's 46 Years

SPEECH
OF
## HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 4, 1959*

Mr. EDMONDSON. Mr. Speaker, every American is proud of the Speaker of the House of Representatives and his unparalleled record of public service.

In Oklahoma, where Speaker RAYBURN has long been regarded as "Oklahoma's Congressman at large," there has long existed a standing organization known as the Rayburn for President Club.

Thousands of Oklahomans have believed for many years that the best qualified man in the United States for President is SAM RAYBURN, of Texas.

On more than one occasion, I have attended meetings in the Sooner State where all in the room were agreed that Speaker RAYBURN was the best man the Democratic Party could nominate for the Presidency.

On one such occasion, I heard our beloved Speaker tell a large group of Oklahomans that he deeply appreciated such sentiments, but that he firmly and emphatically declined to become a candidate.

Speaker RAYBURN'S refusal to become a presidential candidate has been a loss for our party in the White House, but our loss on the executive side of the ledger has undeniably been our greatest gain on the legislative side of the same ledger.

I doubt if any historian of our time will deny that the greatest single influence of this generation upon our Nation's legislative history has been the great Congressman from Bonham, who has served longer than any other American as Speaker of the House.

It has been a great privilege to serve with him in the House.

It is both a privilege and a pleasure to join with my colleagues in expressing congratulations and best wishes as Speaker RAYBURN begins his 47th year of congressional service.

## Peanuts and People

EXTENSION OF REMARKS
OF
## HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. COOLEY. Mr. Speaker, the peanut is more closely associated with fun and pure enjoyment than any other crop.

It is as American as baseball.

What would a circus be without a peanut vendor?

The peanut is a symbol of America at play—with children and grownups alike. It tempts the palate. It gives us energy. It is a solid food on our table. It is the constant companion of good appetite and good humor everywhere.

Versatility vies with taste to give the peanut its standing not only in America but throughout the world.

Its flavor is beyond challenge in the crunchy whole nut, or in spreads and confections. It has an affinity both for salt and for sugar. Throughout many areas of the world it is the most common substitute for meat, answering also the need for oil in the diet. The oil is used widely in chemistry and in commercial enterprises. Not only is the peanut a direct human food, but fed to hogs it makes the tastiest hams; and when the hay of the vine is eaten by cows, we get the sweetest milk.

Only perfect peanuts are used for edible purposes. Others are crushed for oil. The oil is ideal for frying because of its high smoke point of 450°. It does not scorch easily. It does not absorb flavors and can be strained and used repeatedly. The oil is best for salads because its tastes, it clings, it sparkles. It has many other aptitudes. It is the basis for many cosmetics, shaving creams and hair lotions. I am told that the energy value of 1 pound of peanuts equals 4 pounds of beef steak, or 21 pounds of cheese, or 10 quarts of milk, or 33 eggs.

Mr. Speaker, it is fitting that we should be reminded occasionally of those things so often overlooked but which mean so much in our daily lives.

Peanuts are found on every continent and in almost every country where climatic conditions are suitable for their cultivation. They are a major source of food throughout the world.

The United States ranks fifth of all the countries of the world in the production of peanuts and produces a little more than 5 percent of the total world supply of 14 million tons. About one-third of all peanuts are grown in India. China produces a little less than a tenth of the total world supply and sizable quantities are produced in French Equatorial Africa and Nigeria.

Like many cultivated crops, plants similar to the domesticated peanut cannot be found in the wild state. Selection and cultivation of the plant have changed its characteristics until it can be scarcely identified with the wild form.

For a time it was thought that the peanut was a native of Brazil, but later it was found that the wild forms were grown extensively in Paraguay and Uruguay and the northeastern part of Argentina. It is assumed that the peanut came to the United States in the colonial days from Africa which had in turn received it from South America.

In the early part of the 19th century the cultivation of peanuts in the United States was limited to a small portion of eastern Virginia. The expansion of the crop to other areas and its development into an important agricultural commodity occurred, for the most part, in the early part of the 20th century.

During World War II, in response to the vast need in this country for vegetable oil, almost 5 million acres were devoted to peanut production. Much of the problems of the peanut industry today stem from the necessity for reducing this wartime level of production to that required to meet peacetime domestic demand. Peanut acreage has now been reduced to between 1½ to 2 million acres, but with the increased yields per acre annual production at the present time is near a million tons.

Peanut production is an important source of cash income to almost 200,000 farmers. It is particularly important in areas of Virginia, North Carolina, Georgia, Alabama, Texas, and Oklahoma, where soil and climatic conditions favor its production.

This is a brief chronicle. But I cannot close it without mentioning the wonderful work of the National Peanut Council in building markets. The work of this organization is beneficial not only to producers, but also to consumers as well, for the more peanuts we eat and the more we use, the healthier and happier we all will be.

Mr. Speaker, I appreciate the House joining, with its attention, in this salute to the most versatile, the most convivial, of all the products of our farms, the peanut.

## Uncle Sam's Security Lottery

EXTENSION OF REMARKS
OF
**HON. KATHARINE ST. GEORGE**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mrs. ST. GEORGE. Mr. Speaker, the following editorial gives a very fair picture of social security as it looks to Mr. and Mrs. Average Citizen.

This editorial appeared in the Walden Citizen Herald, in my district, on March 5. It tells the facts clearly and truthfully and I feel that the Congress is entirely responsible for this very unfair and unjust situation.

UNCLE SAM'S SECURITY LOTTERY

When you buy insurance, the policy tells you what you'll get for your money and what you won't. It's a contract, and that's that.

Some people think of social security as insurance, but it isn't. The Government tells you what to pay now (or have your property seized) and maybe you'll get something later, maybe not.

Congress decides what you'll pay and what you'll get—if anything. The money goes into the Treasury to be spent, and the Government puts I O U's into the social security account for you to pay in taxes later, or for your children to pay.

You can pay all your life and collect a mere $200 death benefit.

Or you can pay a few years and hit the jackpot of maximum benefits. Congress makes the rules and a later Congress can change them. It often does.

This is just something to think about now that your contribution to this insecure "security" has gone up by another one-fourth of 1 percent.

## H.R. 10—Equality for the Professional or Self-Employed Citizen

EXTENSION OF REMARKS
OF
**HON. GEORGE S. McGOVERN**
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. McGOVERN. Mr. Speaker, I feel constrained to speak out against a present inequality in the tax treatment of our self-employed citizens. The Congress can proudly point to its legislative record of providing financial security for our growing elderly population. One of the milestones in this record is the tax exemption to encourage employee retirement plans. Unfortunately, however, we have discriminated against the industrious self-employed individual by not extending to him a similar opportunity and encouragement to invest in his retirement.

Under private pension plans, which now cover over 15 million workers, the employer's contribution to the individual worker's pension plan is deducted as a business expense by the employer and is not currently taxable to the employee. However, there is no provision in the law for a smiliar partial tax exemption for retirement contributions made by the self-employed.

H.R. 10, reported out favorably by the Ways and Means Committee, would rectify this inequity by permitting a self-employed person to take a tax deduction for strictly defined types and amounts of retirement investments. This bill is extremely well drafted to insure that it actually will do those things for which it is designed, while precluding abuses. It has had the benefit of exhaustive hearings during the 7 years it has been under consideration.

All self-employed persons who fall within this definition in the Social Security Act, plus doctors and ministers, would be permitted to deduct for retirement investments 10 percent of their annual earnings with a ceiling of $2,500 a year and $50,000 for a lifetime. So that older persons would have an opportunity to build up retirement plans within a shorter period, the annual deduction could be higher for persons over 50 years of age on January 1, 1959.

In simplest terms, the principle of the bill is to permit—for example—the small businessman to spread out his income over a greater number of years. During his middle years, when his income is normally the highest, the greatest bite is taken from him under our progressive income taxes. Spreading consists in earmarking a part of his peak earnings for future taxation when his income will be less and consequently the tax will be reduced.

Since 1951, when Representatives KEOGH and REED introduced a bill to correct this tax discrimination, bipartisan attempts by Representatives Keogh, Simpson, Jenkins and the late Representative Reed have been made, without success, in each Congress to pass the necessary legislation. Last year the House passed the bill but it languished in the Senate.

This bill has been tested in practice. Both Great Britain and Canada have with success put similar schemes into operation.

Although previously supporting it, the administration is now opposed to this bill because of the revenues which will be lost to the Treasury. The administration estimates that H.R. 10 may result in a loss of revenue of $320 million for fiscal 1960 and $365 million for the first full year of operation. While $365 million may indeed be the loss in five years or so, based on experience in Canada and Great Britain, and on analogy with other forms of saving programs, it appears highly unlikely that the loss will even begin to approach this figure in 1960.

Furthermore, if revenue loss is to be the criterion by which a law is judged good or bad, then I submit that few inequitable laws will be corrected. It seems to me that we would recover many times the funds lost by this bill, if we applied the criteria of both revenue gain and equity to our present revenue codes and plugged some of the more glaring loopholes. I urge the passage of this measure instituting tax equality for the self-employed.

## New Bill Would Give Durum Separate Consideration It Deserves

EXTENSION OF REMARKS
OF
**HON. DON L. SHORT**
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. SHORT. Mr. Speaker, at the request of Durum growers in North Dakota, Senator YOUNG of North Dakota has introduced a bill consponsored on

the Senate side by Senator LANGER, and by Senators MUNDT and CASE of South Dakota. I am today introducing a similar bill on the House side and I have some hopes that it will be included among the bills our Agriculture Subcommittee will consider during the next several days. One of the problems in promoting Durum legislation has been that Durum is just a subdivision under wheat, as far as a lot of people are concerned, and they want to treat it as such. Macaroni products made with our North Dakota Durum are superior, but that fact—so far, at least—is not appreciated here in the East.

Under the bill I am introducing today, it should be pointed out, is the provision that farmers cannot raise hard wheat on their farms if their Durum allotment is increased. Durum growers would be allowed to grow enough of their product to satisfy the demand. Under the mechanics of this bill, the allotment would be lessened if, at any time the demand for Durum lessened.

I hope the Durum growers, who neither create nor add to the surplus—which is in other classes of wheat—will receive the serious and separate consideration they deserve. That is all we ask in this bill.

## St. Patrick Fund Honors Saint With Cultural Exchanges

EXTENSION OF REMARKS
OF
### HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. DULSKI. Mr. Speaker, the St. Patrick Scholarship Fund, with which I am well acquainted, has done outstanding work in the cultural exchange field. Its program is financed through the annual sale of seals honoring Ireland's patron saint, which sale is in progress at the present time.

This organization is to be highly commended, and I wish to include an article which appeared in the Buffalo Evening News, Buffalo, N.Y., on February 25, 1959:

ST. PATRICK FUND HONORS SAINT WITH CULTURAL EXCHANGES

St. Patrick, whose Christian missionary work brought ancient Ireland into contact with Western Europe, is being remembered fittingly by a group of Buffalonians. Like their patron, they seek cultural exchanges.

They're the St. Patrick Scholarship Fund, Inc., a nonprofit organization of volunteers who honor Ireland's patron saint by making it possible for American and Irish students to be educated in each other's institutions of higher learning.

The fund finances its program through the annual sale of St. Patrick seals. This year it has sent seals to 10,000 Buffalo-area residents.

The fund's immediate goals are:

1. To raise enough money to pay for transportation, board, books, and other expenses for a young man and young woman from Ireland to study in D'Youville and Canisius Colleges. Each college has awarded a 4-year tuition scholarship to the fund.

2. To send an American student to the National University of Ireland, with its constituent colleges in Cork, Galway, and Dublin.

The fund's long-range goal is the reciprocal exchange of scholarships between the National University of Ireland and Catholic colleges in this country, including the six in western New York. In addition to Canisius and D'Youville, they are Niagara and St. Bonaventure Universities and Rosary Hill and Mount St. Joseph Teachers Colleges.

Selection of the American student to be sent to Ireland will be made by the presidents of the six cooperating colleges and universities here, under the chairmanship of the fund's president, the Right Reverend Monsignor Francis Garvey, administrator of St. Joseph's Cathedral. He studied in the National University in Dublin.

## Warren Rejects Warren

EXTENSION OF REMARKS
OF
### HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. HARRISON. Mr. Speaker, under leave to extend my remarks in the Appendix, I include additional editorial comment on the courage and determination of the citizens of Warren County, Va., from the Richmond News Leader of February 19, 1959:

WARREN COURT, WARREN COUNTY

Back in 1954 and 1955, when the Warren court was rewriting the Constitution of the United States and laying down new rules for the operation of public schools, the legal situation could be summed up syllogistically:

(1) The Constitution prohibits the States from performing any act that denies a citizen equal protection of the laws.

(2) The maintenance of racial segregation in a public school is an act that denies a citizen equal protection of the laws.

(3) Therefore, the States are prohibited from performing any act intended to maintain racial segregation in a public school.

If every other consideration were put to one side, and these premises assumed to be true, the conclusion would follow logically. The late Circuit Judge John J. Parker, in expounding this process of reasoning, went to great pains to emphasize one thing: It was segregation that was prohibited, and not integration that was decreed. The procedure, he explained, was injunctive in nature: The States were enjoined against the performance of an unconstitutional act; the States were not affirmatively required to perform any constitutional act. The 14th amendment prohibits; it does not demand.

Many orders have been issued since Judge Parker spoke. In January of 1956, the first note of confusion crept in, when District Judge Taylor not only directed that segregation as to high school students in Anderson County (Tenn.) be discontinued, but also directed county school authorities to adopt a program of integration. The following August, Judge Taylor referred to his January decree as the aforesaid integration order. He enjoined six persons individually and all other persons who may act in concert with them from hindering, obstructing, or in anywise interfering with the aforesaid order, either by words or acts or otherwise. And among the acts of interference and obstruction cited by Judge Taylor were any acts that tended to prevent white students from attending the Clinton High School, and any acts that might keep the high school from operating in an orderly manner.

Just 1 year later, in Little Rock, the same sort of judicial orders were entered. There Judge Davies enjoined a group of white parents "from interfering with and preventing the opening of integrated high schools." On September 3, 1957, Judge Davies "directed and ordered [the Little Rock School Board] to integrate * * * the senior high schools immediately and without delay."

We recall the Clinton and Little Rock cases to make the point that in Clinton and Little Rock, Federal judges did not attempt merely to prohibit segregation; they attempted affirmatively to order integration, and they used the weapon of injunction broadly to prevent anything that might interfere with their decrees.

Now consider the situation in Warren County, Va. If the Taylor-Davies approach is to be pursued, what is the logical next step? Nothing could be plainer. It is to compel the white students to return to Warren County High School under threat of punishment for contempt of court. Under the Taylor-Davies doctrine, these students clearly are obstructing and interfering with integration of the high school. Their action in refusing to return makes an orderly high school impossible. On the face of it, there is something absurd in operating a 30-room high school, capable of housing 1,000 students, for the benefit of five 8th graders, four 9th graders, five 10th graders, six 11th graders, and two 12th graders. On the merits of the case, the school should be closed down again as an inefficient educational unit.

Presumably Judge Paul will not permit this. What, then, would be a logical solution? Would it not be to compel the white students to return, possibly in lock step, under the guns of Federal marshals? The sort of reasoning that defines freedom as slavery, liberty as tyranny, and twists an order prohibiting segregation into a decree requiring integration is capable of such a mandate. The process may be called law. Our own word for it is despotism.

## Washington Report

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following newsletter dated March 7, 1959:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

"If Patrick Henry thought taxation without representation was so terrible, he should see it with representation." How often great truths are spoken in jest.

The Ways and Means Committee, of which I am a member, continues its almost daily all-day tax hearings. Simultaneously, the House meets to consider legislation already cleared by House committees for floor action. Daily mail and office case work (constituents with need for help in Government contact) continue heavy as ever. Beyond these activities are the necessary studies of issues, meetings, speeches, and papers for the RECORD with somewhere in here, a bite of lunch—these are full days, and had better

be, considering the problems confronting this Congress. Necessarily, my efforts in other legislative fields are limited in view of my increased duties and responsibilities in tax matters. Hearings on technical tax changes to the Internal Revenue Code concerning subchapters C, corporate distributions; J, estates and trusts; and K, partners and partnerships, are completed. Now we are holding hearings on depletion allowances. Oil and gas are not yet a part of these hearings. The depletion question is twofold. (1) The point of cutoff (point up to which depletion allowance is computed, a point between mining and manufacturing in developing a marketable product), and (2) the percentage rate. There are many minerals now benefiting by depletion allowances. Problems to resolve: Court reinterpretation of congressional intent and heavy litigation; and (2) mineral industries are each striving for maximum allowance; (3) a complicated new Treasury suggestion to replace existing law, disturbing to each industry, each of which is unique; (4) are the depletion allowances justifiable capital return, therefore tax free, or subsidy?

A bill to end the tax-exempt status of Federal public housing bonds was my legislative contribution this week. The Federal Government by law cannot sell its own tax-exempt bonds. Yet a practice has grown up whereby these bonds are sold in the open market by a shell or front agency designated by the local public housing authority, and Federal interest payments go directly to this front agency. This is simply a dodge or ruse, as many see it. As such, it is illegal. Further, compare this sale to that of a true municipal bond which is sold by a city such as Dallas. This bond is backed by local credit (not Federal), secured by property taxation, ad valorem taxes. These bonds, too, are tax exempt. Competitively, what chance has a city bond in open sale against a Federal bond? And how about the different Federal bonds? Public housing bonds will pay 3.4 percent tax-free to the wealthy investor, when Joe Doe's Government savings bond earns 3¼ percent, and on this he must pay income tax. Is that fair? It is obvious to me that ending the tax-exempt status of public housing bonds is legally and morally right.

Roundup of current items of interest: (1) The AFL–CIO Machinist published an analysis of the purchasing power of wages today compared to 1938 and found it takes fewer hours of work to earn food, clothes, furniture and other needs; simultaneously, the AFL–CIO's Meany lampooned Russia's claims of "workers' paradise" by comparing the lot of the worker in the United States and Russia. Unanswered: When will labor leaders recognize that the productive capacity of our industry joined with incentive, ingenuity, and sweat of our people is the cause of wage-earner prosperity and not Federal aid, which labor leaders incessantly demand. Unanswered, also, when will the wage earners wise up to inflation that waters the purchasing power of their earnings, inflation caused by big Government spending as demanded by labor leaders. Are the labor leaders trying to create problems for wage earners or solve them? (2) How about a Federal taxpayers' revolt? Taxpayers in the State of Washington have signed a petition pledging they'll seek no new State services. A Dallas taxpayer returned to me a Government check as his contribution to reducing the demand for Federal aid, reversing the trend. It wouldn't take many protests of long-suffering taxpayers across this land, in each congressional district, to make Members of Congress cut back on the big spending. (3) A fearless stay-put attitude on the U.S. part is the only answer to the Berlin crisis or to Khrushchev in any negotiation, and if that fails, as have all other contractual obligations been broken by Russia, then we'd better deny recognition to Russia, tighten our belts and be prepared for anything. Further, it's time, as I see it, to think about another defense attitude than our "let the other fellow strike the first blow" policy. In all-out nuclear war there might not be a counterpunch, let's face it. (4) Balanced budget department: We're just before having the financial roof cave in—fantastically expensive Democrat programs in housing, depressed areas aid, airports, farm subsidy, in the multibillions beyond the administration's budget, are facing us. So we are confronted again with fiscal responsibility versus the political "I'm for the people by spending more of their money" boast. Is it more courageous to spend someone else's money, and politically take credit for allegedly doing good, or to say no, we must live within our income and protect the value of our currency? The right course is not always the easy one. To the big Government planners, I quote former Speaker Cannon: "America is a hell of a success. Why tinker with it?"

---

## Hidden Taxes We All Pay

EXTENSION OF REMARKS
OF
## HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. BENTLEY. Mr. Speaker, under leave to extend and revise my remarks in the Appendix of the RECORD, I desire to include the following text of an article which appeared in the Detroit Times on March 1, 1959. The following is indeed an amazing disclosure of the hundreds of unknown taxes American citizens pay each year, many of which are duplications.

THE HIDDEN TAXES WE ALL PAY—THERE ARE 151 LEVIES ON A LOAF OF BREAD AND 600 ON YOUR HOME

(By John Gariepy)

Let's knuckle down to it.

When it comes to paying taxes we haven't heard the most of it.

That's because taxpayers and who isn't a taxpayer—don't know when they are paying taxes.

Confused?

Well, the taxes we pay and will continue to pay are staggering.

Some are well publicized, hundreds more are unknown.

When Joe Citizen shuts off his alarm clock (10 percent excise tax) and begins his day a host of taxes become due and payable.

The Tax Research Institute recently pointed up a few:

On a man's suit—116 taxes.

On a woman's hat—150 taxes.

On a loaf of bread—151 taxes.

On a house—600 taxes.

The institute estimates the average American family with an income of $4,500 annually probably pays about $1,425 in taxes, or just under one-third of its total income.

Now every business line and every product has specific taxes incident to itself as well as many that are commonly shared.

At every level of government, there are specific levies, totaling in the thousands. No business or individual is hit with all of them, a few share many of them.

Some take the form of permits or licenses and are actually fees paid for services rendered.

No one particularly objects to this type of tax because in most instances maintenance of safety in one form or another is involved.

Yet the total amount sucked out piecemeal from a single business each is substantial.

As part of the cost of doing business it is paid by the ultimate consumer when he receives a service or buys a product.

However, it must be remembered most of the hidden taxes (dollar volume) are duplication, rather than a widespread array of different levies.

With the help of the Michigan Association of Certified Public Accountants, let's follow Joe Citizen for 1 day, admittedly a big one, and see where he pays hidden taxes.

The electric bulb that lights Joe's bedroom and costs 83 cents, for example, includes 6 cents excise tax in the sales price. The electric current came from a plant which paid public utility property taxes at the rate of $32.89 per thousand in 1958.

The electric toaster, frying pan, or stove used for preparing breakfast carries 5 percent excise taxes. The same applies to refrigerator and furnace.

The match Joe used to light his first cigarette of the day he may carry as much as 10 percent of the sales price in the tax. Use a cigarette lighter, it's still 10 percent.

When a person smokes a cigarette the gray cloud curling away almost glitters with gold.

The cigarette came out of a pack carrying 8 cents Federal tax, 5 cents Michigan State law. At a pack a day, that is $47.45 a year in taxes exclusive of duplication taxes. The menthol aroma had 35 cents a pound excise tax on it.

As Joe drove his clunker towards the depot to catch the 8:10 commuter he was figuring how to buy a new car costing about $2,500.

Cars are gems when it comes to hidden taxes.

The Automobile Manufacturers Association estimates the taxes at 23.7 percent of the cost.

Every time raw materials or parts move from producer or supplier towards the ultimate consumer the taxes of producer or processor are duplicated.

The most frequently duplicated taxes are corporate income (maximum 52 percent), social security (5 percent total), unemployment (1 to 4.5 percent presently on the first $3,000 of every employe's income), transportation (10 percent), telephone and telegram (10 percent), stamp tax on security transfers (4 cents on each $100 of value), safe deposit box (10 percent), and gasoline (3 cents per gallon), permits, licenses, and inspection fees.

At the State level there are corporation, franchise, business activities, intangible, gasoline, motor vehicle, license, high, tunnel, ferry, and bridge tolls, sale and public utility permits, licenses and inspection fees.

The cities and counties level personal and real property taxes, some local units have sales and income taxes, permits, licenses and inspection fees.

The most obvious taxes on a car are the sales tax, about $72.82 on Joe's intended purchase, and the Federal excise tax of about $182 which include levies on heaters and radios (considered luxuries) and 8 cents a pound on rubber in tires.

This excise tax originally was an emergency measure of World War I when cars were a luxury, not a necessity.

The taxes on materials, parts and transportation prior to receipt by the auto manufacturer carry as estimated $150 tax on Joe's car to which the manufacturer adds his share of income and similar taxes, exclusive of excise and totaling about $137.

The dealer obtains another $36.44 mostly in duplication taxes. The license plate costs $12.75 and the Federal and State slices on 5 gallons of gas and 6 quarts of oil to drive out of the showroom add 68 cents more.

Altogether, special taxes on auto use in Michigan contribute 28.9 percent of all State tax revenues, the association said.

In gasoline, where Federal and State taxes total almost 10 cents a gallon, the 50 or 100 taxes paid from the moment oil is taken from the ground (severance tax) until pumped into Joe's tank may easily equal more than one-half the pump price, experts think.

When Joe walked to his office, he saw a car he liked and he took a picture of it. Some of the chemicals used in picturemaking carry a 6-cent-a-pound plus 38 percent ad valorem based on the selling price of competitive items made in the United States.

In the office, Joe turned on the air conditioning, unlocked the cash register, and uncovered the adding machine—all 10 percent items.

He changed his mind about buying a new car and called his serviceman to replace the battery, $16.50 ($1 tax) and put in a new set of spark plugs, $11 (70 cents tax).

When Joe bought his new ballpoint pen the dealer didn't miss collecting 10 percent excise tax. It was included in the wholesale price.

Before lunch Joe had a "boilermaker," a whisky and a beer. He also put a dime in the jukebox.

When a man imbibes he takes a drink of taxes.

The whisky price included Federal tax at the rate of $2.10 a fifth plus a markup of 46 percent by the State liquor control commission, profits from which support State functions.

Hidden in the retail price of the drink was a $50 Federal license, plus a $1,000 (maximum) State class D license for a hotel.

Also hidden were a city $100 license (hotel), $40 parking lot license, $10 restaurant permit, $20 hotel inspection, $15 public building inspection, plus a host of small fees such as signs, electrical, power, heating, additions, repairs, water, garbage disposal, plumbing, storage, air pollution, smoke abatement, and all the duplication taxes of the product and of the hotel.

On the way back to the office Joe stopped in to watch a bowling tournament. The annual Federal and city licenses on each bowling alley and pool table is $20 and $5.

One of Joe's friends "gave him a horse" and Joe called a bookie to place a bet.

To do business legally, under Federal law, the bookie must buy a $50 license.

Either way the local police will be watching the bookie and that's probably one reason bookies never pay odds of more than 20 to 1 on a straight horse bet, regardless of what happens at the track.

At the office he oiled some of the equipment. All the oils have excises, even castor oil, 1½ cents a pound.

At home that night, Joe watched television until expected company arrived to play cards.

Ten percent on the television, 13 cents a pack on the cards, both Federal. On packs carrying more than 2 jokers or 54 cards the tax is higher.

## What Is Happening to Our Republic?

EXTENSION OF REMARKS

OF

### HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following interesting and timely address delivered by Mrs. Lucile Hosmer, president of the northern division, California Federation of Republican Women, before a recent meeting of that organization:

WHAT IS HAPPENING TO OUR REPUBLIC?

George Orwell, famous author, once wrote a book called "1984" in which he described how history was rewritten daily to suit the purpose of the despots in a completely collectivized state. Any event which could be considered to be against the best interests of the state was rewritten or else completely eradicated.

Since there are those who have been striving for years to change the meaning of our Constitution and our system of government, don't you feel that it is time that we know and understand the forces at work?

Who are they who are so anxious to convert our form of government into a Socialist state? Where did they start and when?

Nearly 100 years ago, a group of political refugees met in New York City and set a goal by which they could convert our constitutional Republic into a Marxist-Socialist state. This group was joined by others of their kind who came to America for political asylum, after they had been expelled from their native lands for plotting the overthrow of the existing governments there and replacing them with Marxist-Socialist type of government. Their activities received little notice because news of the impending Civil War filled the papers. And those who were aware of their activities considered it a "crackpot" scheme which could never happen, here.

Yet, these people, like Marx, like Chou En Lai, like Lenin, and Hitler, had it all spelled out in a book as to just what they intended to do and how to do it.

They were smart enough to know that they could never sell the Marxist-Socialist philosophy to a deeply religious people who believed in God; nor to patriots who were proud of their country and its accomplishments. Those two things must be wiped out of the consciousness of the American people. The first target must be the strong religious faith of the people who wrote our Constitution and established our country on Christian principles, based on the Ten Commandments.

They (the Socialists) realized that the people of a nation whose forefarthers had distributed between the years 1777 and 1778, 20,000 Bibles in the Colonies as the political textbook for America would not be easy prey for their atheistic philosophy. They saw that our deep, abiding faith and religious convictions were reflected in our Constitution and Declaration of Independence, that man was created by God and endowed with unalienable rights by his Creator. These convictions were going to make it a difficult task to replace our concept of government with theirs—a system which made the state the supreme being and denied everything for which our American ancestors fought and died.

Consequently these exponents of change took the indirect approach, which they termed "political and legislative action." They combined this with the activities of their very talented and capable propaganda artists who had definite responsibilities: First, to destroy America's deep religious faith; second, to confuse and blur his understanding of the basic principles upon which this country was founded and the motives of the men who founded it; and last but not least, to completely annihilate the faith, pride and confidence of America in the rightness of our way of life.

They estimated that, with the indirect approach, it would take about 100 years to accomplish this goal. Never at any time using the word socialism; quietly, without fuss, without noise; steadily, continuously, they have been propagandizing a whole nation; its writers; it leaders; its teachers; its schools; until this plan is now in its final stages: and unless we, as individual Americans, wake up, their program will succeed (as they planned) by 1964.

All of us know that today our Congress and our Legislature is dominated by those who have been elected by the CIO–ADA political action groups which are so strongly in favor of a labor-socialist government. They have taken over complete control of the Democrat Party, except in certain parts of the South. They are marching steadily onward; toward the destruction of our constitutional republic and our rights and freedoms as individuals. They are determined to replace our constitutional republic with the Socialist state and with man as its servant.

They call it progress. Is it?

In 1872, Richard Frothingham, a noted historian of his day, in speaking of the social order prior to Christianity, wrote: "At that time, social order rested on the assumed natural inequality of man. The individual was regarded as of value only as he formed a part of the political fabric and was able to contribute to its uses as though it were the end of his being to aggrandize the state. This was the pagan idea of man. The wisest philosophers of antiquity could not rise above it. Its influence imbued the pagan world state. It regarded as of paramount importance * * * not the man * * * but the citizen whose physical and intellectual forces it absorbed. This low view of man was exerting its full power when Rome was at its height of power and glory.

"Christianity then appeared with its central doctrine that man was created in the Divine image and destined for immortality, pronouncing that in the eyes of God all men are equal. This asserted for the individual an independent value. It created the great inference that man is superior to the state which ought to be fashioned for his use. This was the advent of a new spirit and a new power in the world."

Where today, in our histories or our school texts do you find writings such as this? So, what's new about man as the servant of the state? Remember this: "A government that is big enough to do everything for you (socialism) is big enough to do everything to you, and is big enough to take everything from you."

What other things have contributed to the slow "creeping of socialism" into our midst with its doctrine of "something for nothing;" with its doctrine that we are a democracy in which the will of the majority 50 percent, plus one, is the law. Don't ever forget that while you may be one of the majority today, benefiting perhaps by taking something from your neighbor, tomorrow you can be the minority.

Three times in the history of mankind outstanding attempts have been made to establish the freedom of the individual.

First, in the days of Abraham, when he recognized that there was only one God of all things and that man was free and self-controlling, responsible for his own actions. His people prospered for a time under this concept, but once they permitted others to make their decisions for them, and took subsidies from the pharaohs for work that they didn't do—once they refused to stand firm for their convictions as free men, they returned to serfdom and slavery.

Moses came, centuries later, and took them out of the bondage and slavery in which they had placed themselves. Most of them had forgotten what it meant to be free. They abused and criticized Moses continually. He endured it because he understood the truth about God and man. Finally, he gave them the Ten Commandments, hoping it would serve as a moral code until such time as they were capable of understanding its deeper spiritual meaning.

It took many centuries of living with and under the Ten Commandments before mankind was ready for the advent of Jesus and Christianity. For 300 years after His coming there was great growth in the freedom of the individual. Jesus never taught mass salvation nor group salvation. His rule was "work out your own salvation," as an individual. It was not the job of the state to do it for the individual. Once again, however, men refused to accept their responsibilities as free individuals; they accepted patronage and protection from the pagan Emperor Constantine, instead of relying on God. Through their refusal to stand firm for their Christian principles they plunged the world into the era known as the Dark Ages.

The only glimmer of light in the centuries that followed was in 1215 when the Magna Carta outlined some of the rights of man as an individual.

When the republic of the United States was established and its Constitution adopted, some centuries later, the third outstanding attempt to establish the freedom of man as an individual was made.

Jesse T. Peck in his book, "History of the Great Republic," written in 1868, stated: "It may herewith be, with propriety, reaffirmed that Christianity was the guiding power of American colonization and the forming force of American institutions. This is the religion of our great Republic."

He said also "destroy religion and liberty is dead."

Pioneer Americans knew that all men were free under God and accepted their responsibilities that went with freedom, including eternal vigilance. They realized, too, the importance of written law as a restraint on an unlimited form of government, such as was accepted in European countries.

They had had the bitter experience of being subjected to the will of others, without any consideration for their own powers of judgment or right to make their own decisions. Therefore they designed to establish here a limited form of government, under a Constitution; one under which the largest freedom for individual activity would prevail and where the minority and the individual would have the same rights and freedoms as the majority. A government in which individual rights would be sacred from invasion.

Our constitutional Republic, with its checks and balances, with its freedom from unlimited power in any one department, held to this design, throughout. The fundamental rights of life, liberty, and the pursuit of happiness, considered as individual possessions given "by God" are, as the Declaration of Independence states, "unalienable rights," and governments instituted by men "to secure these rights, not to grant them," as the Socialists believe.

The underlying principles of our Republic is that men are endowed with rights, not by the grace of a President, nor a court, nor a constitutional provision, nor a bureaucrat, but by their Creator.

Once again from the "History of the Great Republic," by Jesse T. Peck: "God is the rightful, actual sovereign of all nations; that a purpose to advance the race beyond all its precedents in intelligence, goodness and power, formed this great Republic; and that religion is the only life force and organizing power of liberty."

No government in the world has given to its people the freedom enjoyed by Americans; freedom of religion, the right to worship when and how we choose, freedom of the press, freedom of assembly, freedom of speech, the right to own property and universal franchise.

During the first 100 years of our country, these freedoms were jealously guarded. Men and women put God first, in their hearts, in their homes, in their schools, and in their businesses, and consequently, in their government.

However, through the subtle brainwashing and propaganda of the masters of deceit over a period of nearly a hundred years, any reference to God, to faith or religion has been so belittled and ridiculed that many people are ashamed to admit that they believe in God.

So it has been, too, with patroitism and pride of country and our way of life. Anyone so naive as to think that the accomplishments and freedoms which we have here in America are tremendous, and something which we should defend and protect, is often labeled a "reactionary" or an "isolationist" and someone to be ridiculed and scorned.

William Penn once said: "Men will either be governed by God or ruled by tyrants." Ever since World War I when we went into battle with the slogan "Make the World Safe for Democracy," we, as a nation, have slowly, gradually, without fuss, without noise, been indoctrinated with the idea that we are a democracy rather than a republic.

In 1928, the U.S. Army Training Manual (No. 2000-25, p. 51) appeared this definition of democracy:

"A government of the masses. Authority derived through mass meeting or any other form of 'direct' expression. Results in mobocracy. Attitude toward property is communistic, negating property rights. Attitude toward last is that the rule of the majority shall regulate, whether it be based upon deliberation or governed by passion, prejudice and impulse, without restraint or regard to consequences. Results in demogogism, license, agitation, discontent, anarchy."

Within less than 30 years, the U.S. Army in its Department of the Army Field Manual, "The Soldier's Guide," has this definition:

"Meaning of a democracy: Because the United States is a democracy, the majority of the people decide how our Government will be organized and run and that includes the Army, Navy, and Air Force. The people do this by electing representatives and these men and women, then carry out the wishes of the people."

How come such a change come about, in less than 30 years, unless a very definite program had been operating to change the thinking of the people concerning the meaning of democracy? In fact, today most people believe that the two systems of government are synonomous. Yet the fact is that the very differences between our constitutional republic and democracy are the differences that can mean the loss of our freedoms and rights as individuals.

Our Constitution is the highest concept of government brought forth in any age to protect the rights and freedoms of the individual. We must recognize that our concept of a republic as prescribed in the Constitution rests upon our acceptance of man "as created by God" and his "worth and dignity" as an individual. We have to regain an understanding of our constitutional Republic and our republican form of government: as contrasted with a democracy and various forms of socialism. Unless our citizens are properly instructed in our American principles and the basic concepts of our republican system of government, how easy it becomes for large masses of our people to barter their great American heritage of freedom for a "mess of pottage"—"pottage" offered to them for their temporary or fancied needs by those dedicated to the destruction of our Republic or indifferent to its protection when it interferes with their own personal aggrandizement.

Our Republic was established as a government of laws, not of men. The destruction and intolerance of majority rule has always meant mob rule and the loss of human rights and freedoms.

In the San Francisco Examiner of December 11, 1958, there was an article by John F. Allen concerning the brainwashing of our American soldiers in Korea. The chief psychiatrist at Letterman General Hospital was quoted as saying that "many of the men knew so little about U.S. history, its ideals and traditions that they were unable to offset the advantage of the Chinese indoctrinators who knew so much more about American history and its political doctrine. They could not answer arguments in favor of communism with arguments in favor of Americanism."

He continues with this statement: "Knowledge for those who possessed it was a valuable weapon of defense."

Why didn't they have this knowledge? Why hasn't it been taught in our schools? Why do we not recognize that the basic principles of individual action, free enterprise, the right to make our own decisions, is slowly being stripped from us and that our sons and daughters are being educated for the "new social order" as started by the progressive educationists in the early thirties?

Dr. E. Merrill Root, who has been professor of English at Earlham College (Indiana) since 1930, and is well known for his poems and his prose as well as many articles on education, recently published a book called "Brainwashing In Our High Schools." In this study he quotes from some 11 textbooks on American history used throughout the United States. He found in these books overwhelming evidence of hostility to basic American principles. He found that the present school-generation is being thoroughly indoctrinated to accept socialistic and totalitarian "way of life". The authors of these textbooks misquote and distort the motives, the actions and the sayings of the authors of the Constitution, portraying them as being "creatures of wealth" engaged in a "class struggle"—not a revolution to establish the rights and freedoms of man as an individual. It seems as though the tactics described by George Orwell in his book "1984" have been in use for some time.

The New Deal is praised as "anti-capitalistic" government: interference was, and is, always for the benefit of the "average man" to protect him against "big business," and any strike is always caused by management. The unions and Government according to them, are always the fair-haired boys.

When we refuse to accept our responsibilities as individuals, as citizens, as parents, these foreign ideologies and "isms" make great strides. Our problem now, is how much time do we have to reverse this trend?

Now, that it is uncovered, what are you going to do about it? Go home and say "my, that was quite a speech—and so inspirational. Isn't it nice that there are people like that who take the time to do all that work and come and tell us about it?"

History records that every civilization goes through a cycle.

"From fetters to faith, from faith to freedom, from freedom to folly, and from folly back to fetters, again." Must we, as Americans, conform to this cycle? Or, will we, as individuals, do what needs to be done, right where we are, with courage and determination, upheld by our trust in God, faith in our country, our Constitution and its principles as a Republic, which protects our rights and freedoms as individuals * * * and fight hourly and daily until the victory is won * * * that we may remain * * * free.

## Ingenuity in Small Business

EXTENSION OF REMARKS
OF
**HON. JAMES ROOSEVELT**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. ROOSEVELT. Mr. Speaker, the ingenuity and the ability of qualified small business management to make a great success from small beginnings is a true American story. That it still does happen in the United States in spite of the many problems of small business has been glowingly told about one of my constituents and an enterprise in my district.

I offer the story by Jerry Gillam, of the Star-News Vanguard Bureau, because I feel that not only is it an interesting story in itself, but because I feel that it will be an inspiration to many others and speaks eloquently of the advantages inherent in the enterprise of a free people:

REVELL, INC., MODELS OUTSHINE
(By Jerry Gillam)

Good-looking models are big business in Venice these days.

Not only the female variety, which are ever-present along the seashore, but eye-catching plastic model kits of airplanes, rockets, ships, cars, and animals produced by Revell, Inc.

Revell did a gross business of $35 million on the retail level in 1958.

Lewis H. Glaser is president of the firm which employs over 700 local residents in a modern plant at 4223 Glenco Avenue.

National magazines have praised the company as one of the most successful business ventures in our time.

County Supervisor Burton W. Chace presented a resolution last week which commended Glaser for spawning a hobby enjoyed by children (and their dads, too) all over the world.

The Los Angeles City Council recently bestowed a similar honor on the firm.

Revell models are a far cry from the old type containing a chunk of balsa wood, etc., with the hobbyist spending hours of shaping with a razor blade and sandpaper.

Glaser's kits are exact miniature replicas of the subject when completed, right down to the smallest detail.

Authenticity is obtained by going directly to the Armed Forces for blueprints on ships and planes or right to the Detroit manufacturer for specifications on cars.

Glaser is a real stickler for accuracy. In fact, plans for one kit of a jet fighter plane were held up by the maker until the Air Force passed on them for security reasons.

Although details of the current U.S. missiles and moon rockets are still rather vague to the average adult American, Revell has kits on the market for boy scientists with prices gaged to their weekly allowance.

Girls are not forgotten either for Revell also has a line of realistic animals, including a beagle puppy, squirrel and koala bear, complete with imitation fur, to attract the female sex.

A post World War II plastic toy manufacturer, Glaser found the key to success with one of his first model kits—a replica of the ancient Maxwell car made famous by the jokes of comedian Jack Benny.

The Maxwell was snapped up by hobbyists with bandaged fingers from razor blade cuts and Revell was on its way.

Today, Revell has three other plants in addition to the one in Venice which is "headquarters."

Branches in South Plainfield, N.J.; London, England; and Bielefeld, West Germany, take care of the demand on the east coast and overseas.

Glaser may be in store for a singular honor someday in the future when a youthful scientist tells newspaper reporters on the moon that he got his interest in science from a Revell model rocket kit back in 1959.

Fantastic? Maybe, but Chace's resolution could predict just such a happening when it says:

"Whereas the absolute accuracy of the models, besides providing an interesting hobby for our youngsters, also places in their hands models of devices which they, one day, must grow up to master as our world advances scientifically; Now, therefore, be it

*Resolved*, That the Board Supervisors congratulates Revell, Inc., for its outstanding success and expresses the wish that the industry will continue to grow for years to come by making available the type of product to our children which will excite their interest in scientific advancement while at the same time giving them a pleasant hobby to pursue."

## Schenectady Gazette Offers a Suggestion on the Use of Capitol Columns

EXTENSION OF REMARKS
OF
**HON. SAMUEL S. STRATTON**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. STRATTON. Mr. Speaker, a good deal of interest has been focused recently in Washington and in the surrounding area with regard to the disposal of the 24 sandstone columns which have recently been removed from the east front of the Capitol, in connection with the Capitol extension program now being carried on under the supervision of a joint committee of Congress headed by the distinguished Speaker of the House of Representatives.

I know that in response to the suggestions of a local newspaper, many persons have come forward with suggestions as to how these columns might be utilized. I was delighted recently in reading a copy of the Schenectady Gazette for February 26, in my home town, to see that this newspaper had also considered the matter editorially and had made its own suggestion for the use of these columns. I am delighted to see that the aesthetic problems of the District of Columbia are attracting the interest of leading citizens throughout the Nation, and I am happy to bring the suggestion of the Schenectady Gazette to the attention of the Commission in charge of the reconstruction work so that the views set forth may be given proper consideration. Mr. Speaker, I include herewith the editorial from the Schenectady Gazette:

CAPITOL COLUMNS

In the process of enlarging the east front of the Capitol in Washington, 24 sandstone columns have been removed and they will be replaced with marble columns which are more durable. The 24 old columns are lying on the ground nearby. When the Washington Post and Times-Herald asked its readers for suggestions on what to do with them, all sorts of ideas were offered and it appears that a lively debate is shaping up.

To anyone who dislikes symbolism or monuments of any kind, a spirited discussion of what to do with the 24 columns will seem to be a waste of time. Toss 'em away and forget 'em, they will say. But there are others who like to retain physical evidences of the past as reminders of the sacrifices made by the generations that founded our Nation and made it grow.

One suggestion is that the 24 Capitol columns be set up on the Gettysburg battleground. Another is that each of the 13 original States receive one column and the remainder be set up somewhere in the District of Columbia. Another idea, which appeals to us, is that the 24 columns be erected beside the reflecting pool between the Washington Monument and Lincoln Memorial. Whatever the decision, we hope that their location will be esthetically attractive and tasteful and that there will be provision for permanent, proper maintenance.

## The Greatest Threat

EXTENSION OF REMARKS
OF
**HON. WILLIAM H. AVERY**
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. AVERY. Mr. Speaker, the following is a speech made by the Honorable Alf Landon at the Scottish Rite dinner, February 24, Topeka, Kans. I recommend to all Members of Congress they give thought and consideration to Mr. Landon's comments:

THE GREATEST THREAT

(Speech by Alf M. Landon at Scottish Rite dinner, Topeka, Kans., February 24, 1959)

Since World War II the Soviet has been campaigning against the free nations on three fronts:

1. Political.
2. Economical.
3. Military.

The moves on the political front are now converging on the Berlin decision.

The Soviet occupies the advantageous position in that there is unlikely to be any internal divergence in Communist policy.

The Soviet's policies are always devious—but settled. Khrushchev has no legislative body to consider and only manipulates public opinion behind the Iron Curtain to reckon with in formulating Communist policies.

Whereas the heads of the world's democracies have both to deal with in developing any united policies.

That the urgency is greater than in past crises precipitated by Stalin or Khrushchev is evidenced by Secretary of State Dulles talks a few weeks ago in London, Paris, and Bonn, and now both Prime Minister MacMillan and British Foreign Secretary Lloyd are in Moscow for a most unusual visit for the most unusual extent of 10 days. Immediately thereafter the British Prime Minister visits Paris on March 9 or 10, then Bonn on March 12 or 13 to discuss with the heads of the French and West German Governments the results of his talks in Moscow.

Undoubtedly he will then visit Washington for the final formulation of the Western democracies' united policy on Berlin.

Even then, with the sinister and menacing possibilities confronting them, the world's free states will not be in position with a settled policy and cannot be because as the deadline for civilization approaches the position of Khrushchev will shift north and then south like smoke in a drafting wind.

That will call for new consultations by the heads of government in Bonn, Paris, London, and Washington.

The situation is as if one football team decided on the field its signals and strategy by a committee—while all the plays of the other are called by one quarterback—Khrushchev.

All questioning of the President's defense budget as being inadequate for national security is academic as of now.

If fighting is necessary to protect the free peoples' rights in Berlin—there is nothing gained in charges and countercharges about the lag in America's guided ballistic missiles. We either possess the overall retaliatory power to make military action by the Soviet senseless or we do not. Nothing can be done about that now to affect the military balance of power by May 27.

All the questions on the economic front are actually somewhat academic also until the political or military decisions are made on Berlin.

If it is to be a shooting war what difference does it make whether the President's recommendations for sound money are to be ignored by the Congress or not. All civilization will be wiped out in a few days' time. Some life may be left here and there in remote jungles and mountain fastnesses of the world, where primitive barter still exists and the dollar, pound, franc, mark, and ruble are unknown.

The solidarity of the President, the Congress, and the American people has never in our entire history been greater than it is behind the plainly stated position of the U.S. Government. That is no surrender of America's rights and the free world's rights in Berlin.

We have been through so many crisis in the past 10 years that I think we are somewhat like the people in the old fable who were fooled so often by the boy crying "Wolf, Wolf" that they treated lightly the real event.

This is it. The other crisis precipitated by Stalin and Khrushchev have been on the periphery of the free peoples. This one involves the heart of Europe. Basically, the Berlin demands of Khrushchev are aimed to hamper the growing rearmament of West Germans. The Soviet fears that most of all.

I believe the free peoples of the world are like the patient hovering between life and death. They are facing a turn, either for better or for worse.

If the grim Berlin crisis passes, as the others have done, then the conflict will probably resume on the political and economic front.

In that event, I believe the tempo of the contest will pick up on the economic front.

If that occurs, the fiscal policy of the U.S. Government is not only of vital importance to every American, but to all the peoples in the world.

The primary principle of good government is to balance outgo with income. For 25 years we have departed from that policy of levying taxes to meet appropriations.

That policy has always ultimately wrecked every government that has tried it, whether democracy, republic, or monarchy.

Twenty-five years ago we deliberately adopted the theory of an English economist named Keynes that a little inflation every year would be good for any country.

However, in 25 years no other country has adopted that theory and our dollar has steadily been debased to the point that financial writers the past year are for the first time discussing evidences of a flight from the dollar.

Aside from nuclear war, no greater calamity could happen to the world.

In recent years the American dollar has been the mooring post for all the world currency to tie to. If it weakens, financial and political chaos will prevail.

The Keynes financial theory is a failure. The quicker we realize that, the safer our national existence as a people will be.

The longer the Congress delays returning to the old American principle of levying taxes to meet appropriations—the greater the danger to all Americans.

For 25 years the politicians have enjoyed a paradise of voting appropriations without levying taxes and if our republic is to survive that must be stopped.

In order to get the Members of the Congress off that loco-weed habit, each and every Member must be held accountable by his voters if he votes for appropriations in excess of revenues.

The only wage increase worthwhile to a working man is a wage increase with a stabilized dollar.

Everyone suffers. Not only the workers, who see their wage increases siphoned away by the decreased value of the dollar, but every bond holder, every owner of an insurance policy and everyone looking forward to social security.

The Congress has tried to meet the decreasing value of the dollar by increasing social security payments.

That is like taking "hooch" to cure cancer.

The steady decline in the value of American money by reason of the Congress' failure to match appropriation with revenues not only threatens wages but savings as well.

The lack of stability in the American dollar is one of the factors pricing our goods out of the world market—thereby creating unemployment.

It doesn't make sense, of course. A day of reckoning will come.

When it will come nobody knows. But that it will is a dead certainty.

## The Road to Bankruptcy

EXTENSION OF REMARKS
OF
### HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Journal Star of Thursday, March 5, 1959:

THE ROAD TO BANKRUPTCY

What would happen to a business that operated on red ink 25 out of 30 years? Or to a family?

That is the record of the Federal Government. Sixteen of the last 30 years have been times of war or economic slowdown, when deficits were to be expected. But of the remaining 14 good years, the Government continued to spend more than it took in during 10 of them. The current deficit is by far the largest in a peace-time year.

The national debt goes up and up. So does the interest on it. So does the cost of living. And a man's tax burden gets heavier. This can't continue forever.

Nor is the $80-billion-a-year spending in Washington our only cause for concern. The costs of State and local government have been going up at a rate of $3 billion to $4 billion a year. They total something over $50 billion a year now. One-third, or more than $16 billion, of this comes from property taxes.

We are told that the reason for heavy Washington spending is that people are demanding more from the Federal Government all the time. We should expect then, that they would be demanding less from local and State governments. But the cost of these smaller governments is going up faster than the cost of Federal Government.

There are 3,000 counties, 34,000 cities and townships, 50,000 school districts, and 14,000 other districts. All of them are yelling for more money, or are about to.

## Amerigo Vespucci

EXTENSION OF REMARKS
OF
### HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. MULTER. Mr. Speaker, today, March 9, marks the anniversary of Amerigo Vespucci, a great Italian who left his mark as well as his name on our country.

Amerigo Vespucci, the merchant and adventurer to whom America owes its name, was born in Florence on March 9, 1451. This is the date given for Vespucci's birth in the "Encyclopedia Britannica." The "Encyclopedia Americana" gives March 18, 1452, and variant dates in other sources include the year 1454. He was the third son of Nastagio Vespucci, a notary, and Elizabetta Mini. His uncle, Fra Giorgio Antonio Vespucci, to whom he owed his education, was a scholarly Dominican. Amerigo was particularly devoted to the study of geography, and is believed to have encountered frequently the celebrated Toscanelli. For a time he was employed by the great commercial house of the Medici, then the ruling family in Florence. He made an avocation of the collection of maps and charts and became a skilled map draftsman.

Some time between the middle of 1489 and the end of 1491 he went to Barcelona, probably in connection with the Spanish business interests of the Medici. In 1493, he became connected with the commercial house of Berardi at Seville. Berardi, in the employ of the Spanish Crown, engaged in fitting out vessels for expeditions across the Atlantic. In this position it is probable that Vespucci participated in the fitting out of Columbus' second voyage.

Knowledge of Vespucci's own voyage is based on two letters written by him. One was written in 1503 to Lorenzo di Pier Francesco de'Medici, and the other was addressed in 1504 to his boyhood friend, Piero Soderini, gonfaloniere of Florence. The latter gives an account of four voyages in which the writer took part, the earlier two in the service of Spain and the latter two in that of Portugal. According to this account the first expedition sailed from Cadiz on May 10, 1497. Thus Vespucci visited the American Continent a year before Columbus, touching land at several points, including one not far from Cape Canaveral, Fla.

The letter to Soderini appeared in print in at least two editions, probably without Vespucci's knowledge. A Latin translation was published at St. Dié in Lorraine in April 1507. Martin Waldseemüller made use of it in his "Cosmographiae Introductio," published in St. Dié in the same year. This work con-

tained perhaps the first suggestion in print that the newly discovered fourth part of the world should be called America, because Americus discovered it.

## H.R. 5123, a Bill To Extend and Amend the Renegotiation Act of 1951

EXTENSION OF REMARKS
OF

### HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. KING of California. Mr. Speaker, toward the end of the last session of the Congress, I introduced a bill, known as H.R. 13092, proposing amendments to the Renegotiation Act of 1951. Time did not permit a full study of this and other bills proposing much-needed reforms in the procedures which now govern the renegotiation of defense contracts. One of the proposed amendments, providing for the judicial review of Tax Court decisions in renegotiation cases, was passed unanimously by the House of Representatives. In reporting favorably the bill incorporating this provision, the Ways and Means Committee announced that it was limiting the extension of the Renegotiation Act to a period of 6 months, because the committee intended to undertake a broad review of the entire subject of renegotiation early in this Congress. The report stated that at that time—

> Consideration will be given to the scope, objectives, and procedures of renegotiation and to possible amendments, including those proposed at the hearing on the present bill.

INFIRMITIES OF ACT SHOULD BE ELIMINATED

Since the last session of the Congress there has been considerable study of the problems of renegotiation. I believe, as a result of what we learned during the last session and from the studies made since that time, that certain basic factors indicate quite clearly the course we should follow in providing the necessary reforms in the conduct of renegotiation. In the first place, renegotiation of contracts with the United States was initiated as a temporary wartime measure, because the exigencies of a national emergency required the expeditious procurement of property and services under conditions which precluded the safeguards attendant upon normal contracting procedures within the Government. At that time it was not expected that the renegotiation of Government contracts would last beyond the emergency. Nevertheless, we have now found that, despite the implication of a temporary existence inherent in usual provisions for a short extension of the act each time it expires, renegotiation has been a part of defense procurement for almost the entire period since the war. Many infirmities have remained in the act from the beginning, on the theory that it is purely temporary. As a result, controversies arise as to the reasonableness of the Board's action, particularly in view of the wide discretion given to the Board in determining excessive profits in individual cases and the secrecy which surrounds its deliberations and findings. Under the present act the Board is permitted to operate in a manner that is foreign to any other administrative agency of the United States having quasi-judicial powers.

CONTINUATION OF RENEGOTIATION IS NECESSARY

It may be that the continuation of renegotiation is necessary, because recurring threats to peace still require the expenditure of large sums of money for the national defense. However, I believe that contracting procedures within the Government are now adequate to prevent the accrual of profits beyond those contemplated by the parties in most cases, but the Government should be provided a means of recouping profits which may be considered excessive by appropriate standards. In other words, we should guard against windfall profits, which was the objective of statutory renegotiation in the first place. It is important to emphasize that the head of the department or agency of the Government negotiating a contract has the primary responsibility for preventing the accrual of excessive costs and profits by the effective use of available contracting procedures, and when this responsibility has been properly discharged, the integrity of Government contracts must be preserved to the same extent as contracts between private individuals. In my opinion it is morally wrong for the United States to contract in good faith with a person and years later, after performance has been satisfactorily completed, permit the Renegotiation Board to change the contract and take away profits that were openly and fairly negotiated by the parties in the first place.

EMPLOYEES DEPENDENT UPON SOUND DEFENSE INDUSTRY

I am especially concerned with renegotiation as it presently exists, because in California, and particularly in my district, there are thousands of employees who are dependent upon the soundness of the defense industry for their livelihood. Throughout the country there are millions of employees in the same position. In a situation as important and as serious as this, a maximum of publicity should accompany the findings of the Board to guard against unreasonableness and discrimination, and to allay suspicion of such shortcomings in the conduct of the Board's operations.

OBJECTIVES OF H.R. 5123

Accordingly, H.R. 5123 has four principal objectives:

First. The bill would add to the statutory factors which the Board must take into account under section 103 of the present act, the need for financial stability and incentives to efficiency and economy in the defense industry, and the desirability of comparing costs and profits of the defense industry with other industries in determining the reasonableness of profits.

Second. The bill seeks to preserve the integrity of contracts fairly negotiated with the Government by rendering subject to renegotiation profits in any year which exceed by more than 10 percent a portion of the profits contemplated by the parties.

Third. The bill seeks to give the Congress, the public and the individual who is affected thereby, more information on the reasons for the Board's decisions and the results of its determination in important cases. Freedom from congressional and public scrutiny has been a privilege enjoyed by the Board for reasons which do not appear on the surface, and in this age, which demands that Government activities be carried on in the light of day, a change in this respect is badly needed.

Fourth. The bill also provides for appeals from Tax Court decisions in renegotiation cases to the same extent as in ordinary Tax Court cases. In view of the favorable reception given to a similar proposal during the last session, the justice of this amendment seems obvious.

TWO-YEAR EXTENSION OF THE RENEGOTIATION ACT

During the last session of the Congress, the Renegotiation Act was extended for only 6 months to June 30, 1959. Section 1 of H.R. 5123 provides for a 2-year extension of the act to June 30, 1961.

AMENDMENTS PROVIDING ADDITIONAL STATUTORY FACTORS TO BE CONSIDERED IN DETERMINING EXCESSIVE PROFITS

Section 2 of H.R. 5123 amends section 103(e)—title 50, United States Code Appendix, section 1213(e)—to insert new statutory factors among those which the Board must now take into account in determining excessive profits. In subsection A, it is provided that the Board must take into account, in addition to those items now set forth in the comparable provision of the present act, "a comparison with the costs and profits of other industries." Since the defense industry is in competition with industry generally, it is appropriate that the reasonableness of costs and profits be determined in the light of costs and profits incurred and enjoyed by other industries. Whether or not the Board now takes this into account is problematical. It is believed appropriate that it should be directed to give this factor due weight.

A new statutory factor is included in subparagraph F, which requires the Board to take into account in determining excessive profits:

> The need for financial stability in the defense industry and for proper financial incentives under a system of free enterprise in order to produce the highest degree of efficiency and economy in the performance of contracts with the departments and related subcontracts.

The defense industry has become a permanent part of the economic life of the Nation. The need for financial stability to the same extent as other industry forming part of our national life would seem apparent. The proposed statutory factor would require the Board to take this into account in determining excessive profits.

At the present time, section 103(e) enables the Board to take into account, in determining excessive profits, such other factors the consideration of which the public interest and fair and equi-

table dealing may require which factors shall be published in the regulations of the Board from time to time as adopted. The Board has not seen fit in its entire history to adopt any additional statutory factors by regulation. It would seem appropriate to direct the Board to take into account other factors if the public interest and fair and equitable dealing require it regardless of whether it is constrained to adopt regulations with respect thereto. By eliminating the requirement of a regulation a person subjected to the Board's jurisdiction would, if this amendment were adopted, be able to urge matters consistent with the public interest and fair and equitable dealing, which he is now precluded from presenting under the existing act.

PROTECTION OF AGREED PROFITS

Section 2 proposes a further amendment which is designed to encourage efficiency and cost reduction and at the same time give some support to the integrity of contracts entered into in good faith by the U.S. Government.

In substance it provides that the Board's determination of excessive profits cannot reduce the contractor's retained profits below the sum of the aggregate of agreed profits plus 10 percent of such agreed profits. The proposal includes a definition of the term "agreed profits" which is designed to produce an amount of such agreed profits generally less than those actually agreed upon. This amendment places renegotiation in its proper perspective, namely a method whereby "windfall" profits are recouped. Renegotiation is not the equivalent of an excess profits tax. Congress has not set up a formula or any real standards to enable the Board precisely to determine what profits are excessive. As a result controversies and inconsistencies appear to exist which should be eliminated to the greatest possible extent. The proposed amendment is designed to accomplish this end. This particular amendment will operate with respect to those contracts in which the profit negotiated by the parties is ascertainable either by specific reference in the contract or by other proof. It is to be noted that the departments may adopt rules where appropriate to identify the profits agreed upon by the parties.

PUBLICITY OF BOARD'S FINDINGS AND DETERMINATIONS

Section 3 entitled "Renegotiation Proceedings" is designed to provide the contractor with a full exposition of the reasons for a determination of excessive profits by the Renegotiation Board and the facts used by the Board in arriving at its decision before an order is actually issued. At the present time, not until an order is issued fixing excessive profits is a contractor entitled to any statement explanatory of the Board's position. Moreover, the statement itself cannot be used in the Tax Court for any purpose. There is a specific provision in the proposed amendment that such statement may not be used in the Tax Court as proof of the facts or conclusions stated therein but may be used as proof of the reason for such determination. The proposed amendment would also require the Board to make available for inspection by the contractor all data relating to the renegotiation proceeding and to supply the contractor, upon request, with copies of any part thereof which may be requested by the contractor. All of this is designed to give more attention to the basic principals of fair play to the end that the contractor may be fully apprised of the basis for any determination alleging excessive profits.

EXEMPTION OF STANDARD COMMERCIAL ARTICLES

H.R. 5123 in section 4 proposes an addition clarifying one of the criteria in the definition of a standard commercial class of articles.

JUDICIAL REVIEW OF TAX COURT DECISIONS IN RENEGOTIATION CASES

Section 5 permit appeals from Tax Court decisions in renegotiation cases to the same extent as other tax cases. It also removes any presumption of correctness in the determination of the Board from which an appeal is being taken. The act now provides that a proceeding before the Tax Court is a proceeding de novo. In such a proceeding the contractor and the Board should have equal status with respect to the controversy since the Board's determinations are not made in accordance with the Administrative Procedures Act. It is not a true de novo proceeding if the Board's findings are entitled to a presumption of correctness. The proposed amendment is designed to eliminate the possibility of such an interpretation of the present act.

REPORTS TO CONGRESS

Section 114 of the act now provides for a report to the Congress by the Renegotiation Board. The report contains no information with regard to the specific determinations of the Board in individual cases. As a consequence, the Congress, the public, and the adversaries before the Board are unaware of inconsistencies which may develop in the administration of the act resulting in unfairness and discrimination regardless of an innocent motive. There should be no objection to exposing findings of the Board to the light of day. The requirements of the proposed amendment simply provide that certain information already made available by the Board to the specific contractor involved be made public in its report to the Congress in all cases where the renegotiable business of a contractor exceeded $20 million in the year in question. I believe the public is entitled to know, where these vast sums of Government money are involved, how the Board has interpreted this law which is designed to eliminate excessive or windfall profits. The consolidated statistics that are submitted under the present law do not permit me or the public to learn how the Board is exercising its broad discretionary powers. It would seem to be a help to all—the Renegotiation Board, the Congress, procuring services, the public, and the companies who are receiving such large amounts of Government money—to open these actions to the light of day. Not only will this information be of interest to the Congress and the public but it will be in such form as to assure its use in Tax Court proceedings involving renegotiation determinations.

CONCLUSIONS

The amendments proposed by H.R. 5123 are designed to accomplish a greater degree of due process than is now the case and to surround the Board with the same safeguards against unreasonableness, discrimination, and abuse that apply to other administrative agencies with the power and authority similar to that conferred by the Renegotiation Act. Their adoption will tend to bring about stability in the defense industry to the advantage of the Government, the public, the defense industry, and its employees.

## Orient Air Deep Freeze

EXTENSION OF REMARKS
OF
## HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, February 17, 1959*

Mr. NORBLAD. Mr. Speaker, a most excellent editorial which appeared in the Portland Oregonian on February 21 outlined very clearly and forcefully the urgent necessity for prompt and affirmative action by the administration and the Civil Aeronautics Board to provide competitive transpacific airline service not only for the Pacific Northwest, but for California cities as well.

As indicated in the editorial, the year 1959 is certain to show a considerable gain in transpacific airline traffic and the American lines should not be handicapped more than they are now by foreign competition and U.S. restrictions. I join with the Oregonian in urging speedy action to alleviate this situation and to provide the good people of Oregon, California, and Washington the type of airline service they desire and to which they are entitled.

Under leave to extend my remarks in the RECORD I wish to include the editorial to which I referred:

ORIENT AIR DEEP FREEZE

President Eisenhower has sharply reminded the Civil Aeronautics Board that it has been dilatory in providing competitive transpacific airline service—a policy of the administration in which Portland has a big stake.

The President has addressed a letter to CAB instructing the agency to consolidate all requests for transpacific flight permits into a single case, decide which airlines should provide service and report the decision to him "at the earliest possible date." The President has final authority over overseas air traffic.

In 1957, the President approved CAB's decision granting Northwest Orient Airlines permanent certification for service to the Orient via the great circle (northern) route pioneered by that airline. The President also granted permission for Pan American World Airways to use the great circle route from Los Angeles and San Francisco to Tokyo. But he held in abeyance permission for Pan American to compete with Northwest Airlines in the Pacific Northwest by loading passengers, freight and mail at Portland and Seattle.

Since Northwest Airlines does not serve Portland on a direct route to the Orient, but only Seattle in this area, Portland is very much in favor of having the Portland and Seattle stops added to Pan American's service. Pan American has not yet begun to use the northern route to Tokyo while insisting that CAB and the President add Portland and Seattle first.

So far as Pan American's great circle service is concerned, we continue to be mystified as to why the President doesn't use the authority he reserved to add Portland and Seattle to the service—a move sought not only in Oregon and Washington but supported by chambers of commerce and others in both San Francisco and Los Angeles. Instead, he is checking the whole matter back to CAB for another go-around.

The CAB report to the President in January showed that transpacific traffic is continuing to grow; that a slight increase was recorded last year although domestic lines showed a slight decline; but that foreign lines made transpacific gains in passenger traffic while American lines slipped a little.

In other words, the competitive situation Mr. Eisenhower wants for the Pacific services is being provided by non-American lines. Granting of Pan American's right to serve Portland and Seattle-Tacoma and thereby to initiate its great circle service should not be further delayed. And if the competition is to be made complete, let CAB grant Northwest Airlines' application to serve California cities, also. The year 1959 is certain to record a considerable gain in transpacific traffic and the American lines should not be handicapped more than they now are by foreign competition and U.S. restrictions.

## John S. Letcher, Jr.

EXTENSION OF REMARKS
OF
### HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. HARRISON. Mr. Speaker, Virginia is proud, and the Nation may be proud, of a teenager who has achieved public notice through his achievement in science, John S. Letcher, Jr., of Lexington, Va.

While we struggle, in self-conscious ineptness, to preserve a world for our children to inherit, those children, in the unquenchable optimism of youth, go bravely forward in the marking of new mileposts in man's search for understanding of the mysteries of his cosmos.

Under leave to extend my remarks in the Appendix, I include editorial comment on the honor accorded this young Virginian.

From the Richmond Times-Dispatch of March 4, 1959:

TO THIS TEENAGER, A SALUTE

The news that 17-year-old John S. Letcher, Jr., of Lexington, had won a nationwide science contest appeared on the front page yesterday along with the exciting story that a U.S. rocket for the first time was expected to soar through the bounds of the earth's gravitation.

The simultaneous appearance of these two stories was a happy coincidence. Six-foot-six-inch John Letcher also hopes figuratively to reach out into space some day by developing a nuclear propulsion system for interplanetary travel.

John was chosen from an original field of 28,000 science-minded boys and girls who competed in the annual Westinghouse talent search. Not that it means anything to most laymen, but the record shows that an experimental linear electron accelerator built by young Letcher helped him win the coveted $7,500 scholarship first award.

ROTC Captain Letcher has been president of the Rocket Club at Baylor School in Chattanooga, Tenn., and has been on the varsity wrestling and soccer teams. His grades, needless to say, have been excellent. He's the kind of teenager we like to see make news.

John's mother told the Times-Dispatch that this talented young man wants to go to the California Institute of Technology.

"I guess he won't have a hard time getting in now," she said.

To Mrs. Letcher goes the national award for the understatement of the year.

## Are We Selling Children Down the River?

EXTENSION OF REMARKS
OF
### HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks, I am more than pleased to make known to my colleagues a very fine article, well writen and well reasoned, in support of an urgently needed federal-aid-to-education program.

While I and many of my colleagues have appeared before the General Education Subcommittee of the House Committee on Education and Labor in support of the School Support Act of 1959—sponsored by my able colleague, the gentleman from Montana [Mr. METCALF] and cosponsored by myself and others—I think it is always of interest and of importance to all of us to get the views from those in the community who have a close, on-the-spot acquaintance with the subject at hand.

Mr. Paul D. Ward, secretary, American Federation of Teachers, is certainly well qualified to speak and write on the educational needs of our Nation. His article, "Are We Selling Children Down the River?" appears in the March issue of The American Teacher, the publication of the organization he represents.

I heartily recommend wide readership of his article which follows:

ARE WE SELLING CHILDREN DOWN THE RIVER?

(By Paul D. Ward, secretary, American Federation of Teachers)

Federal aid to education is like motherhood; everyone who has a deep regard and concern for the future generations is for it. Those who oppose it claim we don't need it, and if we get it, Federal control is certain to follow.

Recent national and international developments have placed the arguments that "we don't need it" in grave doubt. Further, if we analyze the many programs of Federal aid that have existed in the past, there is little or no evidence to indicate that Federal aid necessarily leads to Federal control. If we make an all-out effort, Federal support for education can become a reality in this session of Congress. What is perhaps most crucial at this point is the type of program of Federal aid that is proposed and passed.

Many of the programs submitted to the last Congress were out of step with the need. Primarily to avoid the "Federal control" argument, the bills emphasized or pertained solely to construction of new school buildings. Construction of new buildings without provisions to adequately operate them, and operate those already in existence, may tend to add more complications to the problem than it does solutions.

Federal aid to education is not a new nor novel suggestion. It has existed in one form or another since the year 1785, 2 years before the adoption of our Constitution. Those who argue that Federal aid necessarily means Federal control either do not know the historical development of our schools, or they are deliberately using false assumptions and conclusions to obscure the real issue.

Federal support of education began with the Congress of the Confederate States in 1785 when it adopted an ordinance granting certain lands and moneys for school aid to each new State admitted to the Union. Many different types of Federal aid programs followed. More recently, in the 1930's the Federal Government participated to a very large degree by building many needed school plants under the PWA and WPA programs. During the 1940's still more aid was granted under the Lanham Act.

The early 1950's saw the development of Public Laws 815 and 874, which continued the principles of the Lanham Act and gave aid for the construction, maintenance, and operation of schools in federally impacted areas. These acts are in operation today and, if fault can be found with them, it is only that they are too limited in scope and appropriation. Certainly there is no evidence of Federal control nor any evidence of any attempt at Federal control.

One important lesson is obvious in any review of the operation of Public Law 874 and 815. It is that if any district is restricted in the moneys available for school purposes because of limitations on its real property tax base, then Federal aid for construction is not enough. There must also be Federal aid for the operation (including teacher salaries) and maintenance of the buildings once they are erected. Public Laws 815 and 874 are designed to relieve federally impacted areas, especially where there are large Federal installations that pay no property taxes to the local district. The families of the workers at the Federal plants may even live in public housing units which also are exempt from the property tax. Public Laws 815 and 874 compensate for this limitation on the local tax base by providing funds for construction and funds for the operation of the district based upon the number of children from federally connected families.

This has been a successful aid program. However, as several of the districts that receive this aid have pointed out, construction aid is often more harmful than helpful unless it is accompanied by a sound program of operational aid. In fact, there have been occasions where districts have rightfully threatened to refuse acceptance of buildings if they were not accompanied by operational aid.

But even this position of demanding that operational aid accompany construction aid is not the real answer to the problem. Actually, we are not operating the school buildings we have today at their highest efficiency. To be sure, we need new classrooms, and we need them desperately, but even more desperately we need qualified career teachers to man the classrooms now in existence. We can build buildings from now until there is no more land, but this will not guarantee every child an education. The

only opportunity a child has to be taught is to come in contact with a good teacher. It is possible that he could attend hundreds of classrooms and yet have learned nothing simply because the classroom lacked a full qualified teacher.

To solve the problem of an adequate education for our future generations, we first must admit to certain facts:

1. We need buildings, but first we need to keep our qualified teachers and we need to attract new qualified persons to the profession. This is an immediate need. This can only be done by increasing teachers' salaries to the point where the salaries become competitive with other professions and the conditions in teaching become attractive to a significant portion of the young people of America. Since most districts are at their tax-ceiling level now, the salary problem can only be solved through Federal aid or support of operation of existing school plants. The problem of those districts that are at their tax ceiling now is identical to federally impacted areas that are now served by Public Laws 815 and 874; only the cause is different.

2. The citizens of every community must take a close look at the framework of our present-day tax support of education. If they do, they will realize that the property tax is outmoded as a single source of school revenue. The only answer to the problem flows from the fact that the national wealth today is more realistically reflected in the growing income, not property as it was in the past, of the country. Therefore, needed support is most equitably arrived at through the Federal income tax.

Today we need an average additional amount spent on the education of each child per year equal to $240 to bring education to its proper levels. What would it cost the average taxpayer? In most districts because of the legal ceiling on real estate tax this need could never be met. Thus, if we are going to rely on local and State taxes alone, we must be willing to admit that in most cases we can never meet the challenge. But if no ceiling exists, the average householder would contribute approximately $200 per year more in property tax, or his rent would be raised proportionately. On the other hand, if the cost is borne through the Federal income tax, by lowering the exemptions of each income taxpayer by $100, each child in the United States can have $240 additional per year spent on his education. The real estate tax costs the average household $200 while the Federal support costs the same household less than $100 and avoids the whole question of legal ceilings on the local level. Which is the best for the average householder? Is not this the real issue in place of the so-called Federal control?

To put it another way, the tax for Federal support of education could be made even less regressive if Congress were to adopt the recommendations of the AFL–CIO economic policy committee. More than sufficient funds could be raised, without lowering the personal exemption, by taking the following actions:

(a) Repeal the special tax relief granted to dividend income by the Revenue Act of 1954.

(b) Require withholding taxes on the payment of dividends and interest.

(c) Repeal excessive depletion allowances and remove from such tax privileges many of the metals and minerals now covered.

(d) Tighten the capital gains tax structure by lengthening the holding period of long-range gains and increasing considerably the 25 percent tax rate. Remove from capital gains treatment the many types of income not originally included.

Is not the question of whether the burden of education should be borne inadequately by a tax on property or adequately by a tax on income the real question? This would appear as a conflict between the real-estate taxpayer and the income taxpayer. However, the real estate taxpayer knows he is protected by legal ceilings in most areas, thus he alines himself with the pressure groups and lobbyists who oppose any Federal expenditure for schools. The lobbyists for the children and future generations of America have never been able to equal the lobbyists of the anti-tax groups, thus adequate Federal support of education has been difficult to obtain.

3. When we reach the point that we are adequately financing the operation of our existing school facilities, we must build the additional classrooms that will bring each class size down to educationable and manageable proportions. As long as we have over 20 to 25 in any class we are not meeting sound educational requirements. To build the classrooms without having the qualified teachers available makes no sense, nor does the recruiting of capable people for teaching without classrooms make sense. The situation demands a well-coordinated program.

Future generations of Americans are being cheated of their rightful place of influence, leadership, and respect in the world community because our generation is not supporting education to the extent that today's world developments demand.

It is sheer folly to spend billions on ground, sea, air, and space defense today if at the same time we neglect the intellectual development of our children who must meet the challenge of tomorrow.

Every phase of our life, as well as the very defense of our democratic ideals and way of life, becomes more dependent each day upon the development of the mental skills of our people. Leading atomic scientists claim that the sum total of man's knowledge has more than doubled in the past decade.

Unless we are willing to face the facts of this development, and unless we are willing to develop a Federal support program that meets the educational need of our children and their children, then we must be prepared to face the horrible fact that we may be defending ourselves today but at the same time we are selling our future generations down the river.

## Thomas Masaryk: Man of the Ages

EXTENSION OF REMARKS
OF
### HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. MULTER. Mr. Speaker, March 7 marked the anniversary of the birth of Thomas G. Masaryk, the founder and first President of the Czechoslovak Republic.

I want peace, but that does not mean that I am going to meet aggression unarmed; rather the contrary. I want practical, not Utopian, peace.

These were the words of Thomas Masaryk more than a generation ago. And these words alone would link him to America today, if nothing else did. The founder and first President of Czechoslovakia combined practical idealism with realism. Actually, however, we in the United States honor Thomas Masaryk because of the qualities of the political philosopher and the statesman, which link him with the men of all time. He was a man of stature, intellectually, politically, philosophically.

He arose in a day when western civilization was prepared to welcome a man of the people who promoted respect for the individuality of the common man. Not in the sense of Marxism did he plead the cause of the masses; for he rejected Marx. He also rejected Kant, Hegel, Nietzsche. In the truly democratic sense he followed the philosophers Plato, Hume, Mill, Spencer, but, above all, Comte.

His humble birth and struggle to secure an education made him sympathetic with the difficulties of the poor. His zeal for an education and his diligence as a tutor brought to him the realization of the value of the things of the mind and the things of the spirit. His experience as a member of the Austrian legislature gave him political insight. Because of his independence in that capacity he was recognized as a figure of remarkable political, philosophical, and ethical stature. His democratic thought and spiritual freedom were incorporated in his political actions.

When he had been for only 5 years President of the new Czechoslovak nation, of which he was the founder, laudatory messages came from Paris, from Brussels, from London. In them stress was laid upon the fact that the success of his leadership was due to the idealism with which he guided the young state. Comprehension of the kind of freedom desired by the nations in revolt at the time of World War I and a faith in the strength of the democratic feeling within them dominated all of his actions, and gained for him a reputation of rare insight and unusual political honesty.

He believed that Czechoslovakia had a special and unique message for mankind. Marked by religion and spiritual culture of a high order, the mission of the Czechoslovak soul as Masaryk saw it was independence and originality of thought. The shadow of this man stretched not only across and beyond the borders of Czechoslovakia. It has stretched down the decades since his death; and will, no doubt, continue to do so as long as there is a free world to recognize his great contribution to western civilization.

## A Good Plan

EXTENSION OF REMARKS
OF
### HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. WRIGHT. Mr. Speaker, as evidence of the continuing and growing editorial interest in the necessity for a systematic program of national debt reduction and eventual retirement, I am taking the liberty of including here for the reading of those Members who are interested, an editorial published in the

Lubbock Avalanche Journal, February 21, 1959:

A GOOD PLAN

Congressman JIM WRIGHT, of Weatherford, has a plan which, if followed long enough, eventually would liquidate the national debt.

Mr. WRIGHT has introduced a resolution in the House which would express the desire of Congress that in each succeeding year the Nation should pay on the principal an amount equal to not less than 1 percent of the present national debt. He points out that the debt now stands at $283 billion and that in the new fiscal year, we shall be paying $8,100,000,000 annually in interest.

The Weatherford Congressman believes the only way the debt can be eliminated is by paying on the principal a definite amount each year, while keeping up the interest.

The plan makes sense. That is the way a family or a business firm gets out of debt. What works for a private debtor should work for the biggest debtor of all—the U.S. Government.

## A Background Paper on Krebiozen From the American Cancer Society

EXTENSION OF REMARKS
OF
## HON. STEVEN V. CARTER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. CARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following paper from the American Cancer Society:

A BACKGROUND PAPER ON KREBIOZEN FROM THE AMERICAN CANCER SOCIETY

I. THE CONTROVERSY OVER KREBIOZEN

During the past 7 years, the owners and proponents of Krebiozen, a substance alleged to be beneficial in the treatment of cancer, have been engaged in a great campaign to publicize this substance. They have been disseminating propaganda through articles strategically placed in newspapers, magazines, and books, as well as by organized letter writing, and they have been using national political channels to further their interests. They have already been involved in legislative investigations in two States, California and Illinois.

According to Herbert Bailey's book, "A Matter of Life or Death" (Putnam's Sons, 1958), these individuals have made it clear that they wish to recoup from the sale of the substance an investment claimed to be about $2 million and that they intend to sell the substance for profit as a proprietary drug. Despite this fact, they have repeatedly petitioned health organizations supported by public funds to underwrite a test of the therapeutic efficacy of Krebiozen in collaboration with them. They have hoped to use public funds to defray the cost, estimated at $500,000 or more, of testing this privately owned substance.

Moreover, the chemical composition of Krebiozen remains unknown. The recent claims of its therapeutic efficacy which they have broadcast are based on case histories of patients treated with Krebiozen, although they have not given independent investigators access to these records within the last 5 years. The owners and proponents have demanded that the substance be tested according to their own terms, which are demonstrably unscientific.

Their steady campaign of publicity ostensibly designed to obtain support from either the American Cancer Society or the National Cancer Institute for testing the substance on their own terms has aroused public interest in Krebiozen. The following documentation which chronicles the history of Krebiozen will provide answers to some of the questions which the public has been asking about this unproved substance.

II. WHAT IS KREBIOZEN?

"Krebiozen" is a coined name applied to an alleged anticancer drug. It is said to have been produced by Dr. Stevan Durovic in Argentina prior to 1949. Dr. Durovic claims that he injected 2,000 Argentinian horses with Actinomyces bovis, a microorganism which causes "lumpy jaw" in cattle, and from the blood of these infected horses he extracted two grams—about one-half teaspoonful—of a whitish powder which he named "Krebiozen." The full details of the method of extraction have never been revealed. Later, Dr. Durovic brought this powder to the United States. Here, without prior chemical analysis of the powder, he dissolved it in No. 9 mineral oil in the ratio of one part of Krebiozen to 100,000 parts of mineral oil. Thus he made the original (and only) supply of Krebiozen amounting to 200,000 doses, 1 cc. each.

III. THE MEN BEHIND KREBIOZEN

Dr. Stevan Durovic:[1] Born in Ulcinj, Yugoslavia, in 1905, Dr. Durovic received the degree doctor of medicine from the University of Belgrade in 1930. He did postgraduate work at the University of Vienna and at the Pasteur Institute in Paris. During World War II, as a captain in the Medical Corps of the Royal Yugoslav Army, he was taken prisoner by the Italian army and was held for 18 months. In 1942, on the basis of his being a physician in ill health, he was released and he traveled to Spain and Argentina on a Yugoslav passport with a Vatican visa. In 1944 in Buenos Aires, he established Duga, S.A., which was financed by his brother, Marko Durovic, a former munitions manufacturer. At the Duga laboratories he prepared a whitish powder which he named "Kositerin" and which he thought was useful for treating high blood pressure. Dr. Durovic visited the United States in March 1949, for the purpose of working with doctors at Northwestern University in testing Kositerin. Kositerin was found to be without value for the treatment of high blood pressure.

In August 1949, Dr. Durovic met Dr. Andrew C. Ivy, a distinguished medical researcher and vice president of the University of Illinois. At this time Dr. Durovic told Dr. Ivy about another substance, Krebiozen, which he believed was effective against cancer, and he solicited Dr. Ivy's help in testing the drug.

Dr. Durovic is not licensed to practice medicine in this country. He has stated that he is interested only in research, but he has not published in any scientific or medical journal in this country during his nearly 10 years of residence here. In July 1952 he was granted permanent residence in the United States through Senate bill 1159, sponsored by Senator PAUL DOUGLAS of Illinois. In September 1958 he became a naturalized citizen of the United States.

Dr. Andrew C. Ivy: Born in Farmington, Mo., in 1893, Dr. Ivy received his Ph. D. from the University of Chicago and his medical degree from Rush Medical College. He has been the author or coauthor of many published scientific articles. Numerous honorary degrees have been awarded to him and he has held important posts in several universities, in the Government and in private organizations. He was at one time Scientific Director of the Naval Medical Research Institute, Executive Director of the National Advisory Cancer Council, and consultant (on war crimes) to the Secretary of War. When he met Dr. Durovic in 1949, he was vice president in charge of the Chicago Professional Colleges of the University of Illinois and distinguished professor of physiology and head of the department of clinical science at the university.

Although he had not previously published any papers on Krebiozen in medical journals, at a meeting in the Drake Hotel in Chicago on March 26, 1951, attended by physicians and laymen including members of the press, Dr. Ivy submitted a privately printed, 106-page brochure which favored Krebiozen and of which he was coauthor. The meeting was widely publicized in newspapers and there was a public furor over Krebiozen. Because of the methods Dr. Ivy had used to promote Krebiozen, his membership in the Chicago Medical Society was suspended for 3 months. Although he was later invited to reinstate his membership, he declined to do so and was dropped from the roster of the society for nonpayment of dues. This action automatically terminated his membership in the Illinois Medical Society and the American Medical Association.

Dr. Ivy has stated that the process of manufacturing Krebiozen has not been revealed to him and that he has neither seen nor analyzed the original substance in the undissolved state. He also stated that in Chicago he has extracted a substance from 40 horses, recreating by deduction the process that Dr. Durovic used to extract Krebiozen in Argentina. Dr. Ivy is reported to have obtained ten times the amount of powder that Dr. Durovic claimed to get from the same number of animals. However, since the composition of Dr. Durovic's powder has never been revealed, there is no way of knowing whether the substance extracted by Dr. Ivy in the United States in 1957 is the same as that obtained by Dr. Durovic in Argentina 8 years before.

Several other physicians in association with Dr. Ivy have privately published monographs on Krebiozen. These men are Dr. J. F. Pick, a plastic surgeon; Dr. W. F. Phillips, a general practitioner; and Dr. L. Krasno, a researcher in antibiotic dusts.

Marko Durovic:[2] Born in Ulcinj, Yugoslavia, in 1900, Marko Durovic, brother of Stevan Durovic, received his legal training at the University of Paris and the University of Belgrade, completing his training in 1923. In 1926 he was appointed Judge in the Yugoslav District Court in Belgrade. He practiced law from 1927 to 1941 and was coowner of Vistad, a munitions plant. In 1942 he was seized by Italian troops and was sent to Rome. Through the intercession of the Vatican he was released and allowed to travel to neutral Argentina with his brother. There he bought a steel plant and the Instituto Biologica Duga and underwrote his brother's experiments which produced Kositerin. He came to the United States in 1950 on a visitor's visa. In July 1952 he was granted permanent residence in the United States through Senate bill 1159, sponsored by Senator PAUL DOUGLAS of Illinois. In September 1958 he became a naturalized U.S. citizen.

IV. ORGANIZATIONS CONNECTED WITH KREBIOZEN

A number of organizations have been created by the supporters of Krebiozen to publicize, promote and distribute the drug and/or to obtain public support for the testing of Krebiozen according to the terms laid down by its proponents. These organizations are:

1. Duga Laboratories, Inc., Chicago, Ill., and Buenos Aires, Argentina: This drug firm was established by Marko Durovic to underwrite Dr. Stevan Durovic's experiments which produced Krebiozen. Duga Laboratories, Inc., distributes Krebiozen to physicians through the Krebiozen Research Foundation (see footnote 2), which it supports. Duga Laboratories, Inc., accepts from the foundation money which the foundation receives as contributions from patients who have been given Krebiozen. According to

Footnotes at end of speech.

Herbert Bailey's "A Matter of Life or Death." Dr. Durovic has stated that the Duga Laboratories, Inc., is in debt to creditors who expect to receive a return on their investments if Krebiozen is proved to be an effective cancer remedy.

2. The Krebiozen Research Foundation, Chicago, Ill.: This foundation is registered in the State of Illinois as a nonprofit corporation. It furnishes Krebiozen to selected physicians for use in treating patients. The necessary steps under the Public Health Service Act have never been taken to make it possible for Krebiozen to be sold for use in interstate commerce. However, the recipient is requested to make contributions to the Duga Laboratories, which supports the foundation. The request for contributions is at the rate of $9.50 per ampule. The foundation library center reports that as of February 1959, the Krebiozen Research Foundation has not published a list of officers, a report of activities, or a financial statement.

3. Committee for Independent Cancer Research, Inc.: Originally formed ostensibly to investigate various cancer remedies, this organization has put forth major efforts to promote Krebiozen and a book "Krebiozen: Key to Cancer?" written by Herbert Bailey, president of the committee. Because of a disagreement over a matter of policy, this committee has since split into two divergent groups:

(a) The freedom for cancer research committee: Mr. David M. Kasson, who claimed he had been treated for cancer with Krebiozen, presided over this committee. Upon his death from cancer in June 1958, the committee was dissolved.

(b) The Independent Cancer Research Foundation, Inc.: Miss Gloria Swanson, former chairman of the committee for independent cancer research, serves as a member of the board of directors. This group is devoted to gathering and disseminating "all possible information on trends in cancer research and treatments."

4. Committee for a Fair Test of Krebiozen, Inc: This group has circulated petitions urging the American Cancer Society to support the method of testing of Krebiozen which its proponents are demanding.

5. The Lakeland Foundation of Chicago, Ill.: This organization has also been involved in the Krebiozen controversy. According to the foundation library center it is a private corporation and is incorporated under a broad charter that includes conservation of natural resources, care of the aged, research in economic science, and medical research in the field of malignancy. The Lakeland Foundation does not currently publish an annual report.

The Lakeland Foundation has come to Dr. Ivy's assistance on two occasions. When he was on a leave of absence from January 1 through June 30, 1953, from the University of Illinois and without salary, the foundation loaned him $5,000 for living expenses. In 1956–57, the Lakeland Foundation advanced the sum of $10,000 to Dr. Ivy for the purpose of recreating Krebiozen.

V. HAS KREBIOZEN EVER BEEN TESTED?

1. (a) The powder form of Krebiozen was never chemically analyzed before being dissolved in mineral oil. An analysis of Krebiozen dissolved in No. 9 mineral oil has been done by the Clark Microanalytical Laboratory, Urbana, Ill., and was reported in Chemical Week, June 16, 1956. According to the Clark analysis "it contained no nitrogen and * * * might contain some sulfur in addition to carbon, hydrogen and oxygen. Infrared and ultraviolet spectroscopy revealed absorption bands indicating that it could be either a polysaccharide or a steroid. A further study of the product is required before a more definitive statement about its chemical structure can be made."

(b) Two distinguished chemists, Drs. Paul Kirk, of the University of California, and Arthur Furst, of Stanford University, testified at the 1958 hearings of the California General Assembly Committee on Public Health that they had independently attempted to extract and to analyze Krebiozen. After the most exhaustive tests Dr. Kirk independently concluded that "the extraction failed to reveal the presence of anything dissolved in the ampules and would lead to the supposition that all that is contained in Krebiozen is mineral oil, Nujol,' to be specific, because the analysis indicated the identiy with Nujol." Dr. Furst concurred. "I say it is pure Nujol," he stated.

Dr. Ivy has challenged this testimony.

2. (a) A few animal studies have been done with Krebiozen by its proponents. From these studies it is claimed that the substance is nontoxic in rats, cats, and dogs.

(b) Twelve dogs were said to have been treated with Krebiozen by Dr. Hannibal DeGrana at the School of Veterinary Medicine of the University of Buenos Aires. All the animals were described as having natural cancer; seven animals were said to be almost blind because of cataracts. It was aid that all of the tumors were affected to some degree and that in six dogs the cataracts cleared and the dogs regained sight.

(c) John B. Loefer, Ph. D., of the Southwest Foundation for Research and Education, San Antonio, Tex., reported on the effects of Krebiozen therapy on transplanted mouse leukemia and lymphosarcoma in the Journal of the American Medical Association on May 17, 1952. "Krebiozen * * * did not affect the course of development of either the leukemia or the lymphosarcoma," he wrote.

3. (a) In 1952, the committee on research of the council of pharmacy and chemistry of the American Medical Association published "A Status Report on Krebiozen" in the Journal of the American Medical Association. This report, made by a group of four distinguished educators from several medical schools in Chicago (excluding the University of Illinois), contained an analysis of 100 case histories of patients treated with Krebiozen. The case records had been received from seven sources and were examined at the request of Dr. Ivy and his assistants at the Krebiozen Research Foundation.

"Ordinarily, the committee on research * * * would not attempt to evaluate the clinical benefits, if any, of a substance whose character and method of manufacture were not known and standardization of which was so loosely defined," the AMA report stated. "However * * * tremendous worldwide public interest created a moral obligation * * * which transcended the issue of medical ethics ordinarily applicable to secret remedies."

The conclusions of this report were:

"Ninety-eight (of 100 cases studied) were reported as failing to show evidence of improvement.

"Two patients showed some evidence of temporary improvement coincident with Krebiozen therapy. In one patient this was apparently fortuitous; in the other major lesions showed continued rapid progression."

(b) Seven investigators reported on 63 cancer cases treated with Krebiozen to the committee on cancer diagnosis and therapy of the National Research Council. The committee then reviewed these and other cases in 1951 and found no evidence of any curative effect and no proof of palliative effect attributable to the drug itself. This opinion was based on an analysis of the 100 cases already reported in the Journal of the American Medical Association, some of which cases were included among the 63 cases studied by the committee and of 22 cases reported by Dr. Ivy and others in the booklet distributed at the meeting in the Drake Hotel on March 26, 1951, when Krebiozen was first announced.

(c) In 1952, a committee of six distinguished physicians from several medical schools, headed by Dr. Warren H. Cole, head of the department of surgery of the University of Illinois, was appointed by Dr. George Stoddard, president of the university, for the purpose of reviewing Dr. Ivy's 500 cases of cancer treated with Krebiozen. The committee's report, presented to the trustees of the university, contained the following significant conclusions: "Ignorance of the material interferes with a sound evaluation of its therapeutic effectiveness * * * no acceptable evidence that any malignant tumor had been cured by Krebiozen * * * no evidence of prolongation of life * * * no historical evidence that Krebiozen produced degenerative or regressive changes in tumor cells * * * no radiographic evidence that Krebiozen could reduce metastatic tumor lesions in bones or lungs * * * statement in Dr. Ivy's report that a large majority of patients reported a decrease in pain was not confirmed."

In a discussion of future tests, the Cole committee advised that a supply of Krebiozen should be made available for testing and that investigators should attempt to reproduce the material and determine its chemical content.

(e) A committee of supervision, under the chairmanship of Dr. Robert E. Johnson, head of the department of physiology, Urbana, Ill., was appointed by Dr. Stoddard to carry out the recommendations of the Cole committee. The committee of supervision reported in part that a supply of the original material was needed so that it could be tested directly. A supply of the vehicle was needed for adequate scientific control. Complete information on the mode or modes of preparation was needed * * * the originators of the preparation are unwilling to furnish materials and will not provide full technical information * * * (therefore the committee is unable to proceed further.

(3) In 1952, after a 21-month investigation, Dr. Stanley P. Reimann, director of the Institute for Cancer Research, Philadelphia, Pa., announced: "We now know we have cured no patients (with Krebiozen) and we don't believe the length of life has been prolonged on any we have treated."

4. The proponents of Krebiozen have been involved in legislative investigations in two States and have received support from at least two U.S. Senators and one U.S. Representative.

(a) The Illinois Legislature: In 1953, a joint committee of 14 Illinois legislators was appointed from the two State legislative bodies to investigate the Krebiozen controversy. In 1954, after extensive hearings for which records were subpenaed, this committee concluded that Dr. Ivy and the Durovic brothers "were men of good character" and that neither Dr. Stoddard nor the American Medical Association had conspired against Dr. Ivy. The committee urged further research on Krebiozen but made no recommendations as to how this research was to be conducted.

(b) The California Senate: In 1958, the California Senate Committee on Public Health held hearings on "Fraudulent, Dangerous, Unscientific, and Deceptive Practices in the Field and Treatment of Disease," at which Dr. Ivy testified. The burden of Dr. Ivey's testimony was directed to the advocacy of a double blind test of Krebiozen which its proponents have been endeavoring to get.

(c) The late Senator Charles W. Tobey: Senator Tobey is reported to have sponsored an investigation of Krebiozen by a staff investigator.

(d) The Honorable ROLAND V. LIBONATI, U.S. Representative from the State of Illinois. On several occasions, Congressman LIBONATI has had remarks on Krebiozen inserted in the CONGRESSIONAL RECORD. His remarks have generally echoed Dr. Ivy's.

(e) Senator PAUL DOUGLAS, of Illinois: Senator DOUGLAS sponsored a bill in the U.S. Senate which gave the Durovics permanent residence in the United States. On the floor of the U.S. Senate, in August 1958, Senator DOUGLAS proposed a fair test of Krebiozen to be done by the National Institutes of Health, a U.S. Government institution. Later, Drs. Ivy and Durovic met with Dr. Heller, Director of the National Cancer Institute of the National Institutes of Health, and with a representative of Senator DOUGLAS. At this meeting, Dr. Heller stated that "the first step should be an examination of the case records in possession of the Krebiozen Foundation."

At a meeting on September 24, 1958, attended by Drs. Ivy and Durovic, Senator Douglas' representative, and Dr. Heller, it was generally agreed that the evaluation of Krebiozen should be explored further, and that the group was seeking to develop an agreed procedure that would be acceptable to the scientific community.

On December 5 at another meeting attended by the same group, this time including Senator DOUGLAS, the National Cancer Institute suggested an examination of Dr. Ivy's data by a committee of mutually acceptable scientists to decide whether clinical trials should be undertaken and how they should be undertaken. Senator DOUGLAS expressed the opinion that this suggestion was a proper one. Dr. Ivy was invited to define his role as consultant to the evaluating committee, to which he had agreed.

He answered in a letter to the Institute, dated February 1, 1959, insisting that he personally should be a member of an arbitration type of committee and a party to the administration of the therapy and the interpretation of the results under conditions where bias cannot operate. This is a procedure which, as pointed out in two conferences attended by Dr. Ivy, could admit bias and would not be acceptable to the scientific community.

The Institute responded to Dr. Ivy's letter on February 6 by asking him to clarify his apparent rejection of the previous plan made between him and the National Cancer Institute, because "it is the desire of the Institute to get on with the evaluation of Krebiozen as soon as a scientifically acceptable procedure can be effectuated."

VI. CAN KREBIOZEN BE TESTED?

The proponents of Krebiozen have frequently stated that they would welcome an evaluation of their preparation, and during the last 2 years they have conducted an active campaign to promote a specific type of evaluation which they have outlined as a double blind test.

In the past, an evaluation of Krebiozen by independent researchers has been obstructed because of lack of information about the substance and its preparation, and the unavailability of the substance. Thus, the committee on supervision, which was appointed at the University of Illinois in 1952, was unable to proceed with an evaluation of Krebiozen.

Also, independent evaluation of Krebiozen has been impeded because of inadequate information about the drug, the unwillingness of its proponents to surrender to independent researchers the case histories on which they base their claims, and the insistence of the proponents that Krebiozen be tested only on the terms which they themselves have set forth—terms which have been unacceptable to reputable scientists unassociated with Krebiozen.

Recently, the supporters of Krebiozen have concentrated their propaganda efforts on trying to get a reputable organization to sponsor a "double blind" study of their substance.

The proposal for such a study was first made to the American Cancer Society in 1958 by James L. Griffin, director of the Krebiozen Research Foundation.

Briefly, the study proposed by Mr. Griffin called for the appointment of a committee of laymen and a committee of physicians, one-half of the members of each committee to be selected by the Krebiozen proponents and one-half to be chosen by the American Cancer Society. Each committee would then select a single additional member. Ampules of plain mineral oil and ampules of Krebiozen, identified only by code numbers, would by administered by Dr. Ivy to known cancer patients. The extra member of the lay committee would be the only person to know the identity of the contents of the ampules and he would be instructed to keep the code list in a safety deposit box.

At the end of the period of treatment Dr. Ivy would evaluate the results and undertake to identify the patients who had received Krebiozen and those who had not. Committee members would be permitted to observe the patients and to take notes during the treatment period.

The Krebiozen proponents claim to have 1,200 case records of patients already treated with Krebiozen. In testing an unproved substance, the first step would be to evaluate the results already achieved, and in this case it would mean an analysis of the alleged case records. In its proposal to the American Cancer Society, the Krebiozen Research Foundation, however, refused to permit an examination of these case records unless the society agreed beforehand to sponsor their suggested study.

Their proposal for this particular study was carefully considered by the American Cancer Society's advisory committees on research and on the therapy of cancer and by the society's research advisory council. These three groups of scientists concluded that this proposal does not provide a scientifically valid plan for conducting an objective and meaningful evaluation. Their opinion was adopted by the board of directors of the American Cancer Society on October 24, 1958.

The first reason for rejecting the proposal was that the committees to be set up as outlined by the Krebiozen proponents would not be truly independent research groups, because one-half of the membership of each committee would consist of individuals selected by the proponents.

The second reason was that the plan stipulated that only Dr. Ivy would administer the Krebiozen. The American Cancer Society felt that this would not permit an opportunity to determine whether physicians generally can obtain the same results.

The third reason for rejecting the proposal was that the plan provides no clear-cut standards for measuring either the result desired or defining or measuring the results obtained.

The society further stated that it would be willing to support the testing of any substance proposed for the prevention, treatment, or cure of cancer, provided the substance is available for testing under the well-established scientific methods known and accepted for all products proposed for human use, and further, provided that satisfactory preliminary evidence exists that the substance has shown promise of being useful in the treatment of cancer.

The American Cancer Society itself cannot test any drug. It does not operate research laboratories, nor does it control hospitals or other facilities for the treatment of cancer patients. The society has clearly made it a matter of record that it favors the full knowledge and testing of Krebiozen.

VII. IS KREBIOZEN PATENTED? CAN IT BE SOLD?

The owners of Krebiozen have stated on numerous occasions that they have a large investment in this substance and intend to market it for profit. For this reason they are concealing the details of the manufacturing process, thereby setting up a barrier to the testing of the substance by independent researchers.

If the owners of Krebiozen wish to protect the substance, they may apply for a patent on it. They may also apply for a patent on the process by which it is made. Hundreds of drugs are manufactured in this country under such patents.

Such applications are temporary protection for the proponents while the patents are being searched.

Some years ago the owners of Krebiozen applied for a patent but when the U.S. Patent Office returned the application with request for further information, the owners of Krebiozen failed to supply this information and did not resubmit their application. Hence, there is no patent or new application for a patent on Krebiozen, either the substance or the process, in the files of the U.S. Patent Office as of January 1959.

By its description Krebiozen is subject to the biologic control provisions of the Public Health Service Act and thus it may not be legally shipped for sale, barter, or exchange in interstate commerce or exported from or imported into the United States, unless it is produced under Government license. No application for such license has ever been completed for Krebiozen. If an application were made, supported by adequate evidence of safety, purity, and potency of the product, it would be the responsibility of the Division of Biologic Standards of the National Institutes of Health to recommend whether or not a license should be issued. Without this license Krebiozen may be distributed only to qualified experts, solely for purposes of clinical investigation, but it cannot be sold. Some physicians, as indicated earlier, have obtained Krebiozen in this way since 1952.

VIII. PUBLICITY AND PROMOTION OF KREBIOZEN

The history of Krebiozen has presented elements both of wide publicity and deep secrecy. The proponents, although they are physicians and well acquainted with the accepted procedures for introducing a new substance, have ignored and flouted these procedures in the case of Krebiozen. From the very first they have sought to arouse the public interest in Krebiozen before adequately demonstrating to the medical profession the utility or efficacy of the substance.

For this unorthodox approach, Dr. Ivy was disciplined by the medical society of which he was a member. He consequently was relieved of his position as vice president of the University of Illinois. Such censure, however, has not deterred him from continuing to publicize Krebiozen. He has since appeared on television and radio programs devoted to the promotion of the drug, has held interviews with the press, and has made other public appearances in behalf of Krebiozen.

An example of Dr. Ivy's methods of attracting publicity is provided by the circumstances of his recent letter to Dr. Harold S. Diehl, senior vice president for research and medical affairs of the American Cancer Society, proposing a test of Krebiozen. Dr. Ivy was not content merely to communicate privately with Dr. Diehl. At the time he sent this letter, he also released copies of it to the press in an obvious effort to create publicity.

The press releases that have been issued by the proponents of Krebiozen, or in their behalf, are not always consistent with the facts. For instance, G. P. Putnam's Sons, publishers of the new book, "A Matter of Life or Death: The Incredible Story of Krebiozen," by Herbert Bailey, issued a press release stating that ". . . 'The evaluation of Krebiozen—the controversial anticancer agent—by the National Cancer Institute is underway and will proceed with all possible speed,' Dr. John R. Heller, the Institute's Director, told Herbert Baily [sic]." This re-

lease, dated November 11, 1958, also declared that the National Cancer Institute had agreed to conduct a "double blind" test of Krebiozen. Herbert Bailey, who apparently prepared the Putnam release, had sent a copy of it, prior to its publication, to Dr. Heller for his suggestions. Dr. Heller answered immediately, on November 6, 1958, correcting two inaccuracies in the copy: (1) The evaluation of Krebiozen is not underway, and (2) the method of testing has not yet been agreed upon and cannot be determined until examination of data has been completed. "Actually," wrote Dr. Heller, "we are now approaching the preliminary stage of examining the data submitted by Dr. Ivy to determine whether it warrants further investigation of the treatment."

Although Dr. Heller's comments were sent to Mr. Bailey 5 days before the press release was published, Mr. Bailey replied that they were received too late for the necessary revisions to be made.

It has also been pointed out by Dr. Heller that on September 24, 1958, when he and other members of the National Cancer Institute met with Drs. Ivy and Durovic to discuss the testing of Krebiozen, Drs. Ivy and Durovic subscribed to a press release issued by the National Cancer Institute which stated that the method of testing Krebiozen should be acceptable to the scientific community. At that meeting, there was no agreement to undertake the double blind study proposed by Dr. Ivy and which had already been widely rejected by scientific investigators.

IX. NATIONAL CANCER INSTITUTE REQUIREMENTS

The conditions under which the National Cancer Institute would consider an investigation of Krebiozen are based on principles long accepted by the scientific community at large. They apply to the testing of any drug, the value of which has not been adequately proved. These accepted conditions were first outlined by the National Advisory Cancer Council as guidelines for the National Cancer Institute in evaluating compounds, and are subscribed to by the American Cancer Society. They are the following:

1. The chemical formula, if known, must be disclosed to the National Cancer Institute, or if not known, the method of preparation must be supplied.

2. Adequate amounts of the chemical having known purity must be available.

3. The evidence upon which any claim of efficacy is based must be presented along with a full explanation of the method of treatment.

4. The National Cancer Institute reserves the right to determine if, how, where, when, and by whom the investigation is to be carried out.

5. The scientists making the investigation will have the right to publish the results.

The National Cancer Institute is willing to undertake an evaluation of claimant's data on an unorthodox treatment claimed to effect cancer cures in humans, provided that the following conditions are accepted:

1. The method of treatment must be fully explained. There must be full disclosure to the National Cancer Institute of the composition or nature of the treatment.

2. Complete records of clinical and laboratory findings must be submitted of the total number of patients with cancer treated with the remedy or method in question. These records must demonstrate the following:

(a) Diagnosis of cancer in each case, confirmed by verifiable microscopic examination.

(b) Detailed and documented objective evidence that malignant neoplastic disease has disappeared or that its progress has been arrested for a significant period of time in a significant number of patients. It must be shown that no definitive treatment other than the one in question was used during this period of observation; in addition, a detailed record of all treatment received by the patients prior and subsequent to the test period must be supplied.

(c) Details as to preparation, dosage, frequency, and route of administration of the agent in question.

(d) Complete details as to physical and supportive laboratory findings and histologic studies in the patients prior to, during, and subsequent to the course of and cessation of the treatment in question.

(e) Objective evidence of regressions of primary tumor and metastases as shown by recorded measurements of observable tumors, photographs and X-rays, with dates of observation.

3. The National Cancer Institute reserves the right to determine whether or not the evidence submitted warrants further investigation of the proposed treatment and its results, and reserves the right to determine where, when, by whom, and under what conditions such investigation will be made. The National Cancer Institute reserves the right to make public its findings.

X. THE AMERICAN CANCER SOCIETY AND UNPROVED DRUGS

Under the American Cancer Society's research program, hundreds of organic and inorganic compounds have been screened and a few substances have been found which are palliative in certain types of human cancer. The results of research on all of them were first published in medical journals. All of these substances can be manufactured by a drug concern and all are readily available to doctors and to hospitals for experimental purposes.

The American Cancer Society is dedicated to the task of finding the cause and the cure of human cancer at the earliest possible moment. To this end, it supports scientific investigation of every promising kind. At the same time, however, it has the responsibility of seeing to it that the public is not misled by enthusiastic claims of individuals who would exploit unproven methods or drugs for the treatment of cancer. Ill-advised reliance on such unproven methods or substances militates against possible cure of the disease by the acceptable methods known at the present.

Any drug which is claimed to cure cancer must fulfill certain objective criteria. Krebiozen has not met these standards. No acceptable evidence that treatment with Krebiozen causes any objective benefit in human cancer has yet been offered by independent researchers.

CONCLUSION

Advocates of Krebiozen have demanded through all publicity channels what they describe as a fair test of the drug. The National Cancer Institute of the U.S. Public Health Service is willing to conduct a test to further evaluate Krebiozen but insists that it be done in a manner acceptable to the scientific community.

The Krebiozen Research Foundation, Dr. Ivy, Dr. Durovic, and their associates have long claimed they have a tool useful against cancer: it is, then, their clear duty to thousands of cancer patients to cooperate with the National Cancer Institute or any group of competent, objective scientists in an objective test of the drug. Delays now are clearly the responsibility of the Krebiozen Research Foundation.

When Krebiozen was first announced, it was tested in hospitals, clinics, and laboratories, according to scientifically accepted procedures. The results of the tests carried out by scientists and clinicians were reviewed in reports mentioned earlier. This avenue of testing still remains open to advocates of Krebiozen.

However, the agitation continues. This has an unsettling effect on cancer patients, their families, and friends, who question whether the extraordinary claims about Krebiozen are true. The answer can only be settled by a thoroughly objective study such as the one the National Cancer Institute has indicated it is willing to make.

The American Cancer Society hopes that the Krebiozen Research Foundation will recognize the integrity of the National Cancer Institute of the U.S. Public Health Service, respect its well-established methods and procedures, and that the foundation will drop its demands for its own rules and procedures.

## Surplus Foods

EXTENSION OF REMARKS
OF
## HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. BASS of Tennessee. Mr. Speaker, with people throughout the world dying of starvation, it has long been my feeling that we in America should share with them any food commodities that we might have in surplus after taking care of our own aged and needy. I have discussed my feelings in this regard with Mr. Lois Laycook, an outstanding columnist with the Nashville Tennessean, and I think the article he wrote as a result is worthy of the attention of my colleagues in the House. Under leave to extend my remarks, I would, therefore, like to insert Mr. Laycook's column in the CONGRESSIONAL RECORD.

After Mr. Laycook's column was published in the Tennessean, I received a letter from Mr. William A. Harwell, of Lawrenceburg, Tenn., advising me of his opinion of my suggestion. Mr. Harwell, who is district attorney general, is an outstanding citizen and is highly respected by his community. I feel that his comments merit the attention of the membership of the House; and, therefore, I would like to include his letter in the RECORD also.

Mr. Laycook's column and Mr. Harwell's letter follow herewith:

STATE OF TENNESSEE,
*Lawrenceburg, Tenn, March 4, 1959.*

The Honorable Ross Bass,
*House Office Building,*
*Washington, D. C.*

DEAR ROSS: I saw an article in the Nashville Tennessean by Lois Laycock which mentioned the fact that you have made a suggestion that the United States should feed the hungry multitudes of the world out of the present farm surplus commodity.

I want to congratulate you on the idea with which I am in complete harmony. It is my opinion that a bold stroke in foreign affairs is now necessary to not only return the United States to its proper place of leadership, but that present day thinking on matters involving other people of the world

is wholly inadequate to meet the unusual challenge of our day. The time for dollar diplomacy has long since passed away.

In the Bible we are told, you being a minister's son ought to be familiar with it if you are not, that one's neighbor is not necessarily the person who lives next door. Christ when explaining who a person's neighbor was gave the parable of the Good Samaritan. The fact of the matter is that people are no longer interested in who is the greatest nation or who has the most unique gadgets and labor saving devices, but the burning question of all mankind is, "How can we bring our moral and spiritual life up equal to and beyond our scientific achievements?"

On a national scale this can only be done by a complete about-face on foreign affairs. This country should, without any strings attached, feed and clothe the underprivileged, the hungry, and naked of the world insofar as our substance will permit. We have been chained to a fiendish idea of conformity which has led us now to the greatest brink of disaster this country has ever faced. You should not be discouraged in this idea, as it will no doubt have serious opposition by practical minded people, but I hope that you will pursue it as I believe it offers one of the best opportunities to carry into fulfillment the best relationships that have ever been devised by man and taught by the matchless Son of God Himself when He said that if your enemy hungers feed him, if he thirsts give him water, and if he is naked clothe him.

A nation with that kind of an attitude carried into active belief will have the best guidance for its foreign policy because it emanates from the source of all wisdom and all understanding.

Yours very truly,

WILLIAM A. HARWELL.

---

[From the Nashville Tennessean, Mar. 1, 1959]

FEED WORLD'S STARVING—BASS FEELS U.S. BULGING FOOD SURPLUS WOULD STEM COMMUNISM SPREAD

(By Lois Laycook)

WASHINGTON.—Representative ROSS BASS is pressing for an all-out program to feed the world's starving millions out of the $8 billion worth of surplus food stored in bulging Government warehouses.

BASS said he believes such a program offers the sole solution to halting the spread of communism in poverty-stricken countries of the Far and Middle East. Of secondary importance, BASS said he also is convinced a program of this type is the only answer to the ever-growing surplus food problem.

"I think our vast supply of food products in this country is the most potent weapon we have to combat communism and prevent its expansion into the free world," he declared. "After all, poverty is the breeding ground of communism. Our so-called surplus commodities, instead of being a curse on the Government ledger, could be used as a real blessing in the promotion of democracy throughout the world.

"With hunger almost rampant in many countries of the world, particularly in the East and in countries behind the Iron Curtain, our surplus commodities together with our potential production of food commodities properly exploited, could mean more toward promoting democracy than all the other foreign aid efforts combined."

RIGHT DIRECTION

BASS said that Public Law 480, passed in 1954, was a step in the right direction toward helping famine-ravaged countries. Under this law, the President is authorized to furnish a limited amount of emergency assistance to friendly nations or to persons friendly to the United States living in Communist-dominated countries. Food for this program is taken out of surplus stocks.

BASS, however, maintains Public Law 480 is too limited in scope. Furthermore, he said, Secretary of Agriculture Ezra Taft Benson is not taking full advantage of his authority in administering the program under provisions of the law.

"Mr. Benson's excuse is he doesn't want to disrupt the normal channels of trade by flooding the market with surplus food," BASS said. "My answer to that is that when people are hungry and do not have the money with which to purchase food, there is no normal channel of trade as far as they are concerned."

STEP UP PROGRAM

BASS said he feels the House Agriculture Committee, of which he is a member, will be ready to step up the program when the present law expires this year. Meanwhile, our surplus food stocks continue to grow to preposterous proportions.

When Benson took office in 1953 there was approximately $1.2 billion worth of surplus food and fibers stored in Government warehouses. That amount has grown to $80 billion in 1959 despite small dents made in the stockpiles by Public Law 480 and the school lunch program.

For example, Government storage bins now contain 777 million bushels of wheat, 1,168 million bushels of corn, 7,106,000 hundredweight of rice, and 56 million pounds of butter.

GORE TO SPEAK

Senator ALBERT GORE has accepted a number of speaking engagements in March.

They include a speech before the Maryland Jefferson-Jackson Day dinner in Baltimore, March 7, and another before the Wisconsin Electric Co-op Association in Madison, March 11.

He will speak at the annual convention of the Tennessee Road Builders Association in Nashville, March 26, and before the New Century Club at Richland Country Club, March 27.

Representative JOE L. EVINS is slated to address the Washington chapter of the Phi Delta Phi legal fraternity, March 6.

Neil Bass, Knoxville, consulting engineer for the World Bank, will represent the bank at conferences at the United Nations in New York. Bass' wife is the former Miss Betty Neal of Nashville.

Thomas B. Kanaday of Nashville, has been appointed a Senate page by Senator GORE.

---

## Program for Relief in Areas of Unemployment

EXTENSION OF REMARKS

OF

## HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mrs. KEE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include copy of my newsletter which was released today:

KEENOTES

(By Representative ELIZABETH KEE)

Last week I joined 51 of my colleagues from both parties and from all sections of the country in proposing a three-part program which would bring both immediate and long-range relief to those areas which are suffering from persistent and heavy unemployment. The action of the 52 Members dramatizes the gravity of the economic situation facing many areas and the need for immediate action by the Federal Government.

Here is what the 52 Members of Congress proposed:

1. Immediate expansion of the surplus food distribution program, upon which thousands of families throughout the country depend in whole or in part for subsistence.

2. Immediate appropriation of funds by Congress for flood control, reclamation, rivers and harbors development, and other public works in depressed economic areas.

3. Immediate passage by Congress of area development legislation to provide a long-range relief measure which will assist local communities in helping themselves.

Many Members of Congress, especially those from areas which have not suffered severely from the recent economic downturn, do not fully realize just how widespread and intense this economic distress is. Also, the administration has failed to face up to this problem. Perhaps these figures will change their minds—21 percent of the total population in 210 counties in 24 States are now receiving surplus agricultural commodities; 269 different locations, suffering from 6 percent unemployment, are classified as distressed areas; 73 areas, with 15 percent or more unemployment, are acutely distressed.

In the Fifth District of West Virginia, six of the seven counties have 15 percent or more of the total population receiving surplus foods from the Government. In one county, the percentage is 41 percent of the total population.

The 52 House Members who are working together on this problem believe the surplus food program should be expanded to bring immediate relief, that additional foods should be acquired by USDA to bolster the subsistence diet of these people and that greater quantities should be distributed to each family.

Immediate construction of flood control and other public works projects is needed in these distressed areas to provide immediate jobs for men who are unable to find employment. This part of the program would only apply to projects which have already been authorized by Congress but for which no money has been appropriated.

These projects are economically feasible. They are needed. If Congress would make the money available, work could start in about 3 months, thus creating thousands of desperately needed jobs. It is my understanding that foreign aid funds, voted by Congress, are supporting about 100 public works projects abroad but the President does not advocate one new start in this country.

The most important part of the program, in the opinion of many of the 52 Members, is that dealing with area redevelopment. There was unanimous agreement that permanent solutions must be found to rebuild the depressed areas economically. We hope that action by the 52 Members will clearly show the rest of Congress just how urgent this problem is.

The House Banking and Currency Committee plans to open hearings later this month on this legislation. A Senate subcommittee has already started hearing witnesses.

The action of the 52 House Members should serve to indicate the strong support for such legislation in both parties. Perhaps it will speed up final consideration.

The three-point program is urgently needed: (1) More and better surplus foods for the 1,298,201 people forced to subsist on this handout from the Government because of the lack of job opportunities; (2) an immediate public works program to build needed projects and create urgently needed jobs; and (3) area development legislation to rebuild these areas and provide new and permanent employment.

I was happy to join 51 of my colleagues in setting forth this program and in working for its enactment.

## Mary Jo Peterson of Elkhart, Ind., Speaks for Democracy

EXTENSION OF REMARKS
OF
### HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. BRADEMAS. Mr. Speaker, I am proud to draw to the attention of Congress an essay entitled "I Speak for Democracy," written by Miss Mary Jo Peterson, a senior at Elkhart High School in Elkhart, Ind., in the district I represent.

Miss Peterson was a few days ago awarded a $500 prize by the Indiana Broadcasters Association as the winner over 200 other contestants in the State of Indiana of the national Voice of Democracy essay contest, sponsored by the National Broadcasters Association.

Miss Peterson, the daughter of Mr. and Mrs. Floyd Peterson of Elkhart, will use her prize money to begin her studies next fall in the Ball Memorial School of Nursing at Muncie, Ind.

It is customary these days to criticize teenagers as irresponsible and concerned only with having a good time. I think that Mary Jo Peterson's splendid essay and the career she has chosen for herself symbolize the thoughtful, conscientious way in which the great majority of the young people of our country are preparing themselves to be useful, worthwhile citizens.

Miss Peterson's essay follows:

I SPEAK FOR DEMOCRACY

(By Mary Jo Peterson)

I speak for democracy. But, I can't speak for you, the doctor, the mother, the factory worker, or the teacher. I can speak only through the few experiences I have encountered as an American teenager.

Many people have tried to define democracy; Webster says, "Democracy is the belief in or practice of social equality and a disregard for social barriers, such as race or class." also "A government by the people."

In Lincoln's Gettysburg Address he stated that democracy is "A government of the people, by the people, for the people."

Can democracy be defined in a few words? No, I feel that the effects of democracy are far too great, reaching out in all directions, like the roots of a tree, too far extended and deeply rooted to be defined in a sentence or two.

I would like to tell you how democracy has played a vital part in my life—how I have seen democracy at work.

One of the first times I recall coming in contact with democracy was when, as a child, my mother took me to the polls on election day. Here, I saw her and many others exercising their right to vote, to vote for the leaders whom they felt represented the principles they believed in.

As I grew older, I became even more aware of the beauty and equality I experience every day living in a country where democracy is the teacher.

Upon entering junior high school, I became an active part of a student government, our student council. Through the council, each student has a voice through representation in making his school the best possible. Not long ago, we experienced a new type of government. We, the high school pupils, elected a student mayor, judge, and clerk. These three recently represented our high school by spending a day with our city mayor, judge, and clerk. We elected a Negro boy as our judge. I stopped to think once again how this would never have been passible before the 14th and 15th amendments.

Recently, I visited a Jewish synagogue and a Catholic church. Being a Protestant, I noticed many differences in our beliefs; but how unimportant this was when I thought of the precious freedom of choosing when, how often, and how I will worship God.

Another valued possession is our right to an equal education for all. What would it be like to live in a country where only the wealthy, or the top 5 percent of a class could go beyond the eighth grade? I'm thankful to be a part of a school where all who are willing to learn may receive an equal education with opportunities unlimited.

Each Friday in our government class, we discuss current problems facing our country. Here, again, we as youth are taking part in one of our greatest privileges—our freedom of speech. We, as Americans, can speak freely for or against our Government and its leaders.

God must have been a loving Father to give me this country to live in—a country with freedoms and advantages impossible to measure—a country which my forefathers sought to find in answer to their many dreams.

As I see these privileges I have as an American youth, I am only too glad to try to meet my responsibilities—my responsibilites to God, to my community, and to my country.

This year, for the first time, I realized these responsibilities which came to me as I learned to know our foreign students. I hope along with the understandings we have both gained, that these visitors may have seen in my life a spark—a spark that helps make up the flame that burns in the American youth—the flame burning with democracy.

Yes, I'm glad that I'm an American. Because opportunities, though not alway equal, are more widely open than in any other country * * * because the first thought of an American is trust, instead of distrust * * * because the millionaire, the workingman, the Negro and white—all work together sharing their truths and ideals on equal terms.

For these reasons, I speak for democracy.

## Start Trimming the Debt

EXTENSION OF REMARKS
OF
### HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. WRIGHT. Mr. Speaker, as evidence of the continuing and growing editorial interest in the necessity for a systematic program of national debt reduction and eventual retirement, I am taking the liberty of including here for the reading of those Members who are interested a further editorial published by the Nashville Banner some days ago:

START TRIMMING THE DEBT

[From the Nashville Banner, March 1959]

Representative JAMES C. WRIGHT, JR., Democrat, of Texas, and Senator LEVERETT SALTONSTALL, Republican, of Massachusetts, are one in the belief that a start should be made on reducing the national debt.

The Texan's plan, already offered in the House, would make it mandatory that each annual budget—starting in 1961—appropriate for debt reduction in an amount equal to 1 percent of the debt then outstanding.

What is wrong with that? What, after all, is a budget for, if not to precisely calculate necessary costs within estimated income, and provide a margin for paying off accumulated encumbrances as they fall due?

In individual financial cases the honest and responsible householder makes such provisions. He doesn't spend wildly on current desires to and beyond the limits of income, and ignore such pressing obligations as already exist. If he budgets, he makes allowance for those past due, rather than just borrowing more and more to go deeper and deeper into debt.

The Wright and Saltonstall proposals are not quaint and outgrown ideas of national rectitude. They incorporate an elementary principle which is ignored to any nation's peril.

Even at 1 percent a year it would take 100 years to pay off the debt. It shouldn't even have to be pointed out that the added cost soon would be offset by a reduction in the amount required annually for interest payments—which is $8,100 million in the present budget.

That interest cost alone is more than the entire cost of operating the Federal Government before the New Deal took over with its pledge of reducing that total outlay.

It is time, 26 years in the wake of that, to start trimming the debt.

## Out of Debt in a Century

EXTENSION OF REMARKS
OF
### HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. WRIGHT. Mr. Speaker, as evidence of the continuing and growing editorial interest in the necessity for a systematic program of national debt reduction and eventual retirement, I am taking the liberty of including here for the reading of those Members who are interested an Associated Press commentary by the well known news analyst, James Marlow.

OUT OF DEBT IN A CENTURY?

WASHINGTON.—Many a man has looked at the national debt—big as a mountain in dollar bills—and asked himself: "How can we cut it down to pebble size?"

The latest to look and be appalled is Representative JAMES C. WRIGHT, JR., 36, a Texas Democrat. He has an idea which might take 100 years to work out. But he thinks it's better than just sitting and looking.

Although WRIGHT stuck a needle in the national conscience, and one House Member after another arose to applaud him, nothing is likely to come of the idea except that it may be enshrined in a place set aside for noble thoughts.

The national debt now is $285 billion. This year the Government will have to pay $8,100 million in interest on it, without knocking off a dime on the principal.

* * * * *

WRIGHT, like others hates to think of that going on indefinitely. He told the House that with interest rates going up, the Government soon will probably be paying $8,800 million a year in interest, if we just assume

the total debt remains unchanged and does not get even higher than it is now.

So WRIGHT said: "This means that if things go along exactly as they have been going, without any more increases in the national debt and without still another jump in the interest rates, in 29 years we shall have paid the total amount of the debt and still owe every penny of it."

WRIGHT suggests Congress tell the Treasury Department to set aside each year 1 percent of the present national debt of 285 billion—or $2,850 million a year—to pay off the principal.

This, WRIGHT figures, would be cutting down not only on the size of the debt each year but on the interest, too.

Using a $283 billion debt figure which is now the permanent debt ceiling—the temporary ceiling until July 1 is higher than that—WRIGHT told the House: "In 100 years we could completely retire the debt by paying $495 billion in interest and $283 billion in principal, or a total of $778 billion.

"But if we pay nothing on the debt itself, the interest alone for 100 years will be $980 billion, and we will still owe the debt of $283 billion, or a total of $1.263 trillion."

The only trouble with the idea—if it was going to work on schedule—is that for 100 years the Government would have to balance its budget and not go further into debt.

But it hasn't been doing that. The budget, or cost of running the Government, has been going up. While this year President Eisenhower is making a try at budget balancing, the chances are he won't make it.

His budget this year calls for spending $77 billion and he estimated the Government would take in through taxes and other revenues $77,100 million or $100 million more coming in than going out. But even those estimates included higher postal rates and gasoline taxes, and some other changes Congress isn't likely to make.

For WRIGHT's idea to work—that is, for the Government to spend every year around $2,850 million on paying off on the debt—the Government would have to be taking in more than it spent.

How could it do that? In only one of two ways: either by reducing spending or getting more income or revenue, which would mean raising taxes. But Government spending seems pretty sure to be going up, not down. And new taxes aren't popular.

## Senator Wayne Morse Honored by University of Minnesota for Outstanding Achievement

EXTENSION OF REMARKS
OF
### HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. PORTER. Mr. Speaker, Oregon's distinguished senior Senator has received high honor from his alma mater, the University of Minnesota. He has been given an "outstanding achievement" award from the regents of his university "as a token of high esteem and in recognition of noted professional attainment." In part the award also notes he is a "keen student of jurisprudence."

Under leave to extend my remarks in the RECORD, I am privileged to include in the Appendix of the RECORD a news story concerning this honor which appeared in the March 2, 1959, edition of the Albany, Oregon, Democrat-Herald. The text of the award given my friend and colleague in the other body is part of the news story:

UNIVERSITY GIVES AWARD TO MORSE

WASHINGTON.—Senator WAYNE MORSE, Democrat, of Oregon, has received an "outstanding achievement award from the University of Minnesota in connection with the school's Charter Day observance. MORSE is a graduate of the university.

The text of the award read: "The regents of the University of Minnesota as a token of high esteem and in recognition of noted professional attainment by WAYNE MORSE, distinguished graduate of the university, U.S. Senator from Oregon, keen student of jurisprudence especially as a legal educator, effective in labor relations, particularly adept as an arbitrator, always stimulating others to reappraise their positions, deem him to be worthy of special commendation of outstanding achievement."

## Special Bill for a Special Group

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting in the Appendix of the RECORD an article appearing in the Washington Daily News, Friday, March 6, 1959, titled "Special Bill for a Special Group," which gives some facts on H.R. 9 and H.R. 10. These facts should be considered before the bill is enacted into law:

SPECIAL BILL FOR A SPECIAL GROUP

There may be merit in the general principle of permitting Federal income tax deferments on money laid aside for pension funds.

The bill just approved by the House Ways and Means Committee proposes to grant this tax deferment to self-employed taxpayers who lay aside up to $2,500 a year for their old-age retirement.

The bill is intended, the committee says, to provide greater equality of tax treatment to such people. It mainly would affect doctors, lawyers, dentists, and some businessmen.

The Treasury is opposed to the bill on two grounds:

That it would deprive the Government of some $365 million a year in revenue, thereby creating another deficit in present circumstances.

That is doesn't provide the same treatment for other taxpayers who now are not covered by pension or retirement plans—estimated at some 30 million. If the measure were broadened to include everybody, it would cost the Treasury $3 billion a year.

It is true that many whose employers finance pension plans and deduct the expense from their income tax returns, are permitted to defer taxpayments until they begin drawing on these funds. But if this privilege is to be equalized, what's wrong with the 30 million who get no benefits from this bill? They vote, too.

Besides, the Government simply cannot afford such concessions just now. Congress could do everybody a greater favor by restraining its spending craze—so that the value of the dollars saved today won't be depreciated when the time comes to live off them.

## The Liberals' Dilemma

EXTENSION OF REMARKS
OF
### HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. DEROUNIAN. Mr. Speaker, after reading this opportune article by William S. White, those Members of Congress who support greater spending and lower taxes might take a good look in their mirrors:

LIBERALS' TAXATION PROBLEM—ROCKEFELLER AND NEUBERGER SEEN TRYING TO END IRRESPONSIBILITY ON ISSUE

(By William S. White)

Political liberalism in both parties is long on good ideas for spending public money for the public good, and sometimes for the public safety as well. But political liberalism generally is short, indeed, on willingness to face up to a plain if unhappy fact: When money goes out money also has got to come in, unless Government is to become a kind of spending-happy, grinning farce.

This built-in tendency toward irresponsibility is the greatest single long-term weakness of the liberals, whether Democratic or Republican liberals. And it is, to reasonably detached people, the best single argument for preserving conservatism as a counterforce.

Liberalism, in a word, often comes close to the classic definition of the demagog. This fellow, being bravely consistent, always votes for all appropriations and against all taxes—except, of course, those on corporations and the rich.

This small lecture having been duly entered into the record, it is possible to report that two young liberal politicians are now trying to do something about it all. And while they no doubt will fail in their ultimate objectives, they are making genuine contributions to reason in the current budget debate.

A liberal Republican, Gov. Nelson Rockefeller of New York, is trying to persuade the New York Legislature to put on large new State taxes to pay for the new welfare programs he is proposing. He is having very hard going. But, at any rate, he is serving candor, and something else as well. He is giving valuable warning to fellow liberals that more and more voters who are not necessarily reactionaries are tiring of the liberal notion of trying to do much for most everybody without asking anybody much to pay anything much back.

A Democratic liberal in Washington, Senator RICHARD NEUBERGER, of Oregon, is having his own try for similar motives. He has asked Congress to raise taxes by about $3 billion before it approves more housing, more unemployment benefits, and other inherently desirable things.

Senator NEUBERGER wants to soak everybody at least a little bit. He would raise Federal gasoline taxes and he would allow the Post Office Department to lift postal rates to sensible levels. And he wants to hit some of "the interests." He proposes excess-profits levies on the arms makers and reductions in the tax writeoffs long guaranteed the oil industry because of the highly chancy nature of its operations.

Congress is perhaps even less likely to do all this than the New York Legislature is likely to let Governor Rockefeller slap on new taxes to the degree he wishes. But Senator NEUBERGER, a liberal of the liberals, is determined at all events to force his own fellow liberals into some self-examination. If he is able to do only this much he will be content.

His view, and it seems perfectly sound, here as in Albany, is that the voters have pretty well come to know a hack from a handsaw; or that anything that is any good will cost somebody something. He even suspects that the people know that consistently supporting in Congress the most madly liberal programs, and simultaneously crying out for lower taxes on the little man is not really liberal.

The word for that kind of policy is not liberal; the word is spelled p-h-o-n-y.

Senator NEUBERGER himself has painful memories of the real spelling of the word. Last year in the Senate he had the duty to guide a bill to raise postmen's pay. At this point his fellow liberals regarded him as a very sound man. But then he came along with the obviously necessary second part of the thing, a bill to increase postal rates to pay the freight. A great chill fell upon some of his fellow liberals.

"They acted then," he says wryly, "as though I had come out for a bill to nationalize women and children."

## Need for Housing Law

EXTENSION OF REMARKS
OF
### HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 4, 1959*

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks, I should like to include in the RECORD a thought-provoking statement presented to the Colorado State Legislature recently by the Colorado Advisory Committee to the U.S. Civil Rights Commission. The statement was prompted by bills on housing and migratory workers pending in the State legislature. Mr. Speaker, the Colorado Advisory Committee on Civil Rights, and its chairman, Mr. Arthur Ballantine, are to be commended for the solid work they have done in this field. The statement follows:

NEED FOR HOUSING LAW

Hearings before this advisory committee indicate that discrimination in housing is Colorado's biggest unsolved civil rights problem.

Members of minority groups are unable to obtain the kind of decent housing they can afford to buy or rent. They are forced to live in crowded conditions in substandard housing and are often victimized as to prices, sometimes even by members of their own groups.

This situation is wrong. The aim of all Americans and particularly Coloradans should be to work steadily toward the ending of prejudices and discriminatory practices based on race, color, or religion. Human beings should and must be accepted for what they are and what they have accomplished.

A number of groups have lagged behind other groups especially in respect to education. The commission believes this has been due principally to unfortunate economic conditions—not to inherent defects of human material.

Happily, the evidence is abundant that all groups in a State like Colorado which has made solid progress in human relations are producing citizens with high personal standards, intelligence, and often capacity for leadership.

No Coloradan should be content to know such fellow citizens are facing grave housing problems and do nothing about the situation. Just as these citizens are now able to vote and gain admittance to all of our institutions of learning, they should and must be able to get jobs for which they are qualified and decent housing they can afford.

The housing problem cannot be solved within housing areas now generally assigned to minority groups. Such areas are mostly substandard and already overcrowded. Moreover, segregation in housing as in schools is against the Nation's principles.

The only satisfactory way to meet the problem is to end discrimination in housing on a statewide basis—to make available homes in every well-built area to all decent, self-respecting families who can afford them regardless of race, color or religion.

Much is made of the argument that such a policy will endanger property values. The committee has not only read extensively on this subject, but has heard many witnesses, including builders, which negates such arguments.

Such fears appear unfounded. Where property values go down upon entry of minority groups, it is usually because the area is already becoming run down. Where construction is new and in good condition, several important studies show prices as likely to go up as down.

This Colorado Advisory Committee is charged with reporting to the Federal Civil Rights Commission in Washington on the status of civil rights in Colorado, and with making recommendations for their immediate improvement. The Federal Commission will use the Colorado committee's report we make in March to help it formulate recommendations to the President and to Congress later this summer.

Among our findings will be one that civil rights are definitely a State as well as Federal problem, that the Federal Civil Rights Commission should strongly urge the States to take action on matters which fall within their province, such as housing, employment, etc.

The Colorado Legislature is now considering house bill 259 directed specifically at ending discrimination in publicly assisted and privately financed housing. Since this is the kind of law we believe many States should adopt, we are issuing this preliminary report for the specific purpose of endorsing this proposed legislation.

The main emphasis of this bill is on negotiation and mediation, trying to settle problems before they reach public attention or the courts. This is an effective way of dealing with discrimination problems. Colorado already knows this from the experience of using the same technique in employment cases. Many lose their fears upon learning the actual facts and upon finding that others have done successfully what they have been asked to do in dealing with discrimination.

Housing is perhaps the most touchy civil rights problem Colorado has. Many who have not had the privilege of learning as much about the subject as this advisory committee has these last 3 months are fearful of all anti-discrimination acts. In such situations private mediation is especially valuable. The State antidiscrimination commission and its coordinator would have good opportunity through wise administration to provide education and solid progress without the unhappy incidents that have marked civil rights matters in some other States.

House bill 259 also contains enforcement provisions and the committee would like to emphasize its firm belief that enforcement provisions are an essential part of any effective antidiscrimination act. Their existence gives private negotiations a better chance to be successful. They also give the antidiscrimination commission and its coordinator an effective weapon to use when progress can be made in no other way. The enforcement provisions provide that the commission can issue "cease-and-desist" orders enforceable by the district courts, penalties for noncompliance are those of contempt of court.

Other excellent features of the bill are that it is specifically directed against discrimination in both publicly assisted and privately financed housing and against discriminatory practices of realty firms and financing institutions.

It is our belief that if this session of the Colorado Legislature adopts such a housing bill as proposed, Colorado will be tackling effectively the biggest problem facing the State in connection with civil rights.

In the area of migratory workers, the committee would like to call attention to and note with favor another piece of legislation already adopted by the general assembly and pending in the senate. This is house bill 103 requiring field labor contractors and crew leaders to keep payroll records and give wage statements to migratory workers.

In the State of Colorado the migratory worker has been another of our special fields of study. We are especially concerned by problems affecting American citizens who come into Colorado from another State, since Mexican nationals are governed by an agreement between the American and Mexican Governments.

Some excellent work has been done in this field by the migrant ministry and the Catholic women as well as by several companies operating within the State.

However, it is clear that numerous abuses exist in this field, particularly regarding wages, housing, transportation and other facilities for the migrant workers.

The present bill requires detailed wage records to be kept. This should prove to be a protection against unscrupulous individuals who have been taking advantage of the migratory workers.

While the commission regrets that no penalties are written directly into the bill now before the legislature, the very passage of the bill may prove helpful.

(Signed: Arthur Ballantine, Jr., chairman; Wendell A. Peters, vice chairman; Max E. V. Torres, Mrs. L. Arthur Higgins, and Rabbi Manuel Laderman.)

## We're Not Broke—But

EXTENSION OF REMARKS
OF
### HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. RAY. Mr. Speaker, elsewhere in today's RECORD I am inserting an address recently delivered by Mr. George Champion, president of the Chase Manhattan Bank of New York. I am glad to present here a thoughtful editorial on that address which appeared in today's issue of the New York Daily News:

WE'RE NOT BROKE—BUT

We—the United States, that is—are the world's richest nation. But will this fine situation continue automatically and forever? Will the citizens of the world always crave and respect our products and our dollar?

We'd better, on the word of a real expert, not be too smug about any of that prosperity and prestige. Says George Champion, president of the renowned Chase Manhattan Bank, a number of factors already are putting our country on the economic sliding board.

WE'RE STILL INFLATING

(1) Our exports are falling off. People abroad can't afford to buy our wheat, cotton,

steel, autos, and other products into which we've packed the cost of Government subsidies and high-cost labor's low productivity or outright featherbedding. (2) Our gold is disappearing, largely because foreigners fear the inflation built into our governmental deficits. (3) Instead of using self-discipline and trying to check our something-for-nothing habits, too many of us (housing, shipping, and aviation industries, as well as our 20 percent subsidized farmers) continue to demand handouts from the Government—meaning our own neighbors.

It's a startling picture—a nation with our traditions, educational level, research instinct, and industrial know-how allowing itself to skid into what may be financial catastrophe. If you'd like the full eye-opening details, Chase Manhattan Bank may have a few extra copies of its president's remarks, "The Challenge to the Dollar."

## A Mickey From the Bar

EXTENSION OF REMARKS
OF
### HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 3, 1959*

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the Washington Post of February 26, 1959.

It is the privilege, in fact the duty, of members of the bar to criticize court opinions which they believe to be wrong.

But the criticism should not be made unless it can be constructive. Urging that a court decision is wrong, without suggesting a proper remedy, tears down the respect for our courts and tends to undermine our constitutional form of government.

When dealing with constitutional questions we must bear in mind that the problem is a twofold one: Sometimes a court will strike down a law as unconstitutional because it does not conform to the requirements of our Constitution, that is, the language of the statute is inappropriate or indefinite. In such instances those who dissent from the decision should recommend legislation which will comply.

There are other instances where a court declares a law unconstitutional because the subject matter violates the basic rights guaranteed by the Constitution. In those cases, the remedy of the dissidents is to urge amendment of the Constitution.

To those in a hurry, both of these procedures are slow and cumbersome. The answer, however, is that such is the democratic process in a republican form of government such as ours. May it be ever so.

The editorial is as follows:

A MICKEY FROM THE BAR

It is astonishing that the house of delegates of the American Bar Association—the body which is supposed to be the watchdog of law and justice—would adopt a set of recommendations flatly hostile to the intent of the Supreme Court. The resolutions voted at Chicago disavowed any direct effort to limit jurisdiction of the Court and were candied up to remove outright criticism, but they still call upon Congress in effect to set aside decisions of the Court in important areas of civil liberties. It is difficult to avoid the impression that members of the house of delegates followed the narrow report of their special committee like sheep without serious consideration of the momentous issues involved.

Not all of the recommendations are bad, to be sure. No doubt it would be useful for Congress to clarify the purposes and powers of its committees, and the bar group makes this recommendation specifically in respect of the House Un-American Activities Committee. But the tenor of the whole move is shown by the praise of the Un-American Activities Committee and the Senate Internal Security Subcommittee without even a hint that these committees might have exceeded their authority, engaged in persecution, or indeed ever done a single damaging or foolish thing.

In particular the delegates want Congress to amend the Smith Act to make it a crime to advocate overthrow of the Government by force irrespective of whether any damage results, thereby raising a serious question of encroachment upon the first amendment. The delegates want the States to be able to take action in cases of sedition against the Federal Government, thereby reversing the Supreme Court ruling in the Nelson case and inviting confusion of authority. They want to extend the Federal security program to nonsensitive jobs without any showing of need, and they want to require that a Federal employee forfeit any rights he might have under the fifth amendment with respect to testimony about past associations as a condition of employment.

The real problems of subversion need not be ignored in order to understand that this is not a big danger to the United States today. Indeed, if some of the persons who are so concerned about an internal menace would be more concerned with the need for a more adequate defense budget, the country would be safer. As one lawyer has put it, the house of delegates seems to want to do things in the internal security field which the Supreme Court has said or implied are unconstitutional. This is a position unbecoming the American Bar Association, and the more surprising because of the constructive top leadership given the association in recent years by such men as Ross L. Malone and Charles S. Rhyne. It would be frightening to think that the emanations from Chicago represented the sober judgment of the country's lawyers.

## Second Anniversary of Ghana Independence

EXTENSION OF REMARKS
OF
### HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 2, 1959*

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following message which I recorded for the Voice of America extending congratulations to the people of Ghana on the second anniversary of their independence:

My warmest congratulations to the people of Ghana on this, the second anniversary of your independence.

What a day it was in 1957. Indescribable heat that everyone ignored. Amazingly well-managed crowds—deeply interesting ceremonies culminating in that final midnight moment when the Prime Minister spoke from the little stand in the Polo Field and said: At long last we are free.

All this is in my mind today.

To Dr. Kwame Nkrumah, I extend my good wishes and friendly congratulations.

How proud all of you must be of the advances that have been made in your educational services in all fields of education. Such evidences of your recognition of the fundamental part education plays in all areas of freedom give confidence to all.

Last summer we here in the U.S. Congress of which I am a long-time Member welcomed your Prime Minister with sincere pleasure. He spoke to us of your country's need for American investment. He told us of your efforts to eradicate poverty, disease, and illiteracy, and to achieve the sustained economic development which will permit a reasonable standard of living.

We have been happy that a survey team has gone to you in preparation for a useful mission of technical cooperation. We are ready to serve with you in the program you are developing.

This is but a word on this, the second anniversary of your freedom to congratulate you and to do with you all good things.

Heaven blessing you, Mr. Prime Minister, and every man, woman, and child in Ghana.

## I Am Democracy

EXTENSION OF REMARKS
OF
### HON. FRANK IKARD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. IKARD. Mr. Speaker, I am sure that all of us are familiar with the Voice of Democracy broadcast scriptwriting contest for high school students, sponsored by the National Association of Broadcasters. The young lady who won in the 1958–59 contest for the State of Texas was Miss Patricia Frances, of Wichita Falls. She submitted an excellent paper, entitled "I Am Democracy," which I wish to include in the RECORD. The winning paper submitted by Miss Frances is timely and thought-provoking and reflects much credit on the author:

I AM DEMOCRACY
(By Patricia Frances)

I walked down the lonely streets of Paris on July 12, 1789. I walked down the silent streets of Lexington on April 19, 1775. And I walked tearfully down the bloody streets of Budapest in October of 1956. I am Democracy.

How can I survive in the face of tyranny? I live in the hearts and minds of the people, for it is the natural desire of all to be free. I am the hope that makes life livable in times of oppression. I am the spirit that inspires men to fight and even die to obtain that goal. Men are conquerable, but I am unconquerable. History has proved that I have never been killed even in the most enslaved countries. I have even gone underground to give comfort to those who would keep me alive. Thus I grow stronger as brave men gather. And from such gatherings, the torches of liberty are lighted.

Who represents me? I am represented by a government that is of, by, and for the people. Even while communism flourishes, I am the hope of the just. Where I am present, people have freedom of speech and free-

dom of press. Where I am present, people have freedom of religion. Where I am in practice, a man is allowed to vote. Where I am in practice, a man is innocent until he is proved guilty.

What have I seen in my travels? I have seen empires rise and fall and I have seen dictators come and go. I have seen the great masses of people fighting for me and for what I represent.

I helped capture the Bastille. I helped dig the trenches at Valley Forge. And I helped raise the flag on Iwo Jima.

It was for me that those brave men left their bloody footprints in the snow of Valley Forge. It was for me that those brave women left their handprints on the huge door of the Bastille. And it was for the freedom that I represent that brave men also left footprints in the muddy fields of Iwo Jima.

Those men left a mark—a mark in the path of time than can never be erased.

I have many symbols—a burning torch of freedom which illuminates the darkness of oppression, a sword in the hands of a nation in bondage, and a towering Statue of Liberty that cries for all the world to hear:

"Give me your tired, your poor, your huddled masses yearning to be free—the wretched refuse of your teeming shore—send these, the homeless, tempest-tossed to me. I lift my lamp beside the golden door."

How many years will I continue to endure? I will endure as long as men cherish freedom; I will endure as long as men will fight for freedom's sake; as long as man will lay down his life that others might live.

I have walked the streets for centuries and with God's grace I'll walk forever.

I am Democracy.

## The Great 86th Congress

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of Friday, March 6, 1959, listing the legislative efforts of the 86th Congress today. While that article by Mr. Peter Edson is not fairly representative of the record, we hope this Congress will make, it is nevertheless a warning to all of us that the legislative mill had better commence some vigorous action to establish a worthwhile and workable Democratic program:

THE GREAT 86TH CONGRESS
(By Peter Edson)

The great Democratic 86th Congress—with majorities of 30 in the Senate and 130 in the House, exercising last November's mandate from the voters, operating under peerless mastermind leadership—has now completed 2 months of labor.

It has piled up a tremendous CONGRESSIONAL RECORD: 2,760 pages of proceedings, 1,890 pages of appendixes, 1,207 Senate bills introduced, 5,095 House bills introduced, to say nothing of 707 resolutions.

After all these millions of words and mountainous labor, the 86th Congress has now brought forth one mouse. It is Public Law 1, 86th Congress.

It fixes representation of the majority and minority members on the Joint Economic Committee.

But if this great act of statesmanship is supposed to correct everything wrong with the country, it may still leave something to be desired. Something is lacking.

Let no carping, critical soul think this is a record in donothingism, however. This is par for the course.

It always takes a new session of Congress about 3 months to roll up its sleeves and start to begin to commence to get ready to work. Running true to form, it will be some time after the Easter recess at the end of March before things begin to happen around here.

Right after the election there was a lot of big talk about how the new Democratic majorities would be so busy promoting their reforms that there wouldn't ever be time for meaningless, divisive, intraparty fighting.

Majority Leader LYNDON JOHNSON spelled out a 12-point platform. It called for new vitality in the space program, new peaceful uses of atomic energy, bold and imaginative foreign policies, a consistent approach for the State Department's stepchild, Latin America, more aid for depressed areas, urban renewal, airport construction and water resources development, new farm, labor and housing legislation, with lower interest rates for all.

Just after Congress returned in January, Leader JOHNSON made a pep talk to the Democratic caucus in which he accused the Eisenhower administration of "moving hardly at all" and exalting the static.

This is the only caucus Senate Democrats have held this year. They held only one last year. This is what Senator WILLIAM PROXMIRE, Democrat, of Wisconsin, complains about openly, others q.t.

In all, the Senate has passed four bills and the House three. Everything else is in the talk stage.

This indicates how much work will have to be done in the last 4 months of the session if the Democratic majorities make good on their promises and exercise their mandate. And the consensus is that the man will have to do better than that if he wants to be President.

## Statements on Two Issues of Great Importance to This Session of Congress

EXTENSION OF REMARKS
OF
### HON. ROBERT E. JONES
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. JONES of Alabama. Mr. Speaker, on February 17, 1959, representatives of the Alabama League of Municipalities conferred here in Washington with the Alabama congressional delegation. These representatives presented excellent statements on issues of great importance to this session of Congress. At this time, I wish to bring to the attention of the House the following statements which were presented to our Alabama congressional delegation by Hon. E. J. Henninger, mayor of Tuscumbia, Ala., and Hon. R. B. Searcy, mayor of Huntsville, Ala.:

THE GREAT NEED FOR PASSAGE OF TVA SELF-FINANCING BILL
(By E. J. Henninger, mayor of Tuscumbia)

As you know, Congressman ROBERT E. JONES and other Members of the House and the Senate have reintroduced a bill to authorize the Tennessee Valley Authority to finance additional needed power installations by the sale of revenue bonds backed by TVA's earnings. Such bonds would not be obligations of the Federal Treasury and would not add to the national debt. This method of future financing for TVA has been recommended by the TVA Board and is approved by the users of TVA power who alone will pay for the bonds. It is hard to imagine a fairer proposition that could be made to a Nation by one of its regions.

Of course TVA is and remains a property of the United States. After 25 years, it efficiently operates the greatest integrated power system on earth with a capacity of over 10 million kilowatts. This great plant has been built by (1) Federal appropriations; and (2) TVA's own revenues. In the past 7 years, no appropriations have been made to TVA for construction of new generating capacity. TVA is spending out of revenues for new construction now at the rate of a quarter billion dollars every 3 years. Obviously no major utility—public or private—can indefinitely furnish this capital outlay out of current earnings.

DEMAND FOR POWER CONSTANTLY INCREASING

Meanwhile, the region's demand for power presses dangerously close on the TVA supply. The urgency of present finance proposals is marked by the real prospect of a power shortage in the Tennessee Valley by 1961. That event would bring to a rude halt the economic development of the region and could seriously impair the national defense, which year in and year out requires the use of more than half the power TVA produces.

The President four times has called for TVA self-financing. Legislation to that purpose was passed by the Senate in 1957—was reported favorably last year by the House Public Works Committee. This year, the budget presupposes enactment of such legislation. Surely it must be apparent to this session that TVA no longer should be subjected to its present catch-as-catch-can financing which drastically limits its ability to plan and build on schedule to meet its power obligations. We know you gentlemen are as alert to the increasing hazards of this situation as we are.

We in Alabama are counting heavily upon adequate TVA services in the total underpinning of our industrial progress and the advancement of our standard of living. This is an anticipation following naturally upon the lesson of experience. We share with the whole TVA region the impetus TVA has given toward full utilization of our natural resources. Indeed, its leadership and practical demonstrations in this field, in happy conjunction with the enterprise of our State agencies, has quickened our accomplishment and our hope in almost every plane of endeavor—industry, agriculture, commerce, health, and domestic well-being. The unfolding virtues that have made TVA an outstanding American showpiece to the world we have witnessed at firsthand.

TVA HAS LIVED UP TO ITS OBJECTIVES

TVA has lived up to the job it was set to do. Its probity and administrative excellence have placed a shining example before all our public services; its material benefits unquestionably reach to all parts of our State. The salutary effect of its yardstick power rates saves millions of dollars in the pockets of all our people, whether inside or outside of the TVA power service area. In the great northern valley of Alabama it has brought to realization the magnificent waterway the Tennessee River formerly had only in promise and has made possible—soon, we hope—the interconnection of the Tennessee with our other waters already developed for navigation down to the sea. It has shown how floods can be mastered and put to work for mankind, how the

forests and fields can be preserved and enriched and restored, how by intelligent and orderly improvement of the natural potentialities the wealth and strength of a State, a region, a nation can be increased.

Why then is TVA, an agency of our Government that is admirably carrying on the task it was assigned in the beginning, forced to stand up year after year and fight for the means of continuing its success? It pays its own way—it has earned and holds the confidence and esteem of the people of its valley who know it best, and of a great many besides in our own land and in lands around the globe. Yet—and this, of course, I hardly need tell you gentlemen—the powerful interests which all along have sought to halt, to cripple and to erase the TVA are aggressively arrayed against it now, seeking in these halls of Congress to block its path and pull it down.

These interests failed to kill TVA, in its early days, in the courts. They failed, in the notorious Dixon-Yates plot, to infiltrate and corrupt the TVA power service. Since then, they have carried on a war of attrition, campaigning on the one hand to poison the public mind, through national advertising at a cost of millions of dollars, against TVA and all public power—on the other to stifle TVA by shutting off appropriations for new construction.

U.S. CHAMBER FRONTS FOR TVA OPPOSITION

The U.S. Chamber of Commerce has permitted itself to become the chief front and mouthpiece of these interests. On the surface it seems strange that this organization, which previously has itself proposed that TVA be required to issue bonds for its financing, now should be loudest in opposing legislation to authorize this method.

It is not, in fact, strange. For years, despite the existence of Federal law directing TVA to return to the Federal Treasury out of its revenues all appropriated money used in building its power system (TVA is $43 million ahead of schedule for this) these interests have labored to persuade the American people that TVA is subsidized by their taxes. The charge has been their main bludgeon. Now, faced with the self-financing bills and the readiness of the TVA consumers to have their responsibility for TVA financing written specifically in law, they realize that the authorization for self-financing knocks the wind out of their claim of subsidy.

We must comprehend that the end aim of these people is to stifle TVA. They are equally opposed to appropriations and to self-financing. They demand that TVA be broken up and sold. BOB JONES and others of our Representatives repeatedly have advised us of the busy and well-financed lobby against TVA maintained here in Washington. It can be assumed, I believe, that this lobby had hopes of making good its designs against TVA during a period in which elements of the national administration sharing its aversion to TVA were in power.

WE NOW FACE THE BIG SHOWDOWN

This fight on the self-financing bill could be the big showdown. Unless TVA is given access promptly to adequate financing, its whole operation could be hobbled and discredited. At least 3 years are required to build a major generating unit—hydro or steam: TVA should already have begun construction of the new plant it must have to meet forseeable power demands by 1961.

The situation is critical now, and certainly those of us in our State and in neighboring States also served by TVA—conscious of our own large stake in a depepdable supply of electric power from this source—need to put forth our most determined effort to protect our future. Our Representatives are placed by compelling circumstances in the leadership of the fight to obtain bond financing for TVA at this session—without fail, and as early as possible. We urge their maximum effort and pledge our firm and attentive support.

---

STRONG LOCAL CIVIL DEFENSE PROGRAMS ARE IN THE NATIONAL INTEREST

(By R. B. Searcy, mayor of Huntsville)

Being aware of current international tensions and the availability of modern weapons to potential aggressors, the Alabama League of Municipalities emphasizes to its members and to you, the members of the Alabama congressional delegation, the continuing importance of adequate civil defense preparation and the necessity for all levels of government to have the capability to carry out their responsibilities in the event of attack.

The use of terribly destructive weapons, with subsequent radioactive fallout which may make thousands of square miles uninhabitable, makes civil defense a matter of grave importance to the State of Alabama and to its cities and rural areas alike.

It is essential that Federal, State, and local governments be prepared to meet all eventualities of attack through the preparation and testing of operational survival plans.

JOINT RESPONSIBILITY FOR PROGRAM

We agree with present policies which place the responsibility for civil defense jointly in Federal Government, the several States and their political subdivision, which provide for Federal sharing in the administrative and personnel costs of State and local civil defense organization, which provide for Federal sharing in the costs of personnel attending training schools, and which provide for the procurement, distribution and maintenance of radiological detection instruments.

We should like to urge you to support legislation providing the funds needed to implement these programs.

The threat to our national survival requires rapid implementation of the national policy on shelters as promulgated by the Office of Civil and Defense Mobilization, its expansion to include blast, heat and radiation shelters within target areas, and the provisions of adequate funds for planning and construction.

We endorse the national plan for civil and defense mobilization establishing national nonmilitary courses of action both to deter aggression and for national survival in event of attack. We feel that the statement of principles, responsibilities, requirements and broad courses of action for the Federal, State, and local governments and for the American people contained therein fulfills a critical need in the coordination and direction of the civil defense effort of our Nation.

CIVIL DEFENSE AFFECTS NATIONAL PREPAREDNESS

We hope that attention continues to be given to all aspects of civil defense as they affect our national preparedness including among others the broad training program of Office of Civil and Defense Mobilization staff college, assistance to all elements of local training programs and the public information program.

Public Law 85-606 was enacted by the Congress of the United States and approved by the President in 1958 and provides, among other things, for the sharing of administrative and personnel costs of State and local civil defense organization by the Federal Government, the sharing of costs of State and local personnel attending civil defense training schools, and the procurement, distribution, and maintenance of radiological detection instruments.

Although the Congress has authorized the expenditure of funds to accomplish these and other purposes related to the essential activities of the Office of Civil and Defense Mobilization, it has failed to appropriate necessary funds. The appropriation of such funds is urgently necessary to insure the forward progress of State and local civil defense activities and therefore essential to the proper defense of the people of the United States.

We urge you members of the Alabama congressional delegation to do all in your power to immediately make the appropriations necessary for the complete and proper implementation of the provisions of Public Law 85-806 to provide for the full and proper assistance of our State and local civil defense efforts.

ADDITIONAL POLICY RECOMMENDATIONS

In addition, we commend to you the following specific policy recommendations:

That a much more complete and adequate financial program of civil defense which recognizes the urgent importance of protecting and defending our homeland be approved by the Congress. To this end we recommend funds under the Federal Civil Defense Act which will assume 75 percent of the administrative costs of recognized local civil defense agencies. We further recommend that the Federal Government assume full financial responsibility for the purchase and maintenance of all equipment primarily purchased to further the civil defense effort.

That the Congress of the United States continue laws which give to all civil defense agencies a high priority in the procurement of such Federal surplus properties as are necessary to the organization, maintenance, and operation of an effective civil defense and disaster program.

RECRUITMENT OF KEY MUNICIPAL PERSONNEL

That the President of the United States and the Secretary of Defense adopt and enforce policies relating to the military and manpower recruitment of municipal personnel which will preserve the capacity of municipal government to protect its citizens and to discharge its national obligations for civil defense in case of national emergency.

That the Federal Government establish a system of issuing priorities for critical items in times of national emergency. A single agency should determine these priorities and the essential needs of municipalities should be given a preference at least equal to that afforded private industry.

That the Federal Government raise sufficient funds to finance the construction of shelters in cooperation with State and local governments including school and other districts. A program of blast, heat, and radiation shelters within target areas is a necessary addition to the present work toward fallout shelters.

We recommend also that the shelter program give proper consideration to the multiple public uses that may be obtained so as to make them as self-liquidating as possible. We urge that adequate shelters be included in all new public construction and that standards for construction of buildings under all federally aided programs include requirements for adequate shelter spaces.

---

## Proposed Changes in Universal Military Training and Service Act

EXTENSION OF REMARKS

OF

## HON. MERWIN COAD

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, February 18, 1959*

Mr. COAD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include several letters which I have received in the past few

days. These will serve as a sample of the numerous letters and inquiries I have received from coast to coast in support of my proposal to shorten the time our young men are eligible for the draft under the present Universal Military Training and Service Act. This act subjects young men to draft call for a period of 8 years between their 18th and 26th birthdays. I proposed an amendment to the bill before the Senate Armed Services Committee last Wednesday, which would have cut this time to 3 years by providing that the age limit be lowered from 26 to 21.

Adoption of this proposal would still give the draft a 3-year crop of manpower from which to fill their quotas. It would still give the recruiters their chance to obtain enlistments. It would hold all eligible young men to the obligation of military service to their country, but only in accordance with the present day needs of the country and with some consideration for the youth of America and their prospective civilian employers. I believe the present draft law is outdated and out moded in many instances. It is a modern day outrage to continue subjecting our youth unnecessarily to the uncertainties of the draft for this prolonged period of time and it is most certainly inconsistant with the more recent efforts to stress and aid the education of our youth, for I could point to no other single factor more unsettling to education than the present draft law.

Mr. Speaker, I sincerely hope that my colleagues will join with me in ending this grave inequity and restoring to America's youth their constitutional rights to life, liberty, and the pursuit of happiness.

PRINCETON UNIVERSITY,
*Princeton, N.J., March 6, 1959.*

The Honorable MERWIN COAD,
*House of Representatives,*
*Washington, D.C.:*

Although I am not in your constituency, I am writing in reference to your proposal before the Armed Services Committee that draft exemption be granted for men over 21 (New York Times, Mar. 5, 1959). I am extremely pleased that someone in Congress has noticed the gross inequalities and inefficiencies which our present Selective Service System produces. In recent months our population has become concerned with our educational system, at our lack of progress in science and in the needs of higher education. However, I feel that a great deal of our difficulties in these areas are either produced or hardened by the Selective Service System.

While it is true that the draft is beneficial both to the country and often to the individual concerned, it is perhaps more true that the draft is selective in such a way that we do not use our manpower efficiently. Since my personal concern is with higher education, I should like to point out some of the difficulties which arise from our present Selective Service System:

1. Students, otherwise not motivated, apply and accept positions in graduate students in order to avoid the draft.

2. Persons deliberately retard their graduate-school work so thta they will be 26 years of age before completing the doctorate, while the student who is motivated, and perhaps better trained, finishes at an earlier age and is then drafted.

3. The later persons are then placed in a position in which their training is not used for 2 years. Not only does the country lose the benefit of the trained, but the individual finds his ability depreciating during the 2 years since he is out of touch with his field. On the other hand, selective service recognizes a large number of critical skills—that of shop foreman, for example—which are exempted from the draft.

4. Men who marry young and have a child are exempt, while men who pursue their education are then asked to spend 2 additional years in service.

It is clear, I think, that the present System not only discourages students from receiving the training necessary to become a scientist, but punishes him for doing well. I feel that the establishment of the period from 18 to 20 years of age as the years for military training would eliminate this problem, and I would hope that your efforts would prove fruitful.

Sincerely yours,
DOUGLAS K. CANDLAND,
*Department of Psychology.*

---

NEW YORK, N.Y., *March 5, 1959.*

The Honorable MERWIN COAD,
*House of Representatives,*
*Washington, D.C.*

MY DEAR MR. COAD: Today's New York Times included a small notice of your proposal to exempt all men over 21 years of age from the draft. I am writing the newspaper to promote more publicity for your much-needed draft-law revision.

It is unfortunate that most of our Nation's leaders do not express any attempt to best utilize the coming generation; and the Armed Forces is certainly not the place to develop young talent, especially the college graduate. An inexpensive survey, or merely a few visits to Army camps to speak with college-trained servicemen would show the great waste, even in the 6-month plan, that our men, and thus the country, must endure.

I wish you success in your current endeavor.

Very truly yours,
DONALD M. LEVIN.

---

LOS ANGELES, CALIF., *March 6, 1959.*

Representative MERWIN COAD,
*Washington, D.C.*

DEAR SIR: In this morning's Los Angeles Times there was published your proposal for draft exemption for men over 21.

I have never written a letter to anyone like you before, although feeling strongly about many other public issues. This idea of yours affects me personally, however. I would like to add my story to perhaps many others.

My son will be 27 this year. From kindergarten on he has shown a marked proficiency in everything he has tackled. He skipped 2 grades in elementary school. In junior high he was editor of the school paper, writing all the feature editorials himself, as well as specials. In senior high he led all his classes and upon graduation was named the most outstanding scholar. His report cards were always above average.

He attended 4 years at the University of Southern California wholly on his scholarships each succeeding term. He was a Phi Beta Kappa as well as in other honorary fraternities. He graduated from there magna cum laude.

He went on to an assistantship at Massachusetts Institute of Technology and was wholly self-supporting. He graduated there last June, a Ph. D.

He was awarded a Fulbright grant and at present is in Paris, France, at the University of Paris. He will be back next fall.

All these years he has been deferred from the draft. He will be a very valuable man in his field of physics. Important to our world of today. He is being sought by leading and powerful industries, prominent in this age of space.

He has not married. How can he? He has no assurance that he has any future. The draft board hangs over it. His whole life has been dedicated to scientific learning and he certainly deserves a chance now to marry and have a home and serve his country well in his field.

Hope I have helped to bolster your cause.

Very sincerely,
MRS. ELMA FRIEL.

---

## Pertinent Information on Puerto Rican Taxation and Cost of Living

---

EXTENSION OF REMARKS
OF
## HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 4, 1959*

Mr. ASPINALL. Mr. Speaker, in anticipation of a number of questions which will arise in our forthcoming floor debate on Hawaiian statehood I have asked our colleague, Resident Commissioner Fernós-Isern of Puerto Rico to prepare a memorandum on, first, the economic and fiscal relations between Puerto Rico and the United States; second, tax exemption in Puerto Rico; and third, cost-of-living differential in Puerto Rico allowed civil servants of the Federal Government. Invariably, in Hawaiian statehood debates these matters arise and usually are discussed with much of the factual information not being utilized. In order to provide those persons who wish to discuss these Puerto Rican matters as they relate to Hawaii with reliable information I wish to insert in the RECORD the following memorandum prepared by Resident Commissioner Fernós-Isern:

MARCH 4, 1959.

Dr. JOHN TAYLOR,
*Professional Staff Member, House Committee on Interior and Insular Affairs, House of Representatives, Washington, D.C.*

DEAR DR. TAYLOR: With reference to our recent conversation I am enclosing the memorandum which I have prepared at your request on (1) the economic and fiscal relations between Puerto Rico and the United States; (2) tax exemption in Puerto Rico; and (3) cost-of-living differential in Puerto Rico allowed civil servants of the Federal Government.

If you feel that further details are required, I should be happy to provide them.

Sincerely,
A. FERNÓS-ISERN,
*Resident Commissioner.*

---

MARCH 4, 1959.

Memorandum with reference to: (1) Economic and fiscal relations between Puerto Rico and the United States; (2) tax exemption in Puerto Rico; (3) Cost-of-living differential in Puerto Rico.

1. Ever since the United States acquired sovereignty over Puerto Rico under the Treaty of Paris in 1899, the Organic Acts enacted by Congress to organize a civil government in Puerto Rico (1900 and 1917), as well as the Puerto Rico Federal Relations Act (since Puerto Rico became a Commonwealth) have provided that all expenses incurred by the Government of Puerto Rico shall be paid out of the Treasury of Puerto Rico. (See sec. 12, Organic Act of 1900, and sec. 6 of the Second Organic Act of 1917).

No Federal appropriations have ever been made to pay for the expenses of local government, as has been the case in the Territories. This refers, of course, to the government establishment of Puerto Rico and not to the operation of Federal activities and programs undertaken by the United States in Puerto Rico.

The expenses of the U.S. Government in Puerto Rico can be classified into three groups:

(1) The Defense Establishment, including payments to veterans. (Thousands of Puerto Ricans have served during the First World War, the Second World War, and the Korean action and, of course, are entitled to the same compensations as their mainland fellow citizens.)

(2) Civilian Federal agencies, which operate in Puerto Rico in the same way as in any State of the Union. (Federal agencies in Puerto Rico include, of course, the Post Office system, the Immigration Service, the U.S. district court, buoys, lighthouses, agricultural agencies, etc.)

(3) Grant-in-aid laws, which have been extended to Puerto Rico and which operate with joint Federal-Commonwealth funds, under the supervision of the respective Federal departments.

The same rates of tariff applying in the United States to imports from foreign countries apply to merchandise from foreign countries coming into Puerto Rico. The expenses incurred for collecting the customs duties in Puerto Rico are paid out of collections made, and the remainder is covered into the treasury of Puerto Rico (see sec. 4 of the Organic Act of 1900 and sec. 58 of the Second Organic Act of 1917). There are no customs between United States and Puerto Rico. The U.S. Internal Revenue laws would have no force and effect in Puerto Rico (see sec. 14 of the Organic Act of 1900 and sec. 9 of the Second Organic Act of 1917).

In other words, Puerto Rico was accorded free trade with the United States, within a common tariff, and was given fiscal autonomy, while it was supposed to support its own government with its own revenues.

This treatment was accorded Puerto Rico on the theory that Puerto Rico was not incorporated into the United States under the terms of the Treaty of Paris with Spain in 1899, nor has it been incorporated by act of Congress at any later date. It was not a Territory in the traditional sense, but "a people" under the sovereignty of the United States. (See sec. 7, Organic Act of 1900.)

The provisions of the Constitution of the United States concerning the uniformity in tax laws do not apply in Puerto Rico as they have always applied to incorporated territories such as the present Territory of Hawaii.

The distinction between incorporated and unincorporated territories was early made by the Supreme Court in the well-known insular cases, *de Lima* v. *Bidwell*, 182 U.S. 1 (1901); *Jones* v. *Bidwell*, 182 U.S. 244 (1901); *Dooley* v. *U. S.*, 183 U.S. 151 (1901); and later confirmed in *Balzac* v. *People of Puerto Rico*, 258 U.S. 298 (1922).

All these congressional and judicial decisions took place long before the Commonwealth of Puerto Rico was organized. The Commonwealth has evolved within this framework of relations. The fact that the Commonwealth of Puerto Rico was created in 1952 did not alter the above situation. As a matter of fact, the sections in the Organic Act of 1917 which dealt with these matters were specifically continued in force and effect, as the Puerto Rico Federal Relations Act (sec. 4 of Public Law 600, 81st Cong., which enabled the people of Puerto Rico to organize the Commonwealth). The Commonwealth of Puerto Rico, therefore, now has the same fiscal situation and economic relationships which Puerto Rico had before it became a Commonwealth.

Although the general rule is that United States internal revenue laws do not apply in Puerto Rico, it should be noted that the U.S. income tax law applies to the income of residents of Puerto Rico when such income is derived from sources outside of Puerto Rico. This includes Federal salaries paid to residents of Puerto Rico who serve the Federal Government in Puerto Rico. The fundamental fact, then, is not that Puerto Rico is exempt from Federal taxes, but that Puerto Rico is not included in the tax area of the United States and has its own separate tax system as an unincorporated area.

The tax system of Puerto Rico includes income tax laws, excise tax laws, real estate tax laws, inheritance tax laws, etc. The tax laws in Puerto Rico are comparable to those prevailing in the mainland.

2. Puerto Rico has adopted a program of tax exemption for a short period of years, for new industries that may wish to establish themselves in Puerto Rico. This program was implemented in view of the enormous unemployment problem in Puerto Rico and in view of the very limited natural resources. Without this temporary dispensation to new industries, they would have no reason to come to Puerto Rico, and Puerto Rico would neither collect taxes on unexisting industries nor be able to create new opportunities of employment for the unemployed. Since it was not possible to have both taxes and employment from new industries, Puerto Rico had to decide to have one of the two, i.e., employment, and temporarily give up taxes that it would not have received anyway. The program has met with a great deal of success. Employment opportunities in Puerto Rico have increased rapidly. The standard of living has been raised, the purchasing capacity of the average citizen has increased, and as a result (since Puerto Rico does most of its outside shopping in the U.S. mainland) the purchases made by Puerto Rico in the last year exceeded $600 million actually approaching the $700 million mark. Puerto Rican sales to the United States were about $450 million. Puerto Rico is today the third largest market for U.S. products in the New World.

It should be emphasized that the tax exemption program is applied exclusively to new industries coming into Puerto Rico which duly qualify for the exemption; that each case is decided on its merits. Also that except for these new industries the people of Puerto Rico do pay taxes to the Commonwealth, as aforesaid, in a comparable manner as the citizens of the United States pay taxes to the States and to the Federal Government. It should also be emphasized that the tax exemption given to new industries is a temporary measure, limited to a fixed period of time, and that after that time elapses, the new industries are subject to taxation the same as the old-established industries. It should also be emphasized that tax exemption is not granted to industries that may pull out of the United States and come into Puerto Rico. Only brandnew industries which represent an expansion in the industrial organization of the United States are eligible to tax exemption under the Commonwealth law.

3. Although the average per capita income in Puerto Rico is lower than the lowest average per capita income in any State, it has been found, through surveys carried out at the initiative of the Civil Service Commission, that the cost of living in Puerto Rico is about 17½ percent higher than it is in Washington, D.C. Although there may be differences of opinion as to the reasons for this higher cost of living, it seems logical to assume that among the factors creating this higher cost is the fact that Puerto Rico buys in the mainland no less than 50 percent of the food it consumes and pays very high freight rates for transportation. These high freight rates are paid not only in transportation from the mainland to Puerto Rico but also on what is transported from Puerto Rico to the mainland. All this transportation, according to law, must be made within the terms of the coastwise shipping laws of the United States which apply to Puerto Rico, i.e., in vessels registered in the United States.

Since the same situation prevails in other offshore areas, namely, Alaska and Hawaii, the Congress has adopted the policy of compensating United States officials and employees serving in these offshore areas, for this higher cost of living. It seems to be a sound policy, since what it does in fact is to equalize the income of Federal employees in the offshore areas to the income of Federal employees in the mainland areas.

The fact that the Federal Government follows this policy serves to emphasize the difficult economic problem the people of Puerto Rico must meet in their endeavor to attain a standard of living comparable to that of their fellow citizens in the mainland. They must cope not only with unemployment and the fact that their income is lower than that of the average income in the mainland, but also with the fact that their cost of living is higher than in the mainland.

Puerto Rico is making great strides in improving the lot of its people. It has attained Commonwealth status which the multitudes of its people endorse and support. Commonwealth status means that the people of Puerto Rico have full self-government in a measure comparable to that enjoyed by a State of the Union. But the U.S. Government exercises authority in Puerto Rico also in a measure comparable to the authority it exercises with respect to any State. The people of Puerto Rico, fully participating in the election of their Commonwealth officials, do not participate in Federal election or legislation, except that they have a spokesman in the Resident Commissioner, who may present the views of the people of Puerto Rico before Congress as well as before the executive departments in such matters as affect Puerto Rico and are within the province of the Federal Government.

The people of Puerto Rico do not participate in the election of the President, or the Vice President; they do not elect two Senators; they do not elect a proportionate number of voting Members of the House. If Puerto Rico were a State, it would be entitled to no less than five House Members. Nevertheless, Federal laws apply in Puerto Rico equally as in any State, except tax laws, but including, of course, selective service.

---

## Prof. L. P. Gabbard, Department of Agricultural Economics and Sociology, A. & M. College of Texas, Suggests Plan for Supplemental Income Payments To Provide for Logical Approach to Parity for Farm and Ranch People

EXTENSION OF REMARKS

OF

### HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a suggested plan of supplemental income payments

for the purpose of providing parity for farm and ranch people.

The following plan was prepared by Prof. L. P. Gabbard, of the department of agricultural economics and sociology of the A. & M. College of Texas, College Station, Tex.

Prof. Gabbard has long been associated with the college and with the agricultural experiment station and has a wide background in the agricultural field both economically and in the sociological phase of the farm family. I think his long experience of personal contacts in this regard make him most competent and it is with pleasure that I make his suggestions available to the Members of this body:

SUPPLEMENTAL INCOME PAYMENT PLAN

For about 20 years we have had, in one form or another, commodity price supports for agriculture. During this period, troublesome agricultural surpluses have accumulated to plague us.

Currently, farmers are not happy. The farmer finds prices for his products declining, and cost for production items increasing. This price-cost-squeeze leaves him less and less income from his farm operations. Yet, he looks about him and sees wages of laborers increasing, salaries rising and profits of industry mounting.

Fundamentally, the farm problem is not one of politics, but one of economics. It is not so much a maladjustment within agriculture as it is a maladjustment in the overall economy of the Nation. And it is not so much a case where the Lion and Lamb are called on to lie down together as it is one where the Mule and the Elephant have an opportunity to stand and work together for the best possible program for the National interest.

It is assumed that as a Nation we are generally committed to the concept of parity income for agriculture and nonagricultural industries. We may differ widely on details, but we recognize that parity is a goal which may never be completely realized, yet an ideal ever to be sought in the operation of our economy. Any time an important sector of the economy operates on a relatively low income and purchasing power basis, the economy as a whole is not well.

Much of the disparity between agricultural and nonagricultural industries stems from policies and activities of the Government. Throughout practically its entire history, American industry has been protected by tariffs on competitive imports. Industrial labor has benefited from immigration laws limiting the number of people coming to this country, and more recently a minimum wage law has been passed, both of which add up to an indirect subsidy to labor.

What about the American farmer? During the past 150 years, he has had relatively little effective protection, except for the past two decades. He has bought in a protected market and sold in an open market. He maintained production of our foods and fibers, basic necessites, during the depression decade, while industrial production was being cut drastically. He responded generously and effectively in his production program to meet the needs of World War II, but aside from a commodity price support program, he had no assistance in adjusting to peacetime production following the end of the war.

It would be difficult to offer an entirely new farm program in view of the many which already have been tried or proposed. Admittedly, there is no magic formula for a problem so complex. But surely there is a plan that provides the elements of self-adjustment to a much larger degree than any which has been tried. We are currently experiencing the embarrassment of large surpluses under the price support program. Once the Government purchases and stores agricultural commodities there is never a satisfactory time short of war or extended drought to put them on the market. Yet these stored commodities, as a part of the total supply, hover as a threatening cloud to depress farm prices at a time when farmers are already in a painful cost-price squeeze. To the extent that the program succeeds in keeping prices relatively high, consumers in general must pay more for their food and fiber.

A satisfactory farm program should cover the entire farm unit. The moment we single out a particular commodity or commodities for special treatment, the chances are that those commodities left will soon be in trouble. To be fair to all producers, all commodities should be included in a program and each should receive due consideration. To do this on a commodity supply and price basis requires superhuman wisdom.

To be broad and comprehensive, the farm program should go beyond mere price considerations. Price is only part of the formula which makes income. The major concern should be the content and level of farm family living. This includes such items as housing, health, transportation, recreation and the like. With good health, good training and access to adequate resources, a people should find a satisfactory solution to their social and economic problems with a minimum amount of direct aid from their government.

Mere lipservice will not establish and maintain family-size farms. Adequate and suitable credit for the purchase and operation of such farms is a must. Farm income and farm purchasing power based on parity with that of nonagricultural income would be of great help. It is important to the welfare of the Nation that the family farm not only be economically efficient, but socially efficient. The Nation's most important social product of the farm is people. The farm is especially productive in this respect.

If price is to be counted on to bring to the market an adequate supply of commodities in line with demand, the market must be kept free and competitive. The market is not freely competitive for each and all commodities if for some there is a supporting price, while for others there is no support. Programs of this kind often result in greater maladjustment than they propose to remedy.

If the free nations are to be most effective in conducting an economic and ideological warfare on communism, they must arrange their trade relations so as to make full use of the principle of comparative economic advantage. Nations vary greatly in their resources, stage of development, skills, capital and managerial ability. A relatively free exchange of goods and services is about the only permanent basis on which these nations may cooperate. The free nations of the world should have a trade compact providing for an exchange of goods and services approaching the freedom enjoyed by the States of the United States of America.

It is generally conceded that nonagricultural industry enjoys a much greater degree of control over supply than do farmers; hence, a more effective control over price. This control by industry is a major cause of the disparity between agricultural and nonagricultural incomes. The very large number of farms and the vagaries of weather under which they are operated may serve to cause even wider fluctuations from year to year. In the interest of the whole economy, it is well to keep its major sectors on as even keel as possible. Any farm program which does not possess to a large degree the elements of self-adjustment, will ultimately break down under the weight of its own weaknesses. It must rely on prices in the open market to balance production with demand. One of the best means of getting a well balanced allocation of our resources is through a sensitive pricing system. This assumes a market in which the consumer is free to make his choice of goods and services on a fully competitive basis.

This brings us to our main proposal that any disparity in agricultural income when compared to nonagricultural income should be adjusted through supplemental income payments. The supplemental income payment plan in its pure form possesses the elements of self-adjustment to a large degree. It lets the free market set price and determine production and in theory is the most logical approach to parity income for farm people. This plan would leave farmers free to grow and market those products which seemed to offer best returns on a free and open market. Prices made in such a market would serve to guide production and consumption and encourage foreign trade, whereas artificially high prices of commodity price supports tend to cause overproduction and to price us out of foreign trade with certain commodities.

Under the plan it would be necessary to choose a base representing a period when agricultural and nonagricultural incomes and purchasing power were in a satisfactory relationship. This period would equal 100 percent, and needed adjustments of income would be calculated on this base. For example, if for a given year the national average agricultural income per family was relatively 15 percent lower than the nonagricultural income per family, compared with the base period, the income of farm producers would be increased 15 percent to bring the two groups as individuals into relatively the same purchasing power position.

Income payments should be based on net income rather than gross. To illustrate, let us assume that a payment of 15 percent is necessary to bring agricultural income in line with nonagricultural income.

Brown has a net income of $3,000. He would be given 15 percent of his net income or $450 in order to bring his income up to parity. If farmer Brown had a net income of $4,000 he would get a supplemental payment of 15 percent or $600. Thus emphasis is placed on efficient production and marketing because the larger net income gets a larger supplemental payment.

Supplemental income payments would not take care of crop failure due to unfavorable weather, insects, diseases, and the like. Such disasters will need to be covered by crop and livestock insurance or other emergency programs.

The cost to the Government would depend on the degree of disparity between agricultural and nonagricultural income for any given year, compared with the base period. For illustration purposes only, let us select the years 1946–50 as the base period or years in which agricultural income was in good relationship with nonagricultural income. Then during the years 1951 through 1954 the cost to the Government would have been about $10 million in 1951, about $900 million in 1952, about $1.6 billion in 1953, and about $1.4 billion in 1954.

The plan does not propose to stabilize farm income other than to make it comparable with nonagricultural income from year to year. The flexibility and simplicity are perhaps its strongest features. Under the proposed plan, market prices are left free to serve as a guide to the allocation of resources within agriculture for their most efficient uses. Supplemental income payments would eliminate agricultural surpluses and obviate the need of storage, except for normal trade carryovers.

Admittedly, the supplemental income plan is not ideal. We still are looking for an ideally workable plan. This plan would leave the processes of our economic system free to

be self-adjusting. Disparities between agricultural and nonagricultural income would be adjusted outside the market leaving the competitive market to operate freely.

TEN IMPORTANT POINTS (YOU SHOULD KNOW) ABOUT THE SUPPLEMENTAL INCOME PAYMENT PLAN

1. The cost of the program would be reasonable compared with results accomplished: The cost of the proposed plan would vary with the percent of disparity of farm income and how farm income compared with the base period. In a year when the disparity is as much as 15 percent, as in 1954, approximately 1.6 billion dollars would be needed to give farmers parity income and purchasing power equal to the average for the base period 1946–50.

2. The administration of the program would be simple and inexpensive: The administration should be kept as simple as possible. A farmer who wished to benefit under the program would apply through his county ASC office. To his application would be attached a copy of his annual report to the Internal Revenue Service for Federal income tax purposes. His county ASC office would check, record, and forward his application to the USDA for final approval and payment. Application by the farmer would be optional.

3. The plan would apply to the farm as a unit and not to commodities: The plan does not apply to individual crops, but to the farm as a unit. Any and all crops and livestock enterprises included in the organization and operation on the farm would be treated as a unit. Supplemental payments would be based on net income from all farm enterprises.

4. About 50 percent of farm families would benefit directly from the plan: According to the recent U.S. agricultural census about 40 percent of the farm families produce approximately 88 percent of farm products sold. Three-fifths of our farm families produce only about 12 percent of farm products sold. Obviously this plan or any other financial plan will help the farm family less as the net income declines. The low income group of rural families will need assistance through other types of programs, such as technical training, health programs, farm-to-market roads, and similar kinds of services.

5. Consumers and processors who pay for the program should be able to buy food and fiber relatively cheap: Under the plan all farm commodities will be put on the open market. Products are not held off the market by the Government to hold the price artificially high as is done under the commodity price support program. The consumer and processor will be able to buy his food and fiber on an open competitive market. Thus, while as a taxpayer, they are helping pay for the program they should be able to enjoy relatively cheap food and fiber.

6. Foreign trade should benefit substantially under the plan—commodity prices would seek their world level: Since World War II foreign trade has made up roughly 12½ percent of agricultural income in the U.S.A. There could be no such thing as a commodity being priced out of the world market as happens with the commodity program—cotton is a good example. The program should strengthen foreign trade substantially.

The plan should be in harmony with national defense: Under the plan agricultural resources would be allocated and utilized through prices made in the free market. One could not imagine the organization and operation of agriculture on a more flexible or responsive basis. In case of an emergency such as war our entire agricultural economy would be in a position to move readily in the direction of new and special demands.

8. The plan should increase the importance of noncommodity programs: The plan would supersede the current commodity price support program. Agricultural research and agricultural educational programs should increase in importance. The more efficient the producer is under the plan, the greater will be his benefits from it. The soil conservation and related programs would continue.

9. It is a positive program—It does not pay for not producing: It is a positive program. It proposes to help the farmer adjust his business on the basis of production. It will not pay for not producing. It rewards and encourages good management, efficient production, efficient marketing and the production of quality products.

10. It will correct maladjustments and conflicts between commodities arising out of the present program: The plan should help to correct maladjustments and inequities which have arisen between agricultural commodities under the commodity price support program. This should unify the efforts of farmers throughout the Nation and give them greater strength to help themselves as a group.

## Poison in Your Water—No. 21

EXTENSION OF REMARKS
OF
## HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting another article, this time one which appeared in the Denver, Colo., Post on November 14, 1958, describing the "dirty, rotten water" which citizens of Colorado find distributed through the Baker Metropolitan Water and Sanitation District. It was interesting to note in that article that parents among the audience said they feared the water was making their children sick. They said the prevalence of gastritis and enteritis was unusually high:

[From the Denver (Colo.) Post, Nov. 14, 1958]

IRATE CITIZENS BESIEGE BAKER WATER BOARD

(By Mark Bearwald)

Residents besieged the board meeting of the Baker Metropolitan Water and Sanitation District Thursday night with impassioned complaints about "dirty, rotten water."

Board members sat glumly listening to a long list of grievances from more than 60 persons who jammed a small board room at the district's office, 6530 Federal Boulevard. Others stood outside with ears cocked toward the open windows.

Residents have been complaining for several weeks about the odor, taste, and milky appearance of drinking water. One householder said the water has "a rotten odor, like swamp water."

Most of the complaints came from persons living in the Perl-Mack area bordering the upper Valley Highway. Baker District serves water to Perl-Mack, Fairview, and Florado subdivisions.

The district furnishes 2,200 homes with water from its Clear Creek treatment plant and another 603 homes with Denver water. The district hopes to buy more water from Denver once the "blue line" limit is withdrawn.

Several parents in the audience Thursday night said they feared the water was making their children sick. They said the prevalence of "gastritis and enteritis" was unusually high.

Also, the audience charged the Baker board of directors was "sitting on its hands" and doing nothing to clean up its water and sewage in line with recommendations from the State and Tri-County Health Departments.

Speaker after speaker voiced complaints. One man said, "The public is pretty damn well fed up." Another charged the district operated only for the convenience of a Perl-Mack construction firm.

Perl-Mack has lent money to the district for needed improvements of water and sewer works. A lawsuit contesting that financial arrangements is now pending in the State supreme court.

Sheldon Silverman, an attorney for Perl-Mack, told the crowd two water wells will be completed in about 2 weeks.

"Give the wells a chance," he said. "If that doesn't work, we'll be glad to work with you to find another solution." The audience hooted.

Joe Vigil, Tri-County sanitarian, said the wells will help "tremendously in improving the quality of the water."

He said Baker now gets its water from Clear Creek. In the spring and summer there is sufficient flow in the creek to dilute the discharge from upstream sewage plants. But in the fall and winter, Clear Creek falls to a trickle and that trickle at times is 100 percent sewage affluent, Virgil said.

CHRONIC PROBLEM

He said the pollution problem is chronic along Clear Creek "every year at this time." The city of Westminster had a similar protest meeting 2 weeks ago.

Vigil said 15 of the 34 Baker water samples he took in October tested "unsafe."

Both Vigil and Eugene Facetti, district health engineer for the State, seemed to doubt that Baker water was causing any outbreak of disease. Vigil said a State health department team would survey the area to see if a health problem existed.

George Stump, president of the Baker board, and members Herman Osborn and Robert Sandersfield urged the crowd to wait until the two wells go into operation.

The crowd asked for another meeting in a lafger hall. Stump tentatively scheduled a special board meeting on the evening of December 4 at the Francis M. Day School in Perl-Mack.

## Dr. Flemming's Formula

EXTENSION OF REMARKS
OF
## HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 4, 1959*

Mr. METCALF. Mr. Speaker, one of the serious problems that labor unions have run into in organizing the dairy industry is that the cows have to be milked twice a day every day. No 5-day week for a dairyman. Many commentators on the changing conditions in farming have pointed to the decline of the family cow. This, too, is mostly caused by the fact that one family cow requires milking every morning and every evening. No weekends permissible when "old bossy" is home bawling to be milked.

Dr. Flemming, Secretary of Health, Education, and Welfare, has evolved a

formula whereby he says 75,000 classrooms can be built without unbalancing the budget if the local subdivisions will only change their tax concepts, if the States will change statutory debt limits and if constitutions in more than half the States be changed. But Dr. Flemming points out these statutory and constitutional changes will be minor obstacles in the working out of his plan if the States and districts will only cooperate.

Dr. Flemming's formula should be used to put cows on a 5-day week. Of course, it will mean a basic change in the constitution of the cow and her cooperation but with the application of the Flemming formula, those minor obstacles can be easily overcome.

## National Aeronautics and Space Administration

EXTENSION OF REMARKS
OF
## HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, February 25, 1959*

Mr. FULTON. Mr. Speaker, the space program of the United States is of extreme importance to every Member of Congress. Mr. T. Keith Glennan, the Administrator of the National Aeronautics and Space Administration, has given an excellent address to the Aviation Writers Association on March 5, 1959 at the National Press Club. I commend it to my colleagues:

PRESENTATION TO THE AVIATION WRITERS ASSOCIATION, NATIONAL PRESS CLUB, WASHINGTON, D.C., BY T. KEITH GLENNAN, ADMINISTRATOR, NATIONAL AERONAUTICS AND SPACE ADMINISTRATION, MARCH 5, 1959

October 1, last, 5 months and 5 days ago, the National Aeronautics and Space Administration became an operating agency of the Federal Government. The 9 weeks preceding, counting from July 29 when President Eisenhower signed the legislation which established NASA, had been used in recruiting the staff and in performing the many tasks essential to getting underway.

To provide us with many of the resources we would need—the men, the facilities, and the money—there were transferred to NASA the 43-year-old National Advisory Committee for Aeronautics, with its 8,000 people and fine laboratory facilities, the Jet Propulsion Laboratory—including some 2,300 people—operated by the California Institute of Technology, the Vanguard program and with it, the fine group headed by Dr. John P. Hagen, the Pioneer space probe program which the Air Force and the Army were conducting under the direction of the Advanced Research Projects Agency, three satellite projects, and a number of ARPA and Air Force engine development programs.

To sum up, by the end of 1958, NASA had vigorous, rapidly moving, although somewhat ad hoc programs of space technology, space science, and space exploration. The total funding available to NASA for fiscal 1959 was $335,719,532. We have since asked for $48,354,000 in supplemental funds for fiscal 1959 to permit acceleration of Project Mercury, the manned orbital space flight program, and to finance certain necessary construction and equipment items.

One of the most urgent tasks we faced when we began operations last October was to plan for the longer pull, as distinguished from the more immediate, more obvious projects that could be promptly programed or were already underway.

I want to speak briefly about our long-range planning, and in this connection, to consider two problems that are of concern to you, to me, and in fact, to all Americans. The first of these problems, simply stated, is how much should the NASA be talking about what it hopes to do in the future.

You are generally familiar, I believe, with the language of the Space Act, relating to information, but to be specific, I quote: "The Administration (NASA) in order to carry out the purpose of this act, shall * * * provide for the widest practicable and appropriate dissemination of information concerning its activities and the results thereof * * *" and "Information obtained or developed by the Administrator in the performance of his functions under this act shall be made available for public inspection, except (A) information authorized or required by Federal statute to be withheld, and (B) information classified to protect the national security: *Provided*, That nothing in this act shall authorize the withholding of information by the Administrator from the duly authorized committees of the Congress."

The way I read this language is that we are enjoined to report fully and candidly about what we have done, and about what we are doing. As I see it, we are supposed to talk as freely about our failures as we do about our successes. Having opposed unnecessary and excessive secrecy in the conduct of scientific investigations by governmental agencies for many years, I find myself in complete agreement with this provision in the Space Act.

The American public, the people who will have to pay the costs of our space programs, most certainly are entitled to full disclosure about the way we are accomplishing our vital, assigned missions. Further, science will flourish best when interchange—free interchange—of information between scientists is encouraged.

Now, there is another aspect to this matter of reporting to the American public about our activities, and that is what we should do about discussing futures—what we plan to do, and what we hope to do. Here again, it is obvious to me that we cannot expect the Congress, representing the taxpayer, to appropriate hundreds of millions of dollars to NASA unless and until it has become convinced of the soundness of our planning and the need for the space programs we propose.

To do this—to give the congressional committees solid evidence of the validity of our requests for funds—requires that we present a strong case for the future activities of the agency. In the research and development business, there is an old saying that if you know how an experiment is going to turn out, it no longer is justified as an experiment. Thus we find ourselves selling the need for expenditures against the reality that we don't know exactly how to go about each element of the task ahead. And we find it necessary to set dates and suggest the end results to be obtained even though we may be uncertain about the precise methods we shall have to use to assure accomplishment. More often than not, those dates rise up to haunt us for it is characteristic of people working in exploratory activities to be optimistic about their abilities to meet schedules.

In passing, I believe I should observe that you, who have the vital role of providing the citizens of the United States and, in fact, the entire world with prompt, accurate reports about what is happening in the realm of flight, are not in agreement as a group, on the course we should chart in this area of discussing futures.

By way of example, I recall the general criticisms directed our way late last fall and early this year when it was widely reported that we had no long-range plans. The fact that we were very, very much absorbed with performing work of great immediate importance—work that, incidentally, had to be done before we could tackle futures—apparently was far less exciting and newsworthy than reports that we didn't know what we ought to be doing in the years ahead.

Hardly 5 weeks ago, I outlined the procedures we were using to select volunteers for our first manned, orbital space flight program, Project Mercury. You will recall the schedule: First, presentation to about 110 potential candidates of details of the program, after which the call for volunteers—and you should know that nearly 80 percent of those to whom we talked volunteered; second, selection from these volunteers of a group of approximately 30 for further tests; and finally, choice of a small group of these men who were found to be best qualified. In this instance, the criticisms were divided. We were subjected to heavy pressures from some editorial quarters because we declined to make public the names of the 110 potentials or of those volunteering. (The reason: The psychological and physical evaluations leading to the final selections are a private, privileged matter between the examining aeromedical specialists and the volunteers.) Elsewhere, we were lampooned as blue-sky merchants because we had talked about the pilot selection process before the space capsules had even been built.

Getting back to the business of long-range planning, we have been working very hard to map out with some precision the routes we intend to follow on our journeys into space. A first step in this direction was the blueprinting of our programs for fiscal 1960. We took the position that these plans should be directed to the appropriate congressional committees before they were broadcast to the general public by press, radio, and TV.

I am sure I am not overstating the case when I observe that this decision was not altogether pleasing to all members of the fourth estate. Even so, we were somewhat surprised to note fairly sharply worded editorial comment, that instead of talking about our plans for the future we would be serving to better effect the national interest if we stuck to our allotted task of sending more and better probes and satellites into space.

I could go on with other instances where our discreet silence or our modestly phrased forecasts of future goals have aroused editorial umbrage, but I expect I have made my point: We're damned if we do and we're damned if we don't. I am reminded, somewhat ruefully, of the old saying that the man who walks in the middle of the road is the one mostly likely to be run over by the steamroller.

On the other hand, having admitted to being human in this matter of occasional bewilderment when the editorial shot and shell seem to be coming from every direction, I sincerely mean it when I say that responsible comment—public comment—is a necessary ingredient in our business. This exciting, expensive space business we're doing is only one small segment of the total activity of the Federal Government, and yet it is one about which it is vital that the American public shall be promptly and fully informed.

I say, fully informed, because not only is it essential that the American public know they are getting an honest dollar's worth of

performance for every dollar of their taxes appropriated to this business, but it is at least equally important that our citizenry become aware of how necessary it is for them to support our national efforts to pioneer in space. And, by support, I mean much more than mere acceptance of tax levies; I mean no less, the unstinting contributions of talent that will be required from so many. And over the long pull, it is important that a larger proportion of our citizens gain an appreciation of the importance of the support—the generous support—by the Government of basic research in a variety of fields.

The second of the problems I want to discuss is how to inform the American people about our national progress in space in such fashion as to insure that they won't, on the one hand, become discouraged and adopt the belief that we are hopelessly behind the Russians and on the other, and even more erroneously and dangerously, become confident that a couple of recent successes have demonstrated our preeminence in space matters. In the same manner in which I have urged that our space program be planned and operated on a sensible and continuing level of effort, it is important that we realize that this is a long-range program, full of uncertainties—one demanding sustained effort and support over a great many years.

That we started later than the Russians to build the vehicles that would be needed to send first instruments and then man himself into space is a matter of historic record. That the Russians today possess rocket engine systems more powerful than the biggest in our inventory, and consequently, that for some time to come they will be able to loft into space payloads, substantially larger than ours are, again, facts of life that must be accepted.

Earlier this week, I had to be in Boston. During this brief journey, I was repeatedly asked by responsible citizens if the successful Vanguard II and Pioneer IV launchings weren't, indeed, proof that we had caught up with the Russians. It wasn't pleasant for me to have to reply that, no, these U.S. space efforts didn't mean we had drawn even with the Soviet space workers. Of course, we were tremendously proud of the February 17 vindication of the basic validity of the Vanguard project that NASA had inherited from the Naval Research Laboratory. And we are, equally happy about the March 3 performance of Pioneer IV, the solar-orbiting payload that had been put into space by NASA's Jet Propulsion Laboratory and the Army Ballistic Missile Agency. But the fact remains, that for months to come, we must count the weights of our space payloads in tens of pounds, while the Russians count theirs in the hundreds of pounds. It is not at all clear that this single criterion of weight is the most important one—but it is one measure of our capability to engage in more complex experiments in the future. Hence it is impossible, indeed, it is unwise to console ourselves with the knowledge that published information about outer space phenomena show that this country has been doing very well in acquiring that information.

We are, as has been duly reported, working very hard to develop the large, reliable rocket engines required by our future space projects. At the same time, we are developing—on a national basis—the other requisites for our rapid, orderly progress into space.

To excel in space technology, space science, and space exploration means that, for years to come, we in the United States must be prepared to invest—and in substantially large amounts—talent, treasure, and time. This, I submit, is a story that demands telling; upon our determination to commit ourselves in matters of this kind depends our survival as the leader of the free world.

## Commission To Study Government Uses of Radio Frequencies Proposed

EXTENSION OF REMARKS
OF
## HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. BRAY. Mr. Speaker, I have today introduced a joint resolution which proposes the creation of a Commission to study the utilization of those areas of the radio frequency spectrum which are assigned to the Federal Government.

I sponsored similar legislation in the 85th Congress, and a companion bill in the Senate was introduced by Senator POTTER. The Potter bill was reported by the Senate Committee on Interstate and Foreign Commerce, passed by the Senate and then reported by the House committee in the last days of the 1958 session. It appeared for a while that this Commission would become a reality before adjournment last year, but a variety of circumstances contrived to defeat it.

Essentially my purpose remains unchanged. I would establish a Commission composed of experts in the communications field, but men who are not employees of the Federal Government. The idea is to allow persons outside of the Federal Government, but competent in the field, to see how well the frequencies reserved for Government use are being used. The Commission, in addition, might make some assessment about the future requirements for Government use of radio frequencies.

When this bill was introduced 2 years ago the Bureau of the Budget reported adversely on it and endorsed the views set forth in a letter from the Director of the Office of Defense Mobilization to the chairman of the Senate Committee on Interstate and Foreign Commerce. The Director of Defense Mobilization stated that such an undertaking would require the work of many experts over an extended period of time, and pointed out that a study of only a portion of the spectrum required the efforts of more than 50 experts for an estimated equivalent of 2½ man-years. At that time the reaction of the executive department was that such a report would be impossible to achieve and, if achieved, unnecessary.

A year later the Director of OCDM reported to the House Committee on Interstate and Foreign Commerce, when it was considering the Senate-approved resolution, that he favored the establishment of the Commission but wished to see it encompass a thorough study of the problems concerning frequency allocation and of the utilization of spectrum space, not only by the Federal Government but by all private users as well. These suggestions were incorporated into the bill as it was reported by the House Committee on Interstate and Foreign Commerce.

Now, in 1959 the chairman of the Committee on Interstate and Foreign Commerce has proposed that a subcommittee of that group study the utilization of those areas of the radio frequency spectrum which are assigned to the Federal Government. I believe this is a worthwhile endeavor and I hope that the subcommittee will make such an investigation. I believe this study can logically be carried on by the legislative branch; my only hesitancy has been would they have the time and opportunity to give to such a large-scale undertaking in addition to their many other duties.

The President, through the Director of OCDM, has suggested a new proposal to establish a Commission. The administration proposal requests legislative authority for a five-man Commission, appointed by the President, which would study the entire field of frequency allocations, the methods for making allocations, utilization of allocations, and would propose sweeping changes in the management and control of spectrum problems. This seems to me a full reversal of the opinions held by the executive branch 2 years ago, when I first sponsored legislation on this subject.

I still feel that a study is necessary. My central interest has been and still is utilization. I would like to see a thorough and impartial study of spectrum utiliaztion before attempts are made to change the entire structure of spectrum allocation and control. I believe that the proposal of Representative HARRIS for a subcommittee study is of more immediate value than the Commission proposal as it was delivered to Congress. Or, if the Commission proposal were amended back to the form of the Potter-Bray resolution which was before us last year, which provided for legislative selection of some commissioners and which directed a study of the utilization of the spectrum reserved for Government use, then I would support it wholeheartedly. To have this proposal before the Committee on Interstate and Foreign Commerce I have introduced this measure again.

It provides that a Commission of five members, not officers or employees of the Federal Government, be established to investigate the utilization of the radio and television frequencies allocated to the agencies and instrumentalities of the Federal Government. Two of the Commissioners would be appointed by the President, one by the President of the Senate, one by the Speaker, and one by the Chairman of the Federal Communications Commission.

I am pleased to see the increasing interest in this problem evinced in both the executive and legislative branch. Whereas 2 years ago it was difficult to get support for a study commission, it now appears we might have both a legislative and an executive study of spectrum use. Spectrum problems are likely to become more acute as time goes on. The minimum requirements for solving these problems is understanding and impartial knowledge and analysis. To the extent that these studies can contribute in laying such a foundation, these are eminently worthwhile.

## Study Indicates Civil Service Needs New Look

EXTENSION OF REMARKS
OF
## HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. THOMAS. Mr. Speaker, under leave to extend my remarks I include therein an article by Jerry Kluttz, dealing with the Civil Service Commission, which appeared in the March 8 edition of the Washington Post.

I commend this article to the careful consideration of my colleagues. Unfortunately, the Civil Service Commission has gone downhill considerably during the last 2 or 3 years. I do hope the future holds a brighter prospect for its improvement:

STUDY INDICATES CIVIL SERVICE NEEDS NEW LOOK

(By Jerry Kluttz)

The Civil Service Commission has a new Chairman in career executive Roger W. Jones, and there seems to be a growing number of thoughtful people who feel it should also have a new character.

Paul P. Van Riper, the Cornell University professor, has concluded that the civil service system and the Pendleton Act on which it is based are becoming obsolete. In his weighty study, "The History of the U.S. Civil Service," the professor says a new forward-looking theory of public administration is long overdue.

In Van Riper's opinion, the system is slowly strangling on its own red tape, controls, and regulations in the name of justice, security, and fair play for all Federal employees. This overemphasis on job rights, he says, is "wreaking havoc with flexibility, administrative discretion, decentralization, and ultimately the individual employee." Continued he:

"It would seem that the Pendleton Act has carried with it the seeds of its own potential destruction. As the vehicle for a useful and efficient administrative device it will soon be obsolete, even a barrier to progress, if action along the lines suggested above is not taken soon. Like the spoils system it replaced, the civil service law of 1883 has, after 76 years, become a conservative institution.

"Now it is protective, not of business, property and acquisitive economics, as the spoils system had been, but of outdated controls, restrictive and costly procedures, and another species of property right, this time relating to public office."

The way out of this dark picture is, he believes, to concentrate on strengthening Government management instead of controlling it. Most of the procedural controls wouldn't be needed, Van Riper said, under these conditions:

"When employees possess the civil rights which permit them to argue their own case with management on something like equal terms, and when management is aware of both the deep human desire for individual expression and the utility of creativeness on the part of all employees, from the top to the bottom."

Two more problems were cited by Van Riper. One is the leadership factor which has been touched on by other critics. Says Van Riper, "The civil service may, like the Army of the Potomac under Gen. George B. McClellan, be well armed, well trained and ready to go, but if there is no one to lead it and nothing clearly outlined to be done, its potentialties can hardly be fully realized."

Even consolidating personnel and line management and putting them under White House control may have distinct limits, he wrote, if firm leadership is missing.

Finally, large numbers of military personnel in the executive branch prompt Van Riper to say that ignoring the largely unexplored area of civil-military relations "courts great damage to our traditional civilian Federal service and also imperils the even more fundamental constitutional doctrine of civilian control."

Other informed leaders who feel it's time for a change include John W. Macy, Jr., former executive director of Civil Service Commission; Robert Merriam, White House assistant, and Senator Joseph S. Clark (Democrat of Pennsylvania), whose Senate subcommittee recommended putting civil ervice operating leadership under a single White House administrator.

Macy charged that the emphasis on getting and keeping top quality personnel "tends to be lost in a maze of policies, regulations, and procedures."

Merriam says the civil service system has a negative philosophy and that Civil Service Commission should discard its time-worn ideas to keep up with changes in the Federal service.

Jones himself, when he testified before the Clark subcommittee last summer, was careful not to criticize the plan to shake up the Civil Service Commission. In fact, the Budget Bureau, which he represented at the time, gave the Clark bill its left-handed endorsement.

At one time the Eisenhower administration considered modernizing Civil Service Commission. But with less than 2 years to go, it's now content to allow Civil Service Commission to continue unchanged.

This would be a timely period to have a thorough study made of the entire civil service system and what should be done to make it better able to serve the Government and its employees in the years ahead. The findings and recommendations of an objective study group could be ready for the next President and his administration.

## Fidel Castro Errs

EXTENSION OF REMARKS
OF
## HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. PORTER. Mr. Speaker, Fidel Castro is a great human being, but as a human being he errs. His decision to require retrials of the 43 Batista airmen in Santiago simply because he did not believe they should have been acquitted was wrong. The New York Times has been a friend because Castro has been an effective enemy of terror and injustice. Now the Times reproaches him.

I am glad these men have only been sentenced to prison terms. This at least gives an opportunity to Castro to ponder the implications of his act and to let the original acquittals be the final verdict.

Castro is big enough to admit a mistake. He ordered the trials held in the sports arena because he wanted the world to see that his procedures were fair and the evidence overwhelming. When he saw that a Roman spectacle resulted, he stopped the trials and ordered them held in more appropriate settings. He also ordered a retrial for the man concerned.

Castro is a lawyer, a soldier, an idealist, a politician, but also a human being. This order is a mistake his friends, both here and in Cuba, hope he will rectify very soon.

Following is the text of the editorial:

THE JUSTICE OF CUBA

There has been no news out of Cuba recently more disturbing than the refusal of Premier Fidel Castro to accept the verdict of the military court in Santiago de Cuba acquitting 43 airmen. Dr. Castro has not only ordered a retrial, but according to accounts from Cuba has made it clear that he considers the airmen guilty and wants them to be condemned.

One must hope that this was either a misunderstanding or a hasty and thoughtless gesture on the part of Premier Castro which will be corrected. The fact that the respected National Bar Association in Havana and the Bar Association of Santiago de Cuba have both protested against the Premier's action is surely proof enough that opinion everywhere has reason to feel shocked.

The airmen were accused of bombing and strafing civilians in Oriente Province during the regime of General Batista. One can argue that the bombing and strafing of one's own people in a civil war is criminal in a moral sense, but, if so, the criminals were General Batista and the officers who ordered the airmen to attack certain targets.

In any circumstances, why hold a trial at all if the accused are to be considered guilty in advance? Fidel Castro is now a statesman to whom his people look for justice. As a lawyer he knows the functions of the courts. He is surely big enough to admit an error if he makes one and this, even in the judgment of his own Cuban legal profession, is an error.

## Poison in Your Water—No. 23

EXTENSION OF REMARKS
OF
## HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. DINGELL. Mr. Speaker, an article recently appeared in the Middletown, Ohio, Journal on October 24, 1957. It was interesting to me to see that in this area thousands upon thousands of fish in the lower Miami River have been killed by pollution. Neither the source nor the cause of the pollution has been ascertained. The health authorities of the area were having great difficulty in determining what had caused the death of the fish, and this apparently is one of the reasons for vested interests opposing liberalization and expansion, not to say even the bare continuance, of the program of pollution abatement under Public Law 660 of the 84th Congress.

If our waters are polluted with municipal and industrial sewage the situation is such that those who would foul the rivers further may do so with impunity. They, accordingly, do not want

any cleanup of the waters in this once beautiful land of ours.

This article is just another reason why the enforcement features of Public Law 660 must be strengthened to the utmost and why the full amount of the appropriations, some $50 million a year, must be made available for control of the filth and dirt in our waters through grants to States and municipalities for construction of sewage-abatement works:

POLLUTION OF RIVER UNSOLVED

The source of pollution which last week killed thousands of fish in the lower Miami River has not yet been pinpointed, Earl Wallace, game protector, reported today.

Neither has the nature of the pollution been ascertained, Wallace said.

Wallace, whose territory includes four counties in the Miami Valley, said one thing appears clear:

"The source of the pollution does not seem to be north of Hamilton."

The fish, found dead on sandbars by the thousands, lay along the river in a stretch extending from a mile north of the Venice (Ross) Bridge to Hooven.

Found dead were carp, channel cats, bluegills, and minnows, he said.

Paul Shafer, chief of the pollution abatement board of the Division of Wildlife, said an analysis of samples of water, taken from various locations in the river, now is being made in Columbus, and the nature of the poisonous material may soon be learned.

E. Hjalmer Persson, acting city manager of Hamilton, noted that although industrial wastes, dumped into the river above the Hamilton Dam, have been suspected as a source of the pollution, the city itself discharges sewage into the river below the dam. He said he believes the city's waste is not a contributing factor in the pollution.

Both Hamilton and Middletown still discharge wastes into the river, pending the completion of their new sewage treatment plants.

Middletown's treatment plant is expected to be put into operation next month.

## Are We Smart Enough To Survive?

EXTENSION OF REMARKS

OF

## HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. PORTER. Mr. Speaker, Marquis Childs, eminent columnist, and the Washington Post on February 25, 1959, and February 22, 1959, offer mutual useful thoughts on the question of survival in this age of fearful weapons. I ask unanimous consent that both articles be appended:

[From the Washington Post and Times Herald, Feb. 25, 1959]

NUCLEAR TESTING DEBATE MUSHROOMS

(By Marquis Childs)

The dispute within the administration over whether to go on trying to reach an agreement with the Russians on suspending nuclear tests is at the boiling point.

While it is almost entirely hidden from public view by top-secret classification and the censor's blue pencil applied to testimony before Senator HUMPHREY's disarmament subcommittee, a high-level decision may soon be required to resolve it. Here, as in other areas, Secretary of State Dulles' grave illness has removed the authority that might have been invoked.

Reduced to simplest terms, the dispute which has deeply divided the scientific community, is over whether a detection system can be devised that will detect underground nuclear blasts. Those opposing any suspension of tests—most of the Pentagon, the Atomic Energy Commission, Edward Teller, "father of the H-bomb," and the scientists in his camp—argue that the series of nuclear tests at the Nevada Proving Grounds last fall show that no inspection system can be trusted.

But from an unimpeachable source it has been learned that scientific testimony, later stricken out of the disarmament subcommittee record by the censor, seems to undermine this argument. The two principal points were:

1. In the laboratory, without any further tests, the efficiency of nuclear weapons can be doubled. The ratio of increased efficiency could be even greater than this suggests.

2. Since the nuclear tests in Nevada last fall, designated by the name "Hardtack," detection methods, including those for underground tests, have been worked out that promise far greater effectiveness. New techniques or picking up earth waves raise the factor of assured detectability many times.

The witness who gave this testimony was Hans Bethe, one of America's leading physicists, a participant in the early work on the atomic bomb and now a professor at Cornell University. Because of Bethe's position as head of the panel of scientists that appraised Russia's test and detection system, his testimony cannot be idly dismissed.

Furthermore, what Bethe and others have testified to in secret session is that America's present development of nuclear weapons may be sufficiently far in advance of Soviet development so that a test suspension would be to America's advantage. At the very least, it would be a standoff, with neither side gaining.

Those favoring a policed and controlled inspection believe that besides curbing the deadly atomic fallout it would be a small beginning toward negotiating a check in the nuclear-armaments race.

Dulles, before his illness, was on the side of suspension—the official position of the Eisenhower administration. The danger now, in the view of those arguing for a strong U.S. position on suspension, is that the Russians themselves, wanting to continue testing, will use American foot dragging as a justification for breaking off the talks at Geneva. This is not likely to happen until after British Prime Minister Macmillan concludes his visit to Moscow.

So bitter is the division within the scientific community that some scientists fear another explosion like that which saw J. Robert Oppenheimer forced out of Government on charges of being a security risk. TELLER, whose zeal both as scientist and advocate of weapons of ever-greater destructiveness is legendary, was perhaps as responsible as any single individual for launching the drive on Oppenheimer.

Only flashes of this, like figures suddenly silhouetted against a brilliant light, are revealed to the public. Military witnesses discuss the necessity to accept 30 to 40 million casualties in the United States in a future war, but all this is censored out.

HUMPHREY has repeatedly fought the censorship, which is fourfold—Defense Department, Air Force, White House, and State Department. Nevertheless, most of the testimony falls under the censor's pencil.

Dr. James R. Killian, the President's adviser on science, has given cautious testimony favoring a test suspension. But that, too, is censored out. It is like a debate being held in almost total darkness, with only a voice heard and identified now and then. And it is a debate that can determine the future of mankind on this planet.

[From the Washington Post, Feb. 22, 1959]

GHOST OF TERROR

In these latter days of the Eisenhower administration a sort of aimless drift seems to characterize American efforts on the urgent question of arms control. There are many groups with either an honest suspicion of negotiations with the Russians or a vested interest in avoiding any sort of arms control agreement—the Pentagon and the Atomic Energy Commission among them. Nothing like the same amount of top-level attention and vigor is found on the other side of the issue.

With Harold Stassen long out of the picture and with Secretary Dulles confined to the hospital, there is almost no one in high responsibility other than the President himself who earnestly seeks agreement. Indeed, the scientists and other experts who argue for American initiative have their motives questioned and are subjected to a continuing vendetta. Powerful, almost overwhelming pressures are exerted to prevent such initiative and even to undercut proposals already made.

Arms control and adequate defense are two parts of the same problem. This newspaper believes strongly that the United States ought to be spending more money on defense in order to maintain parity with the Soviet Union, not only to defer attack but also to preserve an equal basis for negotiation. But it is not paradoxical to contend that the country ought to be devoting some significant fraction of the energy it expends on armament to the negotiations at Geneva on ending of nuclear weapon tests and the suspended parallel talks on means of preventing surprise attack.

Of course there is no assurance that even the most intensive American effort would produce a satisfactory agreement. The swaggering of Mr. Khrushchev and the Soviet recalcitrance on inspection indicate that any real meeting of minds will be incredibly difficult to attain. Nevertheless, this country has contributed to Soviet misunderstanding with the report casting doubt upon the detection system for underground tests which had already been accepted in principle. There has been no effort to make an inventory of points that might be prudently bargainable for a workable warning system against surprise attack.

Meanwhile, however, the clock ticks inexorably on. What might have been possible in effective arms control 10 years ago is no longer possible today because of the proliferation of nuclear weapons and the advent of intercontinental missiles. What is possible today probably will not be possible even 2 or 3 years hence.

For example, a defense system built upon manned bombers and cumbersome liquid-fuel missiles is subject to some degree of check with adequate inspection. But solid-fuel missiles will be readily storable underground, and they will be almost impossible to detect. It will be possible to launch them almost instantaneously without the long preparation necessary with first generation missiles.

Manned bombers which travel three times as fast as present aircraft will vastly compress the time during which missions can be called back under the fail safe system. There will be at best only a few crucial minutes in which to decide whether enemy attack is imminent. As numbers of weapons and carriers multiply, the chance of mistake and accident will grow proportionately—and a single misjudgment could set off a nuclear holocaust.

In practical terms the nuclear test discussions at Geneva are considerably less important than more substantive efforts to

control missiles and prevent surprise attack. But the talks on a nuclear test ban are the only current negotiations, and the reports that a breakdown is imminent are discouraging indeed.

The argument for a nuclear test ban is based upon three principal objectives: to reduce the danger from radioactivity in the atmosphere, to provide a check upon the production of nuclear weapons by additional nations and possibly to build more confidence for real disarmament. The fears of radioactive contamination are substantial enough (and not all the effects of past tests will be known for some years), but the second objective is of fundamental importance. The thought that the unrestrained rulers of Communist China may soon have nuclear weapons at their command is enough to fill even the men in the Kremlin with horror.

Assuredly the Soviet Union has been very sticky over such issues as the veto and whether inspectors will have freedom of movement. But there have been enough quirks in the American position to cast doubt on whether this country has done all it could to promote agreement. For example, there is good reason to believe that the interpretation placed upon the findings of the panel of seismologists about the difficulty of detecting underground tests was exaggerated. Instead of a basic change in the system, all that is required may be to increase the number of inspection stations by perhaps one-third to one-half.

The impression remains that the American course in the negotiations has fallen by default under the influence of groups which want to see a continuation of nuclear tests at any cost—and that, apart from the constructive interest shown by the Senate Disarmament Subcommittee, the whole attempt at arms control is essentially piddling. Perhaps it will yet be necessary to learn to live with terror on a permanent basis, but the prospect certainly is not one to be taken lightly. Agreement with the Russians may not be possible even with the most serious effort, but the haunting question remains whether the administration has really tried.

---

## These Firms Were in Nowise Abused—They Had $4 Million Advantage To Start

---

EXTENSION OF REMARKS

OF

### HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including two editorials which appeared in the Nashville Tennessean recently. A lot of publicity has been given the purchase of a turbogenerator by TVA from a British firm. As the editorial states, "It is problematical whether the explanation given by TVA for accepting the foreign bid" will silence the complaints, but the TVA Board's statement should set the record straight.

The editorials follow:

THESE FIRMS WERE IN NOWISE ABUSED

It is problematical whether the explanation given by TVA for accepting a foreign bid on an Alabama steamplant turbogenerator over two domestic bids will silence superprotectionist complaints. But it ought to.

Any way one figures it, the two domestic bidders had a 20 percent advantage over their British competitor at the outset. But the bids of Westinghouse Electric Corp. and General Electric Co. figured roughly 50 percent higher.

With particular effect did the TVA statement silence the well-worn cry that the higher cost of American labor put these domestic firms at a disadvantage. The cost of electrical industry labor in Great Britain is approximately 40 percent of that in this nation, but this amounted to only $1.5 million of the $6 million difference in the evaluated bids. And the British firm will have to pay about the same amount—$1.5 million—in import duty.

This labor figure applies only to the productive labor on the turbogenerator itself, of course, and does not include higher American labor costs which may be reflected in raw materials such as steel and copper.

But if the American labor disadvantage and the British tariff disadvantage cancel each other, the two American firms still had a $2.6 million beginning break, which figures about 20 percent. And that 20 percent, incidentally, was granted them by TVA in a real bend-over-backward decision.

The Buy American Act gives domestic firms a 6 percent advantage. This can be doubled when the low domestic bidder is in an area of substantial unemployment. But TVA topped both these with a generous 8 percent additional break. And this is not to mention the fact that Westinghouse and General Electric refused to accept bid stipulations, which refusal, according to TVA, would have "rendered their bids unresponsive and unacceptable even if one of them had been low bidder."

This is a case of a squawk where none was justified, and causes one to wonder how two firms which export about three times as much as is imported in their line each year can conscientiously do the squawking.

---

THEY HAD $4 MILLION ADVANTAGE TO START—BUT THE U.S. BIDS ON TVA TURBINE SOARED 50 PERCENT ABOVE THE BRITISH FIRM'S BID

(Following are excerpts from the TVA board's statement answering critics of its recent award of a turbogenerator contract to a foreign bidder.)

On February 6, 1959, TVA purchased a 500,000 kilowatt turbogenerator, to be installed at the Colbert steam plant near Tuscumbia, Ala., from C. A. Parsons & Co., Ltd., of England. The delivered price will be $12,095,800.

The purchase, made under competitive bidding procedures required by the TVA Act, was based on the following considerations:

1. The evaluated Parsons bid was more than $6 million lower than the evaluated bids of the only other bidders—Westinghouse Electric Corp. and General Electric Co.—both American firms.

2. Full compliance with the provisions of the Buy American Act and established national policy on foreign purchases.

3. A determination that Parsons is qualified, technically competent, and adequately equipped to build and deliver the turbogenerator on schedule.

4. Assurance that Parsons is able to provide promptly any repair service and replacement parts which may be necessary during the life of the machine.

Since 1951 the prices charged by domestic manufacturers of such equipment have increased by more than 50 percent, while the average wholesale price of all commodities has increased only about 5 percent.

In its invitation to bidders TVA set forth certain factors that would be taken into account in comparing bids. These included differences in escalation of prices, and willingness of the manufacturer to pay specified damages if the machine were not delivered on time.

After adjustments for efficiency and esclation, the evaluated bids compared as follows: Parsons, $13,140,700; Westinghouse, $19,453,725; General Electric, $19,673,780.

The evaluated General Electric and Westinghouse bids were thus nearly 50 percent higher than the Parsons bid.

Moreover, of the three bidders only Parsons indicated a willingness to accept a contract containing the provision specified in the invitation for payment of damages in the event of delay in delivery. General Electric and Westinghouse both took specific exception to the provision.

This exception constituted a material deviation from the terms of the invitation which rendered their bids unresponsive and unacceptable even if one of them had been a low bidder.

National policy governing purchases of foreign equipment has been established by Congress in the Buy American Act and by the President, in Executive Order 10582 of December 17, 1954, prescribing the manner in which all Federal agencies shall apply the Buy American Act. The act provides generally for purchase of domestic articles, materials, and supplies, unless their cost is determined to be "unreasonable" as compared to foreign goods. The Executive order provides that ordinarily the "offered price of materials of domestic origin shall be deemed to be unreasonable" and purchase shall be made from competing foreign source if the domestic price exceeds the amount of a foreign bid by more than 6 percent. If the low domestic bidder is in an area of substantial unemployment, a 12-percent differential is used in accordance with a recommendation of the Council on Foreign Economic Policy.

TVA stated in its invitation for bids on the 500,000-kilowatt turbogenerator that it would accept the lowest bid from a U.S. manufacturer if it did not exceed the lowest foreign bid by more than 20 percent.

This price advantage given to U.S. manufacturers was in addition to the import duty which would have to be paid by the foreign manufacturer.

The import duty which will be paid by Parsons amounts to about $1.5 million. The additional 20-percent advantage provided for domestic manufacturers, based on Parsons' evaluated bid, was over $2.6 million. Therefore, the total price advantage enjoyed by domestic bidders as a result of these two items alone amounted to over $4 million.

One explanation which has been offered for the inability of American manufacturers to meet the foreign price competition in this field is the difference in wages paid in this country and abroad.

But comparative figures suggest the differences in labor costs would be in the neighborhood of $1.5 million, and this does not allow for any greater manufacturing efficiency in the larger U.S. plants of General Electric and Westinghouse.

This computed difference is less than half the price advantage provided for domestic manufacturers.

Economical operation of the TVA power system, to which the saving of more than $6 million contributes, is important in the national defense budget, since half of the power from the TVA system goes to Federal defense installations.

In addition, the saving of over $6 million affects TVA's ability to provide low-cost power to farms, homes, and industrial concerns within its power service area. The availability of ample power at the lowest cost stimulates industrial employment, and enables the home consumers of this power to continue to provide the best market in the Nation for electrical appliances, of which General Electric and Westinghouse are leading suppliers.

# *Daily Digest*

## HIGHLIGHTS

Senate took up authorized appropriations for National Aeronautics and Space Administration.

# Senate

## *Chamber Action*

*Routine Proceedings, pages 3133–3159*

**Bills Introduced:** 33 bills and 8 resolutions were introduced, as follows: S. 1315–1347; S.J. Res. 69–74; S. Con. Res. 14; and S. Res. 91. Pages 3145–3146

**Bills Reported:** Reports were made as follows:

S. 243, 328, 330, 331, 332, 624, 633, 869, 459, 460, 327, and 425, private bills (S. Repts. 84–95);

H.R. 2260, to extend until July 1, 1963, the induction provisions of the Universal Military Training and Service Act, and for other purposes, with amendments (S. Rept. 96);

Report of the Committee on the Judiciary entitled "Patents, Trademarks, and Copyrights" (S. Rept. 97);

Report entitled "1959 Joint Economic Committee Report," with minority, supplemental, and additional views (S. Rept. 98);

S. Res. 91, providing $60,000 for Subcommittee on Improvements in Judicial Machinery of the Committee on the Judiciary to make a study of Federal judicial system (no written report); and

S. Con. Res. 14, providing for ceremonies in the placement temporarily in the Capitol Rotunda of statue of the late Joseph Ward, of South Dakota (no written report). Page 3141

**Bills Rereferred:** By unanimous consent, Committee on Armed Services was discharged from further consideration of the following two bills, which were then rereferred to Committee on Finance: S. 723, to amend title 38 of U.S. Code (codification of veterans' benefits) respecting amounts payable under Servicemen's Indemnity Act; and S. 911, relating to circumstances under which former members of armed services may be paid pension by Veterans' Administration.

Committee on Armed Services was also discharged from further consideration of S. 1165, relating to dual compensation provision in the Economy Act of 1932, and the bill was then rereferred to Committee on Post Office and Civil Service. Pages 3157–3158

**Legislative Program:** Majority leader announced that it is the intention of the Senate to take the same action contemplated by the House in recessing from Thursday, March 26, until Tuesday, April 7, but it is hoped that the hereinafter listed bills may be considered before the Senate takes such an Easter recess: S. 1096, authorized appropriations for NASA (already reported); H.R. 2260, extension of draft (ordered reported today); S. 50, Hawaiian statehood (already reported; it is hoped that by Wednesday of this week, following action on NASA appropriation authorization and draft extension on tomorrow, Senate may begin consideration of this bill); S. 726, more expeditious enforcement of cease-and-desist orders under Clayton Act (already reported); S. 12, educational TV bill (already reported); S. 722, area redevelopment (expected to be reported this week with minority reports filed probably by middle of next week); S. 465 or S. 522, additional judge for D.C. juvenile court; S. 643, collection of taxes in D.C.; S. 644, school census in D.C.; S. 645, amend D.C. Removal of Dangerous Buildings Act; S. 745, amend D.C. Condemnation of Unsanitary Buildings Act; S. 4245, taxation of life insurance companies; S.1094, respecting International Monetary Fund and World Bank (very high priority); S. 747, Illinois surplus property; S. 422, prenotification of mergers; S.505, labor reform (to be reported on earliest possible date); S.J. Res. 41, International Medical Research Institute; and S. 226, amend Railroad Retirement Act.

In response to an inquiry the majority leader stated that it cannot be predicted accurately when the farm bill will be ready for consideration, but when it is it will receive the highest priority. Pages 3160–3161, 3210

**National Aeronautics and Space Administration:** Senate made its unfinished business S. 1096, fiscal 1959 supplemental authorizations of appropriations for the National Aeronautics and Space Administration. It was announced that a yea-and-nay vote will be had on passage of bill. Page 3200

**Confirmations:** The following nominations were confirmed: James W. Riddleberger, of Virginia, to be Director of ICA, Department of State; numerous diplomatic and Foreign Service appointments; and three postmasters. Pages 3213–3216

## The Need To Know

EXTENSION OF REMARKS
OF
## HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

*Tuesday, March 10, 1959*

Mr. HUMPHREY. Mr. President, it was my privilege to speak at a banquet held in connection with the Northwestern University Owen L. Coon Memorial Debate Tournament at Evanston, Ill., on February 13, 1959. On this occasion I was honored by receiving the Speaker of the Year award as presented by the Northwestern University debate squad.

I ask unanimous consent, Mr. President, that the speech which I delivered at this banquet be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE NEED TO KNOW

(Excerpts from address prepared for delivery by Senator HUBERT H. HUMPHREY, Democrat of Minnesota, upon receiving Speaker of the Year Award, at national debate banquet, Northwestern University, Evanston, Ill., February 13, 1959)

I am deeply grateful for the award you have bestowed upon me tonight.

To be cited as a person who has, in your opinion, done a commendable job to stimulate discussion and thought on current public issues is indeed a great honor. It is the more so because it is presented by a group which has so much experience and talent in the art of public discussion and debate.

Your award places me in the position of having earned a reputation which I must continue to deserve. But since you have presented me with this citation it is fitting that I use the occasion to speak briefly on the importance of discussion and debate, and on the essentiality of having the necessary information on those subjects chosen for discussion.

DEBATE ESSENTIAL TO THE DEMOCRATIC PROCESS

It is axiomatic that without lively discussion of current public issues, our political system—with its inestimable democratic process—would not survive. It would atrophy through lack of an essential ingredient in its diet, public discussion and debate.

* * * * *

Public debate and discussion, although imperative if our society is to survive and retain its vitality, must also have substance. If debate and discussion mean an exchange of ignorance, or prejudice, then certainly our people will be fooled into approving policies, and our legislators will be misled into passing laws, which are wrong from the standpoint of our national security and the well-being of our citizens.

On domestic matters, reliable information can and does emanate from a variety of sources. Our universities, our research institutions, our inquiring press, and the well-informed voter all make priceless contributions to the evaluation of proposed solutions to problems facing the body politic.

On the foreign front, however, our store of reliable information is sometimes more limited.

I do not mean that private institutions and private citizens do not and cannot make a contribution in the field of foreign policy. They can and they must. But on certain aspects of our national security, the information that is necessary to have for making decisions and rendering judgments is contained within the executive branch of our Government.

Let me cite an example which is very familiar to you, the problem of controlling and reducing armaments, and particularly the question of the prohibition of the further development of nuclear weapons.

You have been debating this question for the past several months. In order to prepare your cases, you have needed information. Without knowing what your various sources were, I am willing to bet that many, if not most, came from hearings and studies held and conducted by our Senate Subcommittee on Disarmament. Or, if they did not come directly from the subcommittee, many of your sources were stimulated as a result of the subcommittee's work.

LACK OF INFORMATION ON THE DETECTION OF NUCLEAR TESTS

Last year it took us literally months to find people in the executive branch of the Government who were willing and prepared to discuss the problem of the detection of nuclear weapons tests. Once we had some knowledge of what was involved in the detection problem, we could go outside the Government for additional views. But basically, we had to start with information that only the executive branch of the Government could supply. Until the Government agencies involved could be persuaded to release more information, intelligent discussion of the control and inspection aspects of prohibiting nuclear weapons production and stopping nuclear weapons tests could not progress.

But there is still a great deal of information that is classified on this matter, and some of it for reasons that are difficult to understand.

The Disarmament Subcommittee has been holding hearings the past couple of weeks on many aspects of the disarmament question. Many of these hearings the subcommittee felt required to hold in executive session. The reason for this was only so that the executive officers could speak frankly before the subcommittee. An executive session means that no witness can refuse to speak or discuss a matter on grounds that the matter is classified. However, the subcommittee requested each witness to go over his testimony carefully so that the maximum portion of it could be made public, and thus contribute to the public's understanding of the issues involved.

CONTINUED GOVERNMENT CLASSIFICATION OF ARMS CONTROL DATA

But getting information that has been presented in executive session released to the public is a frustrating and time-consuming job.

Le me give you some examples, all of which have come out of my recent experience with the Disarmament Subcommittee hearings. * * *

QUESTIONABLE WITHHOLDING OF INFORMATION

*Weapons information*

Case No. 1: Information relating to the weight of atomic weapons relative to their yield, their power, is classified. This, I think you will agree, is clearly sensitive. I have no quarrel with this type of classification.

*Disagreement among executive agencies*

Case No. 2: A private witness who has been serving the Government in a specific capacity makes recommendations to the executive branch regarding future policies on the relationship of disarmament matters to the prevention of surprise attack. These recommendations are agreed to by one agency, but may be opposed by another agency and, therefore, the recommendations are classified.

This case I would call highly questionable. It is understandable that the executive branch prefers to coordinate policy and reach agreement with all agencies concerned before a given policy is stated to the public. But such an attitude assumes that the public should not be privy to the formulation of policy, that the public should only know of policy after it has been set and determined.

It is reasonable to wait for policies to be coordinated among the various agencies of the Government if eventually a decision is made which the public can then discuss and debate. But what we are witnessing today is a Government in which decisions are not being made. There is a lack of leadership at the top to resolve the differences of opinion among the various executive agencies.

Oh, yes, I am aware that this is somewhat a partisan remark.

But I would be dishonest if I tried to gloss over this problem. It's a fact. I can understand that the Department of Defense, the Department of State, and the Atomic Energy Commission as well as other agencies in the Government have different views on such a question as to whether the United States should attempt to negotiate with the Soviet Union on questions of armaments control.

These differences of opinion are legitimate.

But, if our Government is to be a positive force in this world, if our national security is to be preserved, if we are to earn the respect and confidence of the peoples of other nations, and if we are to know what kind of policies we should follow in dealing with the Soviet Union and other countries of the Soviet bloc, then these differences of opinion must be resolved. And they must be resolved within a reasonable period of time.

* * * * *

SEISMOLOGICAL RESEARCH

Case No. 3: Scientific research is now going on regarding the study of the earth, how to distinguish earthquakes from nuclear explosions, and how to perfect instruments to identify earthquakes and explosions. This research is still classified. I fail to comprehend why the nature of the research is withheld. The research does not deal with weapons; it deals with seismology. We are told that if instruments are placed deep in the earth, this may be an excellent means of detecting and identifying nuclear explosions and earthquakes. But you cannot be told how the experiments will be conducted, where they will be conducted, who is responsible for carrying on the research, and when it is ex-

pected to be completed. Yet, the experiments would have great interest for seismologists the world over, and even more important at this particular time, the results could have a significant impact on negotiations now underway in Geneva for a controlled suspension of nuclear weapons tests.

*Case of Executive privilege*

Case No. 4: Certain portions of testimony are deleted on the ground that the witness is a consultant to an advisory body to the President and, therefore, the information should not be given out. Not only is it contended that this is privileged information, but it is contended that since the testimony of the witness may conflict with the views of another executive agency, that this matter should be left to be ironed out within the executive branch of the Government.

What this amounts to is that a regular executive department can air its views in public, even if these views conflict with declared public policy, but a consultant to a Presidential advisory body cannot make some of his views public, even if they agree with declared executive policy. Now this is a strange situation. Let me be a little more explicit.

The stated policy of the Government at the moment is that we shall try to reach agreement with the Soviet Union on the discontinuance of nuclear weapons tests, provided an effective control and inspection system is included in the agreement.

The Department of Defense and the Atomic Energy Commission question the advisability of this policy, and say so publicly.

However, all the private evidence is that the President's Science Advisory Committee, headed by Dr. James R. Killian, formerly head of Massachusetts Institute of Technology, approves the policy.

Yet, neither Killian nor any of the members of the Committee can publicly say they agree with the policy if their statements imply they are speaking as a member of the Committee.

So what we have is a policy, the defenders of which are gagged and those who oppose it have a relatively free hand in expressing their opposition.

All I can say is that this is a rather peculiar way to run a government.

* * * * *

Before I leave this point, I wish to stress I do not disagree with the right of the President to have advisers who have a confidential role. But this prerogative can be carried too far, so far that whole segments of informed opinion are constantly being bottled up. They are stored away and saved for the infighting of the executive branch but the benefit of their views and wisdom are hidden from the public.

Dr. Killian and his Science Advisory Committee is not the only group which has been sheltered from congressional and public inquiry. When Mr. Stassen was Disarmement Adviser to the President, all of his work and the studies conducted for him, were classified under the label of Executive privilege.

When Clarence Randall was the President's adviser on foreign trade, he was prohibited from testifying before Congress because of his role as Presidential adviser.

Nelson Rockefeller, when he was advising the President on matters of psychological warfare, could not tell the public what his views were and that they were not being accepted.

William Foster, as able and conscientious a public servant as one can find, served as vice chairman of the famous Gaither report on our national defense. The Gaither report was completely classified, even from Members of Congress. Mr. Foster, it is reported, felt so strongly about his views that he wrote a book, but even this was labeled secret by the White House. Mr. Foster is a patient man, far more than I would be under such circumstances.

As an illustration of a recent success we have had in getting executive witnesses to declassify testimony which they had labeled "classified" when they first edited it, let me cite our experience with the Army in regard to the testimony of Gen. Maxwell Taylor, the Army Chief of Staff. On the first time through the Army's security office, we were told that certain portions of the general's testimony could not be released. Actually this was only a small portion of the entire record of the hearing. However, it seemed to us that what the Army had red-penciled was in many cases the result of over-caution rather than of genuine security concern and we challenged them on it.

The Army security office reviewed it again. On the second round they restored over 90 percent of what they had taken out the first time. It would be of interest to you I am sure to have an idea of the kind of thing they restored and the sort of data they decided just could not get a declassified stamp. Among the passages they finally declassified were those containing general discussions of new nuclear weapons development and the tactical uses of these weapons. They also put back statements the general had made on the necessity of improving our nonatomic or conventional weapons capabilities if a test ban should go in effect, general information on the fabrication of nuclear weapons, expressions of opinion regarding the reliability of agreements with the U.S.S.R., views on the psychological impact of a nuclear test suspension on people around the world, and the effects of nuclear fallout. They retained a classified stamp, however, on data specifically dealing with dimensions and yields of nuclear weapons, on specific details regarding fabrication of weapons, statements regarding our intelligence capabilities, and data on the Sagebrush maneuvers in Louisiana several years ago. In this case our declassification campaign was a marked success.

*Validity of Soviet positions*

Case No. 5: Another type of information that the Government classified in our recent hearings has to do with the validity of arguments presented by the Soviet Union. A Government witness in the course of his testimony suggested that the Soviet Union possibly had a valid objection to one of our arguments, but the executive branch decided this ought to be censored.

Now, there is considerable merit in not conceding too many points to your opponent in the course of a debate or in the course of delicate negotiations. On the other hand, if the American people are constantly fed the line that every Soviet proposal is by definition full of evil for us or that every Soviet fear is "a trumped up Communist plot," then how shall we ever judge the genuine points of view of that nation and its people?

I am not suggesting here that the Soviet Union is a country to be trusted.

I am suggesting, however, that occasionally the Soviet leaders have made arguments that are legitimate from its security interests, and that it is to the interests of the American people to be aware of what those points of view are. I think we should be sufficiently mature to allow witnesses to release remarks which indicate that a particular Soviet position has some merit, and ought to be studied and given some consideration.

* * * * *

DIRECTION OF AMERICAN FOREIGN AND DEFENSE POLICIES

* * * * *

Since about the time of the Korean war, in 1950, our foreign policy took the form of building national defense so that when the time came, we could negotiate from a position of strength. This was the theme, adopted in the late forties or early fifties, and carried on until the present.

I have no objection to this principle—negotiating from positions of strength. In fact, I would say that the principle is a fundamental prerequisite to any kind of negotiation.

But I doubt that we have followed and abided by this concept. We have allowed certain aspects of our national defense to be weakened considerably, and we have forgotten that we wanted to achieve positions of strength so that we could engage in meaningful negotiations.

On the one hand, we have acted as though we could engage in some unilateral disarmament at home, directed by the Bureau of the Budget and motivated by a desire to save money at the expense of national security.

And on the other hand, we have forgotten that the positions of strength we wanted to build were to be used as the basis for serious bargaining and negotiation.

We have spent billions and billions of dollars for weapons of destruction and annihilation.

We have put most of our knowledge and efforts in the nuclear weapons field into weapons of the very large yield.

By comparison, we are spending all too little on problems of arms control. We are spending very little on the problem of defense against probing actions of the Soviet Union, and on the problem of limited military conflicts and the war of economic competition.

We have also used the vast majority of our foreign aid expenditures to supply other countries with military hardware.

We have joined with as many nations as we could in signing military defense pacts.

We have responded to an increasing degree to the problem of competition from foreign markets by establishing import quotas and raising tariffs. We have accumulated large amounts of foreign currencies through the sale of surplus agricultural products, currencies which now sit idle and which day by day depreciate in value and are not used for productive projects.

These are some of the things we are doing in the field of defense and foreign policy. I submit that the direction of this approach is wrong, misguided, and lacking in vision and creative leadership.

POSITIONS OF MILITARY, POLITICAL, ECONOMIC STRENGTH LACKING

The direction of our policies is not making for positions of strength. They are going in the direction of retrenchment.

Too often we appear to be saying, that we, the richest nation the world has ever known, cannot afford to spend the money to have a balanced defense establishment. Too frequently we give the impression that we dare not sit down at the bargaining table with the Soviet Union because our representatives cannot bargain as effectively as the Soviets.

Too many times do we seem to be saying that the great American market cannot take the competition of foreign made goods.

And, finally, too often does our answer to the problem of need abroad seem to be in terms of military equipment—and not enough in terms of the implements for economic well being and the expansion of opportunities for human growth and happiness.

But I do not propose to dwell on the inadequacies of our policies. It is more important to stress what we should be doing, what we can be working for as citizens of a free government and a rich and prosperous society.

PROGRAM FOR THE FUTURE

1. We need to have a much more balanced defense establishment than we now have. Tthe threats to security and peace today exist in such areas as the island of

freedom of Berlin, Communist subversion and infiltration in the Middle East, and probing actions along the periphery of Asia. If we do not have the know-how, the fortitude, and the equipment to face these situations, then the Soviet bloc will gradually nibble away the free world, bit by bit.

2. We must engage in serious study and preparation for the purpose of bargaining with the Soviet Union on all areas—exchange of persons, joint participation of international health activities, solution of the division of Europe, trade in goods, and the control of armaments. We should not be fearful of negotiating, but whenever we negotiate we should know what we are after, and we must be well prepared and select the best of negotiators to represent us. In none of these areas should we expect quick results.

3. We should focus more on the potential of the economic and political power of the newly developing countries of Asia, Africa, and Latin America. In this power-conscious world we have tended to look primarily where power is today and not enough where power may be tomorrow. * * *

4. The direction of our foreign economic policy should be one of expansion, not one of caution and retrenchment. As we have grown rich and wealthy in our economic system, we have lost to some extent the spirit of competition and the spirit of risk in conducting our economic affairs. If we are to promote and extend ideas of a free economy, I believe we must look outward, not inward. But we canont expand and strengthen international trade and international economic development without meeting some competition from abroad and without subjecting our capital to some risk.

5. The focus of our cultural policy should be one of opening up our shores for the people of all nations to observe the operation of our political, economic, and social system.

We know there are many aspects of our way of life that require vast improvement. But what is and can be exciting and challenging about our free society is that if we have the vision, the will, and the leadership, the sores and the defects can be removed.

Our society is constantly changing, and it is the art of statesmanship and politics to have this change be for the good and not the bad.

I could go on at considerable length elaborating on these points and adding more.

But on all these maters, much more public discussion and debate are needed.

You have done a masterful job in weighing the pros and cons and the various courses of action on one of the crucial issues that face us, that of the direction of our arms control program and policies.

I cannot help but have the feeling that whatever views you come out with on this issue, the country will be better served as a result.

I am pleased to have had a small part in your deliberations tonight, and I can only hope that through the deliberations of you and your fellow students, U.S. policy will evolve to serve the Nation in the cause of a better and more peaceful future for all of us.

## Our Schools Must Be Helped

EXTENSION OF REMARKS

OF

## HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

*Tuesday, March 10, 1959*

Mr. ENGLE. Mr. President, Congress failed last year to enact the Murray-Metcalf "Federal aid to education" bill, a bill which would have gone a long way toward eliminating the serious inadequacies in our elementary and secondary schools. The Senator from Montana [Mr. MURRAY] reintroduced his bill this year, and I joined with a number of other Senators in cosponsoring it.

Today we are involved in a headlong race for supremacy in missiles and satellites, and our education problem has gone from the critical to the crucial stage. If we do not lend a hand to our schools, we will be shirking our responsibilities to our children and jeopardizing the very security of this Nation. On March 6 I submitted a statement to the Subcommittee on Education in support of Senator MURRAY's bill. I ask unanimous consent to have the statement printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR CLAIR ENGLE, DEMOCRAT OF CALIFORNIA, BEFORE THE SUBCOMMITTEE ON EDUCATION OF THE SENATE COMMITTEE ON LABOR AND PUBLIC WELFARE ON PROPOSALS FOR FEDERAL AID TO EDUCATION, MARCH 6, 1959

Mr. Chairman, I appreciate this opportunity to present to the committee my views on Senate bill 2, the Murray bill, which should alleviate our critical shortage of classrooms and remedy the inadequacies in the salaries of our teachers. As a cosponsor of this legislation, I am anxious to go on record as being wholeheartedly in support of the effort to wipe out substandard schools and substandard education.

Presenting the case for Federal aid to education has been made somewhat easier these days. After the Russians launched Sputnik I, the people of the United States were made aware for the first time that the scientific education of this country was not what it should be. This also reflected on the state of education in general. The continued manifestations of Russia's success in the field of missiles and satellites has done as much to argue the case than has the compelling testimony of our legislators and educators. It is indeed regrettable that it has taken an affront to our competitive spirit to arouse us to a sense of urgency about a situation that has existed for some time.

The resistance of the vocal opponents of Federal aid to education is beginning to break down. The passage of the Defense Education Act in the second session of the 85th Congress, and the great success of the programs created by that act, has done much to undermine opposition. There are still features of the legislative proposals that are vigorously objected to, but the major objection now seems to be the extent of the Federal obligation to provide assistance.

With regard to general objections to S. 2, the case has been built on the three-pronged thesis that such aid destroys local initiative; that it results in Federal control over the school operation; and that it places on the shoulders of the whole Nation a tax burden that should be carried by the respective State and local governments.

These arguments have been thoroughly penetrated and shattered. Testimony before this committee by responsible educators has exposed the first two themes as pure myths. The facts clearly show that State and local governments receiving Federal assistance for education have strained themselves to a greater degree than has the Federal Government. The facts show that school districts receiving such aid are not beholden to their benefactor in making up their curriculums, in choosing their teachers, in setting up their operation. The evidence plainly shows that the schools are free to run their own shops, that they are free to stick to the three R's or to encourage handicrafts or homemaking. We need no better proof that there is no validity to the argument of Federal intervention than to take a look at the educational program in federally impacted areas under Public Law 874. The tax argument offered by the opponents of Federal aid to education is perhaps the most illogical of the three. It indicates, first of all, a refusal to recognize the severe limitations of the local tax structure. And, it indicates a failure to recognize that the effects of education cut across State and local boundaries. Certainly, with the tremendous interstate movement of the American people, the educational achievements in each State are the concern of all the States. And, certainly, in the face of Russia's startling success in satellites and missiles, we cannot afford to take the short-sighted attitude reflected in this argument.

Questions of a budgetary nature must be resolved before we can come to grips with the education problem. With rising concern over the size of the national debt and a corresponding effort to maintain a balanced budget, we must make hard decisions on how to finance the level of school support we believe essential. Of one thing I am certain—that the American economy can afford to invest a higher percentage of the gross national product in education than it does at the present time. And this is an investment which should pay the highest dividends in terms of future national income as well as national security. For this reason, our major efforts should be aimed at awakening the public to a sense of urgency about the situation. These efforts should be aimed at awakening the American people and our legislators to a realization that time is very short if we are to preserve the American way of life. There is an appalling slackness in our public school education that must be overcome immediately if we are to keep pace in the space age. We are becoming more and more aware of the vigorous education the Soviets are giving their youngsters. But we still need to impress upon our legislators that our educational needs represent a crisis at least as worthy of financial assistance as our highway or housing or airport needs.

Just what are the dimensions of the problem? We have, first of all, a shortage of some 140,000 classrooms—resulting in the deplorable situation of 9 million children exceeding the present school capacity. (While approximately 2 million children are forced to part-time sessions because of lack of adequate classrooms, when we consider the ideal class size of 30 pupils per teacher, we have 9 million children exceeding our school capacity.) We have, next, a critical shortage of teachers. It has reached the figure of 132,000 and continues to move upward. It is superfluous for me to stress the point that this is due largely to the pitiful salaries teachers in many school districts receive. We have, in short, the situation of hundreds of thousands of children getting a part-time education, and hundreds of thousands more being cheated of effective instruction because classes are too large.

While California is doing a great deal to meet the problem locally, we still have a vital interest in the enactment of the Murray bill, S. 2. There is a great influx of people coming to California and the contribution they can make to the State's welfare depends on the level of their education. It is just as much to our interest to aid them in their home States as it would be if they were natives of California. In any event, we are one Nation, and the fate of all of us depends on the educational level maintained in the poorest States.

These are the tangibles. But there is a more insidious aspect to the problem. It is in the shocking number of teachers of substandard qualifications that our poorer com-

munities are forced to hire. This is not because they are less aggressive or less imaginative than other communities. It is because they are trapped within the narrow confines of a limited, inflexible tax structure and they must stand by helplessly as their qualified men and women turn away from the teaching profession to take jobs that will pay them a living wage.

It is a serious situation, and unless the Federal Government does something about it we stand a good chance of becoming a Nation of schools without scholars. The consequences will reach far into the future and they will be felt in the caliber of the scientists and engineers and researchers who emerge from our colleges. College graduates of high quality are, after all, not merely the product of their college training. They represent the evolvement of layer upon layer of education and training beginning in the elementary and secondary schools.

There is an answer to the situation. It lies in the realization that it is unrealistic to expect that State and local sources of revenue can maintain and build the kind of educational system we want and need for our children. It lies in the realization that the situation demands the breadth and strength and flexibility of a financial structure that only the Federal Government possesses. It lies in the realization that we cannot do the job with halfway measures. We must provide for an adequate program that makes adequate financial assistance available. If we do not accept this thesis, millions of children in this country will be cheated out of their basic rights and the harm done will be irreparable. Losses in education suffered in the formative years cannot be made up. If we allow the Federal Government to default on this responsibility we stand to risk our national economic strength, our security, our very survival.

We need, I repeat, to awaken our legislators and the American people to the urgency of the situation, and to make a concerted effort to convince them that the Murray bill now under consideration meets the two most critical problems in our public school system—the shortage of classrooms and the inadequacy of teachers' salaries.

In passing, I would like to comment on the Murray bill's provision to reduce the annual grant by the percentage by which the State's school effort is below the national average. This provision creates a formula to measure effort, and should do much to encourage States to go to the limit of their local financial abilities in meeting the challenge.

I should like to remind the committee, in closing, that in the Soviet Union there is a total commitment to education; that if our free society is to prevail we must maintain a system of education that serves us as well as the Soviet educational system serves the purposes of it social order. In short, if we are to prevail as a free society we must become as interested in launching educated men and women as we are in launching satellites.

## In Support of the Housing and Urban Renewal Bill

EXTENSION OF REMARKS
OF
### HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 10, 1959*

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include a very fine letter which I have received from the Honorable Norris Poulson, president of the U.S. Conference of Mayors, and mayor of Los Angeles, Calif.; and also by the Honorable Anthony J. Celebrezze, president of the American Municipal Association, and mayor of Cleveland, Ohio, in support of the housing and urban renewal bill recently reported out by the Committee on Banking and Currency, which letter strongly supports the passage of such bill:

U.S. CONFERENCE OF MAYORS,
AMERICAN MUNICIPAL ASSOCIATION,
*Washington, D.C., March 8, 1959.*

DEAR CONGRESSMAN: The housing and urban renewal measure recently reported by the Banking and Currency Committee deserves your support. The bill will provide local government officials with assistance indispensable to their efforts toward the eradication of blight and the renewal of the Nation's cities.

As mayors and as the authorized spokesmen of our fellow mayors throughout the Nation, we assure you that local governments have made real and substantial efforts to meet the tremendous demand for necessary public works growing out of the unprecedented population growth of the last two decades.

This year at our direction a survey of local government renewal plans and needs was made. This survey demonstrated that local government revenues alone cannot finance this effort and that $600 million in Federal capital grants for urban renewals is needed in each of the next several years.

The bill reported by the House committee does not go as far as we believe it should, but it would encourage these local efforts by making $500 million available in urban renewal grants in each of the next 3 years. The committee bill would also assure the availability of low-rent housing which is essential to the continued success of urban renewal and other governmental improvement activities such as highways.

We believe that the committee bill is consistent with the determination of the Congress to promote prudence and thrift in the use of public funds. Careful analysis of the measure has convinced us that the committee has made every effort consistent with sound progress and true economy to keep the bill within the budgetary framework suggested by the President.

Supporting these programs at the level recommended by your Banking and Currency Committee is the best investment that can be made in the future of this country. We urge you to vote for S. 57.

Sincerely yours,

NORRIS POULSON,
*President, U.S. Conference of Mayors, Mayor of Los Angeles.*
ANTHONY J. CELEBREZZE,
*President, American Municipal Association, Mayor of Cleveland.*

## United States Is Losing to Russia in Vital Race To Harness Oceans

EXTENSION OF REMARKS
OF
### HON. HASTINGS KEITH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. KEITH. Mr. Speaker, the accent today is on research, and research is being accelerated along many diverse avenues. None, I submit, is more worthy of the interest and support of Congress than that of oceanography.

The ocean not only covers approximately three-fifths of the earth's surface—it could hold the key to the future of humanity. And we in Congress have it within our power to see that the United States is first to unlock the mysteries of the seas, and with this knowledge to work for the betterment of mankind everywhere.

The Soviet Union will be the victor in this vitally essential area of science—and military or economic defeat of the United States could result—if our country fails to regain the margin of leadership it once held in oceanographic research.

Startling and sobering in its revelations is a series of articles by Everett S. Allen, staff writer of the New Bedford (Mass.) Standard-Times. The articles were published in that newspaper last year. The urgency of their appeal for an awakening on the part of this Nation to the need for an expanded program of ocean study is heightened with the passing of time. Nearly 1 year has elapsed since Mr. Allen's reportorial voice was raised, and the opening statement of his first of 13 articles rings as ominously today as it did when first printed:

The United States is losing to the Soviet Union the biggest and most important sea battle in mankind's history—the contest to unlock the ocean's secrets for use in peace or war. Principally by default, American oceanography is surrendering the lead in a half dozen marine science fields to a Russia that is better equipped, spending more money, and able to put more capable scientists on this particular assignment.

And what of the role of Congress? Only Congress has the authority to provide the tools and manpower that are needed if this Nation is to win this most important race—a race we cannot afford to lose. And with that authority goes the responsibility for restoring the United States to its once favorable position in this field.

Experts have estimated that the present level of financial support for the marine sciences is approximately one-fourth of what is needed if this country is to prevent the Soviet Union from overtaking and surpassing the United States.

To compare the amount of money spent on sea research with that spent on space research is not to minimize the need for the latter. But a comparison of the importance of these two areas of study would indicate a disproportionate percentage of funds going into space research. It is the conviction of sea scientists that returns from the investment of additional money in oceanography would more than justify such expenditure. Now that the United States has drawn alongside the Soviets in the race for outer space, it is essential that we concentrate as well on developing to the fullest our capacity for probing the oceans.

And it is as an investment that funds for oceanography should be regarded. With our very freedom, economic and otherwise, at stake, there remains no

alternative course of action. We must step up our oceanography program.

I would like at this juncture to note approvingly the appointment by the chairman [Mr. BONNER] of the Committee on Merchant Marine and Fisheries of a special Subcommittee on Oceanography, with the gentleman from California [Mr. MILLER] as its chairman.

In announcing the appointment of this subcommittee, the gentleman from North Carolina said, in part:

Despite the importance of the oceans, our knowledge of them is small when compared with the need.

Accordingly, I have presented to each member of the Subcommittee on Oceanography a complete set of the 13-article series by Mr. Allen. I know all will find it a highly informative and useful weapon in the arsenal with which we must fight against retrogression in oceanography.

Toward achieving among Members of the Congress a broader knowledge of this subject and maximum support for an expanded sea research program, with unanimous consent, I am inserting in the Appendix of the RECORD the first article of Mr. Allen's series on "Sea Battle, 1958":

SEA BATTLE, 1958: KEY TO SURVIVAL, I—UNITED STATES IS LOSING TO RUSSIA IN VITAL RACE TO HARNESS OCEANS

(By Everett S. Allen)

The United States is losing to the Soviet Union the biggest and most important sea battle in mankind's history—the contest to unlock the ocean's secrets for use in peace or war. Principally by default, American oceanography is surrendering the lead in a half dozen marine science fields to a Russia that is better equipped, spending more money and able to put many more capable scientists on this particular assignment.

Further, since Russia is largely a landbound country, it has been suggested her primary interest in the sea might well be for aggressive purposes.

It is noteworthy in this respect that the Soviet Union's chief target in either a hot or cold war, the United States, has the largest coastline of any nation in the world.

REDS GAIN RAPIDLY

Soviet oceanography 10 years ago was provincial. Today, it is worldwide in scope and progressing rapidly. Russia has initiated a crash program in ocean study comparable to the rocket-outer space effort that produced sputnik.

For it is increasingly accepted in scientific circles that whoever controls the seas and whoever knows most about them—not only from coast to coast, but from top to bottom, as well—could conceivably control the world, the effect of airpower notwithstanding.

These are the concerted views of America's leading oceanographers, qualitatively among the world's best, who have been interviewed exclusively by the Standard-Times to find out how the United States stands in a scientific race on which the world's survival could rest. For the future depends upon the sea, which covers three-fourths of the earth's surface, and contains the answers to most of its pressing problems.

By comparison, they say, rocketry, missiles, space transport, and the like are essentially adventures in gadgetry. That is why most oceanographers, seriously concerned at the prospect of Russia establishing a long lead in the earth sciences, warn:

"Spend all of America's might and money on rockets, and you will still lose the war with Russia, whether it be cold or hot."

SEAS TO BE DECISIVE

To the degree to which the Soviets gain a lead in oceanography, the possibility of war increases. If there is war, there is sound reason to believe the seas—not the air or outer space—will be the decisive theater of military operations.

As weapon systems evolve the submarine-launched missile will prove to be the most effective, for it will be extremely difficult to tell where it came from, and it can be lanuched close to the target, allowing little time for defense tactics. By contrast, the intercontinental ballistics missile will allow defenders several thousands miles worth of reaction time before it arrives in the target area.

The ocean also is the medium over which America must carry supplies and support to its allies if the free world is to stand. Further, in the modern concept of atomic war, the seas' depths are the most effective hiding place for concealing both offensive and defensive action.

If there is cold war only, there still remains the present struggle for balance of power in the world. Of tantamount importance in this East-West contest for alliances are the underdeveloped "have not" nations, which require such basics as food and fuel. Also torn between necessities and loyalties are many of the more developed countries, which are in pressing need of cheap power and new sources of minerals and metals when petering-out mines are exhausted.

OCEAN HOLDS KEYS

In the ocean lies the answer to all of these things, fundamentally important in peace, critical in war. Either Russia or the United States will find the keys to these secrets, since no other nation is making anything like the deepwater scientific effort of these two—and the Soviet effort is several times that of America.

The nation that does score an eventual breakthrough on any of these principal marine fronts will be in a greatly enhanced position, through prestige, politics, and persuasion, to tip the worldwide balance of power.

As an example, which way would India's hungry millions look for leadership, East or West, if Russia first found a practical means of providing limitless quantities of fish protein for 1½ cents a pound or less to Nehru's money-poor country? Protein is a principal lack of the Indian diet, and this question will be answered one day.

FUNDAMENTAL PROBLEMS

Here are a few of the fundamental problems that oceanography and its allied sciences will help to solve, and it is the growing prospect of their solution that has caused the Soviet Union to place new emphasis on basic research in the earth sciences:

1. Dr. Edward Teller, prominent U.S. physicist, has suggested Russia might conceivably be able to halt rainfall in the United States for a 2-year period, or otherwise control its weather so that Americans possibly would be willing to surrender without a shot having been fired. An apparent major key to weather control lies in the circulation and surface action of the earth's oceans.

2. Prof. Harrison Brown, California Institute of Technology geophysicist, predicts oceans eventually will provide power in quantity because man will extract its hydrogen for fusion energy. Both British and U.S. Governments have announced initial-step laboratory successes in this direction; the goal is electrical power virtually as inexhaustible as the seas themselves.

HARNESSED SUNLIGHT

3. Dr. Clifford C. Furnas, chancellor of the University of Buffalo, says the seas eventually will give up zinc, gold, vanadium, titanium and unique liquid fuels, the latter formed by the photosynthesis of harnessed sunlight in the oceans. There is mounting interest in possible undersea oil deposits which one day might supplement diminishing petroleum supplies on land; southern California offshore wells are only surface scratchers compared with sources that might be developed.

4. Gigantic undersea mountain ranges, vast plains, submarine valleys hundreds of miles in extent, swift currents like rivers that flow across the ocean bottom at speeds up to 75 miles an hour, all of these phenomena, discovered relatively recently, point up the fact that the undersea world's contour has much in common with our own.

Militarily, there is an obvious advantage to being able to feel at home in this new world, to be able to cruise, fight and hide at depths up to 2½ miles, over an extended period. The United States, and undoubtedly Russia as well, already has started making hydrographic charts of the undersea such as now are available for surface navigation.

5. Earth populations are soaring; millions already are chronically hungry. The sea will become the principal source of the additional foods mankind is going to need.

THREAT TO LIFE SEEN

6. Through industrial and domestic uses of fuel, principally coal, man has injected into the atmosphere increasing amounts of carbon dioxide since 1900. This may be jeopardizing his way of life, if not his existence, and the oceans apparently contain the first clue to this possibly grim riddle.

7. The shortest East-West distance in a hot war is over the pole, across the Arctic wastes. Adm. Donald B. MacMillan, and other Arctic and military experts long have predicted that if the Russians come, they will come that way. Successful Arctic offense or defense requires knowledge of this still little-known area, which is principally ice-filled ocean.

8. If it is proved that waters in the great ocean depressions do not rise to the surface in less than decades, or even hundreds of years, these depths may offer a partial solution to the problem of disposal of radioactive wastes. Europe, urgently seeking a new power source to replace diminishing coal and oil supplies, is face to face with this problem right now.

In the light of all this, America's top oceanographers watch the administration and Congress apprehensively, comparing last year's modest national budget of $6 million for basis ocean study with the billions now scheduled for missiles, rockets, and outer space effort.

FUNDS UNCERTAIN

The Navy, which relies heavily on oceanography, and would be critically dependent upon its efforts in an undersea war, has to parcel out funds to ocean scientists from year to year, usually with worry periods in between. Just prior to each contract termination, the scientists do not know whether their jobs, plans and ideas will be perpetuated or dumped into the discard.

"Why on earth can't you guarantee financial support to us over a period of 5 years, or even 2?" a pleading geophysicist asked the Government. "Contractors, grocers, anybody in business has to be able to make long-range plans.

"Suppose we work a year to put together a competent team of specialists. Then the funds are cut off, the team scatters, because its people have to find other ways to earn a living. What the team learned in its brief study is largely lost. A few months later, the Government decides it wants the work continued, and you find you can't get the team together again.

"Right now," the scientist predicted, "if the Government wanted to double its effort in oceanography, which probably should be done—it would be virtually impossible to get the people to do it.

## Talmadge Farm Plan

EXTENSION OF REMARKS
OF

## HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

*Tuesday, March 10, 1959*

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the column of Holmes Alexander commenting on the Talmadge farm plan as it appeared in the Fort Myers (Fla.) News-Press of March 2, 1959; the editorial, "Can Talmadge Bail Out U.S. Farm Program?" from the March 3, 1959, issue of the Atlanta, (Ga.) Constitution; and my letter to the Wall Street Journal which appeared in the February 26, 1959, issue of that paper.

There being no objection, the column, editorial, and letter were ordered to be printed in the RECORD, as follows:

[From the Fort Myers (Fla.) News-Press, Mar. 2, 1959]

SENATOR TALMADGE HAS A SWORD

(By Holmes Alexander)

Senator HERMAN TALMADGE, Democrat, of Georgia, has a sword (S. 306) and it might cut the Gordian knot which binds the once-proud giant—the American farmer.

As things stand today, the producer of our basic foods and fibers has been bound hand and foot with ruinous red tape. His pockets have been picked by our economic system. He stands, in a state of shame which he never earned, as the object of public ridicule and abuse.

The Talmadge bill, cited as the Agriculture Income Equalization Act of 1959 is just that—an equalizer. It suffers from its nature of being an economic leveler, but it has the virtues of leveling up, not leveling down; of junking much red tape while creating only a little bit more; of paying for production rather than for nonproduction. And while the Senator doesn't pretend to the patience and dexterity that would be required to untangle the snarls, he is offering a sharp weapon to sever the cords for good and all.

There should be no further effort at this late hour to demonstrate the need for a new farm policy. As one who believes that the farm picture has been smudged and the American farmer himself dehumanized by the overuse of statistics, this reporter refuses to rehash the oft-told figures. Suffice it to say that corporation farming draws the six-digit subsidies, while the person we call the American farmer gets the bad reputation of being a public charge. He earns less money every year. He works below minimum wages, and above maximum hours. He has no place at the collective bargaining table. He is the victim of the kind of big brother bureaucracy which could devour us all, unless soon mastered by the people.

Senator TALMADGE is not the only farmer in the upper House, but he is very likely the only one who could be called postwar. He commenced raising household crops and meat animals shortly after his 5-year hitch in the World War II Navy. Like nearly all postwar farmers, he is a part-timer, since the land will hardly yield a decent living to the individual or family producer. The Senator counts himself lucky, he tells me, if his farm makes expenses, pays taxes, and keeps a good table. A man has a better chance today at rolling dice, he adds, than at farming. The dice occasionally turn up right; farming never.

The Senator's bill is a refined Brannan plan, according to its author. It frankly provides that the Federal Government pay the difference in cash between what the farmer gets for the domestic purchase of his basic crops and what he ought to get by American standards of livelihood.

In farm legislative language, the farmer would receive 100 percent parity on his produce, but no producer would receive more than $25,000 a year. (Many corporations now receive 10 to 20 times that much.) The basic crops, with corn figures unavailable, under the Talmadge plan would yield an estimated total subsidy of $1.8 billion. But the savings to the public would be several times that amount by elimination of all Government controls and loans, all Government purchase and storage of crops, much Government personnel and property that makes up the present system.

It won't do to present the Talmadge plan as utopian or even wholly satisfactory. It would require a vast staff of paper shufflers to assign each farmer a domestic production quota and to pay to each farmer a sales price support. The farmer himself would be required to submit a bill of sale with his application for sales-price support payments. And without doubt a large crop of inspectors would be on the rolls to check the farmers, and another corps to check the inspectors.

The Talmadge plan would not bring about free enterprise, but it would allow the farmer to raise whatever he wants and sell it for whatever it brings, knowing that there is a Federal floor under the prices. Thus the farmer would be equalized under the same economic protection as the industrial worker, the metals producer, and the numerous other segments of the population.

Secretary Benson's 6-year scheme of reducing price supports and reducing acreage has a negative quality which may be at the heart of its failure. In any event, it is a discredited cause and should be abandoned. The Talmadge proposal, which had a trial flight last year, has many friends in the Senate.

[From the Atlanta (Ga.) Constitution, Mar. 3, 1959]

CAN TALMADGE BAIL OUT U.S. FARM PROGRAM?

Georgia's able commissioner of agriculture, Phil Campbell, told a television audience on the "Constitution's Press Gallery" program Sunday that Senator TALMADGE'S proposed farm legislation offers the Nation's agriculture relief from the expensive and destructive policies of the Eisenhower administration and of Secretary of Agriculture Benson.

He is not alone in his attitude. There are increasing signs of congressional revolt against continuation of a program which is destroying the small farms, drying up the Nation's export markets, and costing the taxpayers more and more every year.

Senator TALMADGE'S proposed legislation, first introduced last year, would tend to reverse the trend to bigger and bigger farm units. It would cost much less than the Benson program. Products would be sold on a free market at home and abroad with farmers receiving parity payments on certain basic commodities consumed in this country. There would be a limit on such subsidy payments.

Such a program would tend to curb inflation in farm prices and restore competitive conditions in world markets. It would reduce Government-held subsidies which have reached the astronomical total of $9 billion costing a billion and a quarter a year for storage alone. Reportedly, Senator HUBERT HUMPHREY, of Minnesota; Senator SYMINGTON, of Missouri; and Senator PROXMIRE, of Wisconsin; are working with the Georgian to iron out further details of the proposed program. While it may not pass at this session of Congress, it forms the outline of what very likely will become the Nation's future farm program.

Supporting the Talmadge plan is the obvious fact that farmers must have some sort of protection in a protected economy to maintain a competitive position with other groups.

It is quite plain the Benson program has been a failure. There is need for a change and a version of the Talmadge plan offers the opportunity.

[From the Wall Street Journal, Feb. 26, 1959]

TALMADGE FARM PLAN

EDITOR, THE WALL STREET JOURNAL:

In your editorial of February 3, "And a 'New' Farm Plan," your characterization of the farm bill which I am sponsoring in the 86th Congress as a new version of the Brannan plan is not supported by the facts of the matter.

If it is the intent of that language to equate the compensatory payment feature of my idea with the so-called Brannan plan, by the same logic it also could be called the Eisenhower plan, the Benson plan, or the Seaton plan because officials by those names have advocated a similar application of the compensatory payment idea to growers of wool and sugar and producers of metal.

The purpose of the Talmadge farm plan is simply to put American farming back on a free enterprise basis again with protection equivalent to that received by labor through organized bargaining and the minimum wage, and industry through the tariff and various Government contracts and subsidies. It attempts realistically to take into account that with all other segments of the American economy being dependent to some degree upon Government support and protection, the farmer, cannot be left as the only person without a legislative guarantee of his proportionate share of the national purchasing power.

The only way in which the American agricultural economy can be restored to its rightful place in the national economy is through removing the Federal Government from the business of buying, selling, storing, and transporting agricultural commodities and putting American agricultural commodities back on the world markets at competitive prices. It would be ideal if that could be achieved by repealing all farm laws and letting agricultural prices seek their own level, but to do so would place the American standard of living, which is the world's highest, in competition with living standards in other countries which are mere fractions of ours.

Therefore, it logically follows that the only sensible and economically alternative compatible with our American concept of free enterprise economy is to support the American standard of living for farmers on that portion of their output consumed in this country and let the law of supply and demand come into play with respect to the remainder.

I do not share the pessimistic view of some that the American farmer cannot conduct his operations responsibly without Government planting and marketing controls. I am convinced that, given an opportunity, the American farmer will prove that he can intelligently regulate his production and marketing in accordance with natural economic laws once the responsibility for making his own decisions with respect to them is returned to him.

The farmer is the backbone of this Nation's economy. To give him less consideration than is accorded all others will create a

double economic standard which canont help but have the eventual result of adversely affecting every phase of our economy.

HERMAN E. TALMADGE,
*U.S. Senate.*

WASHINGTON, D.C.

## Fitness and the Future

EXTENSION OF REMARKS
OF
## HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
*Tuesday, March 10, 1959*

Mr. RANDOLPH. Mr. President, for years I have maintained a lively interest in the fitness of our youth. In this field I have counted it a privilege to have often associated with a long-time friend who is widely recognized as a persevering worker for, and authority on, youth fitness. I refer to the Honorable Shane MacCarthy, executive director of the President's Council on Youth Fitness.

At the recent annual meeting of the President's Citizens Advisory Committee with the President's Council on Youth Fitness, Mr. MacCarthy delivered the keynote address on the subject: "Fitness and the Future."

Mr. MacCarthy has been working closely with groups and individuals in my home State of West Virginia in the youth fitness movement. He has afforded us a better understanding of the purposes and objectives of the President's Council on Youth Fitness, having appropriately termed it "a catalytic agent attempting to awaken our Nation to the bad effects of soft living habits." And he has made it clear, too, that fitness of human beings, embracing mental, emotional, social, spiritual, and physical components, is an item which concerns itself within the human fabric of our democratic society.

Mr. President, the address by Mr. MacCarthy, "Fitness and the Future," is an excellent explanation of the policies and objectives of the President's Council on Youth Fitness, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FITNESS AND THE FUTURE

The issue which brings us together for 2 brief days may well influence the strength of our Nation for centuries to come. For, the concern which gave rise to the establishment of the President's Council on Youth Fitness is raising the very fundamental point that, as the human being moves up the rungs of the ladder of material progress, he is prone to measure the advance by the amount of ease, comfort, and leisure he has acquired. In this process of waging war on work he has a tendency to extol everything as good if it reduces the demand on him to work, to struggle, to strain, to energize, and to be vigorous. What we do not realize sufficiently is that this system of equating an easy life with a high standard of living is selling short the real goals of human existence, in which a purposeful pattern for active personal development is an essential part. This process of nurturing comfort has had similar chapters in world history. Ease and luxury, while being recognizable goals of human effort, have too often deluded major civilizations as to the real estimates of their strength. This is the magnitude of the fitness issue before this conference. From you we hope to get concrete suggestions on how to carry this message to the Nation and arouse our adult and youth populations to assuming the iniative in local programing for tangible, visible fitness results.

Giving stature to the importance of this subject is the organizational composition of the Council itself, made up of Cabinet posts of Government, and also the method by which our chairman, Secretary Seaton, has conducted the Council meetings. He has insisted that the principle of nonsubstitutional representation be applicable. In other words, the Council is not a letterhead organization but an active unit of Federal Government with meetings made up of the Council members themselves. As a mechanism to assist the members of the Council, we have in operation a body known as the Interagency Advisory Group, composed of responsible representatives of the Council members. This group is advisory to the executive director, and it screens all formal items to be brought to the attention of the Council.

Throughout the past year private organizations of all kinds have responded with positive and enthusiastic reaction to the fitness appeal. Governors of States, mayors of cities, presidents of social, civic, fraternal, educational, religious, medical, health, recreational, and other youth-serving organizations and business concerns have taken the Council message not as a castigation of their current projects for young people but rather a pleading that they reexamine and reevaluate their own programs so as to make greater contribution to the youth-fitness crusade. In this way, the Council, instead of detracting from the objectives of these organizations, strengthens all of their aims and purposes. Since our method always has been to work through organizations already in existence without seeking a credit line, much of what is happening today in the communities of the Nation, and which does not bear our fingerprints, will never be credited directly to our efforts. As long as we have a like understanding on this subject between the Council and you, its advisory committee, we can avoid much useless questioning. This is the way a catalytic agent works, and lack of identifiable recognition between results and its efforts is part of the penalty which must always be paid.

To help blueprint a course for the future, we must have a common understanding of the factors involved in fitness so that, with like recognition of the problem areas, we may attempt to attack each issue with a mutual understanding of what we are trying to accomplish. In his message to the initial conference on this subject at Annapolis in 1956, the President said:

"Our young people must be physically as well as mentally and spiritually prepared for American citizenship."

In that same letter, the President also recognized the need for arousing in the American people a new awareness of this subject so that youth may achieve a proper balance of physical, mental, emotional, and spiritual strength. From this basic philosophy the Council has never veered, knowing that the human being cannot be unraveled into identifiably separate parts if he is to live and thrive and be fit. The arousal responsibility is the Council task. The action programs for youth fitness are the job of the citizens in the communities.

Applying the fitness yardstick to communal life in our country today, we must examine how human beings are living, how they are using their energies, how they are designing their environments, how they are working, how they are recreating, because at the very kernel of the fitness concept is the dignity of the human being. Into this context fit the youth who must conform to what we design for them.

But while we speak in pious and patriotic phraseology about the rights of the natural law—God's law—as it applies to each citizen, our format for fitness action does not reflect that philosophy too accurately. As identifiable dangers of current living, ill-affecting the fitness of our citizens, we find:

1. Machines above men. Giving priority to the mechanized over the personal may make nonentities of humans, who then handle in robot manner gadgets of their own design. The self, the person, the individual may well be lost in a mass accumulation of mechanical might. Human desires for space for youth are dwarfed and lost in such issues as traffic, parking, building, and suburban development.

2. Inactivity over action. Work is frowned upon as a hangover of serfdom and those who seem to enjoy self-energizing habits are classed as eccentric. Keeping up with the Jones family is evaluated by the size of the television screen for sitting and watching and the horsepower of the family vehicle, while paying little concern to the human octane rating.

3. Speed over moderate travel. We pack our bodies, minds, and emotions into a mold of tension and consider human beings as trespassers if they as much as step on the street which was a personal thoroughfare a few years ago, and was then a recognized part-time play area for youth. To expedite our breakneck process, we have our millions of miles of turnpikes for traffic while giving little consideration to trails for humans.

This system of urbanized and automized development is largely for the comfort and convenience of the adult. In fact, what we are doing today is saddling on youth a middle-aged method of living in which they have few of the chances for self-determination, self-decision, and spontaneous methods of expending in regular, wholesome, and safe manner their young human energies. Born into this complex maze of people, the attitudes and total personality of the child are influenced by his environment, in which he comes from an initial dependency on all about him to the adult goal of self-dependency. In this process, the mores of home and community, the mechanical methods, the traffic patterns, the urbanized congestions, all influence his thinking and his own pattern of living.

We would indeed be doing a disservice to our Nation if we did not put the fitness problem in the proper context of national dimension. Buttons and dials are just a tiny evidence of this age of automation. The human desires and habits that we are forming—the buttons and dials of the young mind—are much more fundamental. The crowded conditions in which people live complicate further the fitness problem. For example, in 1950 the census showed that more than half of the American people lived in 168 metropolitan areas, ranging in size from about 55,000, to New York with its population of approximately 13 million. Between 1950 and 1957 our population went up another 15 million and the metropolitan areas received 90 percent of this total increase. Continuing this trend, the United States could come close to 220 million inhabitants by 1975 and 60 million of the increase would swell those same metropolitan areas, accentuating the urbanized problems which we have today. This should not be interpreted to mean that youth fitness problems pertain only in the city. Mechanized agricultural methods and school buses combine to make life on the farm much less demanding. All modern means of communication and transportation tend to give an

aspect of urbanization to rural living. Thus, if the present living pattern continues into the future, if the trek of automation reduces further the need for human, healthy exertion of mind and body, if the stress is to continue on the means of living over the ends of living, human softness will accelerate to our own loss as man becomes more and more an automation of his own making.

To counter the detrimental effects on young lives by our primacy on mechanization we are doing much today for youth, often too much.

1. The code of carting. Early in life we make them sedentary by directing that they ride instead of walk. No wonder little boys and girls look on their parents as delinquent adults if we do not act always as their chauffeurs.

2. The inverted sports pyramid. We design leagues for athletic competition in which the gifted few, who are least in need of the experience, get most of the benefit. Such programs would be good if they included all in keeping with their skills. But the best estimates available to us indicate that formal leagues for boys and girls cover less than 10 percent of the total available youth. Let's never forget that there is no cutting from the squad of fitness. Few fitness benefits come from many of these projects in which adults too often demand a brand of overspecialization and undue emphasis on winning at any cost.

3. Parental powder-puffing. To climax our sense of affection for our own children we present to them the gift of automobility so that they may enter the adult stream of movable inertia.

As immediate byproducts of this method of living, we buy fun and watch others participate, thus avoiding the very beneficial attributes of human development which are involved in personal doing, making, creating, and achieving processes. "I don't want to" and "I can't" become the catch phrases of youth and adults alike when asked to do something that can be done by harnessed mechanical or other energy. Such negative attitudes bring about unfitness of attitude and ability in which the boredom of mental and physical inactivity creates a lack of challenge, of dare, of courage, of pioneer spirit—attributes which have made men thrive and survive in the past. These were the qualities which brought about the survival of the fittest. Today the unfit not only survive but they do little to improve their condition of mental, emotional, and physical well-being by self-discipline or by any process involving self-effort.

Perhaps the most disheartening aspect of American life today is the weakness of our moral fiber, as evidenced by the everincreasing youth crime rate in our spiraling population. Crime costs us 10 percent more than education each year. Adult toleration of disregard of authority in home and school, parental allowances to children for nothing done, overgiving for overindulgence in food, drink, and empty pleasure beget an unfit and undisciplined young citizen.

Thus, as the President's Council faces the future, we want your advice on how best to further awaken a democratic society to achieve by voluntary methods the proper fitness needs of human beings. To do this, it is basic that we as citizens strongly supplement, if not replace, our present scheme of materialistic values by a rebirth of the true needs of human personality so that men and women, boys and girls, come before machines. If we continue to conform to the pressures of economic mechanization we are losing. For human fitness we need now an overwhelming force ready to strike for democratic living. Democracy must dare. To stand still is to stagnate. The conformism which we seek is that which will compel economic and political institutions in our society to contribute to the enlargement and intensification of human living, including the physical, social, and moral necessities of persons. These results we must attain not by central dictations but by voluntary methods. Since fitness is not a social theme but an individual determination of each person, proper personal motivation is the key to success. It would be too simple and misleading to feel that the fitness answer can be found in exercise or calisthenics, unless we consider these items as part of a program to develop the love of doing over the affection for indolence. But never should it be a fitness goal to make a "John L. Sullivan" out of a "Thomas Aquinas."

Youth, being particularly affected by what they see and hear and experience, will be benefited most if we use for any fitness program the target of opportunity, which has within it elements of spontaneity, freedom of action, and self-determination. Little will be attained if we bracket all children into the one word "youth" without recognizing the aptitudes, attitudes, and abilities of different ages. By giving them the chance means neither coddling nor directing their every desire. Overprotection can stifle instead of help. To take advantage of opportunity, the incentive of youth must be stimulated. Otherwise, safe space could remain unused and empty.

The youth fitness challenge is in the way we live at home; in the educational system in the school; in the urban design of communal living; on the playground and on the sidewalk; wherever boys and girls of any age live. It is that which considers trails over turnpikes, sandlots over parking lots, walking over sitting, discipline over license, inclusive participation over the naked goal of victory, humans over machines. The fitness concept has the intestinal fortitude to challenge conformity to present methods even though vested monetary interests may react adversely. Only in this way can such needs as space for recreation be considered a necessity in all building projects. Applause for fitness programs, planned and carried out by others, is at most a palliative for conscience. Each person of influence cannot shed the fitness responsibility by such efforts of delegation. Every community leader must consider fitness a priority item demanding attention with all other local undertakings. And men of business and of affairs must recognize that youth fitness is good business to be incorporated in every public relations and advertising endeavor.

Though the President's Council on Youth Fitness was not set up to counter juvenile delinquency, we would be shortsighted if we did not see the relation between the Council goals and the current major national problem of youthful crime. We are, indeed, convinced that as localities provide opportunities for fitness of youth they will be giving the positive and long-range answer to the problem of delinquent acts by boys and girls. Young idle hands, and feet and minds, which are the spawning ground for the devil's work, can be made busy for benefit and guided in ways of wholesome living.

The Council was not born to implement national defense. Its purpose is not to provide more and better prepared soldiers, sailors, airmen and marines. However, the fact cannot be blinked that emphasis on youth fitness is bound to improve the preparedness of youth for military service—and well it might. For today, we are truly a civilian-military society. Almost 30 million of our population have served in our defense forces. It is the expectation of every male being born today, and a great many of the females, to invest 2 years of that very learnable, teachable, post-high school and pre-college or pre-vocation period in military service. The Armed Forces will give the inductees training which will make them self-reliant and help them to mature. When they don the uniform, society should see that they are fit youth so that the period of military duty will enrich their citizenship quality and at the same time enable them to serve on foreign soil as ambassadors of good will.

Your presence shows that you share these convictions on the importance of this subject. You know that fitness is not achieved by fitful starts and stops. It is not a crash project to overcome a momentary problem. Its efforts will always be required as we become more mechanical and automatic and as our population increases. Perhaps, therefore, as we stress the need for current action programs, you, of the President's Citizens Advisory Committee, can tell us how venture money for fitness research can be made available, since we need more facts instead of impressionable opinions to stimulate people to action.

We need your help on the best method for translating this theme into a suggested set of programs for local action. Each community must be irrigated by the flow of human fitness, which is the only guarantee we have that our civilization will renew itself with strength and will endure. In this sense, our most solid defiance of any dictatorial enemies is to demonstrate to them that by harnessing the strength of free minds we can achieve free men of strength. This is the fitness answer.

## The Lincoln Oration by Bruce Catton

EXTENSION OF REMARKS
OF
### HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

*Tuesday, March 10, 1959*

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD "The Lincoln Oration" by Bruce Catton, who is editor of the American Heritage magazine. I listened to Mr. Catton's address, which was delivered at the annual Middlesex Day dinner in Boston on February 12. I was so impressed by the historical analysis which Mr. Catton has made, as well as the message which his speech delivered, that I felt it appropriate that it be preserved in the CONGRESSIONAL RECORD and brought to the attention of the Senate.

There being no objection, the oration was ordered to be printed in the RECORD, as follows:

THE LINCOLN ORATION BY BRUCE CATTON

It is often remarked that Abraham Lincoln was technically very poorly prepared for his role as Commander in Chief of America's Armed Forces in the Civil War. He had had no professional military training whatever; his own military experience had been of the sketchiest, confined to service in a loosely organized volunteer company, which saw no combat service, in the Black Hawk war. He had been a politician and a lawyer all of his life, and he suddenly found himself commanding one of the largest armies in history in a war of surprising magnitude and complexity.

From this the suggestion often follows that this was a terrible handicap to Lincoln himself and to the country. Lincoln approached his war role as a politician; he played politics, so to speak, with the command of the Army; and the implication usually is that the war would have been won more quickly and would have gone a great

deal more smoothly if things could have been different.

I would like to suggest that if Lincoln did handle the war and all of its military issues as primarily a political problem, this was in the main a very good thing.

Political management of the Federal armies during the Civil War undoubtedly caused many difficulties. I believe that it also brought many advantages. If it was a source of weakness, it was even more a source of strength.

Politics is usually supposed to be a bad word. We are a political people; we live by politics; we turn to politics for our leadership, a great part of the time, especially in moments of crisis; but we usually agree that the word has a shady connotation, and that the art of politics itself is somehow unworthy of exercise by a man who hopes to qualify as a great leader and a great statesman.

Now by "politics" I mean the plain, ordinary, everyday politics of the kind we are all familiar with—the kind that is played, year in and year out, in the city hall and the country courthouse, as well as in the National Capitol and the White House itself; that queer, illogical exercise in human leadership which stirs lofty idealism up with the grossest materialis mand gets good results a little oftener than there seems to be any good reason to expect.

Bearing in mind that that is just what I mean by "politics," I would like to go on and state my thesis. Lincoln and the Federal Government which he controlled did play politics with the military phase of the Civil War.

That was partly what was wrong with the northern conduct of the war. But at the same time that was very largely what was right with it. The good and the bad came together, as they usually do in politics, and in the end the good greatly outweighed the bad.

Back of the military campaigns, the selection of generals, the choice of strategic objectives and all the rest, the Northern leaders never once forgot that what they really had on their hands was a political problem. It was like no political problem the Nation had ever seen before, to be sure; it was enormous, violent, tragic, explosive, but it was basically a political problem and in the end it was handled as one. I don't suppose Lincoln or anyone in his cabinet had ever read Clausewitz, but they all knew without being told that war is simply an extension of politics. Especially the American Civil War.

In the beginning, of course, the big danger was that the whole problem raised by Southern Secession might be regarded as the exclusive creation, possession and concern of the Republican Party.

A month or two before Fort Sumter, a leading Ohio Democrat warned Jacob Cox that if any effort were made to coerce the South the Republican invaders would have to push 200,000 Ohio Democrats out of the way before they could even reach the Ohio River.

When the war began that attitude faded. The very Democrats who voiced that warning, as it happened, presently became a stanch war governor of Ohio. But there was always the danger that the two political parties in the North would eventually line up, simply as a war party and a peace party. The administration had to win and hold the support of a great many people besides those who had voted for it in 1860 if the war was to be won.

All of this, to be sure, is part of the elementary A, B, C, of the Civil War story. What I want to invite your attention to this evening is the political device which Mr. Lincoln's government used most effectively to pull the northern people together and get something like unity in the war effort.

That device was the institution of the political general—the man who was given an important command in the Army, not because anybody supposed that he knew anything about military matters, but simply because he had prominence and political influence which the administration wanted to enlist in support of the war.

The political general is usually regarded as the greatest single drawback to the northern war effort. His very existence is supposed to prove that the Federal administration was stupid, heartless, and probably rather corrupt. He is supposed to have lost battles, to have prolonged the war and to have caused the needless slaughter of many good soldiers. We are usually assured that the war would have been won much more quickly if he had never existed.

I believe that that conception of the role played by the political general in the Civil War is just about 100 percent wrong.

I believe that the political general was an instrument the northern government had to use if the war was to be fought sucessfully. To wrench Voltaire's famous remark out of context, if he did not exist it would have been necessary to invent him. The Government was right in appointing political generals, and, in the main, it was right in using them as it did. As an institution, and with some individual exceptions, the political general was worth all he cost and a good deal more.

Let us not judge the 1860's by the standards of the more sophisticated and intricate 20th century.

To begin with, remember that the tradition of the professional soldier with professional training was by no means as well established in the America of 1861 as it is today.

On the contrary, American tradition then tended to glorify the amateur—beginning with George Washington himself. Such military heroes as Andrew Jackson and Zachary Taylor had had no West Point training. American experience at least seemed to show that perfectly capable military leaders could come straight out of civil life.

The processes of warfare were simpler in those days than they are now, and they probably looked even simpler than they really were. Anyone can see, today, that to handle a modern armored division or a group of long-range bombing planes requires a good deal of highly technical training. It was not nearly as easy for a civilian in 1861 to realize that leading a division of infantry might also be a job for a technician. And, as a point of simple fact, the technician was not as essential then as he is today.

No matter what system the Northern government followed in 1861, it was going to have to create large armies practically overnight. Those armies—in the beginning at least—were going to be volunteer armies. Nobody was going to be made to come in. Everybody had to be asked.

Not to dwell on the point unduly, the creation of the Federal armies in 1861 and 1862 was of necessity pretty much a homespun process. Leading citizens of high and low degree organized companies and regiments, winning commissions for themselves in the process. Given the circumstances, that was probably the best and quickest way in which those new armies could be called into being.

In any case, while it was creating these armies, the Government also had to create generals to command them. Before we condemn the process by which those generals were created—that is, the process by which a number of unblemished civilians suddenly found stars on their shoulders—I think we have to ask what was principally required of those Civil War generals.

They had to lead troops in action, to be sure. But, if they were amateurs leading amateurs, so were the people they were going to be fighting against. There were quite a number of West Pointers around to leaven the loaf; meanwhile, it was, above everything else, important to get into the Government's service the qualities of leadership which these eminent civilians possessed—not merely the quality which would enable them to lead troops under fire, but the quality by which the people who followed and believed in these men would be brought into wholehearted support of the war effort.

In other words, it was not possible to approach the gigantic task which the Civil War presented as a straight military problem. The war was not going to be fought by professional soldiers. In the numbers required they simply did not exist, and there was no way on earth to create them. Win or lose, the war would be fought by civilians in arms—by hundreds of thousands of young men who had no military experience and no indoctrination, and who had to be brought together by some device that would appeal to their patriotism, their ideals and their youthful enthusiasm. Turned into soldiers, these men, to the very end, would display traits that would drive the ordinary professional soldier to complete distraction. They would respond to leadership, but it had to be the kind of leadership that talked their own language. In plain English, it had to be political leadership.

Yet there was a huge pitfall in this path. The war might well be a violent extension of the political campaign of 1860—of the whole political struggle which had made the decade of the 1850's the haunted, tormented decade of American history—but it would not be made a straight Republican war. There was, to be sure, an important segment in the Republican Party which wanted to do it that way, but the war would inevitably have been lost if it had been approached in that way. Mr. Lincoln met that problem at the very beginning, and met it in the traditional American way—the way of ward and courthouse politics. That is, he gave to various important people, including the leaders of the political opposition, a piece of the job. He commissioned many highly unmilitary people as generals and gave them some pretty consequential commands. What did he get out of all of this?

Well, to name only a representative few, he got such generals as Fremont, Sigel, Banks, McClernand, Logan, Blair, and, of course, the one and only Ben Butler.

There is no denying that some of these men turned out to be utterly incompetent soldiers. Is saying that the same thing as saying that the Lincoln administration made a terrible mistake in commissioning them? I do not think it is.

Fremont and Sigel and Butler would handicap any army, of course. But would the Federal war effort have gone along faster if better men had been in their places—and if the Government had never had the popular support which it won by commissioning those men? Could the war have been won if the hard core of free-soil antislavery men had been alienated? Was not the support of the German community essential—particularly in such a State as Missouri? Was it not necessary to carry along the War Democrats? McClernand was of no great account as a general, but he personally recruited thousands of the men with whom the Mississippi Valley was opened. The support of Blair and Logan was beyond price, and—just incidentally—those two men turned into first-rate soldiers to boot.

To win the war the northern government had to ride half a dozen horses at once. It had to get and keep the support of any number of separate groups, factions and classes. One of the important ways in which it got that support was through the appointment, as generals, of civilian leaders in whom the members of those highly divergent groups strongly believed.

That is obvious enough, of course. Was it all worth what it cost?

In the main, I think that it cost a great deal less than we ordinarily assume.

Beyond any question, the war was made longer and more costly than it should have been by many failures on the part of northern generals. Yet if you will study the record in the eastern theater of the war—which is where most of those expensive mistakes took place—you will presently encounter a rather remarkable fact.

The really disastrous mistakes were made by the professionals, not by the amateurs.

From first to last, the Army of the Potomac was under professionals—McDowell, McClellan, Pope, Burnside, Hooker, and Meade. Some of these generals did indeed play politics, before and after they got to high command, but not one was a political general in the ordinary meaning of the word.

There were two battles in the East which to this day stand as melancholy examples of useless butchery—Fredericksburg and Cold Harbor. They were strictly the work of the professionals. No political general had an important role in either one. The greatest missed opportunities of the war, probably, was Antietam and the Battle of the Crater. Both were strictly the work of the West Pointers.

If the 1864 campaign of the unfortunate Army of the Potomac was made more difficult by the failure of Sigel, the political general, it was equally affected by the failure of the professional who took Sigel's place—David Hunter. Ben Butler failed ingloriously to take Petersburg in May 1864, thereby helping to prolong the war; and equally expensive failure to take Petersburg occurred exactly one month later under Baldy Smith, who was a professional.

That peculiar falling short in generalship which lengthened the war and cost so many lives simply cannot be blamed on the administration's habit of commissioning prominent politicians.

If the Government had never issued one political commission, but had chosen all of its generals from the ranks of the professionals—assuming that it could have found all of them there—none of the really disastrous mistakes in the eastern theater of the war would have been averted. The record there would be about what it is now—a record of prolonged suffering, of missed opportunities, of needless bloodshed.

What I am arguing, of course, is that the northern government was correct in seeing the war as a political problem and in adopting straight political measures in regard to it. Its use of the political general was justified. That much maligned creature was worth more than he cost. If, now and then, in the guise of a Sickles, he gives us the creeps, he makes up for it a moment later by appearing as a Joshua Chamberlain. All in all—given the conditions which existed in the 1860's—he was a character who had to be there if the war was to be won.

The political general had grave defects and he had high virtues, but the most important thing to remember about him is that under the circumstances he was an irreplaceable instrument. The act of secession had presented the Federal Government with what was primarily a political problem. It could not have been met by other than political means. Lincoln had to take his leaders where he could find them. He found a great many of them, naturally enough, in the field of politics. With them, he mustered mass support for his great fight to save the Union. With their aid, he brought the people through a fiery time of trial and testing.

Before we leave the subject, take a brief glance at the course followed by Mr. Lincoln's opposite number, President Jefferson Davis of the Southern Confederacy.

Mr. Davis was a much more rigid man than Mr. Lincoln. He had had West Point training, combat experience, a term as Secretary of War, a period as head of the Senate's Committee on Military Affairs. He did his level best to apply straight military principles to his conduct of the southern war effort—and the result was wholly disastrous. For his position was precisely like Lincoln's, he was facing, primarily, a political problem—the task of welding a great many diverse people into one coordinated and enduring effort—and to a great extent he refused to use the instruments of politics in doing it. The flexibility which, in the North, enabled Lincoln to make use of the talents of men who bitterly opposed him politically, was almost entirely lacking in the South. As a result, in the tragic final months of the war Mr. Davis became more and more isolated from the people he was trying to lead. The Confederacy failed, ultimately, partly because the North brought overwhelming force to bear on it, but at least partly, as well, because so many of the southern people had become detached from their leadership.

In the last analysis, by going to politics Lincoln was going to the people themselves. Among the people he had to look not only for followers but for leaders. In the long run he found precisely what he was looking for. That was the greatest source of his strength—the fact that he had discernment enough to make his search there, and the added fact that the American people themselves justified his faith.

## Give Patients a Green Light to Their Doctor

EXTENSION OF REMARKS
OF
## HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. OLIVER. Mr. Speaker, Dr. Adrian Scolten, a Portland, Maine physician has long been an effective spokesman regarding public affairs. In the past, there have been many times when Dr. Scolten and I have not seen eye-to-eye on various issues; however, I have always respected his point of view and his integrity.

The depth of Dr. Scolten's convictions can easily be ascertained from the following articles. Both in discussing his sincere dedication to serving his patients faithfully regardless of monetary gain and in expressing the belief that doctors should be placed under the social security system, his inner conviction in the justness of his cause is evident. In these days of conformity and "me tooism," it is gratifying to know that men like Adrian Scolten have the courage to express their opinions so forthrightly. With great pleasure, I request that the following articles be inserted in the RECORD.

GIVE PATIENTS A GREEN LIGHT TO THEIR DOCTOR—IT IS A PRIVILEGE TO BE AN M.D.

(By Adrian H. Scolten, M.D.)

In Medical Economics, a Maine physician recently made a strong plea for charging patients for telephone calls. He stated in an article in this medical magazine that charging for telephone calls worked out well in his experience and it made his life less burdensome. To me, at least, he gave the impression that he believes that physicians are too soft-hearted, and too charitable.

I am an M.D. practicing dermatology in Portland, Maine, and therefore wish to apologize for the smug commercialism shown by this Maine doctor who through Medical Economics, a magazine read by many M.D.'s throughout America, has attempted to spread the impression that Maine doctors do not have the dedication or idealism that M.D.'s everywhere in America should have. In my humble opinion, this doctor who wrote under an assumed name has views which are no credit to my State nor to the doctors of America and I write this letter because I am sure his views and his way of treating telephone calls from patients should not be considered acceptable. No doctor should take his advice I feel sure.

All patients should have a green light to their doctor and no charge or other roadblocks should be set up to keep the mothers or anxious patients from telephoning him and getting his personal attention. There are too many middlemen between patient and doctor and one of them is the doctor's secretary.

Twenty-five or thirty years ago no M.D. would dare write as this Maine doctor did and to his credit is the fact that he did not use his own name. I therefore do not know his identity and believe he is secretly ashamed of his self-interested and uncharitable stand.

We who have practiced medicine for a long time and without ever doing what some of the younger "better business men" do, want to see the profession we highly revere and love put back in a class with the clergy and priesthood. Those doctors who are most successful in helping people or in the art of medical practice are not often financial successes. The two do not often go together for great physicians are like the clergy—altruistic, uncommercial and unselfish. They try to do good—not to just make money.

American medicine became a great and grand profession because they put the patient first, not their own convenience, or their own pocketbook. In those days, no public relations men or business advisers put good doctors on wrong roads. The rules of conduct of an insurance executive were not their guideposts.

The doctors of the past were on a pedestal in the public's opinion because they deserved to be there. They lived to serve and they observed strictly the oath of hippocrates and the code of medical ethics which was inexcusably revised by some of our representatives in the house of delegates of the American Medical Association recently. I am sure that like the Ten Commandments, it needed no revision. Today the conduct of quite a few people in all walks of life, including a few doctors, badly needs revision. We should get our number of M.D.'s whose conduct is questionable or needs revision down to an irreducible minimum. In all walks of life we must set a better example in a materialistic, selfish, and corrupt world.

The public did not get billed for telephone calls, canceled appointments, nor were they sent to free clinics by the truly great physicians of the past and none were told to take out insurance so the surgeons or obstetricians or other doctor could get paid. The public is still getting this good old-fashioned treatment from most of the doctors practicing today. They get it without fail from the many unbusinesslike older doctors who don't want any middlemen between them and their patient, and who die without leaving an estate of over $10,000. They, like the preachers, priests, and many teachers, go about doing good all their lives without regard for the financial return.

Like these good people the great physicians of the past were not unhappy men and they were truly successful. Those who follow their ways in collecting fees will not go wrong. The aged and the poor we will always have with us. None must be neglected.

All of us should read our Bibles more and we should be less self-interested. Too

many doctors, especially the younger ones of today, try to act like businessmen. If they wanted to become rich men they should not have become physicians.

"It is easier for a camel to go through the eye of a needle than for a rich man to enter the Kingdom of Heaven."

Commercial interest does not guide the true physician, and there are many thousands of these men in America. They believe it is a privilege to be an M.D. and they go about daily doing good, giving of themselves gladly and generously, showing a heart as well as a well-trained medical mind.

ADRIAN H. SCOLTEN, M.D.

---

[From the March 1958 issue of the Journal of the Maine Medical Association]

RANK AND FILE M.D. WANTS U.S. SOCIAL SECURITY

EDITOR OF MAINE MEDICAL JOURNAL:

A few years ago at an annual meeting of the House of Delegates of the American Medical Association I was the only M.D. who spoke in favor of U.S. social security for self-employed physicians. This was at a hearing held by the AMA on a resolution seeking endorsement of it. Ever since, almost without other support (and no financial support whatever to this day), I have been trying to make the rank and file M.D. see that we can have and should have this social security and we will have it if we let Congress see that we rank and file M.D.'s want it.

Last June at the AMA convention in New York City another hearing on the social security question was held. At it I again spoke but so did some others who are not satisfied with the way the big brass of the AMA speaks for us of the grassroots on this vital question. Maine has only one young delegate and no alternate in the AMA house of delegates but all M.D.'s are allowed to speak for themselves, and all should do so now while Congress is in session by talking, wiring, or writing direct to Congressmen.

All doctors anywhere in America who want social security for themselves and their families should do this even though a poll of the rank and file was taken or will be taken. Polls taken on a statewide basis in Massachusetts and Connecticut show that over 70 percent of the doctors in those States voted for social security. They did this even when their representatives in the AMA had already voted the other way.

The AMA's House of Delegates has voted against giving us a nationwide poll of the membership, something some of us have been advocating for some time.

America still has many dedicated independent thinking doctors who are not rich surgeons, or on good salaries, and who have not like sheep been led astray by the Blue Shield overlord or that too-powerful small group in the house of delegates of the AMA who do not want M.D.'s to have U.S. Government social security for themselves or their families. These doctors know that the members of all other professions through act of Congress have been put on social security and if each doctor who wants social security only takes the time to write to six U.S. Senators or Congressmen they too will be made eligible for social security, by Congress in short order.

As I so well know from experience there is no wish to present the case for social security for M.D.'s or against so-called voluntary health insurance including Blue Shield in the medical journals (see editor's note) or the daily press of the United States for the public relations department of the AMA and of most State societies are continually trying to brainwash the doctors and the general public with propaganda saying that the majority of the M.D.'s do not want social security and that Blue Shield can be made to work satisfactorily.

For over 10 years I have tried hard to make the public and the doctors see that all voluntary health insurance plans, including Blue Shield are frightfully expensive, and have created more problems than they have solved. We who have practiced a long time know they were not needed in the first place and that they have made many American medical doctors who should be their own boss just abject handmaidens of commercially minded insurance people. When a doctor cannot use his own best judgment he cannot give the best possible service to his patients.

Because we do not always get the news presented to us impartially I believe it is time the medical and lay press give out the data which supports giving U.S. Government social security to everyone including M.D.'s and also all data which tends to prove that voluntary health insurance including Blue Shield surgical and obstetrical insurance and every other kind has created more problems than it has solved.

I have long had the firm conviction that this kind of insurance is not a needed kind and that it is much too easily sold.

I began practicing when American medicine was the best in the entire world and before we had meddlesome well-paid middlemen standing between doctor and patient handcuffing both as is now the case in so many instances.

American doctors in years gone by were free from entangling alliances with controlling self-interested insurance middlemen and looked up to because they could and did live up to the Hippocratic oath and a high-minded medical code of ethics. Insurance people with their more money-minded restricting rules and regulations and a far different commercial code of conduct are making no contribution to better medicine in my opinion and in the opinion of many dedicated doctors who practiced before these meddlesome middlemen disrupted the more satisfactory and successful old way of having the patient pay his doctor directly or not at all.

Insurance people now restrict the precious freedom and liberty of both patient and doctor and deteriorate the quality of American medical care. American medicine is at its best when there are no well-paid middlemen between the doctor and his patient.

ADRIAN H. SCOLTEN, M.D.

## Diversion of Water From Lake Michigan Into the Illinois Waterway

EXTENSION OF REMARKS

OF

## HON. CHARLES A. BOYLE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. BOYLE. Mr. Speaker, under leave to extend my remarks, I am asking permission to include herewith a copy of Senate Joint Resolution 9 as adopted in the 71st General Assembly of the State of Illinois, as certified by Charles F. Carpentier, secretary of state, in connection with the O'Brien lake diversion bill—H.R. 1—which provides for a 1-year trial study of an additional 1,000-cubic-feet-per-second diversion of water from Lake Michigan.

The resolution in letters and figures is:

SENATE JOINT RESOLUTION 9

Whereas the effect of diversion of water from Lake Michigan into the Illinois Waterway has long been a source of dispute; and

Whereas House Resolution 1 now pending before the 86th Congress proposes that an additional 1,000 cubic feet per second be permitted for 1 year; and

Whereas such additional flow will permit a proper survey and evaluation to be made by the Secretary of the Army; and

Whereas House Resolution 1 expressly prohibits any diversion during times of flood in the Illinois, Des Plaines, Chicago, or Calumet Rivers; and

Whereas existing facilities at the point of diversion are adequate to control the proposed increased flow, and are beneficial to marine life by reason of providing added oxygen; and

Whereas the preservation of public health is vitally involved in this proposal: Therefore be it

*Resolved by the Senate of the 71st General Assembly of the State of Illinois (the House of Representatives concurring herein)*, That we respectfully request the Congress to pass House Resolution 1; and that a copy of this preamble and resolution be sent by the secretary of state to every Member of the 86th Congress from the State of Illinois.

Adopted by the senate, February 26, 1959.

JOHN WM. CHAPMAN,
*President of the Senate.*
EDWARD E. FERNANDEZ,
*Secretary of the Senate.*

Concurred in by the house of representatives, February 26, 1959.

PAUL POWELL,
*Speaker of House of Representatives.*
———,
*Clerk of House of Representatives.*

---

## Money and Medicine

EXTENSION OF REMARKS

OF

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting in the Appendix of the RECORD an article appearing in the October 1958 Progressive magazine, entitled "Money and Medicine," by Mr. Selig Greenberg:

MONEY AND MEDICINE

(By Selig Greenberg)

Are doctors in North Carolina of a breed wholly different from those in the rest of the country? This question is inevitably raised by the high ratio of incompetent performance among general practitioners in that State disclosed by a study jointly sponsored by the Rockefeller Foundation and the University of North Carolina whose findings I reported in the September issue of the Progressive. Out of a representative sample of 88 physicians whose work was carefully examined in the survey, 39 were classified as "poor," 27 as "average," and only 22 as "good" or "outstanding." The study brought to light a truly appalling proportion of medical services of a quality falling far short of generally accepted standards of professional competence, which means that many patients fail to get the kind of care they are entitled to.

How prevalent are similar conditions in medical practice in other States? This is a question which is certain to produce more heat than light when it is discussed with most doctors. The North Carolina survey was the first of its kind ever made, and there is no equally documented evidence to show whether the quality of medical care is better, as bad, or even worse elsewhere. But several distinguished authorities in the field of medical care with whom I have discussed this question have told me they saw no reason to think that the situation found in North Carolina is an isolated phenomenon.

"I was not all surprised at the findings of the study," said a nationally known Boston physician who has had many years of experience in medical practice, education, and administration. "I expect that, to a greater or lesser extent, this situation holds true generally. North Carolina is not a typical Southern State. It has a far higher standard of living than most States in the South and good medical schools and hospitals. North Carolina doctors are no different from doctors elsewhere. They're doing the best thy know how. It's not a question of the individual; it's the system."

The report of the North Carolina survey emphasizes that the physicians whose work was studied appeared to be typical of general practitioners. "The training taken by these doctors," the report says, "is similar to the training taken by doctors in the country at large. They had received their training in a wide variety of hospitals in all parts of the United States. The physicians studied came from many medical schools and had exhibited all degrees of academic success, so there is no reason to assume an adverse selection. It can, therefore, be stated with considerable assurance that in terms of medical education and training the physicians who participated in this study are not evidently different from general practitioners at large."

Whether we get good or poor medical care is determined by a great many things, almost all of which basically involve the economics of medical practice. Among these factors are the fragmentation of medicine as a result of specialization, the growing professional isolation of the general practitioner, the size of a doctor's practice and its effect on the quality of his work and his ability to keep up with medical advances, whether there are enough doctors in a community, and the even more controversial issue of whether there are effective mechanisms for assessment and control of the quality of medical care. Under the prevailing system of solo, fee-for-service medical practice, there is, above all, the question of the patient's ability to pay. Consciously or subconsciously, this question of what the patient can afford to pay has a great deal to do in the doctor's mind with the kind of treatment provided and the degree to which such treatment meets the patient's needs.

The march of science has profoundly affected the whole system of the organization of medical practice. The family doctor can no longer take care of everything, and the patient must now frequently be passed on to one or more specialists for diagnosis and treatment. The more things medicine can do, the more splintered and expensive it gets—and the more difficult for the average physician to keep up with scientific advances. There are now 30 recognized medical specialties and sub-specialties, each of which requires special training and certification by a specialty board. Because specializing means greater income and prestige, there has been a steady trend in this direction. While the overall ratio of doctors to population in the United States has declined in the past 25 years, the number of specialists has in the same period quadrupled.

The stampede toward specialization has had several results which thoughtful observers regard as disturbing. It frequently leads to piecemeal medical care, to excessive resort to expensive procedures, and to the kind of concentration on a single organ in which the doctor loses sight of the patient as a person. But perhaps its most unfortunate consequence has been the decline in the status—and very often in the competence—of the general practitioner. Since more than half of the doctors in this country are still engaged in general practice, the professional isolation of the general practitioner is having momentous effects upon the quality of medical care received by millions of Americans.

Aside from their numerical preponderance in the profession, general practitioners have a vital function to perform. The general practitioner is the firstline diagnostician. At his best, he is the family physician who provides not only medical care but the integration of this care with the personal interest and psychological support of such great value to the patient. Furthermore, there are few, if any, specialists available in many smaller communities.

But the growth of specialization and of the system of postgraduate training set up for specialty certification has created a caste system with medicine, putting the general practitioner on the defensive and relegating him to an inferior status. He has no required graduate education program, is looked down upon by the specialist, and is frequently isolated from the mainstream of medical developments. The Academy of General Practice, which was established a few years ago as something of a counterpart to the specialty boards, says that the competence of the general practitioner extends to whatever he feels he is capable of doing. In view of the tremendous complexity of today's medicine and the wide range of skills it requires, this is a pretty big order. Nor does it make for good medical care under the handicaps within which the general physician is often forced to practice.

In smaller communities in particular, the general practitioner frequently does almost everything. As a rule, he works longer hours than the specialist, and his income is considerably lower. He has a wide range of medicine to keep up with but less time and, even more important, less professional stimulation to do so. He is often barred from hospital staff appointments or is relegated to the courtesy staff. This not only deprives him of an important source of income but of an extremely valuable opportunity for teamwork, a form of continuing education essential in modern medicine.

The nature of the work of general practitioners, one of the excellent reports published periodically by the New York Academy of Medicine has said, "calls for unusually broad knowledge, but they are most often so taken up with their practice—and generally isolated from hospitals and other medical centers—that they have little time for continued training. The result is that in all parts of the country, but particularly in the smaller and more isolated communities, there are general practitioners who still practice much the same medicine they learned in their student days." There is reason to believe that the general physician, who is more and more becoming a medical jack-of-all-trades and master of none, sometimes tries to do things for which he is not qualified because of fear that if he makes a referral to a specialist he will never see the patient again. It is out of this situation that the reportedly not uncommon practice of fee-splitting between general practitioners and surgeons and other professional abuses arise.

A vexing problem for all doctors, and especially so for the usually overworked general practitioner, is how to keep up with the rapidly changing and constantly expanding body of medical knowledge.

If you have recently kept an appointment in your doctor's office, you may have wondered how he stands the pace. It is not uncommon for a physician to see as many as 15 to 25 patients in the course of an afternoon, and, in addition, hold office hours several evenings a week. In the mornings he usually makes his hospital rounds. And some nights he is liable to be out until all hours on house calls. The American Academy of Pediatrics reported after a nationwide survey that 20 percent of the general practitioners interviewed saw more than 30 patients a day, and 5 percent saw more than 50. A study made jointly by the American Medical Association and the U.S. Department of Commerce, in which information was collected from more than 30,000 doctors, established that doctors were working an average of 60 hours a week.

While such long hours undoubtedly entitle many physicians to their generous income, they raise two important questions: Is the average doctor able, under these circumstances, to give his patients the amount of time they should have for adequate treatment? And does the average doctor have enough time to try to keep abreast of new developments in medicine?

A physician's ability to keep up with medical advances obviously affects the quality of his work and the extent to which he can give his patients the full benefits of the experience and progress of medicine. If he is to do so, the doctor must have time to read some of the professional journals, to attend medical meetings and lectures, and perhaps occasionally to take some postgraduate refresher courses. Above all, he must have the stimulation of working closely with other physicians. Such an opportunity for continued education, for pooling knowledge and learning from one another, is offered by the better hospitals. To an even greater degree it is provided by group practice. Close professional association in one form or another tends to maintain both technical and ethical standards. The solo practitioner, on the other hand, is completely on his own.

The report of the study of general practice in North Carolina has some enlightening comments about the average physician's difficulties in keeping up with the avalanche of medical literature. Many doctors, the report says, are increasingly coming to depend for information regarding medical progress on digests put out by the big drug companies and on drug salesmen who are known in the trade as detail men. "It was apparent from observation and statements from physicians that their practices in regard to medication and therapy are influenced significantly by the information and products supplied by the drug salesman," declares the report, adding that this is a far from desirable state of affairs, "since the detail man's function is not to provide education but to sell pharmaceutical products." The introduction of each new medication, it notes, "is accompanied by a mass of literature which descends upon the physician's desk each day showing him the presumptive virtues and excellence of each. , The practicing physician cannot know everything about therapy nor evaluate the very optimistic claims made for the many medications pressed upon him. A good conscientious doctor may easily fail to keep up with the vital new knowledge in medicine."

The obstacles now frequently standing in the way of adequate professional performance underscore the danger stemming from the public's lack of proper safeguards against poor medical care.

Some of the top authorities in the health field hold that one of the most serious weak-

nesses of the prevailing system of medical practice is that there is no means for maintaining standards, except within the broad limits set by licensing and laws against malpractice. Present provisions for professional regulation offer the public little protection against incompetent doctors. Once a man obtains a license to practice medicine, he can usually do anything he wants, short of criminal abortion, as long as he can find the patients.

Just what can be done about this is admittedly a tough problem. Some experts advocate more rigorous policing of professional conduct and, specifically, relicensing examinations for all physicians at intervals of five or ten years. One of those favoring such a step is Dr. Walter Bauer, chief of medical services at Massachusetts General Hospital in Boston and professor of clinical medicine at Harvard Medical School, who feels the public "has a right to satisfy itself concerning the continued competence of doctors." A serious question, however, is whether it would be feasible to require such reexamination in view of the solid opposition to be expected from the profession and of the difficulties involved in setting up adequate and fair criteria for measuring the competence of men long out of medical school.

One of the merits of group practice—and particularly the kind of joint practice associated with a comprehensive insurance plan, such as the Health Insurance Plan of Greater New York—is that it provides for control of the standards of medical care within the professional family. This type of practice has many other advantages. Among the most important are that it makes doctors responsible not just for treating illness as it occurs but for the total health care of the insurance plan's subscribers, and that it eliminates the economic barrier inherent in fee-for-service practice.

One distinguished physician summed up the medical care situation in a recent interview this way:

"The important thing in medical practice today is not just the doctor's training, knowledge, and conscience. Equally important is the framework within which he practices. And this framework is based on the fact that the physician's remuneration is directly dependent on the number and complexity of procedures he performs. The more of them he does, the more money he makes. At what point does a doctor decide that he is seeing too many patients, that he is getting too tired, that he can't do a good job? What are the criteria—in terms of activity and performance? As long as remuneration is based on the type and frequency of procedures, the doctor has to fight off the tendency to put the emphasis there. It's a tough temptation and it may warp judgment.

"As far as evaluating the quality of one's work and keeping up to date, the important thing to bear in mind is that no one can do it himself. It takes the day-to-day interplay with one's peers on an organized basis. This is done in the last 2 years of the physician's medical school education and during his internship and residency. Then it stops. Group practice prepayment removes both the fee-for-service deterrent to good medicine and the professional isolation of the solo practitioner. It is true that this isolation is counteracted to some extent for many physicians by the work they do in hospitals—which, by the way, provide the doctors at public expense with an indispensable workshop, with the necessary tools, to a degree which doesn't hold true of any other profession. But much of the most significant medical service takes place in the home and in the office, where the original diagnosis is made.

"There is no getting away from the fact that the element of the patient's ability to pay is all-important and that it leads to many compromises. Often the investigation recommended is very much tailored to the patient's ability to pay, not only in the direction of overdoing but even more so in the direction of underdoing. The doctor's judgment is based on the question whether the patient can afford many procedures. This inevitably affects the quality of medical service. In prepaid group practice you not only eliminate this factor of ability to pay but the doctor has continuous responsibility for comprehensive care, without which there can be no good medicine."

All of which underlines the cogency of the statement by Dr. Leroy E. Burney, the U.S. Surgeon General, that change in the medical field "not only produces new products; it also calls for new patterns of thought and action."

---

## The Origin of the Massachusetts Consumer Council Bill

EXTENSION OF REMARKS

OF

### HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 10, 1959*

Mr. McCORMACK. Mr. Speaker, one of the first States of the Union to attempt to give official representation to the consuming public is the Commonwealth of Massachusetts. The present attorney general, the Honorable Edward J. McCormack, Jr., has acted to establish an advisory consumer council in his office, and Governor Furcolo has presented a bill to the general court to establish such a council as an official State agency. The chairman of the attorney general's advisory council is Rev. Father Robert J. McEwen, S.J., of Boston College, Boston, Mass. Father McEwen is one of the outstanding economists of the country.

The committee on State administration of the Massachusetts general court on February 16, 1959, held hearings on the bill introduced and pending before that committee, at which hearings Father McEwen appeared and testified.

In my remarks I am pleased to include the statement made by Father McEwen to the members of the committee on State administration:

ADVISORY CONSUMER COUNCIL

(Statement by the chairman, Rev. Robert J. McEwen, S.J., before the Committee on State Administration, Feb. 16, 1959)

THE ORIGIN OF THE CONSUMER COUNCIL BILL

For some 10 years this has been part of the general Democratic legislative plan. Originally, it appears to have been aimed primarily at public utility hearings in order to have some representative or watchdog for the consumer interest in cases where rates were to be raised or services altered. For 3 years now the present Governor has been advocating, in accordance with the Democratic tradition, the formal establishment of a State agency charged with the representation of the consumer interest.

Until last year no bill ever got through the house of representatives, partially because this agency was to be granted subpena powers to get the records of business concerns. Business was quite fearful of such power. Last year, however, the bill was radically changed and the subpena power was omitted. Then, largely due to the almost singlehanded attention of the Governor's legislative secretary, Miss Margaret O'Donnell, this bill finally obtained house approval by the narrow margin of one vote. It subsequently was defeated on straight party lines by the then Republican senate.

Parenthetically, I might add here, I tried last year before this committee to make it perfectly natural for members of both parties to support such a bill. I still believe it is not primarily, or should not be primarily, a party bill.

At any rate, the present attorney general, Mr. Edward J. McCormack, Jr., shortly after he was elected by the legislature, decided to use the inherent powers of his office to set up a consumer council attached to the attorney general's office. This he did, and it has proceeded to function along the lines that most of you know. I believe its operation, even for such a short period of time as it has existed, has convinced many skeptics and doubters about the potential contribution to the general welfare that the consumer council idea does posess. The present bill, therefore, is an endeavor to give legislative approval and statutory authority to the consumer council idea and to enable it to function more effectively by allotting some meager budget.

THE COST OF THE COUNCIL

Up to now the operation of the present council in the attorney general's office has shown that much good work can be accomplished in this field at a relatively trifling cost. The universities have been glad to contribute the talent of their men and women to this type of public service on a completely voluntary and unpaid basis.

Incidentally, I consider this aspect of the consumer council movement one that is not sufficiently appreciated by outsiders. The Governor and the attorney general deserve great credit for this pioneering effort toward a closer integration of the political world and the university world. Each has much to learn from the other and mutual cooperation cannot fail to produce lasting benefits for the general public.

Last year I urged this committee to continue the Massachusetts tradition of leadership in such ventures as this present effort at political and university collaboration in the fields of consumer education and protection. I repeat again this year my feeling that this is one of the most important virtues of the present bill.

THE INDEPENDENCE OF THE CONSUMER COUNCIL

A Herald editorial, discussing the consumer council, correctly appraised it as an agency charged with specifically protecting the consumer public in several areas where other agencies had also at least a partial obligation to protect the consumer. It admitted that in the course of time most of these agencies had strayed from this consumer protection purpose. It then asked the question: "Won't the same thing happen to the consumer council in time? Will it, too, not be taken over by the special interest groups and diverted from its original purpose?"

I must admit this editorial question has bothered me a great deal. It is true that no formal agency structure, apart from the talents, energy, and integrity of the individual members staffing the agency, will suffice to achieve the original purposes of these bodies. Furthermore, any agency, including the consumer council, can be "stacked" and consequently thwarted if the appointing officials or the executive agents so desire. If that happens, the Herald may be right—a new watchdog agency may have to be formed.

But that is only to be expected from reading the history of human institutions. They all tend to stray from their original purposes and have to be abolished or reformed in time. That is exactly the meaning of the warning that "eternal vigilance is the price

of liberty." The citizens should never delude themselves that once a consumer council is officially established all their problems are solved. By no means.

FUNCTIONS OF THE COUNCIL

Now let me give you my conception of the functions that such a consumer council should undertake to perform.

1. Research: This almost always has to start with legal research on (a) the present prescriptions of law on a certain point and this may frequently involve an official opinion or decision by the attorney general; (b) the history of past legal and court actions in the area; (c) what State and Federal officials have any jurisdiction in the matter and what are their duties. Then comes the very difficult, painstaking job of economic research and economic analysis to diagnose the true welfare of the consuming public in the area under discussion.

2. Representation: This involves lawyers before courts and regulatory agencies stating the position of the consumer council on issues before those bodies. This, of course, can only be done after the first function of research has been thoroughly completed.

3. Education and organization of consumers: Ideally, the small consumer council should work with a very large group, or third layer, of consumer organizations and other public service groups. This may lead to periodic conferences such as the one recently conducted on the subject of advertising. Under this heading also should fall the task of coordination of official State activities for consumers.

4. The fourth function of the council, which in a way depends on the other three, is that of advice and suggestion to the executive and legislative branches of the Government. This could concern (1) new laws needed; (2) old laws to be enforced or discarded; and (3) recommendations on consumer complaints.

THE STRUCTURE OF THE CONSUMER COUNCIL

Two chief alternative structures are possible: (1) There could be one chief officer with a subordinate advisory council; this was the New York system. The second possibility is to have the small council, acting as a group, the main director of the activities and functions of this consumer agency. This would involve giving the council subordinate officers for legal, secretarial, and research assistance. It is the consensus of the present council that the second structure is preferable for Massachusetts.

The question of cost, I realize, must be uppermost in the mind of every legislator in Massachusetts this year. Really, the budget for the council could be an extremely modest one involving secretarial and research salaries for those assistants and certain allowances for the publication of reports. We must remember that an orderly continuing research study such as this council envisages would prevent the legislature from having to throw $100,000 or $200,000 quickly into a hasty panic study of utility rates or railroad rates, or what have you, as a last-minute desperate effort to show the public that something is being done to protect their interests.

## Man of the South

EXTENSION OF REMARKS

OF

### HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

*Tuesday, March 10, 1959*

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the news release announcing the forthcoming poll conducted by Dixie Business magazine of Decatur, Ga., to select the Man of the South of 1959. The release, prepared and distributed by editor Hubert F. Lee, lists the outstanding southerners who have been nominated for this honor.

There being no objection, the news release was ordered to be printed in the RECORD, as follows:

HELP ELECT THE MAN OF THE SOUTH

Readers of this newspaper are invited to help elect the Man of the South for 1959 from a group of leading southerners who have been named to the South's Hall of Fame for the Living, an honor group limited to 200 living southerners.

Votes for seven from the honor group should be mailed to Hubert F. Lee, founder of the South's Hall of Fame for the Living, 4592 Covington Road, Decatur, Ga.

The annual poll is sponsored by Dixie Business, which Lee has edited for the past 30 years.

Past Men of the South since 1946 include Thomas W. Martin, Birmingham; Donald Comer, Birmingham; C. Hamilton Moses, Little Rock; Ernest L. Kurth, Lufkin, Tex.; Reuben B. Robertson, Canton, N.C.; David Ovens (deceased), Charlotte; James C. Self, Sr. (deceased), Greenwood, S.C.; Robert T. (Bobby) Jones, Atlanta; Bishop Arthur J. Moore, Atlanta; Wilten E. Hall, Anderson, S.C.; Senator Walter F. George (deceased), Vienna, Ga.; A. Dee Simpson, Houston; Frank P. Samford, Birmingham.

Vote for seven of the following, giving reasons for first preference: Dr. O. C. Aderhold; Ivan Allen; Remmie L. Arnold; Robert O. Arnold; Harry M. Ayers; C. W. Bailey; Hines Baker; William N. Banks; Col. T. H. Barton; Bruce Bartin; Bernard Baruch; George C. Biggers, Sr.; L. L. Baxter; Morgan Beatty; Barry Bingham; Alfred Blalock, M.D.; Gen. A. R. Bolling; Harllee Branch, Jr.; Carl D. Brorein; Rex I. Brown; David Tennant Bryan; Wright Bryan; A. M. Burton; C. F. Byrns; Erskine Caldwell; Cason Callaway; James L. Camp, Jr.; John W. Carpenter; Bishop C. C. J. Carpenter; Hodding Carter; Dr. O. C. Carmichael; Owen R. Cheatham; James Saxon Childers; Will Clayton; Erle Cocke, Sr.; Erle Cocke, Jr.; Norman Cocke; Charles A. Collier; Hugh Comer; Senator Tom Connally; H. McKinley Conway, Jr.; Richard W. Courts, Jr.; Dr. John R. Cunningham; Virginius Dabney; Jonathan Daniels; Colgate Darden, Jr.; E. M. "Ted" Dealey; James K. Dobbs; Dr. Ralph B. Draughon; John E. Drewry; Hal S. Dumas; B. M. Edwards, Jr.; Oliver Emmerich; K. A. Engel; William Faulkner; Milton Fies; Fred F. Florence; B. T. Fooks, John Nance Garner; E. K. Gaylord; Dr. Francis P. Gaines; Alvan Gillem; Frank Gould; Walter F. Graefe; John Temple Graves; Gordon Gray; Robert Gregg; F. E. Grier; Haynes McFadden; Robert W. Graves; Robert M. Hanes; Clarence Hanson, Jr.; Dr. Rufas C. Harris; Harry G. Hastings; Dan J. Haughton; Clarence Haverty; J. N. Heiskell; Arthur M. Hill; Gov. William P. Hobby; Oveta Culp Hobby; Hamilton T. Holt; Gen. George A. Horkan; Clark Howell; Frank Huntress, Jr.; R. F. Hudson; George M. Ivey, Sr.; Maxey Jarman; Robert Jemison, Jr.; Hershel V. Jenkins; Dewey H. Johnson; Walter C. Johnson; Thomas M. Johnson; Dr. James A. Jones; Helen Keller; Kenneth S. Keyes; Dr. James R. Killian; Edwin D. Lambright; Samuel L. Latimer, Jr.; Thomas C. Law; Spencer Love; Joseph T. Lykes; Robert T. Maddox; Gen. George C. Marshall; Rabbi David Marx; Ben Massell; Ben M. McKelway; J. Finley McRae; C. B. McManus; Dr. James Ross McCain; S. C. McMeekin; Ralph McGill; Henry T. McIntosh; Quimby Melton, Sr.; Troy Middleton; Thomas A. Morgan; William M. Murphey; Frank H. Neely; Abit Nix; E. L. Norton; Alton Ochsner, M.D.; Gen. E. W. Opie; T. W. Pangborn; Roger Peace; Commodore E. H. Perry; Gen. John C. Persons; Louis Pizitz; Dr. John L. Plyler; Dr. William G. Pollard; Dr. Clarence Poe (for 60 years editor, Progressive Farmer); Legh R. Powell, Jr.; Nelson Poynter; L. W. Robert; E. A. Roberts; Caffey Robertson; James C. Self, Jr; John A. Sibley; Tom Slick; Frank G. Slaughter; McGregor Smith; Richard P. Smith; William A. Smith; Frank E. Spain (past president Rotary International); Talbot T. Spear; Tom D. Spies, M.D. (A Great American for 1958 Distinguished Service Award winner); Eugene W. Stetson; Louis V. Sutton; James G. Stahlman; L. P. Sweatt; Dr. Charles A. Thomas; Fred J. Turner; W. R. Turner; W. G. Violette; Louis Ware; P. F. Watzek; Dr. Goodrich White; A. L. M. Wiggins; Robert W. Woodruff; C. E. Woolman.

## I Speak for Democracy

EXTENSION OF REMARKS

OF

### HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. OLIVER. Mr. Speaker, I recently attended a dinner cosponsored by the National Association of Broadcasters and the Electronic Industries Association in honor of the 50 winners of the Voice of Democracy Contest, representing each State and the District of Columbia. Miss Margaret Rose Deraps of Portland, Maine, was the outstanding representative from my State. Miss Deraps in her radio script, which I am pleased to include in the RECORD, has shown a marvelous insight into the concept of democracy.

Her essay is a well-written expression of the true meaning of our most treasured possession—freedom. Her thoughts and ideas should be an inspiration to all Americans:

I SPEAK FOR DEMOCRACY

(By Margaret R. Deraps)

"Here rests in honored glory an American soldier known but to God." These simple words compose the epitaph on the Tomb of the Unknown Soldier—a symbol of our country and all that it stands for.

Who is this unknown soldier? He is every unidentified soldier who died for his country—be he rich or poor—farmer, executive, or laborer—white or black—Catholic, Protestant, or Jew. This hero died for Hometown, U.S.A.—for his loved ones—for his freedom. This hero died for democracy.

He is the unknown soldier who marched, tramped, and crawled through an insect laden jungle, striving and sweating for the hill looming before him, yet so far in the distance. He is the unknown soldier who lay in the mud and snow of a trench, waiting for the bullets and grenades to let up, and then plunged ahead, only to be driven by a bullet into the muck and stench of the battlefield far from the homelands for which he gave his life.

What made this man willing to face the gravity of war, its dangers, sufferings, and hardships? What gave him the courage to laugh and be gay and brave at the point of death?

To Joe, it was a small white bungalow on Main Street set among pines and shrubbery. It was the quiet evenings his family and friends spent together discussing each other's

problems and those of the world. They had individual opinions. They did not always agree, but they spoke their minds openly for they possessed one of the four great freedoms of democracy—freedom of speech.

Then again Tony, the Italian immigrant, gave his life so that others like himself might enjoy the happiness of living in a land of superabundance. To him democracy meant freedom from want. It was the joy of having a humble little place he could call his own; of having such simple luxuries as running water, electricity, soapsuds, and a few extra coins jingling in his pocket. It was the inexpressable look of joy on the faces of his children on Christmas morning.

But let us not forget Jacob, just out of high school, green and just plain scared. Wearing the identification band his girl gave him, he said brave goodbys to his family at the station. In his heart he carries one thought alone—there must be freedom, freedom from fear. This adolescent is going to free the world from fear itself so that people may never again be sick with panic; so that boys like himself would never have to face terror, shock, mutilation, permanent disability, death. Even in his short life in a democracy, he learned those ideals that helped him to fight and die as heroically in his first mission as the veteran beside him.

And to each of these Americans—Joe, Tony, and Jacob—democracy was freedom of worship. It was the right to attend the white Congregational Church at the top of the hill, or the great stone cathedral with its many spires, or the synagogue with the Star of David etched above its portals. How this priceless freedom should be cherished.

Yes, I am an American and I speak for democracy, but were I the greatest of orators I could not speak as eloquently as the silent voice of the Unknown Soldier. A silent voice shouting for democracy and begging us, the living: "Preserve these liberties for which I have died—freedom of speech, freedom from want, freedom from fear, and freedom of worship."

## Report on National Outdoor Recreation Resources Review Commission

EXTENSION OF REMARKS
OF
### HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Tuesday, March 10, 1959*

Mr. NEUBERGER. Mr. President, the National Outdoor Recreation Resources Review Commission, of which I am happy to be a member, has embarked on a detailed study of our Nation's future recreational requirements and an evaluation of the assets available for fulfilling the indicated needs. The staff of the Commission will soon be assembled under the direction of its newly appointed executive director, Mr. Francis W. Sargent, former commissioner of natural resources for the Commonwealth of Massachusetts.

In my comparatively brief association with the Commission, with its Chairman and staff members, I have been favorably impressed by the enthusiasm and perspective with which the congressional directives of the, act establishing the Commission are being pursued. I think these attitudes foreshadow fruitful and imaginative results from the 3-year study being planned by the Commission.

Mr. Laurance S. Rockefeller, able Chairman of the Commission, is largely responsible for the splendid start which has been made. Last week, at the North American wildlife conference, Mr. Rockefeller summarized what the Outdoor Recreation Resources Review Commission is, and what it hopes to achieve. Because many Members of Congress will find Mr. Laurance S. Rockefeller's address valuable as a kind of interim report on Commission activities and its plans. I ask unanimous consent to have printed in the Appendix of the RECORD the text of his speech of March 4, 1959, delivered in New York City.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

MEETING FUTURE RECREATIONAL NEEDS

(An address by Laurance S. Rockefeller before the North American Wildlife Conference, Statler-Hilton Hotel, New York, N.Y., March 4, 1959)

It is a great pleasure for me to be here today. In a sense, this is my first public appearance as chairman of the National Outdoor Recreation Resources Review Commission. Naturally, I would prefer to talk about the accomplishments of the Commission rather than its plans. However, as our work is just beginning, I can, of course, only speak of the plans. I am delighted to have the opportunity to do so before this conference, whose members have long shown their deep interest in the subject of the Commission's study.

I might note that in one of the earliest meetings of the Commission it was agreed that where questions of opinion were expressed by Commission members in public, we would speak only as individuals in order to maintain the objectivity of the Commission. Thus, I have divided this talk into two parts: In the first part—where I try to spell out the why, what, where, when, and who of the Commission—I shall speak as its chairman; when I go into what I believe is the underlying philosophy that must guide our thinking, I will be speaking simply as an individual interested in our Nation's recreational resources.

The title "Meeting Future Recreational Needs" is both broad and ambitious, but no more so than the task set up by the 85th Congress last year when it established the National Outdoor Recreation Resources Review Commission.

The "why" of this accounting lies in the fact that in creating the Commission, the Congress and the President recognized that conservation for the physical, cultural and spiritual benefit of the American people is in a critical period of transition as a result of new demands. The unprecedented growth of population, the basic shifts of age groups within the population, the increase in leisure time because of shorter hours and earlier retirement, increasing urbanization, and the tremendous strides taken in transportation all lead to the need for reexamination of our outdoor resources and a new appraisal of our requirements, not for just today but, in the terms set out by the act establishing the commission, looking as far ahead as the year 2000.

The "what" of the Commission is pretty plainly set forth in the establishing act by Congress. Our task will be, in the words of the act:

"To preserve, develop, and secure accessibility to all American people of present and future generations such quality and quantity of outdoor recreation resources as will be necessary and desirable for individual enjoyment, and to assure the spiritual, cultural, and physical benefits that such outdoor recreation provides.

"To inventory and evaluate the outdoor recreation resources and opportunities of the Nation, to determine the types and location of such resources and opportunities which will be required by present and future generations.

"To make comprehensive information and recommendations leading to these goals available to the President, the Congress, and the individual States and Territories."

Now as to the "where" of the Commission's work. In the first place, possibly we should define what is meant by outdoor recreation resources, and for an accurate account I shall use the formal definition set out in the act:

"Outdoor recreation resources shall mean the land and water areas and associated resources of such areas in the United States, its Territories, and possessions which provide or may in the future provide opportunities for outdoor recreation, irrespective of ownership.

"Outdoor recreation resources shall not mean nor include recreation facilities, programs, and opportunities usually associated with urban development, such as playgrounds, stadiums, golf courses, city parks, and zoos."

The Commission's evaluations and recommendations are to be made on a State-by-State, region-by-region, and national basis. Needless to say, local and community relationships must play an important role if the Commission's objectives are to be achieved. As part of its work, the Commission must survey, analyze and catalogue all presently existing outdoor recreation areas and, in doing so, the Commission will keep in mind both present and potential use. The scope of the Commission's operations will require it to determine the qualitative as well as the quantitative recreation facility needs of the American people. Naturally, there has to be some general relationship between the amount of land assigned to specific recreational purposes and the popularity of the purposes involved, but this cannot be formulated on purely mathematical terms; for recreation facilities and the need for them bear a direct relationship to public health and other social considerations as well as to population growth and concentration. In summation, the Commission's "where" covers the entire Nation, for means must be found to survey the Nation and pinpoint available sites, irrespective of ownership or present use, which might be used for recreation purposes, and which can be added to those already partially or fully developed, for the purpose of more nearly matching availability of nearby recreation areas to recreation needs. Special attention will be given to new multiple uses where this is judged compatible with presently established uses.

Only in this way can a formula be worked out in which we can make recommendations, where indicated, to the Federal Government, States, counties, municipalities, and private owners for the creation, management, and financing of present and planned recreation areas.

We come now to the fourth "W" or the when of the Commission. By September 1, 1961, the Commisison is asked to present a report of its review, a compilation of its data and its recommendations to the President and Congress. Act S. 846 calls for the National Outdoor Recreation Resources Review Commission to cease to exist not later than 1 year thereafter.

The present plan of the Commission is to allocate its 3-year term roughly as follows: (a) The first year to be devoted to an overall staff study and correlation of all available materials; (b) the second year to developing conclusions, policy, and program; (c) the third year to completing the report and making recommendations. One quite obvious difficulty facing a new Commission such as

ours is the always adherent and ever-present desire by interested parties for it to arrive at conclusions before an objetcive study has been made. No doubt a great many special interests will in all honesty expect the Commission to take positive stands either for or against pending legislation, or in connection with areas where use and protection may be in conflict.

With regard to other legislation which might effect recreational areas and opportunities, it is the majority opinion of the Commission that no recommendations should be made by it unless specifically requested by the Congress or the President. And it might be added it is our earnest hope that such recommendations will not be required before the review is far enough along to be significant.

We now come to the who of the Commission. As you may know, the members of the Commission have a responsibility under the act to coordinate its objectives with various persons and activities. We have spent already a considerable amount of time building what I consider to be this very essential base from which to operate.

The Commission, of which I am privileged to be chairman, has 15 members. Our congressional contingent has four Members of the U.S. Senate—CLINTON P. ANDERSON, RICHARD L. NEUBERGER, HENRY C. DWORSHAK, and THOMAS E. MARTIN—and four Members of the House of Representatives—HAROLD R. COLLIER, GRACIE PFOST, JOHN SAYLOR, and AL ULLMAN.

The other members of the Commission, in addition to me, are: Mrs. Halfdan Lee, Samuel T. Dana, Bernard Orell, Joseph W. Penfold, M. Frederick Smith, and Chester S. Wilson.

I believe most of you are already acquainted with these people, who have been long identified with the broad areas with which we are concerned.

The act calls also for the appointment of an advisory council of 25, who represent various special interests and geographic locations. To make sure that we would get the ablest and most representative group available, we requested recommendations for nominees from approximately 200 organizations and citizen interest groups. We have received to date over 500 nominations and have reviewed each with regard to respective categories of interest, abilities, etc. We will shortly announce the names of those appointed to the advisory council, which, we feel, will be a very important arm of this Commission. I might note that uppermost in our minds in selecting this group has been our desire to get persons to participate actively on the basis of a broad understanding of the underlying problems rather than merely representing special interests.

Mr. Francis Sargent, former Commissioner of Natural Resources for the Commonwealth of Massachusetts, officially started his tour of duty as executive director to the Commission just 3 days ago. In various positions, he has served under both Republican and Democratic governments in Massachusetts. He has been Director of Marine Fisheries, chairman of Atlantic States Marine Fisheries Commission, one of the three U.S. Commissioners on the International Commission for the Northwest Atlantic Fisheries, and chairman of the Massachusetts Water Resources Commission.

That we were lucky to get Mr. Sargent as executive director is attested to by the really tremendous number of laudatory articles and editorials which appeared in the newspapers of Massachusetts since his resignation from his posts there.

A small but very capable staff is already at work at our headquarters in the Regional General Services Administration Building, Washington, D.C.

We have been in touch with each of the 13 Federal departments and independent agencies having a direct interest in outdoor recreation and have requested the appointment of liaison officers from each. In every case, an Under Secretary, Assistant Secretary, or a Director has been named to work with the Commission. I personally have had the opportunity to meet with most of the Secretaries and agency heads in regard to their designation of a liaison officer and have found them unfailingly cooperative and actively interested in the jobs we are undertaking.

In the course of the Commission's life we will wish to coordinate our work closely with that being carried out by individual States. Indeed, we plan to take into account the problems and opportunities of outdoor recreation in each State. This, of course, will require access to such studies by the States as might be available concerning existing and possible future recreational problems as well as plans for meeting them. To further this program, we have written to the Governor of each State requesting the designation of an official with whom the Commission can work.

In addition, we will call on individual consultants and private consulting firms to the extent that they can enable us to get specific information as needed without having to enlarge our staff.

We are hopeful that the type of joint effort we will endeavor to carry out at all levels of government—be they State, Federal, county, or municipal—and with private persons and groups, can provide a lasting service to all concerned with the broad problems of recreational resources.

Before concluding, I should like to add a few personal observations about the underlying importance of outdoor recreation resources.

Quite apart from the physical benefits resulting from outdoor activity, man needs outdoor recreation resources because it is through them that he is reminded that he is part of nature. There was a time, not too long ago, when such reminders were not needed. Outdoors, natural beauty—and natural hazards—were a part of everyday life. Indeed, I fancy that there were a great many people, especially among the early settlers, who then looked upon nature as a constantly threatening force, ever to be pushed back. In this connection, many people today feel that the hardy pioneers of yesterday were impelled to seek new horizons not by a love of the wilderness as by a desire to improve their condition or status.

When the pioneers had no new lands to conquer, when people started moving from isolated farms to small communities and thence to urban centers, our relationship with nature underwent great change. As we became less fearful of the forces of nature and more mindful of the pressures of civilization, we began to seek solace in our former foe. Thus the need for outdoor recreation resources became established. Recognition of this need has tended to grow proportionately to the increasing urbanization of our country.

The United States, despite having been a forerunner in the establishment of National and State park systems, is on the whole just beginning to wake up to the vital importance of recreation. The reasons for this are not difficult to ascertain: we are still a relatively new country and have been engaged in the necessity of settling and developing a land that was wilderness two centuries ago. Thanks to the energy and drive of our people as well as to the wealth of our natural resources, no nation in history has developed so fast. But to accomplish this, our society in the past has had to emphasize—and rightly so—the dignity of work. Recreation, or the proper use of leisure time, has not yet attained a comparable social or moral stature. It is still considered by many, including policymakers, with suspicion—as a waste of time.

We can recognize, as a sign of our reaching maturity as a people, that this attitude is beginning to change. We are beginning to recognize that outdoor recreation—as a healthy, satisfying and often creative use of leisure time—has evolved from a luxury of the few to a necessity of the many. We must recognize also that sports promotion, travel advertising, and the commercial use of outdoor areas and attractions have all played a part in accentuating the demand for outdoor facilities.

To meet these demands, I think they must be approached on three fronts: Federal, State, and community. Great strides have already been made, but I feel much remains to be done—particularly in the third area. Recreational problems at the community level are particularly important because there are fewer answers and greater pressures. An editorial in the New York Times last week mentioned in this connection:

"Our city and our suburbs need more park land, not less. • • • There would be a willing buyer, industrial, commercial, or residential, for every piece of park land in the metropolitan area if government were willing to sell out. Our suburbs are for the most part poor in public recreation areas. They cannot spare an acre."

While this editorial was referring to the situation in New York, it could apply to most of our large cities throughout the United States.

I have previously spelled out the official why, what, where, when, and who of the Commission. Unofficially, I would like to recapitulate as follows:

The Commission expects to serve as a clearing house of information and ideas.

Its review will cut across all areas and all activities dealing with land use.

Its purpose is to anticipate needs and prevent shortages in our natural recreation resources.

Its work is already in progress; its findings will be made available in 1961; its responsibilities are to tomorrow as well as today.

The Commission recognizes that outdoor recreation resources are something in which every one of us has a stake.

The goal of the Commission will be to reflect the needs and aspirations of the entire national community.

## Poison in Your Water—No. 22

EXTENSION OF REMARKS

OF

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. DINGELL. Mr. Speaker, in another insertion which I made into the CONGRESSIONAL RECORD Appendix appeared complaints about the water in the region of Denver, Colo.

This article appearing on November 25, 1958, entitled "Metropolitan Denver's Sewer Problem, or How Long Can We Hold Our Noses?" sets forth one of the reasons why the citizens of the area complain about the dirty, rotten water. The reason is pollution in the waters of the area.

This is just another reason why Public Law 660 of the 84th Congress must be implemented by full appropriation and

why the program must be expanded rather than contracted:

METROPOLITAN DENVER'S SEWER PROBLEM, OR HOW LONG CAN WE HOLD OUR NOSES?

Come late summer and autumn, many residents north and west of Denver are not very happy when they lift their water glasses from the dining room table.

Too often it isn't really what a chemist would call water at all. It's a chemical solution. It has a sight color, a slight odor and a slight taste.

It's sanitary all right. It's been treated and it's safe. It just isn't savory.

Why? Because four of the water districts in that region depend on Clear Creek water for part of their supply. And upstream from the water inlets are the outlets of as many as seven individual sewage treatment plants.

All but one of these dump sewage into Clear Creek after only primary treatment.

When Clear Creek is low, as it is every late summer, fall and early winter, a sizeable portion of the flow is what is dumped in upstream.

This problem is not only Clear Creek's, but the South Platte's as well. As one housewife we know says as she pulls the plug in the sink, "Well, there it goes to Brighton."

In addition to stream pollution, the dilemma of what to do with sewage (some 95 percent of the 55,000 gallons each Denver area resident uses annually goes back into a sewer) takes many another form, most of which are financial. Examples:

Denver is under court order to construct a secondary sewage treatment plant, at a cost of several million dollars. No one knows where the money is coming from.

The little town of Sheridan, on Denver's southwest edge, having trouble making ends meet financially, is dickering with both Denver and Littleton to hook on to a larger city's sewer rather than build its own treatment plant.

The small enclave of Glendale, enclosed on four sides by Southeast Denver, has had a bond issue passed by its voters to build a sewage treatment plant. But Glendale is having difficulty selling its bonds.

The majority of the 53 separate sewer districts in metropolitan area are having some kind of trouble, mostly due to lack of money or capacity. The Denver public works department is constantly badgered by these districts to annex them; and sometimes, after Denver has said no, city sewer men find the districts have secretly hooked on anyway.

The metropolitan area has 27 sewage disposal plants where only four would do. This makes sewerage costs much higher than necessary.

The inescapable conclusion is that metropolitan Denver's sewage problem is going to get worse and worse until some kind of area-wide cooperation and planning results in a metropolitan sewer system.

## The Challenge to the Dollar

EXTENSION OF REMARKS

OF

### HON. JOHN H. RAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. RAY. Mr. Speaker, the following address, delivered by Mr. George Champion, president of the Chase Manhattan Bank of New York on January 30 last has just come to my attention. It is a broad and careful survey of the major dangers that threaten our national economy, and I am sure it will interest every Member of this House and every other reader of the RECORD.

Mr. Champion's remarks and suggestions deserve wide attention and careful study:

THE CHALLENGE TO THE DOLLAR

When I lived in San Diego there was some substance to the disparaging remarks made there in regard to your harbor, which was then called San Pedro. The tremendous work you have done in building this great body of water which now exists is a tribute indeed to the farsighted citizens of Los Angeles. Having seen this great development over the years I was not too surprised to hear you had passed the old port of Boston as a center of world trade.

Because of your historical interest in the importance of international trade I felt that there could be no better place to discuss the position of our country in the world markets, and that the future of the dollar would have especial significance to you.

The life of every one of us here, indeed every American, is inextricably bound up with what happens to the Nation's international position. So interdependent has the world become—so interrelated are the domestic and world economies—that none of us can esecape the consequences of a basic change in our relations with other nations. And yet in the past several years some rather disturbing trends have developed which suggest such a change may actually be under way unless we act with vigor and courage to head it off.

Let me point to just three items which suggest we ought to dig beneath the surface to unearth any fundamental disturbance that may be in the making.

GOLD STOCK IS DOWN

Item 1: Our Nation has experienced a sizable gold outflow over the past year. For 1958 as a whole we shipped abroad about $2.3 billion of gold, and our total gold stock today has fallen to around $20.5 billion, still a sizable figure, but the lowest since 1946. During the recession a year ago, with interest rates falling, there were good reasons why the United States should lose some gold. But the outflow has been persistent and is continuing today, although at a reduced rate.

Item 2: U.S. exports have fallen rather sharply. Our exports actually fell from a peak rate of $21 billion annually in mid-1957 to a recent rate of about $17 billion. This decline in foreign sales was a major contributor to the drop in domestic output in early 1958.

And item 3: We are hearing increasing talk (most of it from abroad) that the dollar may be heading toward a period of severe trouble. Far-fetched as it may seem, there are reputable analysts in Britain and on the Continent who even predict eventual devaluation of the dollar.

Actually these symptoms, these surface manifestations of potential trouble, are all interrelated. They involve the sum total of our economic relations with other peoples, relations which finally come to be reflected in the balance of payments between the United States and other nations. Most of us, I am sure, never look at this particular balance sheet. Yet buried in the fine print are certain trends which we all ought to know something about.

For one thing, it may not be widely appreciated that the volume of dollars the United States is providing other nations has increased immensely in recent years. Moreover, most of these dollars are not tied to any specific exports. Take, as an example, the heavy expenditures that are made in connection with American military forces abroad. Today our Government pays for the support of troops in Germany, England, Japan, and at dozens of other far-off bases. And, of course, the men themselves spend their pay.

The result is an outlay of more than $3 billion to countries which are the hosts of our military men. At the same time a dozen other streams are feeding dollars abroad—the imports we buy (which are steadily increasing), our foreign aid, and the private foreign investment we send to other countries among them. This foreign investment alone has more than doubled since 1955.

DOLLARS NOT BEING SPENT

When all these dollar streams converge they make a mighty river. Last year the sum total of dollars provided to other countries came to the impressively large figure of $26 billion. And it is a significant fact that, counting the world as a whole, not all these dollars the being spent. Indeed, over the past decade many individuals and many countries have sought to save dollars rather than to spend them. As a result the dollar balances and short-term investments held on foreign account in the United States have more than doubled and now exceed $15 billion.

Now this increase in dollars held in foreign accounts isn't bad in itself. Over much of the postwar period the free world suffered from a dollar shortage. It became the objective of governments and central banks to build up their stock of dollars, and to hold dollars was regarded as being as good as holding gold.

For some countries this dollar shortage still perists—India, the Philippines, Brazil, and Argentina are examples. Many such countries are lesser developed lands to which we channel much of our aid. But for a number of others, particularly in Europe, the dollar shortage has become a thing of the past. Such countries no longer have a pressing need to build up balances in the United States. On the contrary, if they are to retain the balances already here, if they are not to convert them into gold, they must stay convinced that the dollar will indeed continue to be as good as gold.

KEEP THE DOLLAR STRONG

So here we come to the heart of the matter: the dollar must be kept strong and respected in every country of the world. For if it ever proves otherwise, if the dollar ever begins to be questioned and a feeling generated that the United States cannot properly manage its affairs, then our Nation, indeed the whole free world, will find itself in deep trouble.

We clearly are not in deep trouble at the moment. But this does not mean we should wait and act only when trouble becomes acute. Certainly we should not wait for any real crisis to develop. The fact of the gold flow, the fact that questions are being raised about the future of the dollar—these are warning signs which it would be folly to ignore.

What are the fears in the minds of our friends abroad? What are the dangers which we Americans must guard against? I think they can be boiled down to these:

First, there is concern that the United States is pricing itself out of foreign markets—that it cannot achieve the level of exports necessary to prevent a continuing outflow of gold.

INFLATION A GROWING FEAR

Secondly, and related to the first, there is fear that we may lack the necessary discipline to keep our costs and prices under control—in other words, to avoid inflation.

And, thirdly, I might add, there is concern that our country may be in the process of scrapping some of the fundamental principles which in the past have made it strong—that we may be foregoing our reliance on free enterprise and individual initiative in order to take the easy road of Government action and subsidy.

I want to say just a few words about each of these dangers. It certainly would do us no good to deny that we are encountering difficulties in some export markets. I have mentioned earlier the rather sharp decline in shipments abroad this past year. Some of this reduction, it is true, is due to cutbacks in demand. In Europe business is now experiencing a moderate letdown in activity—very much like ours of a year ago. And some of the raw material areas, like South America and Africa, are suffering from lower prices.

Yet the fact still remains that American exports are holding up less well, relatively, than those of many nations including Germany, Britain and Japan. Moreover, we have testimony from a number of our producers that they no longer can match foreign firms when it comes to prices on a wide range of items. Producers of electrical equipment tell us their counterparts in Britain or Switzerland can build a generator for considerably less than it can be produced here.

NOW WE'RE IMPORTERS

We used to be exporters of all kinds of copper products, but now we are importers. Or take the story Roger Blough tells about the industrious Japanese who buy scrap metal here in California, haul it back to their mills in the Orient, manufacture it into finished products, and ship it back across the wide Pacific to undersell American producers by such wide margins as $29 a ton on reinforcing bars. We can hardly compete in Latin America when foreign producers undersell us in our own frontyard.

Then turn to still a different sector of our economy—agriculture. Almost from the founding of our country the United States has been known as the world's primary source of supply for certain farm staples, especially cotton and tobacco. Prior to World War II our country provided nearly 40 percent of all cotton that entered into world trade. By the early fifties, after 2 decades of inflating farm prices, we furnished only one-fourth of foreign shipments. Meanwhile stocks began to mount sky-high in our warehouses.

So what did we do? Did we try to make ourselves truly competitive in the world's cotton market? Not in the least. Our Government said that it would compete, but only on the artifical basis of a subsidy. This season it is estimated our exporters will ship abroad some 4 million bales by selling cotton at an average around 28½ cents a pound, almost a fifth below the domestic price. The same technique of course has been employed to dispose of wheat, rice and other products in world markets. Truly this is one of those situations that might even have seemed strange to Alice traveling in Wonderland.

Now I don't want to imply that all of our problems in export markets are of our own making—that we can't compete on any range of items. That just isn't true. After all, we are shipping abroad some $17 billion of goods a year—more than any other single nation. The trouble is that $17 billion just isn't enough to balance our accounts, and we have to put ourselves in a position to expand the volume.

Right here I ought to say that in some areas of the world—and it is particularly true of Europe—American shippers face tariffs, quotas, and other obstacles to a degree not confronted by other nations. Indeed, some of these obstacles are designed specifically to exclude U.S. products, and except for liberalization by Germany and some by France (on raw material quotas), the recent moves toward currency convertibility in Europe didn't affect them.

U.S. CARS COSTLY ABROAD

Take the case of automobiles. You all know that foreign cars are having quite a vogue here in America. We even lowered the tariff on them recently from 10 to 8½ percent. But what about American cars abroad? True, their price has gone up and they cost more. I want to say a word about that trend in a moment. But in countries like Britain, Italy, and France a buyer can hardly get an American car if he wants to.

Ernest Breech recently cited the case of a 1959 Ford Fairlane, which carries a price here in California of about $3,400, including optional equipment and taxes. Mr. Breech points out that in France the delivered price of that car is about $8,200. It includes no less than $3,200 of duties. In Italy the car would cost $5,800, with a penalty of $1,400. And in England the price would be about $8,000, with the penalty composed of a 30-percent duty.

IMPORTS ARE LIMITED

Moreover, if this were not enough, Mr. Breech added, imports are further limited by severe quotas and other devices. Thus France admits only a relatively few cars from outside the European Common Market, the United Kingdom presently restricts imports from the United States and Canada to 650 automobiles per year, and Italy admits only a few hundred American cars.

One could go on and read off a long list of other products, from refrigerators to machinery to chemicals, that face similar obstacles. On some of these our producers might not be able to compete even if the barriers were down. But on others—particularly specialized products—we undoubtedly could.

Initially, of course, there were good reasons for these discriminating barriers. Europe had been torn by war, its industry was badly hurt, and it was woefully short of dollars. But these circumstances are a thing of the past. The time has come for most European countries to stop singling out U.S. products for special treatment. They should move to eliminate discriminating quotas and other devices, so that we are allowed to compete as best we can, on the same terms as other suppliers.

I wish I could say that this were all that would be needed to solve our problems. But unfortunately it isn't. There are other deeper, highly significant trends, to which we ourselves hold the key, and which also have an impact on our position in world markets. One of these goes back to the whole vital matter of prices and the persistent tendency toward inflationary pressure here in the United States; and another, not unrelated to this, is the growing inclination to turn to Government whenever the going gets tough.

No producer can expect to hold on to his market if prices are pushed incessantly higher. And yet that has been the rather unhappy record for a number of items over the past few years. Since 1955, at least, prices have risen more in the United States than in either Germany or Japan, and this in spite of the fact that the Federal Reserve System did all that it could to stem the advance.

LABOR COSTS SURGING

Now we don't have to look very far to find the major source of this pressure on prices. It comes from rising costs—and the chief item on the list is labor costs. The story is too familiar to you gentlemen to need retelling. Many of you have lived through it yourselves: the wage increases that far outrun any gains in productivity; job featherbedding, which is uneconomic and indeed morally indefensible; and still other labor practices which interfere with the process of passing savings on to the consumer. Most of us could cite chapter and verse, and the pity of it is that the leaders who take this path really do a disservice to every citizen individually and the Nation as a whole.

Let me cite you a story as one hears it told abroad—the pattern of the future as some of the foreign seers profess to see it. It goes like this: "The United States lacks the internal discipline (or should I say fortitude) to control its costs. Prices are bound to rise. As a result U.S. producers will continue to lose out in world markets even if other countries quit discriminating against them, and the adverse balance of payments will remain. The gold flow will persist, and at some point, as the holders of dollars become concerned, the flow will turn into a torrent. The United States will then be faced with the necessity to devalue the dollar."

That, in essence, is what some of our foreign critics are saying.

Now I don't think for a moment that any such pattern of events will take place, and the consensus of informed economists is that it will not happen. But it would be foolish for us to hide our heads in the sand and conclude that it could never come to pass. At all costs we have to guard the integrity of the dollar, and that means that we all have to work to curb the forces that could weaken it. You may have heard the old saying "God save th Queen, but only the English people can save the pound." Well, only the American people can kep the dollar sound.

DEFICITS DURING PROSPERITY

This means, too, that we have to remove the pressure on prices that could arise from a continuing Government deficit. Here we are, running a $12 billion annual deficit at a time of mounting prosperity. We quite rightly give help to many other countries that need it, working through a variety of agencies to do so. The Monetary Fund and the World Bank, in providing such help, rightly insist that recipient nations balance their fiscal budgets as well as their payments with other countries. Then we turn around and do the opposite ourselves.

BALANCED BUDGET IS AIM

It just won't work. No nation, any more than any family, can long exist if it tries to run counter to the fundamental laws that guide economic life. We, too, must bring our public expenditures under better control and balance our dollar outgo with income.

The President has made it unmistakably clear that this is his policy, that he aims for a balanced budget. Now it is up to us, the American people, to tell him and Congress clearly and without equivocation that we are back of him one hundred percent—that we strongly urge a cut in expenditures.

There is no doubt in my mind that if we tackle this problem with vigor and determination we can lick it. It is not enough for trade associations, business clubs and other civic organizations to send resolutions to Congress, though of course these actions are good in themselves. In the final analysis it comes right down to the individual. What do you and I do about it? Do we make ourselves heard? Do we take the time and make the effort to express our opinions plainly and vigorously to those who represent us in the Federal Government? (And State and local governments, too, for that matter.)

And when we talk about cutting expenses we should make it known that we mean the nonessentials, and not vital items like defense and essential foreign aid. When it comes to defense, an establishment that is second to none is vital. Nothing is more perilous or useless than a second-best defense.

And related to this is our foreign aid. I don't mean aid to countries that are piling up dollar balances—any aid to them, including the military, ought to be reexamined, and indeed it now is being reexamined. I mean aid to countries that really need it: countries in Asia, the Middle East, or other areas that may go under without it.

TWO AND FOUR-TENTHS BILLION DOLLARS TO FARMERS

I realize it has been fashionable to blame the national deficit on the need for huge defense and foreign aid expenditures. Yet

I wonder how many of our citizens appreciate that of the $7.5 billion increase in Government expenditures this year, none flows to foreign aid and only $1.7 billion represents an increase in defense outlays. Where does the remainder go? Well, $2.4 billion (the largest single increase) is going to the farmer; $1 billion is going for housing; about $400 million has been earmarked for added unemployment benefits; and the remainder of the increase is scattered among other beneficiaries.

It is significant that a sizable portion of these outlays involves a subsidy to one group or another. I am afraid that it is fast becoming a habit in our country to regard Washington as a highly convenient storm cellar—a place for one and all to run to at the first sign of disturbance. Unfortunately this is too often true of business as well as other groups, with subsidies flowing to such diverse fields as housing, shipping, aviation, and now to the whole area of small business.

But probably no area receives as heavy a subsidy today as does agriculture. Almost one-fifth of all cash income for farming (close to $7 billion) flows from the Federal Government. Moreover, this farm subsidy has a double meaning in terms of our international position. Not only is it a major contributor to the unbalanced budget, and hence to the concern about inflation, but it also acts to price us directly out of important world markets.

I have already mentioned the gap that exists between the world price and our own domestic price for such crops as wheat, rice, and cotton. The truth is that the farm program of our Government, now almost a quarter century old, effectively deprives the United States and the world of some of our most productive resources. For I'm completely convinced that if farming were permitted to develop unhindered in America we could produce many staples here more cheaply than anywhere else, and all to the benefit of peoples everywhere.

COTTON AND RICE

I am sure that all of you who are familiar with the cotton situation in California would agree with me. But perhaps an even more dramatic example is to be found in the case of rice. Experts tell me that if the controls were to be removed from rice output, modern methods would make it possible to produce rice more cheaply in the South than in the Orient—and this in spite of the fact that the laborer in the Orient earns only 20 cents a day.

Clearly there is something wrong with a program that blocks this kind of efficiency and spends $7 billion in the process of doing it. The underlying truth may be that in exports the United States may find itself heading toward a growing advantage in farm products even as compared with many manufactures.

We cannot ignore the fact that in the postwar period productivity in farming has been increasing by 6 percent or more a year, while that in manufacturing has grown a bit less than 3 percent on the average. In such circumstances it should be natural for us to place increased emphasis on the export of farm items. That is a main reason why our farm program needs to be revised and brought into harmony with the facts of the mid-20th century.

ADVANTAGES ARE MANY

In farming, as in industry, we need to return to some of the basic principles that did so much to encourage the growth of our country in its most formative years: A reliance on our own individual enterprise, encouraged by enlightened self-interest, and making full use of the marketplace, of the normal forces of supply and demand, to direct our efforts.

Think of all the advantages we start with: a level of education, know-how, and productivity that is greater than anywhere else in the world; an industrial plant and capacity that can't be matched in any other country; and an eagerness and willingness to learn, backed by research and scientific inquiry on an unprecedented scale. These are advantages that give us a headstart on all other nations. But we have to make full use of them.

You have heard the saying, "The world is full of willing people; some willing to work, the rest willing to let them work." We have to disprove that saying. We can't featherbed; if anything we have to work harder and longer, make better products and relax less in the suburbs—and that applies to bankers, as well as to everyone else.

The fact is (and too often it's overlooked), we continue to be at war—a war not of our own choosing, but still all embracing. It is a war for men's minds and men's souls, with active battles being fought on the political, ideological and economic fronts, while the military position holds at a stalemate. Consider again those words of Khrushchev:

"We declare war on you * * * in the peaceful field of trade. We declare war. We will win over the United States. The threat to the United States is not the ICBM, but in the field of peaceful production. We are relentless in this and it will prove the superiority of our system. * * * We value trade least for economic reasons and most for political reasons."

Is it any accident, then, that the Russians in the past year have begun a trade drive in the West? That they have sold tin, aluminum, asbestos, and other products at cutrate prices? That they seek to become the suppliers of oil to Latin America? Or to tie Egypt and Syria to their orbit through loans and the iron bands of trade? Or is it any accident, on the other side of the globe, that Communist China has begun to undercut the Japanese in markets of southeast Asia?

OUTCOME IS CLEAR

The answer is, of course, that it is no accident; and this economic war promises to affect the lives of all of us. And yet I am sure that none of us has any doubt as to the outcome. Our Nation is manned by a people of great resourcefulness and proven strength. When confronted by large problems and issues in the past they have displayed remarkably good judgment. There is no reason why the future should be any exception.

The future will be what we make it. There are encouraging signs that we are beginning to recognize and face up to our problems. On all sides one hears of a growth in productivity, of a striving to get costs under better control. And the President, with his inspiring leadership, has pointed to the road that can lead us to fiscal stability. Certainly our scientists are working overtime; and no nation is devoting so much thought and effort as we in the search for better ways of doing things.

We do indeed possess great advantages, and I for one am confident that we shall make full use of them. We can overcome our economic problems. To do so we will need determination and skill, imagination and hard work, courage and self-discipline. Americans are rich in these qualities. Now we must roll up our sleeves and show the world how to use them.

## Thomas Masaryk: Champion of Democracy

EXTENSION OF REMARKS

OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. GALLAGHER. Mr. Speaker, it is a privilege to have a part in honoring a man of the stature of Thomas Masaryk. One cannot overpublicize the contribution that this man made to the cause of democracy. His is a name that is likely to endure as long as the world has a place for the cause of individual freedom.

Yet his position of prominence was of relatively short duration in the scheme of things. As President of the Czechoslovak Republic—whose existence as an independent state was itself short-lived—Thomas Masaryk, in a brief 17 years, promoted the true ideal of democracy as few men have been able to do in the space of a lifetime.

Thomas Masaryk founded the Republic of Czechoslovakia. When he became its first President, in 1918, he was chosen for the post because of his ideals, his devotion to them, and his willingness to make sacrifices for them. This characteristic idealism had marked his life.

As a youth of lowly parentage, but encouraged by his mother, he had struggled to achieve an education. As a young man his talent and dedication to high principles was recognized; he was encouraged and assisted to become a teacher. As a teacher he developed an independence of spirt and devotion to mankind that gained for him a place in the legislature of his then mother-country, Austria. As a legislator his chief contribution to his fellowman derived from his independence of spirit. He had sufficient courage and consecration to principle to fight the reactionary government, to insist on the rights of the individual against the state.

Then when World War I liberated his compatriots and generated an independent state, it was he who guided it to the fruition of a faith. He led this new nation for more than half of its independent existence, and his idealism persisted.

As long as the free world shall endure it will be appropriate to recall that whatever the fate of this one-time Republic of Czechoslovakia, now fallen behind the Iron Curtain, its very existence was the culmination of an idea—the idea that men should be allowed to live in freedom and in peace, with emphasis upon the individual, his rights, his dignity, and his high promise.

Thomas Masaryk, Czechoslovakian leader, was the very embodiment of this idea. In his promotion of it he made a contribution to the world which will not be forgotten.

## Poison in Your Water—No. 24

EXTENSION OF REMARKS
OF
## HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I inserted into the CONGRESSIONAL RECORD recently an article describing how the rivers in the Philadelphia area are fouled and soiled and polluted by sewage and industrial waste.

An interesting consequence to this pollution and filth in the water of the area appeared in an article in the Philadelphia, Pa., News, on October 10, 1957.

The waters and springs of Fairmount Park, traditional sources for pure drinking water for millions oppressed by foul tasting tapwater, have now become polluted so that they are no longer available to the people of the area for drinking.

The springs are characterized as dirty as "what you'd find in a sewer." The area once available to the people for pure drinking water is now posted with guards to see that no one drinks from the springs or takes the water away for use at home.

This is just another reason why the Federal Government must vigorously continue its action to abate pollution, both by enforcement action and by continuation of the grants authorized under Public Law 660 of the 84th Congress:

PARK SPRINGS ARE POLLUTED

One printed sign created a sensation in Fairmount Park yesterday. Generation on generation of our town's families would never believe it, but—the sign says: "This spring water unsafe for drinking."

Remember the days when Philadelphia's tapwater was renowned for its odor of stables? When the Nation laughed at jokes about the chlorine cocktails that flowed in our kitchens?

In those days, just a few years back, Philadelphians by the hundreds drove to the pure spring on East River Drive above the Girard Avenue Bridge, to fill their gallon jugs.

Here was the oasis in the middle of millions of people. And now, the water that spouts from the stone lion's mouth has been disgraced.

It's polluted, said the health department.

And so are the other springs in Fairmount Park, 75 all told.

Health Commissioner James P. Dixon says stay away. The springs suffered the greatest degradation of all: the water is what you'd find in a sewer. This was established through 1,861 tests.

Most popular springs, in addition to the East River lion, are Harrison Spring, on East River Drive; the spring near Black Road on West River Drive; Murphy Spring, Belmont Avenue near Wynnefield Drive, and Mount Pleasant Spring in the East Park.

All over the park, the signs went up. Park guards were instructed to see that nobody drank from the springs, took water away—or moved the signs.

Charles I. Thompson, president of the Fairmount Park Commission, said the springs have been tested for 20 years. And this is the first time they've been found contaminated to a dangerous degree. In 1941, 16 springs were closed for a while.

If tapwater could laugh it'd have a chuckle today. Taps running free and healthy, and spring water's in the guardhouse.

## "For God and Country"

EXTENSION OF REMARKS
OF
## HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include, therewith, the winning address for the Freedom Award by the Reverend Feltham S. James, then national chaplain of the American Legion, on May 30, 1958, at Omaha, Nebr., the title of which is "For God and Country." Mr. Speaker, for this address this distinguished clergyman and theologian, at the annual conclave of the Officials of the Freedoms Foundation, was selected to receive the top award from that illustrious organization at their headquarters, at Valley Forge, Pa., on Sunday, February 22, 1959. Mr. Speaker, no finer American could have been selected; Mr. Speaker, no finer address could have been selected; Mr. Speaker, no finer place could have been selected for the award.

The address follows:

FOR GOD AND COUNTRY

(Address by Rev. Feltham S. James, national chaplain of the American Legion, delivered at Omaha, Nebr., May 30, 1958)

Several years ago the United States issued a special commemorative postage stamp honoring four army chaplains, who lost their lives in the Second World War. The engraving shows the sinking troopship *Dorchester* and, above the stricken ship, the calm, friendly faces of the Protestant, Roman Catholic, and Jewish Chaplains who died hand in hand. The *Dorchester* was torpeoded and sunk in the North Atlantic in February 1943. On board were four chaplains: George Fox, a Methodist; Clark Poling, Reformed Church of America; John Washington, a Roman Catholic; and Alexander Goode, a Jew. When the ship was hit, each of the four chaplains gave his lifebelt to nearby soldiers who did not have one. Then they joined hands and prayed to the one God they all served for the safety of the men struggling to leave the fast sinking vessel. The survivors finally landed in Greenland. They said, "This is the picture engraved on our minds and hearts as the *Dorchester* disappeared beneath the waves."

There we see exemplified the sacrifice upon which our Nation was built. Those four chaplains, as well as countless thousands of other men, have given their lives that you and I might enjoy the heritage of freedom that is ours. One of our greatest faults is that we too seldom pause to recall the heroic sacrifice of those brave men and women of yesterday. We do not follow the injunction of the Old Testament, which required of the father to recount to his children the great and noble deeds of those who won for Israel the high place of the chosen people of God.

The ancient Romans remembered their honored dead by placing statues of their Roman children would see them and be reminded to emulate their noble deeds. We have no statues of our honored dead in our dwelling places. But we do have occasions the obvious meaning of which is to remember our honored dead. Such an occasion is this morning. We have come together to remember and pay honor to comrades who have answered the final bugle call.

On occasions like these we pause and pay tribute. But this is not all the occasion means. If we stop there, we are not true to our honored dead, to ourselves or to our beloved country. These occasions should have a profound effect upon our lives and thought. Those who gave their life's blood did not do it that we might simply meet to sing their praises. The spoil they won for themselves was only a fraction of what they secured for us. They were strugglers for the future, battlers for a heritage for generations yet unborn. They died for a purpose, for a cause. It is for us to accept the challenge to continue what they began.

"For the youth they gave and the blood they gave
We must render back the due;
For every marked or nameless grave
We must pay with a service true;
Till the scales stand straight with even weight,
And the world is a world made new."

Out of the past we should learn our lessons for the building of the future. There are times in the history of persons and peoples, particularly times of crisis, when a rediscovery of yesterday opens a new pathway to tomorrow, when the awakening of a sense of heritage becomes a powerful force for determining our destiny. Men must learn to look back if they are ever to succeeed in moving forward. Behind us are the wisdom and the experience of the ages. The past is full of landmarks and danger signals which he must study who would advance into tomorrow. And so occasions like these have a twofold function: they not only lift up tributes for the dead, but they have exhortations for the living. They bring challenges from the graves of our dead. Those graves are not silent. They speak. They remind us of what God expects of us and of this land we profess to love. Memories carry us back into the past. But on these occasions the past warns us to look into the future and make certain that war will not visit us again. They warn us that we must work to conquer the sins that have so long conquered mankind. They warn us, also, that America's dream of freedom and liberty will melt like the hoarfrost in the morning sun unless we keep it alive in the minds of the people and defend it with the power of the Nation.

Certainly it is not secret that there are forces in the world seeking to destroy that dream. Russian strategy and policy has been—and is—the destruction of free America. It is more important than ever that our Nation maintain its ability to resist aggression—because in our strength rests our power to avoid the holocaust of atomic destruction. Only through peace can we bring our dream into a reality and only through power, in the face of Russian threats, can we maintain that peace.

Mere anticommunism is not enough. We must know what we believe, why we believe it, and why we must resist that which would destroy us and destroy as well the faith that has made us what we are. Before we lower our guard, we muts have convincing proof that there has been a change in Soviet strategy and their basic goal of world domination.

Yes, the graves of those whom we this day honor speak out in a clear, unmistakable voice. They tell us that the course of history has proven that our only hope for realizing our dream of freedom and liberty today is to be so strong that no aggressor, or group

of aggressor nations, will dare to seek to impose tyranny and dictatorship upon freedom-loving men who desire to live in dignity in the image of God.

And as we recall the past we not alone recognize the patriotism of our fathers but we find an even greater purpose in that recollection—that this patriotism must be perpetuated. Let us then cultivate patriotism. But while we do it, let us bear in mind that one way to do it is to put down all sectionalism and divisions that break up into feuding camps. The downfall of many a nation has been its internal divisions. Our duty is for us to forget that there is any North or South, East or West, but to know only that we are one people. It was the immortal Patrick Henry who said, "I am not a Virginian. I am an American," and these words should find echo in every American heart. As we are bound by the bridges that span our streams, by the continuous steel rails that support our trains, by the wires that transmit our messages, and by the blue canopy that shuts us under the same roof, so let us be bound by the eternal ties of brotherhood that make us one people.

It is thus that memorial occasions call us to a high patriotism, a patriotism that lives and works for the highest ideals of American life. We who are churchmen must not forget that those ideals include the making of our patriotism religious and our religion patriotic. Love of country is not only a natural sentiment in every heart, but it is right in the sight of God. No one can ignore his relationship to his country and not sin against God.

Then, too, memorial occasions should bring us to a fuller understanding of the value of peace. They show war at its best to be only a necessary evil, never justified except in a righteous cause. They show the cost of war. I am not thinking of the financial cost either. For what our wars have cost us in dollars and cents may some day be wiped out and forgotten, but what they cost in hundreds of thousands of precious lives will never be forgotten so long as we meet like this to pay honor. We must never forget the value of peace and freedom, purchased at so great a price.

One more strong thought ought an occasion like this bring to us—the truth of self-sacrifice. Tradition has it that in Scotland there is a battlefield on the Colloden Moor on which the natives and their saxon foes met in mortal conflict. No monument marks the spot, but a singular, little blue flower grows there and there alone. It sprang up after the battle and they call it the "flower of Colloden," because it sprang from the soil made sacred and rich with the blood of fallen heroes. The seed were there, of course, but they needed the baptism of blood to make them grow. And now every blue flower on Colloden field, as it bends its head in the summer breeze, is a tender memorial of the brave spirits who dyed that soil with their life's blood and fertilized it with sacrifice. The flowers of Colloden are always the choicest because of the cost of their production.

The choicest flowers of human civilization are always the Colloden flowers; they spring alone from soil that has been watered by sacrifice. Freedom is one such flower. True patriotism is another. Religious liberty is another. Christianity is another—it sprang from the blood-dyed ground at the foot of a cross. He who is not willing to open his veins to sanctify his country, is not worthy of the inheritance that an occasion like this brings to him. No man has begun to be a real citizen until his citizenship has cost him something. We must feed our most holy institutions as our heroic dead fed freedom—with sacrifice.

Self-sacrifice for one's country has given us a heritage unmatched in the history of man. But I am sometimes apprehensive about the other half of that phrase carved on the Tomb of the Unknown Soldier, "For God and Country." Great have been our sacrifices for our country, but what of the sacrifices for our God. We honor those who fought and gave their lives that the whole world might be freed from the domination of tyranny and oppression in whatever form it might present itself. But how little of sacrifice for the highest things in life there is among us. It is a noble sacrifice for the highest things in life there is among us. It is a noble thing to die for one's country and it is highly commendable but there is another to whom we owe greater allegiance—that is God. This thing we call sacrifice is not complete when made for country alone. It must be for God and country and when we leave God out we have undermined the very foundation upon which country stands. Only by our country becoming a great spiritual bastion and by exalting God in personal testimony and public action can we prevent the sacrifice of our soldier dead from having been made in vain. We must be moved to deeper spiritual dedication. We are heirs of a great legacy, and we are proud of what those who have gone before us have achieved; but every generation must vouchsafe its own faith and insure its own freedom.

Edward Gomez was a private in the Marine Corps. He was killed in action in the Korean war. As his machinegun squad moved up, an enemy grenade landed nearby, threatening the entire operation. Shouting a warning to the others, Gomez grabbed the grenade and fell on it, his body absorbing the shock of the explosion. For this action his parents received on his behalf the Nation's highest honor, conferred at their request in their little parish church.

Edward's mother found among his personal effects a letter—a letter written in premonition—a testimony of faith and courage of all those who laid down their lives that we might enjoy the fruits of liberty and freedom.

"I am not sorry I died," he wrote, "because I died fighting for my country. I am very proud to have done what little I have done to keep my honor free. Be proud of me, Mom, because even though I'm scared now, I know what I am doing is worth it. Tell Dad I died like the man he wanted me to be. The kids—remind them of me once in a while. And never forget, kids, fight only for what you believe in; that's what I'm fighting for."

We can never close our account with those who died on the field of honor. Perhaps the humblest tribute we can pay to their memory is to follow the wisdom of the young hero: "Fight for what you believe in."

The men who fought and died, either in the line of battle or at home, after having carried the contest to a successful conclusion have left us a well-defined duty. That duty is to reassert and reemphasize the principles for which they died; the principles in which they believed. These are the principles of liberty, freedom and truth.

All our efforts to save a world by diplomacy, treaties, food distribution, economic loans, reciprocal trade, foreign aid, or otherwise, will fall unless at the foundation we put the basic stone of the fatherhood of God and the brotherhood of man. Unless we can do this, those who have died gave their lives in vain. Having failed them, "these cannot sleep in Flander's Fields" or in any other spot on the face of the earth. We must take up the torch, hold it high and march under the banner of the Kingdom of God in bringing to pass the things for which "they gave the last full measure of devotion."

## Trujillo Trembles

EXTENSION OF REMARKS
OF
## HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. PORTER. Mr. Speaker, Trujillo trembles and well he might. Batista and Peron are in his domain as living examples of deposed dictators. Perez Jimenez cowers in Miami on a day-to-day parole by the U.S. authorities.

Trujillo talks big about foreign legions with lots of guns and machetes. He takes over Haiti by a show of force and money. He blusters and he storms to hide the trembling of his body and soul. The day of reckoning is nigh and he knows it.

He violates ancient and revered traditions of asylum, a sure sign of panic. I include, under unanimous consent, a letter I have just received from an American citizen, Bienvenido Gonzales, about his family and friends now imprisoned in the Venezuelan Embassy in Ciudad Trujillo. It speaks for itself and marks up another score to be settled soon when Trujillo finds that even his fearful subjects will turn and fight at long last to purge their beautiful land of a benefactor whose benefits have been largely confined to himself and whose malefactions are many.

MAYAGUEZ, P.R.,
*February 28, 1959.*

Hon. CHARLES O. PORTER,
*Congress of the United States, House of Representatives, Washington, D.C.*

DEAR MR. PORTER: I am writing this letter to you, appealing to your humanitarian sense of justice, not only as an American citizen born in Puerto Rico, but as a distraught father who finds himself helpless and unable to help his two sons, a daughter, the wife of the oldest son, his three grandchildren, and his exwife, all presently in asylum at the Venezuelan Embassy in Ciudad, Trujillo, Dominican Republic.

Certainly I will not take your valuable time to recount all the abuses which the generalissimo has wrought on the citizens of Santo Domingo. But I am appealing to you to help and assist and possibly see that a safe conduct is granted to my family who, my children especially, are in a sense derivative American citizens. I hope and pray that this right may some day be established, the right to call themselves American citizens.

The safe conduct I beg you to try and obtain, so that they may leave Santo Domingo and go to Venezuela or any other friendly country, is for the following:

Bienvenido Gonzalez Mieses, my own son, Norka P. de Monte de Gonzalez, his wife, and their children (my grandchildren): Milagros Atlagracia Gonzales, age 5; Angel Bienvenido, age 3; Bienvenido Eudoro, age 2 months; Antonio Gonzales Mieses, my own son; Diana Margarita Gonzalez Mieses, my own daughter; and my exwife, mother of my children, Caridad Mieses de Rojas.

I understand and this I say because I have not been able to establish contact with my family, that they have been deprived of all creature comforts, possibly even food and water.

In the name of humanity, the love of a distraught father and as an American citi-

zen, I beg you, sir, to find a way directly or through our State Department, to help my family leave Santo Domingo safely and as soon as possible.

Faithfully yours,

BIENVENIDO GONZALEZ.

## Essay by William Anderson, of Linfield College, Oregon

EXTENSION OF REMARKS
OF
## HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Tuesday, March 10, 1959*

Mr. NEUBERGER. Mr. President, in the March 14, 1959, issue of the Union Signal, which is published by the National Womans Christian Temperance Union, a thoughtful and provocative essay has been written by Mr. J. William Anderson, a student at Linfield College, McMinnville, Oreg. This is one of Oregon's outstanding private schools of higher education.

Mr. Anderson, who writes vividly and effectively, has emphasized with dramatic effect the tragic result of the combination of alcohol and gasoline. The essay won the 1958 intercollegiate oratorical contest in Oregon, and deservedly placed second in the Nation when judging took place in Washington, D.C., last August.

For the information of my colleagues, I ask unanimous consent, Mr. President, that the able essay by J. William Anderson, of Linfield College, entitled "The Real Enemy," be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

THE REAL ENEMY

(By Bill Anderson)

Explain something to me, Christian temperance worker. Explain the grounds on which you fight your dreaded enemy. Tell me how you prove to the farmer growing hops, to the foreman in the brewery, or to the clerk behind the liquor counter, that what he's doing is wrong. He knows it's not a sin to drink; not a sin against God, nor against his fellow man, nor against himself. How do you intend to convince him otherwise?

After all, doesn't the Psalmist include it in his praise to God for His gifts to man: "wine that maketh glad the heart of man, and oil to make his face to shine, and bread which strengtheneth man's heart?" Wasn't King Lemuel in Proverbs advised to "give strong drink unto him that is ready to perish, and wine unto those that be of heavy hearts," to "let him drink, and forget his poverty and remember his misery no more" (Prov. 31: 6–7)? And didn't St. Paul advise Timothy to "use a little wine for thy stomach's sake and thine often infirmities" (I Tim. 5: 23)? We know they're not all talking about fresh grapejuice.

How then can the Christian church stand on scriptural grounds to renounce the use of alcohol? Wouldn't those who are already antagonistic toward the church, likewise be antagonistic toward its scriptural dictates?

Come now, take off your white ribbon. Cease this useless fight against man's privilege to drink if he so chooses——

"But wait."

A voice cries out from behind me, and another and another, until there's a great chorus, crying out as one voice, "Wait! Wait!" I turn to see who would interrupt me, but I see nothing but a vast gray mist from which the voices emerge. Then one voice issues forth and takes on the misshapen form of a twisted, dirty man, old before his time; a staggering, stumbling relic of the streets, with the stench of too much alcohol permeating his very being, crying, "Wait! Wait!"

I turn away in disgust. "Wait for what, old man? Why should we listen to you? We're not of your kind. We're young and healthy, not old and diseased." And the man falls back, to be swept away in the current of the gutter, like 520,000 others, never to be seen again, his warning unheeded.

Another voice takes on form and emerges from the fog; a woman with a baby in her arms and two crying children hanging to the tattered hem of her faded dress. Her face is scarred, but with scars far deeper than just the torn skin of her cheek; a mind and body, scarred by the constant abuses of a drunken husband. And she, crying out for the 200,000 alcohol-ruined homes she represents, cries above the rest, "Wait! Wait!"

Still the clamor from the fog continues, and I cry back, "Let us alone. We can't enjoy the pleasures of our drinking if you insist upon annoying us so."

But the clamor only increases, and another figure steps forth. This time it is a young, good-looking man, yet a man whose mind is slowly being eaten away by the ravages, not of alcohol, but of a disease that has come from his intemperance. He, as he is led away, like 190,000 others, cries back, half-crazed, "Wait! Wait!"

I begin to tire from the parade of useless exceptions who would try to blame drink for their downfall and not their own inherent weakness, their own intemperance.

Then beyond the rabble of voices, I hear another sound, not the sound of a human voice, but that of a modern, high-powered automobile, racing at high speed, careening from the mist. There's an anguished scream of streaming brakes, a pause, and a rending crash of metal, and glass, and concrete. Then silence.

The vehicle that only moments before had been the beautiful, sleek, swift product of the latest of Detroit's engineering ingenuity, lies upside down in the middle of the highway, torn and twisted beyong recognition. Flames begin to lick out from the gasoline-soaked interior, and with the flames, a woman, trapped inside, screams out in pain and fear. The flames reach the tank, and in a blinding flash, the woman's fear and pain are over.

Then I notice another figure lying in the ditch at the side of the road. I rush to his side and kneel beside him. In the heavy, fog-laden air, above the stench of warm human blood, there is the oder of the drinks that had made the evening so gay, but so dulled his judgment that he did not realize that he could not control his car.

Here had been a man of distinction, a man of good health and prosperity, a man who had loved and provided amply for his family, who had gone to church regularly, and followed unfailingly a life of moderation.

Yet in an instant, he and his wife had become 2 more additions to the list of 20,000 "alcohol-flavored" traffic deaths anticipated this year. A life of moderation?

Then the light shifts, and I see the face of the man for the first time. I am sickened with what I see, for the face on the dead man is mine. My own body destroyed, my wife dead, my children homeless.

Then it is that I know. "There's no need to explain, Christian temperance worker. This is your proof."

There may be no evil spirits in the glass, but death and poverty and disease swim within it. There may be no sin in the act of drinking itself, but wanton murder and destruction lie submerged in the unconscious, unknowing release of inhibitions; complete oblivion in the unwarranted self-confidence imparted by it. There may be no literal condemnation, scripturally, of drinking, but with drunkenness and its attendant social evils, we have no alternative but total abstinence.

Here then is our real task. Go beyond pinning white ribbons just to the women of the church. Tie in one great bond all peoples. Go beyond taking temperance tracts only to the destitute in the gutter. First provide for young minds a realistic education in the social deterioration and destruction that is consistently the result of even the most moderate use of alcohol. Go beyond using biological object lessons to scare men away from drink. Give them, instead, a glimpse of social tragedy: skid-row derelicts, broken homes, social disease, crime, and the broken body and homeless children of the would-be moderate social drinker. Save them from becoming just another pathetic figure on some Sunday evening pulpit statistic.

Let's work together, you and I, to battle the real enemy, not the bottle and what it contains, but the ignorance of the mind that turns to that bottle for release from its tensions, that knows no greater release than self-destruction, no higher joy than momentary pleasure, no greater goal than complete oblivion. Offer them, instead, an abundant life, with freedom from themselves and a trust in someone far greater. Then, and only then, can we completely defeat our real enemy.

## Item Veto Legislation—The Other Side of the Coin

EXTENSION OF REMARKS
OF
## HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
*Tuesday, March 10, 1959*

Mr. KEATING. Mr. President, a recent article in the New York Herald Tribune by Victor Wilson centers attention on executive control of expenditures under the law creating the Bureau of the Budget. The article points out that the language under which the Budget Bureau operates allows it, with Presidential approval, to hold up expenditures of money to effect savings, promote greater efficiency, or because of "other developments" subsequent to approval of an appropriation.

This situation indicates that Congress may not now have the absolute power of the purse which has been assumed. I do not say this critically, since I believe that the Chief Executive frequently is in the best position to judge where savings can be made in nonessential programs and for unjustified projects. Indeed, in my opinion we would be taking a great step in promoting economy in Government operations by giving to the President the express power to veto specific items in appropriation bills, such as is proposed in Senate Joint Resolution 44, which I introduced in behalf of myself and other Senators.

Mr. Wilson's article suggests another side to the item veto coin. For while an item veto amendment would vest the Chief Executive with more direct control over appropriation bills, it could

serve to diminish the indirect administrative veto of expenditures finally approved by Congress. This fact may be worthy of serious consideration by those who have opposed item veto legislation on the ground that it would give the executive branch too much authority over appropriation measures.

Mr. President, I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ITEM VETO

(By Victor Wilson)

WASHINGTON.—For more than half a century, American Presidents, right down to Dwight D. Eisenhower, have pleaded with Congress—in vain—to give them a law that can be summed up in two little words—item veto.

Those two little words would permit the Chief Executive to kill individual items in appropriations bills without being forced to veto the whole measure simply to strike down the items he dislikes.

Presidential yearning for the item veto is generally well known.

What isn't so well known—though Congress is becoming more acutely aware of it—is that latter-day Presidents, including Mr. Eisenhower, are achieving some measure of item-veto power without congressional sanction.

They do it through an agency called the Bureau of the Budget, created in 1921 in the Treasury Department, but transferred to the Executive Office of the President in 1939.

The language under which the Budget Bureau operates allows it, with Presidential approval, to hold up expenditure of money if it will effect savings, promote greater efficiency, or because of other developments subsequent to appropriation.

This language, as wide open as a barn door, permits the President, through the Director of the Budget Bureau—whom he appoints—to impound funds voted by Congress instead of spending them on projects he disapproves.

That word "impound," by the way, raises hackles from one end of the Budget Bureau to the other. The preferred phraseology is "creating reserves."

Budget Bureau officials are reluctant to discuss—for publication—how far this technique of "creating reserves" can be pushed. Would it be possible, one was asked by a reporter, for Congress to vote funds for a postoffice, say, and then have actual construction held up by a President who thought the project wasteful?

After a bit of hemming and hawing, the official replied cautiously: "The speed of a project can always be determined by the Chief Executive."

The chief congressional feeling aaginst the item veto stems, of course, from jealousy over the power of the purse. Congress simply doesn't want any executive interference in that area.

And what Congress thought of the item veto in the past can be told quickly. The first such proposal was introduced in 1876. From that day to this only one vote on the subject—and an oblique one, at that—has been taken.

It came in 1883, in a House vote to suspend the rules so that an item-veto bill, locked in the Judiciary Committee, could be brought to the floor for a full House vote. The motion failed to get the necessary two-thirds vote, though 101 voted for it against 58 nays.

Within Congress today there is disagreement whether item-veto power could be granted by simple statute or would require a constitutional amendment. Several bills covering both methods have been filed in the House.

In the Senate there is a joint resolution sponsored by Senator KENNETH B. KEATING, Republican, of New York, and supported by several others, providing for a constitutional amendment. This would require for passage a two-thirds vote by both Houses, and subsequent ratification by three-fourths of the States within 7 years.

Does Senator KEATING's resolution, or any of the House legislation, have a chance for passage? The general feeling here seems to be negative.

Still, with President Eisenhower, like his predecessor, managing to sidestep Congress' will, to some extent, by not spending moneys voted, Capitol Hill may be goaded into action—in self-defense.

Action could be speeded if Mr. Eisenhower extends use of the Budget Bureau technique to check spending by what he calls the "radical spenders" in this Democratic-controlled Congress, in opposition to his own balance-the-budget views.

One congressional device might be to approve a constitutional amendment, but stating in it that the Congress may by law permit the President to exercise item-veto power.

This would be the item veto with a fishhook inserted. The barb would be the provision that congressional approval would still be needed—perhaps item by item.

## Poison in Your Water—No. 25

EXTENSION OF REMARKS

OF

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting in the Appendix of the RECORD, an article appearing in the St. Louis, Mo., Globe-Democrat, October 1, 1957, telling how poor sewage facilities make that area one of 10 most polluted in the United States.

The authority for this statement was Mr. Jack K. Smith, chief of the water-pollution-control section, bureau of public health engineering, Missouri Division of Health. Mr. Smith said sewage-polluted waters cannot be used for irrigation in the area:

POOR SEWAGE FACILITIES MAKE AREA ONE OF 10 MOST POLLUTED IN UNITED STATES

St. Louis and Kansas City are among the 10 most polluted areas in the country because of inadequate sewage-treatment facilities, Jack K. Smith, chief of the water-pollution-control section, bureau of public health engineering, Missouri Division of Health, said here yesterday.

Mr. Smith took part in a panel discussion of river pollution at the annual joint meeting of the Missouri Water and Sewerage Conference and the Missouri section of the American Water Works Association, at Hotel Sheraton-Jefferson.

The State official pointed out that at least 189 communities in Missouri, not counting the St. Louis and Kansas City metropolitan areas, need new sewage-treatment facilities or additions to existing plants. Construction of adequate sewage-disposal facilities is not keeping pace with residential construction, he observed.

PLANTS INADEQUATE

"Three-fourths of the people in the State are served by sanitary sewers," Mr. Smith said. "Of this number, one-third is served by adequate sewage-treatment plants."

Such a situation has a direct effect on health, Mr. Smith stressed, aiding the spread of such diseases as typhoid fever, dysentry and, possible infectious hepatitis.

Mr. Smith also pointed to the bad effects which stream pollution has on fish and other wildlife. Pollution "renders many streams unfit for recreation uses because of odors and unsightliness," he added.

Recent drought conditions which caused low river flows and greater pollution in the Missouri River "affected the water supply for 534,000 persons," Mr. Smith said. Further problems will occur, he warned, "until such time as adequate treatment works have been installed along the river."

STOPS IRRIGATION

Sewage polluted waters cannot be used for irrigation, which is becoming increasingly important to the State's agriculture, he said.

Nevertheless, Missouri is making some progress in correcting this situation, Mr. Smith said. He praised the action taken by many cities and industries along the Missouri and Mississippi Rivers to construct or take steps to provide sewage treatment facilities.

A new State law, passed by the last legislature, also will aid the pollution abatement program by providing for "prevention, regulation and penalties for failure to comply," Mr. Smith said.

He predicted that continued progress will be made in the next few years to relieve the stigma placed on the State by a survey which indicated that two of the 10 most polluted areas in the United States existed in Missouri.

Others taking part in the panel discussions were Vance C. Lischer, principal engineer, Horner & Shifrin Consulting Engineers, St. Louis; Thomas F. Maher, chief engineer, hydraulics branch, Army Corps of Engineers, St. Louis, and L. C. Burroughs, assistant to vice president, manufacturing, Shell Oil Co., New York.

Allen H. Wymore, principal engineer, Burns and McDonnell Engineering Co., Kansas City, served as panel moderator.

## The Need for an Increase in Social Science Research

EXTENSION OF REMARKS

OF

## HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. PORTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following preamble to the report of the Social Science Committee, National Science Board, of January 23, 1959, and also an article by Dr. Harry Alpert, dean of the graduate school, University of Oregon, reprinted from American Sociological Review for December, 1958:

PREAMBLE TO THE REPORT OF THE SOCIAL SCIENCE COMMITTEE, NATIONAL SCIENCE BOARD

The National Science Board recognizes the importance, as well as the complexity and

difficulty, of research in the social sciences. It is clear that the intellectual, economic, and social strength of our Nation requires a vigorous approach to social problems, with scientific techniques of study making their maximum contribution.

Accordingly, the National Science Board considers it proper and desirable for the National Science Foundation to support basic research in the social sciences, where such research meets the usual scientific criteria of objectivity, verifiability, and generality. Such support is valuable in assisting social scientists to improve their research techniques, to accumulate fundamental knowledge about human behavior and society, and to develop sound theoretical bases for further inquiry. In addition, such foundation support stimulates interchange between natural and social scientists. Finally, a program of basic research support will undergird any serious effort on the part of others to deal with social problems.

---

[From American Sociological Review, December 1958]

CONGRESSMEN, SOCIAL SCIENTISTS, AND ATTITUDES TOWARD FEDERAL SUPPORT OF SOCIAL SCIENCE RESEARCH

(By Harry Alpert)

(This article is Dean Alpert's generous response to my suggestion that, after so ably serving the interests of the social sciences for many years in the National Science Foundation, he prepare a "retrospective" paper. Readers of the Review will agree, I am sure, that we are (once more) in Harry Alpert's debt.—The EDITOR.)

The U.S. Senate just 12 years ago voted to exclude from the then pending bill to establish a National Science Foundation the specific provision which created a Division of the Social Sciences. In his report on the crucial Senate debate which preceded this vote, George A. Lundberg concluded that the outcome "should perhaps not be taken as reflecting any considered hostility or opposition on the part of the Senate, but simply as a reflection of the common feeling that the social and the physical sciences have nothing in common and that at best the social sciences are a propagandist, reformist, evangelical sort of cult."[1] At the same time, Lundberg expressed concern about social scientists being their own worst enemies by failing to recognize their proper function as scientists.[2]

Another interpretation of the Senate's action was presented more recently by former President Harry S. Truman. In commenting on the development of the social science program of the National Science Foundation as reported in the Saturday Review last February, Mr. Truman suggested that opposition to social science study on the part of Members of Congress was the result of fear of the implications of the report "To Secure These Rights" which had been prepared by his special Commission on Civil Rights. "The southern Senators," Mr. Truman wrote, "were afraid of equality of education and equality of opportunity as set forth in [this] famous report."[3]

I trust it is not an act of ingratitude, in view of President Truman's strong support of the social sciences, to suggest that there is apparently a telescoping of historical events in this version of the Senate controversy regarding the role of the social sciences in the proposed foundation. "To Secure These Rights" was published late in 1947, the Committee on Civil Rights having held meetings through September of that year. The critical vote in the Senate on Senator HART's amendment to drop the social sciences took place on July 3, 1946, almost 6 months before President Truman established his Civil Rights Committee. Examination of the rollcall on the Hart amendment does not support the view that the voting was regional in character and, obviously, it could not have been influenced by the report of President Truman's Committee on Civil Rights.

My own analysis of this important vote suggests: (1) the absence of a disciplined party position; (2) the operation of a complex multiplicity of motivations and attitudes; and (3) the effectiveness of the lobbying activities and personal representations of various individual natural scientists and of natural science groups and organizations such as the committee supporting the Bush reports.

Whatever may be the correct interpretation, the events of 12 years ago clearly indicate that the fate of public support of social science research, particularly at the Federal level, is dependent on the fundamental attitudes of key Congressman toward the social sciences, on clarification of the almost inevitable confusion of social science and social issues, and on the active and skillful participation of social scientists in the legislative process. Therefore this report directs attention to some of the more recent attitudes toward science expressed by Members of Congress and to the role of social scientists in effectively presenting to congressional committees the national importance of the positive contributions of social science research and education. An effort is also made to define some of the issues and problems which continue to serve as obstacles to the full acceptance of the social sciences.

An important turning point in congressional expressions toward the social sciences was the vigorous and forthright statement by Senator ESTES KEFAUVER'S Senate Subcommittee on Juvenile Delinquency which late in 1955 and again in 1956 and 1957 strongly urged increased support of basic research in the social sciences and, in particular, recommended extension of the National Science Foundation's basic research and fellowship programs into the areas of human social behavior. Senator KEFAUVER wrote to the Director of the Foundation and to all members of the National Science Board, directing their attention to the recommendations of this subcommittee. Also late in 1955, Representative RICHARD BOLLING'S Subcommittee on Economic Statistics of the Joint Committee on the Economic Report recommended expansion of the National Science Foundation's social science research program so as to include support of research in the area of economic statistics. In both instances, the subcommittees gave sympathetic attention to the expert testimony of distinguished social scientists. Paul F. Lazarsfeld's views were presented to the delinquency committee and Martin Gainsburgh and Rensis Likert were leading witnesses before the economic statistics committee.

When the American Sociological Society passed official resolutions regarding support of the National Science Foundation's social science program, they were brought to the attention of Senator JACOB JAVITS who inserted them in the CONGRESSIONAL RECORD.

In the summer of 1957, Senator HUBERT HUMPHREY, on returning from a trip to the Near East, made a strong plea for more generous support of the social sciences. Senator HUMPHREY remarked, a full year prior to the outbreak of the current crisis in the Middle East, that:

"My recent experience in the Middle East has impressed upon me more than ever the urgency of getting on in the social sciences. There is immediate and crying need for trained and knowledgeable personnel to deal intelligently and rationally with a variety of social science problems. For example, the question of equitable distribution of agricultural surpluses, the need for better understanding of the obstacles and impediments to reasonable interpersonal and intergovernmental relations in the area, and insight into the mentalities and personalities of the individuals and masses with whom we have to deal. The effectiveness of our various assistance programs depends in large measure upon having reliable information about, and understanding of, the hopes, aspirations, motivations, and expectations of the peoples involved. In so many different ways there was impressed upon me the tremendous benefits which would accrue to us as a Nation from having available a well-trained corps of social-science technicians and experts.

"I deem it essential, therefore, that the National Science Foundation set about with dispatch to broaden its research and fellowship programs in the social science. The needs are considerable."[4]

Senator HUMPHREY noted that his attention had been directed to this problem by Dr. Malcolm Willey of the University of Minnesota.

A month earlier, in similar vein, Senator WAYNE MORSE recommended greater emphasis on the social sciences and reproduced as part of his statement in support of expanded National Science Foundation appropriations the full text of communications he had received from Leonard S. Cottrell, Jr., and Luther S. Cressman. Additional arguments for social science support were presented by Senator MORSE later in the summer.[5]

The sense of crisis in American science and education created by the launching of Sputnik I last October affected the social sciences, too. In November, Vice President NIXON initiated discussions with Dr. James G. Miller which led to the formation of a Temporary Group on National Support for Behavioral Science. Mr. NIXON was particularly concerned with maintaining our superiority vis-a-vis the Russians in the social and behavioral sciences. In a discussion during a dinner meeting of the Conference on University Contacts Abroad, Mr. NIXON stated that:

"I think it is essential that we not make the mistake at this time of going overboard in developing or in putting emphasis on scientific and technical training to the exclusion of training in the social sciences and other fields. I say this because the greatest mistake we could make would be to become simply a pale carbon copy of the scientific materialism which the Soviet Union represents in the world today. We have something other to offer than simply leadership in the field of science. We must not be behind in that field, but we also have to train leaders in government, leaders in business, leaders in the social sciences."[6]

The report by Dr. Miller's group, National Support for Behavioral Science, was presented to the President's Scientific Advisory Committee and was endorsed in principle by a number of Senators and Representatives of both parties with whom Dr. Miller discussed it. Senator HUBERT HUMPHREY inserted the complete text of the report in the CONGRESSIONAL RECORD,[7] and Dr. Miller offered a summary of it in testimony before the Subcommittee on the Independent Offices appropriation bill when it was hear-

ing witnesses on the 1959 appropriation for the National Science Foundation. Senator LEVERETT SALTONSTALL expressed interest in the report and requested the director of the National Science Foundation to comment on it.

Senator MORSE perhaps has been the most persistent legislator in urging support for the social sciences. Early this year he reproduced in the RECORD, with appropriate remarks, the complete text of the Saturday Review articles on the social sciences by Harry Alpert and Pendleton Herring and, in May, once again reiterated his strong feelings on the importance of the social sciences.[8]

On the House side, Representative CHARLES O. PORTER, of Oregon, in March 1958, attempted by amendment of the fiscal year 1959 appropriation for the National Science Foundation, to double the amount included for social science research.[9] Although the amendment did not prevail for parliamentary reasons, Mr. PORTER was specifically advised by Representative ALBERT THOMAS, chairman of the appropriations subgroup which reviews the National Science Foundation's budgets, that his general purpose was an admirable one. Mr. PORTER has placed in the RECORD an entertaining and instructive essay by Dr. Joseph Clawson on "Social Science—the Unused Weapon," as well as the cogent testimony presented before the Senate appropriations subcommittee by Dr. Leonard S. Cottrell, Jr.[10]

Finally, another facet of the social science problem, namely representation of the social sciences on the National Science Board, was discussed recently by Senator MORSE. Reproducing a letter from Dr. Cottrell to President Eisenhower in which disappointment is expressed over the President's failure to appoint social scientists to the Board, Senator MORSE commented, in part, as follows:

"The National Science Board is a key body in guiding the progress of this Nation in the field of scientific research. I deplore the absence of social science representation and trust that the President will bear this in mind in future nominations. In approaching these nominations I hope that the Senate will convey to all members of the National Science Board its keen interest in the National Science Foundation and its hope that the Board will move forward vigorously in improving the state of what the Saturday Review called the knowledge we need most—increased research and studies that relate to man himself. * * * I shall continue to do everything I can in the Senate to support needed appropriations for the physical sciences. We certainly need to keep ahead of Russia in the development of scientific research in the whole field of natural science, but let me warn the Senate that we also need to keep ahead of Russia in the field of social science. When we look at the educational program of Russia; when we look at the effort Russia is putting forth in the field of social sciences, we realize that in this field, too, we are beginning to lag behind Russia. Therefore, I think it is regrettable that the President has not nominated a social scientist to the Board of the National Science Foundation."[11]

Moreover, a very penetrating and systematic analysis of the serious consequences of the failure to recognize the social sciences in National Science Board nominations was presented toward the end of the last session of Congress by Representative PORTER.[12]

This account of recent congressional expressions of opinion is by no means complete, but is indicative of the growing positive interest in the social sciences. It underscores the importance of active participation of social scientists in the legislative process. Many of the statements and actions mentioned above are the immediate and direct result of personal appearances of social scientists before congressional groups, direct discussions with Congressmen and members of their staffs, letters urging specific types of actions and votes, and communications of appreciation for favorable actions taken. It is axiomatic that legislators need to be informed of their constituents' feelings on particular issues. It is also elementary that they like to feel that their actions are commended and appreciated.

Still, it may be asked: With all this support, why are the social sciences not more advanced in the National Science Foundation and other governmental agencies? The answer lies in the persistence of many of the attitudes and viewpoints identified by Professor Lundberg a score of years ago.

In reviewing the types of objections to social science voiced by scientists, administrators, executives, and Congressmen, I have been able to identify nine major themes or issues which appear with greatest frequency in the various debates and deliberations. The following summary statements of these issues and the accompanying comments are presented with special reference to the National Science Foundation, but they have, I believe, wider implications.

(1) Vagueness: One cannot identify the social sciences or know just where and how far one is going in a social science program, since the social sciences are vague and indefinite. Comment: While the phrase "social science" is used quite loosely in some quarters, it has been found possible to be both specific and concrete in identifying the precise areas of the social sciences which are included in a program of research support. This has been achieved by identifying the program in terms of recognizable and established academic disciplines.

(2) Controversy: The social sciences involve areas of public controversy which might jeopardize an agency's general growth and development. Comment: The social sciences unquestionably involve areas of public controversy, but the experience of the National Science Foundation and other Government agencies has demonstrated clearly that reliance on scientific methods and the scientific integrity of investigators can insure freedom from involvement in controversial areas.

(3) Soft areas: The social sciences include activities which are scarcely identifiable as science and are more concerned with considerations of ethics, welfare, and philosophical interpretations of man's destiny. Comment: The term "social sciences" covers a wide range of activities. These activities may be thought of in terms of a continuum. At one end of the continuum lie the hard-core scientific studies of human social behavior. These include the use of experimental techniques, controlled experiments, laboratory studies, statistical and mathematical methods, survey design techniques, the development of measurement devices and instruments such as standardized tests and scales, the empirical testing of hypotheses and concepts, and other characteristic features of scientific research. At the other end of the continuum lie philosophical, ethical, and political studies and interpretations of human social conduct, including interpretations of social welfare, concern with the amelioration of social conditions and the elimination of social problems, and similar considerations relating to social values and the good life. A social science program within the general framework of scientific objectives can properly be limited to the hard-core scientific end of the continuum.

(4) Debasement of human dignity: Social science provides powerful weapons for hidden persuaders, brainwashers, and other manipulators of human populations and permits them to direct and control human lives. Comment: The social sciences do not differ from the natural sciences in the utilization of scientific knowledge. The scientist provides fundamental knowledge. The objectives toward which that knowledge is directed are beyond his immediate control and are determined by a complex of societal forces. Whether the atom is used for peace or destruction, whether bacteria are mobilized for purposes of health or disease, whether knowledge of human motivations is used to provide happiness or to sell soap, are alternatives which the scientist as seeker of knowledge and truth cannot determine. It should also be noted that one of the best defenses against the manipulators of the human spirit is the understanding of their techniques and weapons which social science provides.

(5) Partisanship: The social sciences are in early stage of development as sciences and hence are characterized by schools, philosophies, and perspectives, each of which has its group of ardent supporters and detractors. It is difficult to avoid dogmatic partisanship for a particular viewpoint. Comment: By careful selection of advisory panel members and research referees who are catholic and broad in their orientation to their respective social science disciplines, discrimination based on narrow partisanship can be avoided. There is ample evidence that the quality of men and of proposals can be identified regardless of one's own commitments to this or that school of thought or approach.

(6) Applied research: The social sciences are applied and practical and therefore have no place in a program dedicated to support of basic research and education. Comment: Like other scientific disciplines, the social sciences have an identifiable basic or fundamental component as well as an applied or developmental orientation. Although the line between basic and applied research is often difficult to draw in many scientific areas, experience over several years has indicated the possibility of a satisfactory operating division of labor between agencies supporting fundamental explorations of the unknown in social science and those whose major responsibilities lie in applied areas such as mental health, delinquency, marketing, social security, and illegitimacy.

(7) Magnitude: The needs of the social sciences are tremendous and consequently a social science program would make heavy and disproportionate demands on an agency dedicated to promoting the advancement of science in all fields. Comment: A major limiting factor in the ability of a scientific field to spend funds expeditiously and fruitfully is the available supply of trained personnel in that field. The manpower differentials between the social sciences and other sciences are such that the social sciences could profitably command only a small percentage of the total funds available for research. In the United States there are approximately 35,000 social scientists in comparison with 250,000 physical and biological scientists, and over 600,000 engineers.

(8) Private resources: Private resources support the social sciences quite adequately; hence, there is no need for a Federal pro-

gram in the social sciences. Comment: Analysis of the activities of the major private foundations supporting the social sciences indicates that the programs of these foundations, in large measure, are problem-oriented and training-oriented rather than research-oriented. Moreover, when the Ford Foundation became active a few years ago, some of the other large foundations modified their programs by placing far less emphasis on the behavioral and social sciences. Last year, the Ford Foundation discontinued its behavioral sciences division, thus eliminating a major source of private support of social science. It should also be noted that certain social science and interdisciplinary areas are not normally included in private foundation programs or have been drastically curtailed in recent years.

(9) Separate agency: The Federal Government should support the social sciences, but not through the same agency which supports the natural sciences. Comment: There are numerous advantages, as pointed out by Dr. Vannevar Bush,[13] in the intimate association of the natural sciences and social sciences. There is a unity of scientific method and scientific outlook from which all the sciences benefit. Moreover, the distinction between the natural and social sciences is not clear cut. Considerable areas of overlap exist in such disciplines as geography, anthropology, psychology, statistics, and mathematical social science. Separate agencies would involve unnecessary duplication of effort and complicate the problems of coordination.

Despite these various arguments, the National Science Foundation has a social science research program [14] and overall governmental expenditures for research and development in the social sciences have been steadily increasing in recent years.[15] The sociologist of science will one day marvel at the extent, variety, and depth of the resistances to the application of rational intelligence and scientific method to the understanding of the nature of man's social behavior. And a latter-day Vilfredo Pareto, with some psychiatric sophistication, will delight in recording the derivations and rationalizations which man has invented to keep himself from a better understanding of his own nature and his social environment.

Yet, the exigencies of social living in contemporary society are developing their own momentum and are overcoming the resistances to social science at a rate which would have seemed incredible a short decade ago. But social forces operate only through individuals and it is the individual social scientist who must undertake the professional tasks which will insure reasonable support of the sciences of man. At various universities, when asked what the individual teacher of social science can do to enhance public support and understanding of his discipline, I have invariably replied: Teach as if every student in your class is a potential legislator who will one day have to vote on an appropriation for your discipline.

## Who Should Go to College?

EXTENSION OF REMARKS
OF
### HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. ADDONIZIO. Mr. Speaker, the general scientific breakthrough achieved by the Russians has aroused great concern among the American people as to the deficiencies in our own educational system. In our zeal to match these scientific achievements, there is danger that we shall lose respect for the culture and scholarship that represent the best of Western civilization. Mr. Robert U. Redpath, Jr., of South Orange, N.J., has kindly sent me a statement "Who Should Go to College," by the Northern New Jersey Humanist Association. Mr. Redpath stresses the point made by the association that—

The disproportional stress on the student gifted in science is the mark of our growing imbalance—

In education.

It is a disavowal of the liberating principle of Western education, which recognized the inherent worth of each child, each human being as such.

I believe the statement is deserving of examination by the Congress and I include it at this point:

WHO SHOULD GO TO COLLEGE?

(A statement by the Northern New Jersey Humanist Association)

The American people have adopted, in a spirit of almost mystical faith, a new program of higher education with which to master the challenge of the nuclear age. Unusually able scholars in science and mathematics will be systematically identified and assisted. Curriculums will be oriented toward the massive objectives of the military-industrial complex. Forces of the universe now locked in matter and remote in space will fall within the soaring orbit of the human mind. In the long run these positive aspects of the program will multiply our deterrent power in war and our productive resources for peace.

But what, in the long run, will be the effect on the democratic form of life? Only a small number of talents that rise haphazardly above the average level of our school system will be nurtured. The mass of men, with their immeasurable store of unsifted talents, are not called upon. If they are excluded from higher education, what part can they play in the great social and scientific projects of our age? Are they to be only instruments? What will become of their human dignity? For dignity is not a partisan battle cry, it is a state of moral clarity wherein man is free, and prepared in his whole being, to be a constructive factor in the common life.

Certainly America needs to foster genius as an illuminating and organizing power; but it needs even more a multitude of young minds and spirits disciplined in science, the humanities, and the democratic process. The disproportional stress on the student gifted in science is the mark of our growing imbalance. It is a disavowal of the liberating principle of Western education, which recognized the inherent worth of each child, each human being as such.

This insight was the fount of all democratic beliefs. The minds that conceived the Declaration of Independence posed no riddle in the assertion that all men are created equal. If equality does not exist in the practical life as it has evolved, if men differ in intellectual training and in economic status, there is nevertheless a human status, separate and inviolable, where equality should rule with primal force: in freedom of access to the educational facilities of the Nation for the utmost development of everyone's native powers. To withhold this freedom is to profane the individual, almost as a matter of policy, and to weaken the Nation by denying it the multiform creative forces of its people. The inner unity of democratic society, historically always in sensitive balance, cannot survive discrimination in education.

Higher education should not be bent to the needs of technology and the market alone, for if it does not serve a far-reaching public philosophy it will not serve even limited ends. It is for the sake of the moral and ethical decisions that none of us can delegate to another that we ought to be educated. For each must choose whether to write further in the human epic or bring it to a close; to incinerate those who offend us or to seek their redemption, and thereby our own; to degrade men of another race or to revere their humanity.

The Humanist Association offers as an opinion that the minimum requisite for so necessary an estate of life is a college education for all who want it and who qualify by scholastic standards that are not narrowly exclusive. No youth should be left out for lack of means. The GI bill of rights was a beginning; it remains to extend that program to the totality of the Nation.

## The Argument for Hawaii

EXTENSION OF REMARKS
OF
### HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 2, 1959*

Mr. DENT. Mr. Speaker, for the benefit of those who are not fully prepared with certain facts and figures on the newest proposed State in the Union, I want to present some information that may help our people to have a better understanding of Hawaii, its peoples, its aims, its habits, and more important, its united effort and yearning to become one of the great States of the United States of America.

After 46 years as an organized Territory of the United States, Alaska in 1958 became the 49th State and left her older sister, Hawaii, the only remaining incorporated Territory.

Hawaii has proved its qualifications for statehood time and time again since becoming a Territory in 1900. The islands' people revere the American flag and the principles it symbolizes. Their mode of life, the type of local government they support, and the service they give to the Nation are a credit to the colors.

They are much like the people of Main Street, U.S.A. For more than half a century they have lived as Americans, worked as Americans, and fought in wars for America. They have always conducted themselves as first-class citizens.

Modern Hawaii, destined to become Uncle Sam's 50th star, is already the Nation's star performer in the Pacific.

Before going into the details, here are some of the salient points that show Hawaii as one of the country's most modern, progressive, and prosperous areas in 1958:

First. A fast-growing population reached 575,000, plus another 41,000 military personnel.

Second. Business in the Territory approached a volume of $2 billion annually, with sugar, pineapple, and tourism leading the industrial moneymakers.

Third. Fifty-nine banks had a total of $481 million assets, clearings of $3.3 billion.

Fourth. With the expansion of tourist facilities and industry, including a forthcoming Standard Oil refinery and a steel mill, construction was a $200 million island industry.

Fifth. Two hundred thousand employed persons in the Islands were paid $850 million annually in wages and salaries.

Sixth. Per capita personal income rose to $1,821 in 1957, ranking Hawaii 25th with the States.

Seventh. Taxes paid the Federal Government reached a record $166 million, putting Hawaii ahead of 10 States as a taxpayer.

Eighth. A total of 136,000 students attended the Islands' 208 public schools in 1958, and 7,000 were enrolled at the University of Hawaii, highest per population in the Nation.

Ninth. The United States was spending more than $300 million to maintain the strength of this Pacific bastion of defense and America's show window on Asia.

Such are some of the highlights of modern Hawaii, an integral part of the United States since 1898, a proud and loyal community of half a million American citizens asking their full measure of equality under the American flag. Hawaii has repeatedly shown her true red-white-and-blue colors. She was never more fit and ready for the crowning honor or statehood. Hawaii is headed for stardom.

By embracing Hawaii as a State America would advance three bold steps closer to victory in the cold war against communism in the Pacific and Asia.

First. It would demonstrate dramatically that the United States both cherishes and practices the democratic ideal that her citizens stand equal before the law regardless of color and creed. The example of a State of Hawaii would shine in the Pacific for half the world's people to see and to compare with the empty promise of equality held out by communism.

Second. Admission to the Union would bolster Hawaii's role as our defense outpost in the Pacific.

Third. It would make Hawaii a center where the people of the Pacific basin could study and learn our best American traditions.

When the United States granted independence to the Republic of the Philippines, the peoples of Asia understood. Statehood for the strong, loyal body of American citizens of many Pacific races in Hawaii would be an even more striking example for Asia.

It would be a sign to a billion men, women, and children that the Pacific Ocean is no longer a barrier between them and a free way of life. Statehood would confirm their hope that America believes in the full development of local self-government.

In these times, statehood for Hawaii is an ethical rather than a political question.

Old World colonialism has run its course in Asia, leaving its people with a choice—a free way of life, or communism.

Our national policies will be judged in no small measure by the decisions we make in respect to the people of Hawaii.

It is imperative that we continue to demonstrate our belief that all people should have a government of their own choosing.

Hawaii already is a Pacific outpost of the American way of life, a window on our freedoms. The people of Hawaii already have reached a goal still sought by the rest of the world. Nowhere else is there a mosaic of races, national origins, tongues, cultures to compare with this community of Americans.

The Territory is no longer an experiment in democracy. It is proof, tested in war and peace, that people of the East and West can work together for the good of all under the flag of freedom.

Hawaii occupies a key position in the commerce and defense of the Pacific. Her many racial backgrounds give her people a keen and knowing interest in Pacific affairs. A State of Hawaii, fully represented in Washington, would be a voice alert to the problems of national security in the Pacific, with a background of knowledge to furnish ways of meeting the problems.

The people of the Islands have long paid tribute to the American way of life by their persistent demand for statehood. They do not seek independence. They do not ask dominion status. They seek American union.

They ask, with overwhelming voice, to share the privileges and responsibilities of full citizenship with their fellow Americans.

Again, more than 50,000 young men of Hawaii served in the Armed Forces during World War II and the Korean conflict. Hundreds more are volunteering or being drafted today on quotas enforced in the same proportion as in the States. Yet Hawaii's citizens had no voice in the passing of the draft law.

Only the change from territorial status to statehood will properly correct this situation by giving Hawaii full equality in the American system of government, including:

First. The right to full voting representation in both the U.S. Senate and the House of Representatives, with the people of Hawaii selecting these representatives.

Second. The right to vote for the President and Vice President of the United States.

Third. The right to choose its own governor, and to carry on functions of government by its own elected officials instead of Federal Adminstrators.

Fourth. The right to the wider latitude of a State in lawmaking by its own legislature.

Fifth. The right to judicial functioning in its courts by local authority rather than by Federal appointees.

Sixth. The right to freedom from overlapping of Federal and local authority.

Seventh. The right to an equal share on a per capita basis in Federal grants for education, health, highways and other public improvements.

Eighth. The right to voice in any proposed amendment of the constitution.

And all of these rights would be irrevocable.

Citizens of all the States enjoy these rights; Hawaii's Americans have earned them too.

Hawaii is an industrious, prosperous, and progressive community—a showcase for democracy.

It is a land of sunshine, scenic beauty, natural grandeur—as Mark Twain said: "The loveliest fleet of islands that lies anchored in any ocean."

It is America's strongest military outpost in the Pacific, a symbol of our Nation's firm intentions.

Hawaii is also a modern American community. It has a streamlined government, a high standard of living, progressive industries, first-rate schools, familiar churches, and up-to-date transportation and communication facilities.

Its citizens live in modern houses, drive new automobiles—some with help of the finance company—belong to Republican and Democratic clubs, and send their children to the University of Hawaii or a favorite mainland college.

Hawaii residents yell themselves hoarse at football games, eat hot dogs, attend church services, watch television. They enjoy Broadway hit plays at Honolulu Community Theater and they take in "thriller" movies at drive-ins; they go to afternoon jazz sessions and attend evening Honolulu Symphony Orchestra concerts; they enjoy exhibits at the Honolulu Academy of Arts and read the funny papers.

They are Americans, through and through.

They are particularly proud that whatever their racial origin, they have learned to live together, work together, play together and study together—that is Americanism too, and the kind that makes the deepest impression on the half of the world's population that faces toward Hawaii. To these peoples, Hawaii is a fascinating laboratory; a place where democracy has been planted and thrives in fertile soil, whose appealing crops are worthy of attention.

This land of economic prosperity and social opportunity deserves a close look from its Pacific neighbors—and from its American neighbors on the mainland.

Hawaii has an area of approximately 6,400 square miles, larger than any of three States—Connecticut, Delaware, or Rhode Island.

The Territorial Department of Health estimates October 30, 1958, put Hawaii's population at 575,711, or a total of 616,711 including military personnel. Hawaii's population was thus larger than the population of any of five States: Vermont, Delaware, Wyoming, Nevada,

and Alaska. Hawaii has a larger population than existed in any State at the time of admission with the exception of Oklahoma. As a State, Hawaii will fit the pattern of 14 States, with 1 or 2 Representatives in Congress and the usual 2 Senators.

Eighty-five percent of Hawaii's people are citizens of the United States. More important, between 98 and 99 percent of grade and high school students are citizens.

Hawaii's finances are sound. The Territory has substantial resources in lands and industries and has taken care to build a strong economy with them. For the fiscal year ending June 30, 1958, the Territory paid a record high of $166,306,000 in Federal taxes, more than any of 10 States, including Alaska.

Hawaii has paid more than $2.3 billion in Federal taxes since becoming a Territory.

At the end of June 1957, total assets of the 59 banks in Hawaii were $481 million. Clearings amounted to $3.3 billion.

Hawaii's 1957 mainland dollar earnings were $856 million. Hawaii spent $833 million.

Per capita personal income rose to $1,821 in 1957, putting Hawaii in 25th place nationally or ahead of 24 States—U.S. Department of Commerce, Bureau of the Census, State Tax Collection in 1958, August 1958.

A notable expansion and diversification of industry is taking place. Among the most dramatic of recent developments was the choice of a site on Barber's Point several miles from Honolulu for a $40-million refinery by Standard Oil Co. of California. Construction was begun in October 1958, for this first oil refinery in Hawaii.

The island's first steel mill, for production of reinforcing bars for the construction industry, was to be completed and in operation early in 1959.

Agriculture has branched out into other fields besides sugar and pineapple, such as macadamia nut production.

Hawaii's homegrown textile industry is setting tropical garment fashions for all the Nation.

Agriculture is the foundation of Hawaii's economy. The Territory leads the world in the technique of sugar production and far outstrips the rest of the world combined in the canning of pineapple products.

Nowhere in the world have scientific methods been applied to agriculture on the scale that prevails in the sugar and pineapple production of Hawaii.

The Senate Interior and Insular Affairs Committee reported in 1951. In 1957, Hawaii's 28 independent sugar plantations produced 1,085,000 tons of raw sugar on their 220,000 acres with a crop value of $148 million.

Hawaii's 9 pineapple canneries processed 30,787,000 cases of fruit and juice grown on 77,000 acres of 13 plantations. Total value of the crop was $117 million.

The young coffee industry in 1957 grew 4.404 tons worth nearly $6 million. Beef and dairy products continued their rapid expansion in order to match the demands of a vital, growing population. Fruits, nuts, vegetables, and flower crops contributed nearly $5 million to Hawaii's economy.

Islanders consumed 7½ million dozen eggs and a goodly quantity of chicken to account for $6.5 million in the poultry industry.

Hawaii's superb climate, scenic beauty, and recreational facilities are a major economic asset to the islands.

Tourism ranks as Hawaii's third basic industry, and is determinedly challenging sugar and pineapple in dollar value.

Every year sees new highs in the number of visitors, which reached a record figure of 168,000 in 1957. In dollar volume this has meant a jump from $6 million in 1946 to $77 million in 1957, or an increase of 1,183 percent. The elements that caused this increase point to further expansion. These include the continuing national population migration to the west coast, and the expansion in volume and speed of air transportation. By early 1959, Hawaii will be served regularly by jet liners taking a scant 4½ hours to fly the 2,000 miles from California.

To accommodate the increase in visitors, multimillion-dollar developments like Henry J. Kaiser's Hawaiian Village Hotel and the rapid rise of luxurious apartment-hotels have become common sights.

Several first-class hotels have been built on the neighbor islands of Hawaii, Maui, and Kauai. One notable area is the Kona coast of the island of Hawaii, which, in a smaller way than Waikiki, has grown phenomenally.

A projection by the Hawaii Visitors Bureau indicates the Territory will be hosting 280,000 tourists annually by 1965.

In 1950, 63 delegates were elected throughout the islands to write a constitution for the proposed State of Hawaii. Foes of statehood said that the ILWU's Communist leadership would control a majority of the delegates. But candidates identified as representing the ILWU leadership were defeated.

As the convention met, the subcommittee of the House Committee on Un-American Activities opened hearings in Honolulu. One convention delegate resigned and another was expelled as a result of testimony, or of refusing to testify, at the hearings.

The State constitution finally drawn contains a provision that "no person who advocates, or who aids or belongs to any party, organization or association which advocates the overthrow by force of violence of the Government of this State or of the United States shall be qualified to hold any public office or employment."

It is the first State constitution to contain such a provision.

Despite bitter ILWU opposition to this conservative constitution, it was ratified by the people by better than 3 to 1 in a plebiscite. The National Municipal League of New York City said Hawaii "had set a new standard in the writing of a modern State constitution by convention."

Among strong anti-Communist measures, Hawaii's Legislature has enacted:

First. Legislation setting up a subversive activities commission to ferret out security risks.

Second. A series of loyalty acts as stringent as in any State.

To summarize, the Nation needs Hawaii because:

Statehood would be an example before the world of American democracy in action. It would bolster Hawaii's defense role in the Pacific. It would make Hawaii a center where Pacific peoples could study American traditions.

Hawaii is a community of Americans who have proved that East and West can live and work together, in peace and war, under the flag of freedom.

Hawaii has passed every test. Congressional committees, Government departments, military leaders and others have marked her "A" for American. Five major Pacific commands in Hawaii show the Islands' military importance. Statehood will serve notice to the world that the United States intends to stay in the Pacific.

The Nation wants Hawaii because:

National surveys since 1941 show public opinion overwhelmingly in favor of admitting Hawaii into the Union.

The American press is nearly unanimous in its support of Hawaiian statehood.

Nearly two score national organizations are on record in favor of it.

The platforms of both political parties call for immediate statehood.

Twenty separate Congressional hearings have exhaustively investigated Hawaii's fitness for statehood.

The U.S. House of Representatives has passed Hawaiian statehood bills three times, in 1947, 1950, and 1953.

Although reported out favorably by the Senate and House Interior Committees in succeeding sessions of Congress, Hawaii's bills never came to a vote in either chamber. The Hawaii and Alaska measures were combined, then reintroduced separately, and Alaska's bill was finally enacted in the 85th Congress.

Why Hawaii wants statehood:

Hawaii's 575,000 people have fulfilled the obligations of citizenship for more than half a century without enjoying all the privileges.

They pay taxes as residents of the States do and serve on battlefronts equally, but have no voice in either tax or draft legislation. Taxation without representation violates a basic American precept.

Statehood is the expressed will of Hawaii's people. They have elected or reelected 10 ardently prostatehood Delegates to Washington since 1900. In a plebiscite in 1940, 67 percent of those voting said they favored statehood.

In 1949, the people elected 63 delegates to a convention to draft a proposed State constitution. At the next year's elections they ratified the constitution drawn by better than 3 to 1.

In February 1954, 116,000 persons on all the major islands signed a huge petition for statehood addressed to the U.S. Senate.

The case for Hawaii rests. The people of Hawaii have spoken eloquently and

without reservation. They want to belong. Now the American people, through their representatives, must make the all-important decision.

Will Hawaii be admitted as a State in the firmament of the United States of America?

I say "Yes."

## Law in Space: Call for Action

EXTENSION OF REMARKS
OF
### HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
*Tuesday, March 10, 1959*

Mr. KEATING. Mr. President, one of the most pressing of the nonscientific problems raised by the space age is the need for adoption of new rules of law for the settlement of space-age controversies. The urgency of this problem is generally underestimated. Many who recall with nostalgia the centuries required for the flowering of the common law fondly anticipate a similar development of the new space law. I grant that law is shaped and nourished by experience—but I also insist that it is fundamentally based on necessity. The necessity for new laws and concepts in this case is overwhelming. There will be no time for legal craftsmanship and judicial speculation after rival claims are made to the moon or to space itself. Civilization has now reached a point at which a gap between our moral and technological tools could be fatal. The rule of law in the age of space is not a matter of philosophy, but a matter of survival.

The House Committee on Science and Astronautics recently conducted extensive hearings on the subject of legal control of outer space. This committee should be commended for its initiative in centering attention in its hearings on this most significant problem. I had the privilege of appearing as a witness before the committee and in the course of my testimony, I urged the importance of taking immediate steps in the direction of devising a new legal code for the space age.

A recent editorial in the New York Times deals directly with these issues. In view of its pertinence to this important subject, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR LAW IN SPACE

The East Berlin radio, acting perhaps as a mouthpiece for Moscow, has objected to the launching of Discoverer I into orbit, claiming that it is engaged in espionage and has been sent into orbit without prior permission by the countries over whose territory it passes. The issue thus raised is an important one, even though it is obviously not a real one in the present case of a satellite whose signals have been so irregular that it took almost a week to gain evidence that it actually was in orbit. The real issue is posed, of course, by what is now the great likelihood that within a comparatively short time, a few years at most, both the United States and the Soviet Union will be in a position to launch "seeing eye" satellites for surveillance of activities on earth by cameras radioing their observations back to stations on our planet.

What is involved here is the simple fact that man's technological capabilities have outrun the existing system of international law. How far up does a nation's sovereignty extend? What rights, if any, does a nation possess for protection against surveillance by a satellite circling the globe at a speed of thousands of miles an hour? Does a nation possess the right to shoot down—assuming technology is developed for this purpose—a satellite that passes over its tefritory without prior permission?

Thus far a makeshift solution has ruled, inasmuch as the satellite launchings began during the International Geophysical Year and no nation objected to their movement over its territory as part of purely scientific research. But the IGY period originally defined has ended, and the era of military satellites is near at hand. Is it not high time for the United Nations to convene an international conference to consider the knotty legal issues now posed in this area and to work out a system of space law which would avoid international tensions arising over this issue?

## Industrial Education for Foreign Students, Inc.

EXTENSION OF REMARKS
OF
### HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
*Tuesday, March 10, 1959*

Mr. WILEY. Mr. President, in the days ahead, the Congress will be considering programs to promote better relations and understanding among nations.

Today, I should like to pay tribute to a fine program, sponsored by private initiative, which is making an important contribution toward this objective.

The project to which I refer is Industrial Education for Foreign Students, Inc. Its originator and director, Mr. A. Roger Hook, deserves particular commendation, as well as do the many other individuals and organizations which have contributed to its development, for their relentless efforts to make the project a success.

Basically, the objectives of the program are:

First. To develop a program to make available opportunities for on-the-job training for foreign students in American industry and business.

Second. To assist, encourage, and cooperate with U.S. business and industry in establishing education and training programs for foreign students within their organizations; and in locating foreign students suitable for enrollment in such programs.

Third. To assist foreign students in U.S. colleges and universities who are interested in obtaining on-the-job education and training in American industry before returning to their native countries.

Overall, these efforts will assist in acquainting students from other lands with the operations of our free enterprise system, as well as better enable American industry to expand in foreign nations by utilizing the services of students trained in this country.

In carrying out these objective, Industrial Education for Foreign Students, Inc., will benefit both industry and students.

By promoting exchange of persons and ideas between ourselves and foreign countries, this program will act as an important supplement to the many Government sponsored efforts in this field.

Recently, I received a letter from Mr. Hook, indicating that an additional step of progress had been achieved; that is, the appointment by the board of directors of an advisory council, a legal council, and a finance committee to help carry out the operations of the program.

I warmly commend these individuals for their willingness and readiness to assume a responsibility in this constructive project.

Believing that this program deserves the consideration of my colleagues as a fine example of private initiative in promoting international cooperation and understanding, I ask unanimous consent to have Mr. Hook's letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

INDUSTRIAL EDUCATION FOR
FOREIGN STUDENTS, INC.
*Janesville, Wis., March 1959.*

DEAR FRIEND: Three years ago a group of business and professional men of this community met together to discuss ways and means of helping foreign students find on-the-job training upon completion of their academic training at United States universities and colleges. During the past 3 years the many problems involved in developing a national organization for this purpose have been under constant study. With the excellent help of a committee of faculty members of the University of Wisconsin Law School, several Federal Government agencies, and many organizations, individuals and business firms, the entire program is gradually unfolding.

In accordance with action taken by the board of directors, the following committees have been appointed:

Advisory Council: F. H. Elwell, Dean Emeritus, School of Commerce, University of Wisconsin, Madison, Wis.; Clifford A. Randall, attorney, president of Rotary International, Milwaukee, Wis.; John J. Benson, director, Division of Industrial and Port Development, Governor's office, Madison, Wis.; W. A. R. Walker, liaison officer, West Indies students liaison office, Washington, D.C.; Mrs. Lawrence H. Smith, veterans liaison office, Washington, D.C.

Legal Council: Professor Arthur Sporn, Chairman, Law School, University of Wisconsin, Madison, Wis.; Professor Wm. G. Rice, Law School, University of Wisconsin, Madison, Wis.; Hiram Nowlan, attorney, Jeffris Mouat law firm, Janesville, Wis.

Finance Committee: G. Earl Best, chairman, secretary, treasurer, Parker Pen Co., Janesville, Wis.; Walter R. Arthur, president, W. R. Arthur and Co., Inc., Janesville, Wis.;

Robert W. Bliss, copublisher and editor, Janesville Daily Gazette, Janesville, Wis.

* * * * *

In response to a letter to Gen. Wilton B. Persons, the assistant to the President, in which our program and method of financing was carefully detailed, we are most happy to have the following reply:

"Your program has interesting possibilities and could serve a valuable function in assisting foreign students in the United States to supplement their regular academic study with practical training."

General Persons further suggested that we keep the State Department informed of the progress of our program.

The White House has thus given us their moral support—the above committees have agreed to serve with us because they believe in the objectives of our corporation. Janesville, Wis., is now truly the focal point for a movement designed to help the many young people from other lands who are interested in learning more about our way of life.

Because of the worldwide publicity the organization has received, universities and colleges throughout the United States, foreign embassies, and some 40,000 foreign students have turned to our corporation, the only one of its kind, for leadership in this tremendously important activity. The opportunity for your cooperation is present, may we look to you for guidance, and for your assistance in carrying forward the work.

Very sincerely yours,

INDUSTRIAL EDUCATION FOR FOREIGN STUDENTS, INC.,
A. ROGER HOOK, *Executive Director.*

## The President Is Looking the Wrong Way

EXTENSION OF REMARKS
OF
## HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
*Tuesday, March 10, 1959*

Mr. YARBOROUGH. Mr. President, the entire Nation stands behind President Eisenhower in his determination on the Berlin issue.

However, it appears to me that the President is more concerned with saving dollars than with saving the Nation. In the Berlin situation, in which we are facing a possibility of a May 27 deadline, we are confronted by a vocal threat of war, and Secretary of Defense McElroy says any clash in the area is likely to result in a nuclear war.

Yet it seems the President is allowing the bugaboo of spending to scare him away from preparedness for defense. This Nation, the recognized leader of the free world, has been openly challenged by the Russians. The threat of all-out, global war is far greater than it has been for some time. Yet this Nation seems to be showing no concern, seems not to realize the danger at hand.

This course of action could cost us a heavy defeat psychologically—a defeat which would undercut our position in the world. And there is the possibility of a diplomatic defeat as well. We must begin work immediately to strengthen this country's defenses, and those of our allies as well.

We stand behind the President in his firm position on Berlin. But it seems to me that when faced with a snarling bear, a man should at least have a rifle. He does not have to fire it unless the bear charges, but it is good to have the bear know it is there and can be used if the bear attacks.

Mr. President, in support of my position, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which was printed in the Washington Post and Times Herald for Tuesday, March 10, 1959, under the heading "Bankrupt."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BANKRUPT

The attitude reportedly expressed by President Eisenhower in his meeting with congressional committees last Friday is almost as frightening as the possibility of war over Berlin. Time and again the President is said to have reverted to his theme that the Soviet strategy is to induce the United States to spend itself into bankruptcy. On this basis he resisted all talk of a general mobilization (which no one has advocated in such broad terms), of an increase in the defense budget and even of deferring the manpower cuts in the Armed Forces. It sounded very much as if George Humphrey were determining American policy.

Leaving aside the question of how Mr. Eisenhower can be sure that this is indeed Soviet strategy, is there a real danger that the United States would spend itself into bankruptcy? The sums being mentioned by way of addition to the military budget to overcome the missile gap and provide more limited war preparedness add up to some $2 billion. This amounts to about 5 percent of the new military budget, a little more than 2½ percent of the total national budget and less than one-half of 1 percent of the gross national product. The augmented military budget would still be under 10 percent of the gross national product.

The notion that this or even a substantially larger effort would cause national bankruptcy is, we believe, absurd. The United States made proportionately far greater expenditures during World War II and even during the Korean war without such dire consequences. If the President is concerned about inflationary impact, let him recommend tax increases—but let him not contend that the richest country in the world cannot afford a more complete defense. Ancient Athens did not fall to Sparta because of bankruptcy.

It is unnecessary to quarrel with Mr. Eisenhower's assertion that he knows more about military needs than outsiders. Certainly the appraisal of military requirements should be his forte—even though the list of reservations about the adequacy of the budget furnished to the Senate Preparedness Subcommittee by members of the Joint Chiefs of Staff seems highly disturbing. Mr. Eisenhower's wish to avoid an appearance of provocation also is understandable—although the danger seems to us that the administration will lean so far over backward in this respect that it will lose its balance.

But has the President fully considered the psychological impact of the administration's course? If the country is in fact facing a military crisis in Berlin—one in which Secretary McElroy says that big nuclear war is likely in any clash—has the public been conditioned to the seriousness of the situation? Are this country's allies encouraged to be firm when they see no evidence of any special preparation or concern here?

And what about the effect on the Soviet leaders themselves? If, as seems apparent, the Berlin crisis is in part the result of Mr. Khrushchev's confidence in Soviet superiority, what is this country doing to counteract such an impression and equalize its bargaining power? One would think that an administration which had been so tragically wrong about the psychological effect of the first Soviet sputnik would at least question the validity of its assumptions.

Obviously the whole country stands behind the President in his determination on Berlin. It is splendid to see Mr. Eisenhower taking a more active personal role of leadership. But neither of these is enough in the particular challenge the country faces. If the President will not act to improve American military and negotiating posture, congressional leaders will have to assert themselves independently. Much more worrisome than the possibility of bankruptcy is the possibility that a thoroughly solvent United States could pinchpenny itself into psychological, if not actual, defeat.

## There's No Real Recovery Without Full Employment

EXTENSION OF REMARKS
OF
## HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 2, 1959*

Mr. DENT. Mr. Speaker, one of the great threats to economic stability is the rapid advancement of automation coupled with the displacement of goods on markets on the importation of produce and production from other countries. Hardly anyone wants to fight automation. Yet this Congress or some future Congress, and I hope in the not too distant future, must take cognizance of the fact that we will have a number of displaced workers in all fields and areas if we let automation come in at too rapid a pace without creating legislative safeguards against long duration unemployment. This fact is becoming more and more apparent every day. Some of our harder working, conscientious labor leaders are taking cognizance of the fact. They're beginning to speak out. Although we are gaining in production, we are losing in employment. I herewith submit the following article which I believe to be one of the best written observations I have seen on this subject in a long time. The observations are those of David J. McDonald, president of the Steelworkers of America. I hope that all of the Members of this Congress will take heed and read the warning signals on the horizon. Drastic and bold action is needed now if we are to regain our economic stability. I submit the following article for the edification and education of those of us who are paying too little attention to these important matters:

THERE'S NO REAL RECOVERY WITHOUT FULL EMPLOYMENT—STEEL OUTPUT RISES BUT JOB GAINS DECLINE

Steel production is likely to reach 90 percent, or more, of capacity this month. This will equal production in early 1957.

But there is no prospect that employment in the industry will go to what it was 2 years ago.
